PROCEEDINGS AND DEBATES OF THE 87th CONGRESS, SECOND SESSION

HOUSE OF REPRESENTATIVES

MONDAY, AUGUST 6, 1962

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

1 John 1: 3: *Truly our fellowship is with the Father, and with His son Jesus Christ.*

Almighty God, we rejoice that daily we are privileged to have fellowship with good men and women and that we are guided by their high ideals and that we can cherish their hopes and aspirations and learn to love what they love.

Grant that we may appreciate the even more exalted privilege of unbroken fellowship and communion with Thee and of yielding ourselves to Thy will and loving what Thou dost love.

Inspire us with a profound belief in the possibility and power of this divine fellowship and may we have a faith that outstrips and goes beyond our reasoning faculties and the deductions of the intellect.

In these days of world crises may our President, our Speaker, and the Members of Congress be men and women of light and leading, true hearted, clear minded, faithful, and full of faith.

We earnestly beseech Thee that they may be the sons and daughters of the spirit whose intimate fellowship with Thee and deep faith and daring fortitude are the saving and sufficient support for these times that try men's souls.

Hear us in Christ's name. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, August 2, 1962, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 3822. An act for the relief of Ahsabet Oyunciyan.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 11151. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1962, and for other purposes.

The message also announced that the Senate insists upon its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. PASTORE, Mr. CHAVEZ, Mr. MONRONEY, Mr. HUMPHREY, Mr. HAYDEN, Mr. SALTONSTALL, Mr. YOUNG of North Dakota, and Mr. KUCHEL to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 2256. An act to amend section 5 of the War Claims Act of 1948 to provide detention and other benefits thereunder to certain Guamanians killed or captured by the Japanese at Wake Island;

S. 2978. An act to authorize the Foreign Claims Settlement Commission of the United States to investigate the claims of citizens of the United States who suffered property damage in 1951 and 1952 as a result of the artificial raising of the water level of Lake Ontario;

S. 3340. An act to repeal a portion of the Second Supplemental National Defense Appropriation Act, 1943, as approved October 26, 1942 (56 Stat. 990, 999), as amended, and for other purposes;

S. 3525. An act to authorize the Administrator of General Services, in connection with the construction and maintenance of a Federal office building, to use the public space under and over 10th Street SW., in the District of Columbia, and for other purposes; and

S. 3544. An act authorizing modification of the project for Gloucester Harbor, Mass.

The message also announced that the Senate agrees to the amendments of the House to a bill and a joint resolution of the Senate of the following titles:

S. 405. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Mann Creek Federal reclamation project, Idaho, and for other purposes; and

S.J. Res. 91. Joint resolution to establish the St. Augustine Quadricentennial Commission, and for other purposes.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10904) entitle "An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1963, and for other purposes.

The message also announced that the Senate agrees to the amendments of the House to Senate amendments numbered 2, 3, 5, 6, 13, and 52 to the foregoing bill.

The message also announced that the Vice President, under authority created by House Concurrent Resolution 438, 87th Congress, had appointed Mr. CARLSON, vice Mr. COTTON, resigned, to be a member of the joint committee to represent Congress at ceremonies to be conducted at Roanoke Island, N.C., during the week of August 12–18, 1962.

"THIS IS WHERE I CAME IN"

Mrs. SULLIVAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Missouri?

There was no objection.

Mrs. SULLIVAN. Mr. Speaker, by the time I reached the business section of the Washington Evening Star the other night, I was just about ready to turn out the night light and go to sleep until I saw an item which, like a familiar old movie on television, prompted me to exclaim, "This is where I came in." It certainly woke me up. It was an AP dispatch from Rio de Janeiro, and reported that frost had destroyed nearly a half million tons of Brazilian coffee, and the dispatch added, this "might affect coffee prices in the United States."

It was 8 years ago last January that the U.S. consumer was being victimized by the hoax of an alleged coffee shortage in Brazil, said to be caused by frost destroying a large portion of the crop. The price of coffee in the United States had shot up more than double—but, as I had told the House and as the Federal Trade Commission later established, there was no shortage and the price increase was strictly a fraud on the consumer.

The coffee markets of the world are now so glutted with supplies that I understand we could go for a whole year without any new production and not suffer any shortages. The coffee-producing countries are desperately seeking to limit production in order to reduce surpluses and stabilize prices. Under the circumstances, I hope the American housewife—the consumer—will not stand for any increase at this time in coffee prices based on an alleged crop disaster in Brazil. If any distributor or retailer does increase coffee prices, the customer should demand to know why—and not accept as a reason the false assertion that frost in Brazil has ruined so much of the crop that we face an imminent shortage. Eight years may be a long time for consumers to remember an old hoax, but let us not fall for it again. "This is where we came in."

RECORD OF THE ATTORNEY GENERAL

Mr. BECKER. Mr. Speaker I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BECKER. Mr. Speaker, I want to take this opportunity to offer my congratulations to Bobby Kennedy, the Attorney General of the United States, for his great accomplishments in his office during the first 18 months of his administration.

First, his great success with roasting wieners in his office in the Justice Department for the VIP children. This earned front-page coverage all over the country.

Second, his wonderful parties at his country estate. The selected group to be pushed in the swimming pool fully clothed, has brought whoops of joy from the American public.

And third, the recent act of "Beauty and Brumus." Poor Brumus is lonely, he must be brought to the Justice Department, where he is provided with a beautiful "governess"—at Government expense—to walk him up and down the corridors. I wonder if there are any "curb your dog" signs in the Justice Department hallways. The public rejoices.

But the Hoffas and other racketeers are still roaming the land. Crime is on the increase and particularly here in the Capital City. Of course, his action in the steel hike case also drew rave notices.

I hope, someday, when Bobby gets over the heady publicity of these great events, he may be able to devote some time to the high office he holds as Attorney General.

Tomorrow, I hope to call attention to the great successes of another Cabinet member. They, too, are very inspiring.

The SPEAKER. This is Consent Calendar day.

The Clerk will call the first bill on the Consent Calendar.

PRINCE GEORGES COUNTY SCHOOL BOARD, MARYLAND

The Clerk called the bill (H.R. 6759) for the relief of the Prince Georges County School Board, Maryland.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

AMEND ACT AUTHORIZING NATIONAL MEDALS OF SCIENCE

The Clerk called the bill (H.R. 4055) to amend the act of August 25, 1959, to authorize the payment of a monetary award to recipients of the National Medal of Science.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. FORD. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

WASHINGTON METROPOLITAN TRANSIT COMPACT AMENDMENTS

The Clerk called House Joint Resolution 693, granting the consent and approval of Congress for the State of Maryland, the Commonwealth of Virginia, and the District of Columbia to amend the Washington metropolitan area transit regulation compact, and for other purposes.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. FORD. Mr. Speaker, reserving the right to object—and my present inclination is not to object—I think it is about time someone said that all the transportation problems of the metropolitan area of the District of Columbia are not going to be solved by this transit report that we are all waiting for with bated breath.

Mr. Speaker, I happen to think that there are at least some people in that organization who are not the ultimate and final authority on how some of us are to get from our home to our office and back again. I happen to believe that there are some people who have worked long and faithfully on highway and traffic problems in the District of Columbia who, in my opinion, have done a pretty good job under difficult circumstances.

Mr. Speaker, I am getting a little sick and tired of everything being held in abeyance in this area, waiting with bated breath for this great report which is about to be forthcoming, I understand, sometime in October of this year. I just want to be on record right here and now to the effect that as soon as this report is made we are not all going to roll over and play dead waiting for Mr. Stolzenbach—I guess that is his name—to tell us what we are supposed to do.

Mr. Speaker, it is my honest opinion and judgment that some very good people in the District government have done a very good job in trying to solve the very difficult transit and highway problems. I do not like a lot of Johnny-come-lately's stepping in the picture and deciding that everything which has been done in the past is wrong and everything they propose is going to be right. I have said my piece, but if I am here next year I am going to look with a very, very skeptical eye at some of these long-haired ideas which I understand may be contained in the report.

Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. GROSS. Mr. Speaker, further reserving the right to object, I think we are entitled to a reasonable explanation of this resolution, because it may have some serious ramifications for some people. I would like to know whether this should be known as the "O. Roy Chalk-Montgomery" resolution? Who is back of this so-called compact to stop taxicabs from hauling tourists to various points of interest in the Washington area, if that is the purpose of this legislation?

Mr. WILLIS. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I am pleased to yield to the gentleman from Louisiana.

Mr. WILLIS. The people back of this resolution happen to be the Legislatures of Maryland and Virginia, represented by our colleague, the gentleman from Virginia, Governor TUCK, and the gentleman from Maryland [Mr. MATHIAS]. A couple of years ago we passed a compact bill dealing with Washington metropolitan area transit.

Since that time the Legislatures of Virginia and Maryland have again adopted identical measures, based on their experience, enacting minor amendments to the compact we have already approved. For example, since that time the Dulles Airport is or is about to be in operation and therefore will be included within the area affected by the compact.

Mr. GROSS. What does this do to the taxicab operator who wants to take five or six or seven people on a tour from Washington, D.C., to Virginia, or perhaps into Maryland?

Mr. WILLIS. The answer is that it does nothing, because taxicabs remain exempt under this bill. However, there is an amendment that in order to remain exempt he must be a bona fide taxicab operator engaged in the business of taxicabs. But the answer is that taxicabs are exempt.

Mr. GROSS. What is meant by the report which states on page 6:

> The Commission has stated that its major concern in proposing the amendment to section 1(c) of article XII is that the present wording might be construed to allow operators of vehicles carrying eight passengers or less to operate "helter-skelter" in competition with mass transit.

Where in the report can I find substantiation for this charge of "helter-skelter" operation?

Mr. WILLIS. As I said, bona fide taxicab operators are exempt under the bill. But in order to be exempt he must be a taxicab operator and he must not take his operation in a "helter-skelter" fashion, or intermittently pose as a taxicab operator. That is all there is to it. But taxicabs are exempt from the provisions of the bill.

Mr. GROSS. If a man is licensed to operate a taxicab in the District of Columbia, there is nothing in this bill to prevent him from taking tourists who come to this city to visit Arlington Cemetery or Mount Vernon?

Mr. WILLIS. That is correct; the gentleman is correct.

Mr. GROSS. If he has a license to operate a taxicab, and meets the requirements for the operation of a taxicab in the District of Columbia, he will not be estopped by virtue of the passage of this bill from taking tourists within the metropolitan area; is that correct?

Mr. WILLIS. The gentleman is correct.

Mr. GROSS. I still do not understand then this charge of "helter-skelter" operation.

Mr. WILLIS. This discourages someone who is not truly a taxicab operator but is posing as such to escape from the provisions of this bill.

May I suggest that the gentleman yield to the gentleman from Maryland at this point?

Mr. GROSS. I am glad to yield to the gentleman from Maryland.

Mr. MATHIAS. The reason this amendment was required is that in the original act which was passed by this House several years ago certain motor vehicles were exempt from the operation of the act according to the number of passengers they were designed to carry. In some cases in the District area you have small sightseeing buses which normally would be regulated by the Transit Authority, although the number of passengers is small, say eight. These were just blanket exemptions according to the number of passengers. Actually, this is designed to exempt taxicabs, but it was found in practice that it was also exempting certain of these, if you want to call them that, contract carriers, sightseers in the area. So the language was designed more specifically to exempt the regular licensed taxicab operation and to designate what was really intended in the first place, these contract carriers.

Mr. GROSS. Mr. Speaker, let me say to the gentleman from Maryland that my concern is that this may tend to create monopoly in the hands of O. Roy Chalk and the operator by the name of Montgomery who is presently in the courts, as I understand it. Is it correct that he is in the courts now trying to stay in this business?

Mr. MATHIAS. There is a Montgomery Charter Service that is in the courts trying to establish certain grandfather rights. I believe there are some other operators in the area having similar rights.

Mr. GROSS. This bill makes provision, if he does establish grandfather rights that he may not be estopped; is that not correct?

Mr. MATHIAS. The bill does not so provide but I think that would be a natural consequence, that if he has certain rights he would be protected.

Mr. GROSS. The gentleman is not saying that this bill is designed to stop the lawsuit that is now pending?

Mr. MATHIAS. It is not designed for that at all.

Mr. GROSS. Will it do that?

Mr. MATHIAS. No. The bill is not designed to affect the outcome of this lawsuit at all. The bill was written a long time ago by the Legislature of Virginia, sometime long before we had any lawsuit involved.

Mr. GROSS. May I ask the gentleman one other question. Why is it that the National Capital Transportation Agency takes no position on this bill? Is that Agency not an interested party?

Mr. MATHIAS. They may have some interest that they could have come in and offered. There were some hearings held.

Mr. GROSS. The Agency has a letter in the report that says they take no position. I would think the National Capital Transportation Agency would be very much interested in legislation of this type.

Mr. MATHIAS. I think if they had objection they certainly would have made it known.

Mr. GROSS. They do not object. They just say they do not take any position. This is hard for me to understand.

Mr. MATHIAS. I do not want to put words into the mouth of the agency, but I would say, No. 1, we are proposing to enlarge the area of transportation here because of the geographical location of the Dulles Airport and, No. 2, we are attempting to remedy an error which became apparent in practice over the last several years. These are not major changes in policy.

Mr. GROSS. With the assurance of the gentleman from Louisiana [Mr. WILLIS] and the author of this joint resolution, the gentleman from Maryland [Mr. MATHIAS], that this resolution is not designed to give to O. Roy Chalk or anyone else a monopoly over the transportation of sightseers and tourists who come to the District of Columbia, I will let this bill go through insofar as unanimous consent is concerned, but I will say to the gentleman that I will, as I am sure other Members of Congress will, watch with interest what transpires under this joint resolution.

Mr. MATHIAS. If the gentleman will yield further, as I pointed out before, this was enacted in the same form in which it is now before the House by the Legislatures of Maryland and Virginia. The basic act calls for the fact that any certificates of convenience and necessity shall be issued.

Mr. GROSS. Of course they can be, but will they be issued?

Mr. MATHIAS. This of course is something that all of us are going to watch. I have just as much interest as the gentleman has in seeing that the public is treated fairly on this matter. I intend to watch it very closely, and I will join with the gentleman in watching it closely.

Mr. GROSS. I withdraw my reservation of the right to object, Mr. Speaker.

Mr. O'HARA of Illinois. Mr. Speaker, reserving the right to object, I would like some clarification on a phase in which I have a personal interest. That interest stems from my regard for Ralph Worthy, whom I have known during my long residence at the Congressional Hotel. Mr. Worthy, who is a married man, a college graduate, and a respected citizen, owns a limousine and he services guests at the Congressional Hotel who desire to tour Washington and adjacent points of historical interest, going where they or members of their party may desire and under the guidance of one familiar with the Capital City and the adjacent spots like Mount Vernon and whose reliability is vouched for by the hotel.

This is a clean and necessary business. It is a supplementary service to that furnished by the established buslines. There are many families who visit Washington who desire to go in their own family groups in limousines. I would say, Mr. Speaker, that all my colleagues in the House would agree with me that there are constituents who would feel that something was taken away from them if this service were denied them. Touring the city and the adjacent territory and at their leisure stopping in at places of interest, and doing this in their own taxis or limousines, contributes much to their delight and thrill coming to Washington.

There are many Ralph Worthys. They are part of our Washington and, on the whole, I think they are dedicated men. They are small businessmen in the local transportation field. It would be a crime and a disservice to our constituents if conditions for their operation were made so difficult that they were driven out of business. I would like it clarified that it is not the intent of the Congress, in agreeing to the pending bill, that it should drive the limousines from the tourist business, monopolizing all such business in the hands of the large carriers.

Mr. Worthy fears, and I understand other people like him, that the intent back of this bill is to do away with these limousines. I would like that clarified.

Mr. WILLIS. I am glad the gentleman asked that question. It is very specifically answered on page 6 of the report, which I read:

> The committee notes that the Transit Commission has taken the position that "bona fide taxicab service" includes incidental sightseeing operations performed by taxicabs. Indeed, the Commission has stated the opinion that normal sightseeing operations being conducted by limousines in the Washington metropolitan area are in fact a type of taxicab service, and that it is not the Commission's intention to require certificates as a prerequisite to engage in such operations.

So the answer is specifically set forth in the report as to the position of the Commission.

Mr. O'HARA of Illinois. May I ask whether or not there were requirements for certificates of convenience and necessity, without which the limousines could not operate, and upon application with the necessary proof of safety and insurance, the certificates were not issued?

Mr. WILLIS. There was a question as to whether sightseeing operations were in the nature of taxicab operators. The Transit Commission has issued a ruling that they were. Let me read from the act of September 15, 1960, with regard to the grandfather clause. That act reads: "*Provided, however*, That if any person was bona fide engaged in transportation subject to this Act on the effective date of this Act, the Commission shall issue such certificate without requiring further proof that public convenience and necessity will be served by such operation, and without further proceedings, if application for such certificate is made to the Commission within 90 days after the effective date of this Act."

That is the grandfather clause.

Mr. O'HARA of Illinois. Then the gentleman, for whom I have the greatest respect, and whose word is the strongest bond I would wish, assures me that it is not the intent or purpose of this bill to put the limousine operators out of business?

Mr. WILLIS. It is not. We asked the Commission for their position and we put it in writing. This problem exists, and we want to clarify it.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Iowa.

Mr. GROSS. Apparently it is not the intention to take the operator of a taxicab who is duly licensed and insured and has met all requirements for operating in the District of Columbia out of business, either?

Mr. WILLIS. That is correct.

Mr. O'HARA of Illinois. I thank my good friends: From Louisiana [Mr. Willis], a member of the committee; from Maryland [Mr. Mathias], the author of the bill; and from Iowa [Mr. Gross] for their contributions to a colloquy that has made it perfectly clear that it is not the intent of the House to put out of the legitimate sightseeing business the taxicab drivers and the limousine drivers who are rendering, I would say, one of the most valuable services we have to offer our constituents.

Mr. Speaker, I withdraw my reservation of objection.

The Clerk read the resolution, as follows:

Whereas the State of Maryland and the Commonwealth of Virginia have entered into a compact, known as the Washington Metropolitan Area Transit Regulation Compact, hereinafter called compact, creating the Washington Metropolitan Area Transit Commission, hereinafter called Commission; and

Whereas Congress, by Public Law 86–794 (74 Stat. 1031), consented to the entry into the compact by the State of Maryland and the Commonwealth of Virginia, and authorized and directed the Board of Commissioners of the District of Columbia to enter into and execute the compact on behalf of the United States for the District of Columbia; and

Whereas the Commission has recommended specific amendments to the compact, to wit:

(1) To include within the Washington metropolitan area transit district the Dulles International Airport and all cities which lie within the metropolitan district;

(2) To exempt from the Commission's jurisdiction transportation performed by a carrier whose only transportation is between points outside the metropolitan district and points inside the metropolitan district;

(3) To clarify the Commission's jurisdiction over interstate taxicab operations;

(4) To provide that the annual reports of the Commission be submitted on a fiscal year basis; and

Whereas the State of Maryland and the Commonwealth of Virginia have by legislation (ch. 114, Acts of Maryland General Assembly, 1962; and ch. 67, Acts of Virginia General Assembly, 1962) adopted identical amendments to the compact, to become effective upon consent of Congress, by which article I, and sections 1 and 24 of article XII, respectively, of the compact are amended to read as follows:

"ARTICLE I

"There is hereby created the Washington Metropolitan Area Transit District, hereinafter referred to as Metropolitan District, which shall embrace the District of Columbia, the cities of Alexandria and Falls Church, the counties of Arlington and Fairfax, and political subdivisions of the State of Virginia located within those counties and that portion of Loudoun County, Virginia, occupied by the Dulles International Airport and the counties of Montgomery and Prince Georges, in the State of Maryland and political subdivisions of the State of Maryland located within said counties, and all other cities now or hereafter existing in Maryland or Virginia within the geographic area bounded by the outer boundaries of the combined area of said counties, cities, and airport.

"ARTICLE XII

"Transportation covered

"1. (a) This Act shall apply to the transportation for hire by any carrier of persons between any points in the Metropolitan District and to the persons engaged in rendering or performing such transportation service, except—

"(1) transportation by water;

"(2) transportation by the Federal Government, the signatories hereto, or any political subdivision thereof;

"(3) transportation by motor vehicles employed solely in transporting schoolchildren and teachers to or from public or private schools;

"(4) transportation performed in the course of an operation over a regular route, between a point in the Metropolitan District and a point outside the Metropolitan District, including transportation between points on such regular route within the Metropolitan District as to interstate and foreign commerce, if authorized by certificate of public convenience and necessity or permit issued by the Interstate Commerce Commission, and any carrier whose only transportation within the Metropolitan District is within this exemption shall not be deemed to be a carrier subject to the compact; provided, however, if the primary function of a carrier's entire operations is the furnishing of mass transportation service within the Washington Metropolitan Area Transit District, then such operations in the Metropolitan District shall be subject to the jurisdiction of the Commission;

"(5) transportation performed by a common carrier by railroad subject to Part I of the Interstate Commerce Act, as amended.

"(b) The provisions of this Title II shall not apply to transportation as specified in this section solely within the Commonwealth of Virginia and to the activities of persons engaged in such transportation, nor shall any provision of this Title II be construed to infringe the exercise of any power or the discharge of any duties conferred or imposed upon the State Corporation Commission of the Commonwealth of Virginia by the Virginia Constitution.

"(c) Notwithstanding the provisions of paragraph (a) of this section, this Act shall apply to taxicabs and other vehicles used in performing a bona fide taxicab service having a seating capacity of eight passengers or less in addition to the driver thereof with respect only to (i) the rate or charges for transportation from one signatory to another within the confines of the Metropolitan District, and (ii) requirements for minimum insurance coverage.

"Annual report of the Commission

"24. The Commission shall make an annual report for each fiscal year ending June thirtieth, to the Governor of Virginia and the Governor of Maryland, and to the Board of Commissioners of the District of Columbia as soon as practicable after June thirtieth, but no later than the 1st day of January of each year, which shall contain, in addition to a report of the work performed under this Act, such other information and recommendations concerning passenger transportation within the Metropolitan District, as the Commission deems advisable."

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to the State of Maryland and the Commonwealth of Virginia to effectuate the foregoing amendments to the compact, and the Commissioners of the District of Columbia are authorized and directed to effectuate said amendments on behalf of the United States for the District of Columbia.

Sec. 2. Section 5 of Public Law 86–794 (74 Stat. 1050) is repealed.

Sec. 3. The right of Congress to alter, amend, or repeal this Act is hereby expressly reserved.

The resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

POTOMAC RIVER COMPACT

The Clerk called the resolution (H.J. Res. 659) granting consent of the Congress to a compact entered into between the State of Maryland and the Commonwealth of Virginia for the creation of the Potomac River Compact of 1958.

There being no objection, the Clerk read the resolution, as follows:

Whereas the State of Maryland and the Commonwealth of Virginia have entered into a compact, known as the Potomac River Compact of 1958, by means of concurrent legislation for that purpose, being chapter 269 of the Acts of the General Assembly of Maryland of 1959 and being found in chapters 5 and 28 of the 1959 Extraordinary Session of the General Assembly of Virginia: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of the Congress, subject to the provisions and conditions of section 2 of this joint resolution, is given to the State of Maryland and the Commonwealth of Virginia for the Potomac River Compact of 1958 and for each and every part and article thereof: *Provided,* That nothing in this compact shall be construed as impairing or in any manner affecting any right or jurisdiction of the United States in or over the region which forms the subject of the compact or the power of Congress pursuant to the United States Constitution over interstate or foreign commerce. The compact reads as follows:

"POTOMAC RIVER COMPACT OF 1958

"Preamble

"Whereas Maryland and Virginia are both vitally interested in conserving and improving the valuable fishery resources of the Tidewater portion of the Potomac River, and

"Whereas, certain provisions of the Compact of 1785 between Maryland and Virginia having become obsolete, Maryland and Virginia each recognizing that Maryland is the owner of the Potomac River bed and waters to the low water mark of the southern shore thereof, as laid out on the Mathews-Nelson survey of 1927, and that Virginia is the owner of the Potomac River bed and waters southerly from said low water mark as laid out, and that the citizens of Virginia have certain riparian rights along the southern shore of the river, as shown on said Mathews-Nelson survey, and, in common with the citizens of Maryland, the right of fishing in said river, Maryland and Virginia have agreed that the necessary conservation and improvement of the tidewater portion of the Potomac fishery resources can be best achieved by a Commission comprised of representatives of both Maryland and Virginia, charged with the establishment and maintenance of a program to conserve and improve these resources, and

"Whereas, at a meeting of the commissioners appointed by the Governors of the State of Maryland and the Commonwealth of Virginia, to-wit: Carlyle Barton, M. William Adelson, Stephen R. Collins, Edward S. Delaplaine and William J. McWilliams, Esquires, on the part of the State of Maryland, and Mills E. Godwin, Jr., Howard H. Adams, Robert Y. Button, John Warren Cooke and Edward E. Lane, Esquires, on the part of the Commonwealth of Virginia, at Mount Vernon, Virginia, on the twentieth of December, in the year one thousand nine hundred and fifty-eight, the following Potomac River Compact of 1958 between the Commonwealth of Virginia and the State of Maryland was mutually agreed to by the said Commissioners: Now, therefore, be it *Resolved* by the Commissioners appointed by the Governors of the State of Maryland and the Commonwealth of Virginia, meeting in joint session, that they do unanimously recommend to the said respective Governors that there be a new compact, to be designated as the "Potomac River Compact of 1958", and that the said new compact be referred as promptly as possible to the Legislatures of the State of Maryland and the Commonwealth of Virginia for appropriate action, and to the end and after ratification and adoption by said Legislatures the same be submitted to the Congress of the United States for approval.

"Article I

"Commission—Membership and Organization

"SECTION 1. COMMISSION CREATED.—The Potomac River Fisheries Commission, hereinafter designated as "Commission", is hereby created.

"SEC. 2. MEMBERS.—The Commission shall consist of six members, three from Maryland and three from Virginia. The Maryland members shall be the members of the Tidewater Fisheries Commission of Maryland or its successor agency and the Virginia members shall be the members of the Virginia Fisheries Commission or its successor agency. If the membership of either of the respective State Commissions exceeds three, then the three Commission members from that State shall be selected by the Governor thereof from the members of the State Commission; and if the membership of either of the respective State Commissions is less than three, the three Commission members from that State shall be the member or members of the State Commission, and such additional person or persons who shall be appointed by the Governor as may be necessary to constitute a total of three Commissioners.

"SEC. 3. TERM, VACANCIES.—The term of Commissioners who are members of their respective State Commissions shall be conterminous with their term on their State Commission. The term of Commissioners who are not members of their State Commission shall be four years. Vacancies on the Commission shall be filled by appointment of the Governor of the State entitled to fill the vacancy, except that where the State Commission has three members, the person filling a vacancy on the State Commission shall ex officio become a member of the Commission.

"SEC. 4. CHAIRMAN.—The Chairman of the Commission shall alternate from year to year between the representatives of Maryland and Virginia. Subject to such alternation, the Chairman shall be elected by the Commissioners for a term of one year.

"SEC. 5. COMPENSATION, EXPENSES.—Commissioners shall be entitled to receive from the General Fund of the Commission compensation of twenty-five ($25.00) for each day or portion thereof spent in the performance of their duties, and reimbursement of reasonable expenses incident to the performance of their duties.

"SEC. 6. MEETINGS, QUORUM.—Commission meetings shall be held at least once each quarter, and at such other times as the Commission may determine.

"In order to constitute a quorum for the transaction of any business at least two of the three members from each State must be present and must vote on the business being transacted.

"SEC. 7. OFFICE AND EMPLOYEES.—The Commission shall establish and maintain an office at such locations as it may select, and may employ an Executive Secretary who shall serve at the pleasure of the Commission, and such other administrative, clerical, scientific, and legal personnel as it deems necessary. The powers, duties, and compensation of all employees shall be as prescribed by the Commission, and the employees shall not be subject to the provisions of article 64A of the Annotated Code of Maryland nor to the provisions of the Virginia Personnel Act, as the same may be from time to time in effect. The Commission may extend to any employee or employees membership in the Virginia Supplemental Retirement System or the Maryland Employees' Retirement System, whichever is applicable, subject to the laws relating to each such retirement system.

"Article II

"Jurisdictional Boundaries

"The territory in which the Potomac River Fisheries Commission shall have jurisdiction shall be those waters of the Potomac River enclosed within the following described area:

"Beginning at the intersection of mean low water mark at Point Lookout and an established line running from Smiths Point to Point Lookout, marking Chesapeake Bay waters; thence following the mean low water line of the shore northwesterly across the respective mouths of all creeks to Gray Point at the westerly entrance into Rowley Bay; thence in a straight line northwesterly to the southerly extremity of Kitts Point; thence along the mean low water line to the southwesterly point of St. Inigoes Neck; thence in a straight line westerly to the most easterly point of St. Georges Island; thence following the mean low water line in a general northwesterly direction, across the respective mouths of all creeks and inlets to the southwesterly point of Huggins Point; thence in a straight line southwesterly to the eastern extremity of the sand bar known as Heron Island; thence northwesterly following the ridge of Heron Island Bar to its westerly extremity; thence southwesterly in a straight line to the most southerly point of Blakiston Island; thence in a straight line northwesterly to the southern extremity of Colton's Point; thence following the mean low water line westerly, excluding all creeks and inlets, to the point marking the southeasterly entrance into St. Catherine Sound; thence westerly in a straight line to the southern extremity of St. Catherine Island Sandbar; thence northwesterly, along the westerly edge of said sand bar containing along the mean low water line of the southwesterly side of St. Catherine Island to the northwesterly point of said island; thence westerly in a straight line to Cobb Point Bar Lighthouse; thence northwesterly along the ridge of Cobb Point Sandbar to the southerly extremity of Cobb Point; thence following the mean low water line in general northwesterly and northerly directions across the respective mouths of all creeks and inlets to a point at the easterly entrance into Port Tobacco River, due east of Windmill Point; thence in a straight line westerly to Windmill Point; thence southwesterly following the mean low water line across the respective mouths of all creeks and inlets to Upper Cedar Point; thence southwesterly in a straight line across the mouth of Nanjemoy Creek to a point on shore at the village of Riverside; thence following the mean low water line, southwesterly, northwesterly and northerly across the respective mouths of all creeks and inlets to Smiths Point; thence northerly in a straight line to Liverpool Point; thence northerly in a straight line to Sandy Point; thence following the mean low water line northerly, across the respective mouths of all creeks and inlets to Moss Point; thence northerly in a straight line across Chicamuxen Creek to the southernmost point of Stump Neck; thence following the mean low water line northeasterly, across the respective mouths of all creeks and inlets, to a point at the southerly entrance into Mattawoman Creek; thence in a straight line northeasterly across the mouth of Mattawoman Creek to the southwesterly point of Cornwallis Neck; thence following the mean low water line northeasterly, across the respective mouths of all creeks and inlets, to Chapman Point; thence in a straight line northeasterly to Pomonkey or Hillis Point; thence following the mean low water line in a northerly direction across the respective mouths of all creeks and inlets, to a point on Marshall Hall shore, due south of Ferry Point; thence northeasterly in a straight line to Bryan Point; thence northeasterly in a straight line to the northwest extremity of Mockley Point; thence northeasterly in a straight line to Hatton Point; thence northerly in a straight line to the southwesternmost point of Indian Queen Bluff; thence following the mean low water line northerly across the respective mouths of all creeks and inlets, to Rosier Bluff Point; thence in a straight line northerly to the intersection with the District of Columbia line at Fox Ferry Point; thence following the boundary line of the District of Columbia southwesterly to a point on the lower or southern shore of the Potomac River, said point being the intersection of the boundary line of the Commonwealth of Virginia with the boundary line of the District of Columbia; thence following the mean low water line of the Potomac River on the southern, or Virginia shore, as defined in the Black-Jenkins Award of 1877 and as laid out in the Mathews-Nelson Survey of 1927, beginning at the intersection of the Potomac River and the District of Columbia line at Jones Point and running to Smiths Point; and thence in a straight line across the mouth of the Potomac River on the established line from Smiths Point to Point Lookout, to the mean low water mark at Point Lookout, the place of beginning.

"Article III

"Commission Powers and Duties

"SECTION 1. OYSTER BARS.—The Commission shall make a survey of the oyster bars within its jurisdiction and may reseed and replant said oyster bars as may from time to time be necessary.

"SEC. 2. FISH AND SEAFOOD.—The Commission may by regulation prescribe the type, size and description of all species of finfish, crabs, oysters, clams and other shellfish which may be taken or caught, within its jurisdiction, the places where they may be taken or caught, and the manner of taking or catching.

"SEC. 3. RESEARCH.—The Commission shall maintain a program of research relating to the conservation and repletion of the fishery resources within its jurisdiction, and to that end may cooperate and contract with scientists and public and private scientific agencies engaged in similar work, and may purchase, construct, lease, borrow or otherwise acquire by any lawful method such property, structures, facilities, or equipment as it deems necessary.

"SEC. 4. LICENSES.—(a) The Commission shall issue such licenses as it may prescribe which shall thereupon be required for the taking of finfish, crabs, oysters, clams or other shellfish from the waters within the jurisdiction of the Commission, and for boats, vessels and equipment used for such taking. Recognizing that the right of fishing in the territory over which the Commission shall have jurisdiction is and shall be common to and equally enjoyed by the citizens of Virginia and Maryland, the Commission shall make no distinction between the citizens of Virginia or Maryland in any rule, regulation or the granting of any licenses, privileges, or rights under this compact.

"(b) Licenses for the taking of oysters and clams and the commercial taking of finfish and crabs within the jurisdiction of the Commission shall be granted only to citizens of Maryland or Virginia who have resided in either or both States for at least twelve months immediately preceding the application for the license. Within six months after the effective date of this compact, the Commission shall adopt a schedule of licenses, the privileges granted thereby, and the fees therefor, which may be modified from time to time in the discretion of the Commission.

"(c) The licenses hereby authorized may be issued at such places, by such persons, and in accordance with such procedures as the Commission may determine.

"Sec. 5. Expenditures.—The Commission is authorized to expend funds for the purposes of general administration, repletion of the fish and shellfish in the Potomac River, and the conservation and research programs authorized under this compact, subject to the limitations provided in this compact.

"Sec. 6. Grants, contributions, etc.—The Commission is authorized to receive and accept (or to refuse) from any and all public and private sources such grants, contributions, appropriations, donations, and gifts as may be given to it, which shall be paid into and become part of the General Fund of the Commission, except where the donor instructs that it shall be used for a specific project, study, purpose, or program, in which event it shall be placed in a special account, which shall be administered under the same procedure as that prescribed for the General Fund.

"Sec. 7. Cooperation of State Agencies.—The Commission may call upon the resources and assistance of the Virginia Fisheries Laboratory, the Maryland Department of Research and Education, and all other agencies institutions, and departments of Maryland and Virginia which shall cooperate fully with the Commission upon such request.

"Sec. 8. Regulations.—The Commission shall have the power to make, adopt and publish such rules and regulations as may be necessary or desirable for the conduct of its meetings, such hearings as it may from time to time hold, and for the administration of its affairs.

"Sec. 9. Inspection Tax.—The Commission may impose an inspection tax, in an amount as fixed from time to time by the Commission, not exceeding 25 cents per bushel, upon all oysters caught within the limits of the Potomac River. The tax shall be paid by the buyer at the place in Maryland or Virginia where the oysters are unloaded from vessels and are to be shipped no further in bulk in vessel, to an agent of the Commission, or to such officer or employee of the Virginia Fisheries Commission or of the Maryland Department of Tidewater Fisheries, as may be designated by the Commission, and by him paid over to the Commission.

"Article IV

"Commission Regulations—Procedure and Review

"Section 1. Notice, Hearing, Vote.—No regulation shall be adopted by the Commission unless:

"(a) A public hearing is held thereon;

"(b) Prior to the hearing the Commission has given notice of the proposed regulation by publication thereof at least once a week for three successive weeks in at least one newspaper published, or having a general circulation in each county of Maryland and Virginia contiguous to the waters within the Commission's jurisdiction, the first such publication to be at least thirty days but not more than forty-five days prior to the date of the hearing;

"(c) A copy of the proposed regulation is mailed at least thirty days but not more than forty-five days prior to the hearing, to the clerk of the court of each county of Maryland and Virginia contiguous to the waters within the Commission's jurisdiction, who shall post the same in a conspicuous place at or in the courthouse; and

"(d) The regulation is approved by at least four members of the Commission.

"Sec. 2. Recording, Effective Date.—(a) Regulations of the Commission shall be exempt from the provisions of Chapter 1.1 (§ 9–6.1 et seq.) of Title 9 of the Code of Virginia (1950 Edition, as amended from time to time), and of section 9 of Article 41 of the Annotated Code of Maryland (1957 Edition, as amended from time to time). Copies of Commission regulations shall be kept on public file and available for public reference in the offices of the Commission, the office of the clerk of court in each county of Maryland and Virginia contiguous to the waters within the Commission's jurisdiction, the office of the Virginia Division of Statutory Research and Drafting, the office of the Maryland Department of Legislative Reference, the office of the Virginia Fisheries Commission, and the office of the Maryland Department of Tidewater Fisheries.

"(b) No regulation of the Commission shall become effective until thirty (30) days after the date of its adoption, or such later date as may be fixed by the Commission.

"(c) Leasing, dredging or patent tonging shall be authorized by the Commission only if such authorization is granted by joint action of the Legislatures of Maryland and Virginia.

"Sec. 3. Review.—Any person aggrieved by any regulation or order of the Commission may at any time file a petition for declaratory judgment with respect to the validity or construction thereof, in the circuit court of any county in Maryland or Virginia contiguous to the waters within the Commission's jurisdiction. A review of the final judgment of the circuit court may be appealed to the court of highest appellate jurisdiction of the State in accordance with the rules of procedure in each State.

"Sec. 4. Revision by Legislative Action.—Regulations of the Commission may be amended, modified, or rescinded by joint enactment of the General Assembly of Maryland and the General Assembly of Virginia.

"Sec. 5. Revision of Compact.—At any time subsequent to the adoption of this compact the Governor or Legislature of either Maryland or Virginia may call for the appointment of a Commission to make further study and recommendations concerning revision and amendments to this compact, at which time the Governors of the respective States shall act forthwith in compliance with the request for the appointment of said Commission.

"Article V

"Enforcement of Laws and Regulations: Penalties

"Section 1. Responsibility for Enforcement.—The regulations and orders of the Commission shall be enforced by the joint effort of the law enforcement agencies and officers of Maryland and Virginia.

"Sec. 2. Penalties.—The violation of any regulation of the Commission shall be a misdemeanor. Unless a lesser punishment is provided by the Commission, such violation shall be punishable by a fine not to exceed one thousand dollars ($1,000.00) or confinement in a penal institution for not more than one (1) year, or both, in the discretion of the court, and any vessel, boat, or equipment used in the taking of finfish, crabs, oysters, clams, or other shellfish from the Potomac River in violation of any regulation of the Commission or of applicable laws may be confiscated by the court, upon the abandonment thereof or the conviction of the owner or operator thereof.

"Sec. 3. Jurisdiction of Court.—The officer making an arrest or preferring a charge for violation of a regulation of the Commission or an applicable State law respecting the waters within the Commission's jurisdiction shall take the alleged offender to a court of competent jurisdiction in either State in a county adjacent to the portion of the Potomac River where the alleged offense occurred, which shall thereupon have jurisdiction over the offense.

"Sec. 4. Disposition of Fines and Forfeitures.—All fines imposed for violation of regulations of the Commission or applicable State laws respecting the waters within the Commission's jurisdiction shall be paid into the court in which the case is prosecuted, and accounted for under the laws applicable to that court. Any property confiscated under the provisions of this compact shall be turned over to the Commission, which may retain, use, or dispose of it as it deems best.

"Article VI

"Commission finances

"Section 1. Budget.—The Commission shall approve and adopt a proposed annual budget showing estimated income, revenues, appropriations, and grants from all sources, and estimated necessary expenditures and shall send a copy thereof to the Governors of Maryland and Virginia.

"Sec. 2. Appropriations.—The said Governors shall place in the proposed budget of their respective States for each year the sum of not less than fifty thousand dollars ($50,000.00) for the expenses and the other purposes of the Commission for that year, except that none of the sum so appropriated shall be used for law enforcement purposes; and the General Assembly of each of the two states agrees to appropriate annually not less than this sum to the Commission.

"Sec. 3. General Fund.—(a) The General Fund shall consist off:

"(1) All income and revenue received from the issuance of licenses under this compact;

"(2) The proceeds of the disposition of property confiscated pursuant to the provisions of this compact;

"(3) The proceeds of the inspection tax upon oysters imposed pursuant to this compact; and

"(4) The funds appropriated to the Commission by the two States.

"(b) The General Fund of the Commission shall be kept in such bank or depository as the Commission shall from time to time select. The General Fund shall be audited annually by the Auditor of Public Accounts of Virginia and the State Auditor of Maryland acting jointly, and at such other times as the Commission may request.

"Article VII

"Effect on existing laws and prior compact

"Section 1. Existing Rights.—The rights including the privilege of erecting and maintaining wharves and other improvements, of the citizens of each State along the shores of the Potomac River adjoining their lands shall be neither diminished, restricted, enlarged, increased nor otherwise altered by this compact, and the decisions of the courts construing that portion of Article VII of the Compact of 1785 relating to the rights of riparian owners shall be given full force and effect.

"Sec. 2. Existing Laws.—The laws of the State of Maryland relating to finfish, crabs, oysters, and clams in the Potomac River, as set forth in Article 66C of the Annotated Code of Maryland and as in effect on December 1, 1958, shall be and remain applicable in the Potomac River except to the extent changed, amended, or modified by regulations of the Commission adopted in accordance with this compact.

"SEC. 3. EXISTING LICENSES.—The rights and privileges of licensees to take and catch finfish, crabs, oysters, clams, and other shellfish in the Potomac River, which are in effect at the time this compact becomes effective, shall continue in force for a period of six months at which time every such license and every such right and privilege shall be abrogated.

"Article VIII

"Effect of Ratification

"These articles shall be laid before the Legislatures of Virginia and Maryland, and their approbation being obtained, shall be confirmed and ratified by a law of each State, never to be repealed or altered by either, without the consent of the other.

"Article IX

"Effective Date

"This compact, which takes the place of the Compact of 1785 between Maryland and Virginia, shall take effect at the expiration of sixty days after the completion of the last act legally necessary to make it operative, and thereupon the said Compact of 1785 shall no longer have any force or effect."

SEC. 2. (a) The right to alter, amend, or repeal this joint resolution is hereby expressly reserved.

(b) The right is hereby reserved to the Congress or any of its standing committees to require of the Potomac River Fisheries Commission the disclosure and furnishing of such information and data as is deemed appropriate by the Congress or any committee thereof having jurisdiction of the subject matter of this resolution.

The resolution was ordered to be engrossed and read the third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DELAWARE-NEW JERSEY COMPACT

The Clerk called the resolution (H.J. Res. 783) granting consent of Congress to the State of Delaware and the State of New Jersey to enter into a compact to establish the Delaware River and Bay Authority for the development of the area in both States bordering the Delaware River and Bay.

Mr. WIDNALL. Mr. Speaker, reserving the right to object, I would like to ask a question about this.

Do you know whether or not this resolution has been amended to take care of the situation in Cape May, N.J.?

Mr. WILLIS. If the gentleman will yield, Mr. Speaker, I do not know exactly the amendment the gentleman has in mind. I would say this to him, that the Governors of these two States, Delaware and New Jersey, appeared before the committee. They made certain recommendations which we adopted. The Department of the Interior and the Department of Commerce made certain recommendations; and, very happily, we were able to get everyone together, and as far as I know everybody is satisfied.

As I say, I do not know exactly the amendment the gentleman referred to, but I can tell him what the amendments are. There are five, and as far as I know, everyone is satisfied.

Mr. WIDNALL. Senator Sandman, of Cape May, N.J.——

Mr. WILLIS. If he was the gentleman who appeared as a witness, my answer to the House is that the two State senators, one from each State, appeared, and they were satisfied. Again I state I do not know exactly what amendment the gentleman is talking about, but I do know that the Governors and the State senators, the Department of the Interior, and the Department of Commerce were all satisfied.

Mr. WIDNALL. The project has to do with a proposed ferry running from Cape May to Delaware. Senator Sandman seemed to feel that under the bill as offered there was some question.

Mr. WILLIS. The question of the operation of the ferry is not involved in this bill, I would say to the gentleman from New Jersey.

Mr. WIDNALL. And it would be possible still to go ahead with the project and have terminal facilities?

Mr. WILLIS. That would depend on the local laws. This bill would not have any effect on it.

Mr. WIDNALL. They would not be barred from having terminal facilities?

Mr. WILLIS. The bill does not deal with that.

Mr. AUCHINCLOSS. Mr. Speaker, will the gentleman yield?

Mr. WIDNALL. I yield.

Mr. AUCHINCLOSS. The project the gentleman refers to is to come before another committee in separate legislation. If this bill is passed today it will have a definite bearing on the legislation which is before the Public Works Committee covering the Cape May operation which he has in mind. I think it will specifically meet the objections that have been raised by the State senator in New Jersey who probably communicated with the gentleman. He has communicated with me, at least.

Mr. WIDNALL. Mr. Speaker, I withdraw my reservation of objection.

Mr. McDOWELL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Delaware?

There was no objection.

Mr. McDOWELL. Mr. Speaker, the purpose of House Joint Resolution 783 is to grant the consent of Congress to the States of Delaware and New Jersey to enter into a compact to establish the Delaware River and Bay Authority for developing the area in both States bordering the Delaware River and Bay.

The compact has been adopted by identical legislation of the States of Delaware and New Jersey.

In summary, the compact establishes the authority for the purposes of: (a) Planning and constructing crossings; (b) planning and constructing transportation and terminal facilities; and (c) performance of other functions hereafter entrusted to Delaware and New Jersey.

The compact details the powers to be exercised by the authority and also permits it to be given additional powers.

The authority will be authorized to collect tolls on crossings and facilities and to pledge tolls for the repayment of borrowings. The aggregate of such tolls must be at least sufficient to defray operating and acquisition costs and the establishment of reserves.

Section 1 of the joint resolution gives the consent of Congress to Delaware and New Jersey to enter into the compact, reserving the right and jurisdiction of the United States in and over the area which forms the subject of the compact.

In addition, the compact contains the following reservations and conditions:

First. Projects of the authority shall be subject to the requirements of the Fish and Wildlife Coordination Act.

Second. Nothing in the resolution amends or supersedes the Delaware River Basin compact resolution.

In the 84th Congress I introduced legislation to amend the act entitled "An act authorizing the State of Delaware by and through its State highway department to construct, maintain, and operate a toll bridge across the Delaware River near Wilmington, Del."

The need for a second bridge and for new access roads in Delaware leading to the bridge were fully outlined by me and by others at the July 12, 1956 hearings held by the Subcommittee on Rivers and Harbors.

New Jersey insisted at that time that the construction and operation of transportation facilities between Delaware and New Jersey must be a joint project of the two States.

Delaware and New Jersey subsequently ratified legislation to permit the tolls to remain on the Delaware Memorial Bridge, the construction of a second bridge, and authorize the establishment of a ferry across that part of the Delaware Bay which is so wide that the construction of a bridge would not be economically feasible.

This legislation also provided that these vital projects could be financed by revenue bonds without the use of either tax money or bonds backed by the credit of the States of Delaware and New Jersey.

The Delaware-New Jersey compact fully recognizes what is so clearly obvious, that neither Delaware nor New Jersey can by themselves alone provide for the operation and development of such great and expensive transportation facilities as bridges, ferries, tunnels, or other crossings, and that the planning and operation of such vital facilities takes a good many years to work out.

Traffic surveys indicate that the present Delaware Memorial Bridge will reach its peak traffic capacity within the next 2 years.

The new bistate authority will require a reasonable time to plan for the construction of an additional crossing; a new bridge to facilitate the expected flow of traffic over this important waterway will require at least 5 years to plan and build.

Both Delaware and New Jersey have completed legislative action to prepare for planning and constructing this additional crossing. It only remains for the Congress to ratify the Delaware-New Jersey compact.

I urge you to pass this House joint resolution, which I am proud to have authored, so that the traveling public may not be inconvenienced by a bottleneck which would stifle interstate travel and commerce.

In doing so, you will be providing for the present and the future.

The SPEAKER. Is there objection to the present consideration of the resolution?

There being no objection, the Clerk read the resolution, as follows:

Whereas, the State of Delaware and the State of New Jersey, pursuant to legislative authority adopted by each State, being 53 Laws of Delaware, chapter 145, and P.L. 1961, chapter 66 of the Laws of New Jersey, have provided, subject to the consent of Congress, for a compact, known as the Delaware-New Jersey Compact, establishing "The Delaware River and Bay Authority" for the development of the area in both States bordering the said Delaware River and Bay; and

Whereas, said compact reads as follows:

DELAWARE-NEW JERSEY COMPACT

Whereas, The States of Delaware and New Jersey are separated by the Delaware River and Bay which create a natural obstacle to the uninterrupted passage of traffic other than by water and with normal commercial activity between the two States thereby hindering the economic growth and development of those areas in both States which border the River and Bay; and

Whereas, the pressures of existing trends from increasing traffic, growing population and greater industrialization indicate the need for closer cooperation between the two States in order to advance the economic development and to improve crossings, transportation, terminal and other facilities of the area; and

Whereas, the financing, construction, operation and maintenance of such crossings, transportation, terminal and other facilities of commerce and the over-all planning for future economic development of the area may be best accomplished for the benefit of the two States and their citizens, the region and Nation, by the cordial cooperation of Delaware and New Jersey by and through a joint or common agency or authority;

Now, therefore, the State of Delaware and the State of New Jersey, do hereby solemnly covenant and agree, each with the other as follows:

Article I

Short Title

This Compact shall be known as the "Delaware-New Jersey Compact."

Article II

Definitions

"Crossing" means any structure or facility adapted for public use in crossing the Delaware River or Bay between the States, whether by bridge, tunnel, ferry or other device, and by any vehicle or means of transportation of persons or property, as well as all approaches thereto and connecting and service routes and all appurtenances and equipment relating thereto.

"Transportation facility" and "terminal facility" mean any structure or facility other than a crossing as herein defined, adapted for public use within each of the States party hereto in connection with the transportation of persons or property, including railroads, motor vehicles, watercraft, airports and aircraft, docks, wharves, piers, slips, basins, storage places, sheds, warehouses, and every means or vehicle of transportation now or hereafter in use for the transportation of persons and property or the storage, handling or loading of property, as well as all apurtenances and equipment related thereto.

"Appurtenances" and "equipment" mean all works, buildings, structures, devices, appliances and supplies, as well as every kind of mechanism, arrangement, object or substance related to and necessary or convenient for the proper construction, equipment, maintenance, improvement and operation of any crossing, transportation facility or terminal facility.

"Project" means any undertaking or program for the acquisition or creation of any crossing, transportation facility or terminal facility, or any part thereof, as well as for the operation, maintenance and improvement thereof.

"Tunnel" means a tunnel of one or more tubes.

"Governor" means any person authorized by the Constitution and law of each State to exercise the functions, powers and duties of that office.

"Authority" means the Authority created by this Compact or any agency successor thereto.

The singular whenever used herein shall include the plural, and the plural shall include the singular.

Article III

Faithful Cooperation

They agree to and pledge, each to the other, faithful cooperation in the effectuation of this Compact and any future amendment or supplement thereto, and of any legislation expressly in implementation thereof hereafter enacted, and in the planning, development, financing, construction, operation, maintenance and improvement of all projects entrusted to the Authority created by this Compact.

Article IV

Establishment of Agency; Purposes

The two States agree that there shall be created and they do hereby create a body politic, to be known as "The Delaware River and Bay Authority" (for brevity hereinafter referred to as the "Authority"), which shall constitute an agency of government of the State of Delaware and the State of New Jersey for the following general public purposes, and which shall be deemed to be exercising essential governmental functions in effectuating such purposes, to wit:

(a) The planning, financing, development, construction, purchase, lease, maintenance, improvement and operation of crossings between the States of Delaware and New Jersey across the Delaware River or Bay at any location south of the boundary line between the State of Delaware and the Commonwealth of Pennsylvania as extended across the Delaware River to the New Jersey shore of said river, together with such approaches or connections thereto as in the judgment of the Authority are required to make adequate and efficient connections between such crossings and any public highway or other routes in the State of Delaware or in the State of New Jersey; and

(b) The planning, financing, development, construction, purchase, lease, maintenance, improvement and operation of any transportation or terminal facility within those areas of both States which border on or are adjacent to the Delaware River or Bay south of the aforesaid line and which in the judgment of the States is required for the sound economic development of the area; and

(c) The performance of such other functions as may be hereafter entrusted to the Authority by concurrent legislation expressly in implementation hereof.

The authority shall not undertake any project or part thereof, other than a crossing, without having first secured approval thereof by concurrent legislation of the two States expressly in implementation hereof.

Article V

Commissioners

The Authority shall consist of ten Commissioners, five of whom shall be residents of and qualified to vote in, and shall be appointed from, the State of Delaware, and five of whom shall be residents of and qualified to vote in, and shall be appointed from, the State of New Jersey; not more than three of the Commissioners of each State shall be of the same political party; the Commissioners for each State shall be appointed in the manner fixed and determined from time to time by the law of each State respectively. Each Commissioner shall hold office for a term of five years, and until his successor shall have been appointed and qualified, but the terms of the first Commissioners shall be so designated that the term of one Commissioner from each State shall expire each year. All terms shall run to the first day of July. Any vacancy, however created, shall be filled for the unexpired term only. Any Commissioner may be suspended or removed from office as provided by law of the State from which he shall be appointed.

Commissioners shall be entitled to reimbursement for necessary expenses to be paid only from revenues of the Authority and may not receive any other compensation for services to the Authority except such as may from time to time be authorized from such revenues by concurrent legislation.

Article VI

Board Action

The Commissioners shall have charge of the Authority's property and affairs and shall, for the purpose of doing business, constitute a Board; but no action of the Commissioners shall be binding or effective unless taken at a meeting at which at least three Commissioners from each State are present, and unless at least three Commissioners from each State shall vote in favor thereof. The vote of any one or more of the Commissioners from each State shall be subject to cancellation by the Governor of such State at any time within 10 days (Saturdays, Sundays, and public holidays in the particular State excepted) after receipt at the Governor's Office of a certified copy of the minutes of the meeting at which such vote was taken. Each State may provide by law for the manner of delivery of such minutes, and for notification of the action thereon.

Article VII

General Powers

For the effectuation of its authorized purposes, the Authority is hereby granted the following powers:

a. To have perpetual succession.

b. To adopt and use an official seal.

c. To elect a chairman and a vice-chairman from among the commissioners. The chairman and vice-chairman shall be elected from different States, and shall each hold office for two years. The chairmanship and vice-chairmanship shall be alternated between the two States.

d. To adopt by-laws to govern the conduct of its affairs by the Board of Commissioners, and it may adopt rules and regulations and may make appropriate orders to carry out and discharge its powers, duties and functions, but no by-law, or rule, regulation or order shall take effect until it has been filed with the Secretary of State of each State or in such other manner in each State as may be provided by the law thereof. In the establishment of rules, regulations and orders respecting the use of any crossing, transportation or terminal facility owned or operated by the Authority, including approach roads, it shall consult with appropriate officials of both States in order to insure, as far as possible, uniformity of such rules, regulations and orders with the law of both States.

e. To appoint, or employ, such other officers, agents, attorneys, engineers and employees as it may require for the performance of its duties and to fix and determine their qualifications, duties, compensation, pensions, terms of office and all other conditions and terms of employment and retention.

f. To enter into contracts and agreements with either State or with the United States,

or with any public body, department, or other agency of either State or of the United States or with any individual, firm or corporation, deemed necessary or advisable for the exercise of its purposes and powers.

g. To accept from any government or governmental department, agency or other public or private body, or from any other source, grants or contributions of money or property as well as loans, advances, guarantees, or other forms of financial assistance which it may use for or in aid of any of its purposes.

h. To acquire (by gift, purchase or condemnation), own, hire, lease, use, operate and dispose of property, whether real, personal or mixed, or of any interest therein, including any rights, franchise and property for any crossing, facility or other project owned by another, and which the Authority is authorized to own and operate.

i. To designate as express highways, and control public and private access thereto, all or any approaches to any crossing or other facility of the Authority for the purpose of connecting the same with any highway or other route in either State.

j. To borrow money and to evidence such loans by bonds, notes or other obligations, either secured or unsecured, and either in registered or unregistered form, and to fund or refund such evidences of indebtedness, which may be executed with facsimile signatures of such persons as may be designated by the Authority and by a facsimile of its corporate seal.

k. To procure and keep in force adequate insurance or otherwise provide for the adequate protection of its property, as well as to indemnify it or its officers, agents or employees against loss or liability with respect to any risk to which it or they may be exposed in carrying out any function hereunder.

l. To grant the use of, by franchise, lease or otherwise, and to make charges for the use of, any crossing, facility or other project or property owned or controlled by it.

m. To exercise the right of eminent domain to acquire any property or interest therein.

n. To determine the exact location, system and character of and all other matters in connection with any and all crossings, transportation or terminal facilities or other projects which it may be authorized to own, construct, establish, effectuate, operate or control.

o. To exercise all other powers not inconsistent with the Constitutions of the two States or of the United States, which may be reasonably necessary or incidental to the effectuation of its authorized purposes or to the exercise of any of the foregoing powers, except the power to levy taxes or assessments, and generally to exercise in connection with its property and affairs, and in connection with property within its control, any and all powers which might be exercised by a natural person or a private corporation in connection with similar property and affairs.

Article VIII

Additional Powers

For the purpose of effectuating the authorized purposes of the Authority, additional powers may be granted to the Authority by legislation of either State without the concurrence of the other, and may be exercised within such State, or may be granted to the Authority by Congress and exercised by it; but no additional duties or obligations shall be undertaken by the Authority under the law of either State or of Congress without authorization by the law of both States.

Article IX

Eminent Domain

If the Authority shall find and determine that any property or interest therein is required for a public use because in furtherance of the purposes of the Authority, said determination shall not be affected by the fact that such property has theretofore been taken over or is then devoted to a public use, but the public use in the hands or under the control of the Authority, shall be deemed superior to the public use for which it has theretofore been taken or to which it is then devoted.

In any condemnation proceedings in connection with the acquisition by the Authority of property or property rights of any character in either State and the right of inspection and immediate entry thereon, through the exercise by it of its power of eminent domain, any existing or future law or rule of court of the State in which such property is located with respect to the condemnation of property for the construction, reconstruction, and maintenance of highways therein, shall control. The Authority shall have the same power and authority with respect thereto as the State agency named in any such law; provided that nothing herein contained shall be construed as requiring joint or concurrent action by the two States with respect to the enactment, repeal or amendment of any law or rule of court on the subject of condemnation under which the Authority may proceed by virtue of this Article.

If the established grade of any street, avenue, highway or other route shall be changed by reason of the construction by the Authority of any work so as to cause loss or injury to any property abutting on such street, avenue, highway or other route, the Authority may enter into voluntary agreements with such abutting property owners and pay reasonable compensation for any loss or injury so sustained, whether or not it be compensable as damages under the condemnation law of the State.

The power of the Authority to acquire property by condemnation shall be a continuing power, and no exercise thereof shall be deemed to exhaust it.

Article X

Revenues and Application

The Authority is hereby authorized to establish, levy and collect such tolls and other charges as it may deem necessary, proper or desirable, in connection with any crossing, transportation or terminal facility or other project which it is or may be authorized at any time to construct, own, operate or control, and the aggregate of said tolls and charges shall be at least sufficient (1) to meet the combined expenses of operation, maintenance and improvement thereof (2) to pay the cost of acquisition or construction, including the payment, amortization and retirement of bonds or other securities or obligations assumed, issued or incurred by the Authority, together with interest thereon and (3) to provide reserves for such purposes; and the Authority is hereby authorized and empowered, subject to prior pledges, if any, to pledge such tolls and other revenues or any part thereof as security for the repayment with interest of any moneys borrowed by it or advanced to it for its authorized purposes and as security for the satisfaction of any other obligations assumed by it in connection with such loans or advances. There shall be allocated to the cost of the acquisition, construction, operation, maintenance and improvement of such facilities and projects, such proportion of the general expenses of the Authority as it shall deem properly chargeable thereto.

Article XI

Covenant With Bondholders

The two said States covenant and agree with each other and with the holders of any bonds or other securities or obligations of the Authority, assumed, issued or incurred by it and as security for which there may be pledged the tolls and revenues or any part thereof of any crossing, transportation or terminal facility or other project, that the two said States will not, so long as any of such bonds or other obligations remain outstanding and unpaid, diminish or impair the power of the Authority to establish, levy and collect tolls and other charges in connection therewith, and that neither of the two said States will, so long as any of such bonds or other obligations remain outstanding and unpaid, authorize any crossing of the Delaware River or Delaware Bay south of the line mentioned in Article IV (a) of this Compact, by any person or body other than the Authority; unless, in either case, adequate provision shall be made by law for the protection of those advancing money upon such obligations.

Article XII

Securities Lawful Investments

The bonds or other securities or obligations which may be issued by the Authority pursuant to this Compact, or any amendments hereof or supplements hereto, are hereby declared to be negotiable instruments, and are hereby made securities in which all State and municipal officers and bodies of each State, all banks, bankers, trust companies, savings banks, building and loan associations, saving and loan associations, investment companies and other persons carrying on a banking business, all insurance companies, insurance associations and other persons carrying on an insurance business, and all administrators, executors, guardians, trustees and other fiduciaries and all other persons whatsoever who are now or may hereafter be authorized to invest in bonds or other obligations of either State, may properly and legally invest any funds, including capital, belonging to them or within their control; and said obligations are hereby made securities which may properly and legally be deposited with and shall be received by any State or municipal officer or agency of either State for any purpose for which the deposit of bonds or other obligations of such State is now or may hereafter be authorized.

Article XIII

Tax Status

The powers and functions exercised by the Authority under this Compact and any amendments hereof or supplements hereto are and will be in all respects for the benefit of the people of the States of Delaware and New Jersey, the region and nation, for the increase of their commerce and prosperity and for the enhancement of their general welfare. To this end, the Authority shall be regarded as performing essential governmental functions in exercising such powers and functions and in carrying out the provisions of this compact and of any law relating thereto, and shall not be required to pay any taxes or assessments of any character, levied by either State or political subdivision thereof, upon any of the property used by it for such purposes, or any income or revenue therefrom, including any profit from a sale or exchange. The bonds or other securities or obligations issued by the Authority, their transfer and the interest paid thereon or income therefrom, including any profit from a sale or exchange, shall at all times be free from taxation by either State or any subdivision thereof.

Article XIV

Jurisdiction; Use of Lands

Each of the two States hereby consents to the use and occupancy by the Authority of any lands and property of the Authority in such State for the construction, operation, maintenance or improvement of any crossing, transportation or terminal facility or other project which it is or may be authorized at any time to construct, own or operate, including lands lying under water.

Article XV

Review and Enforcement of Rules

Judicial proceedings to review any by-law, rule, regulation, order or other action of the Authority or to determine the meaning or effect thereof, may be brought in such court of each State, and pursuant to such law or rules thereof, as a similar proceeding with respect to any agency of such State might be brought.

Each State may provide by law what penalty or penalties shall be imposed for violation of any lawful rule, regulation or order of the Authority, and, by law or rule of court, for the manner of enforcing the same.

Article XVI

No Pledge of Credit

The Authority shall have no power to pledge the credit or to create any debt or liability of the State of Delaware, of the State of New Jersey, or of any other agency or of any political subdivision of said States.

Article XVII

Local Cooperation

All municipalities, political subdivisions and every department, agency or public body of each of the States are hereby authorized and empowered to cooperate with, aid and assist the Authority in effectuating the provisions of this Compact and of any amendment hereof or supplement hereto.

Article XVIII

Depositaries

All banks, bankers, trust companies, savings banks and other persons carrying on a banking business under the laws of either State are authorized to give security for the safe-keeping and prompt payment of moneys of the authority deposited by it with them, in such manner and form as may be required by and may be approved by the Authority, which security may consist of a good and sufficient undertaking with such sureties as may be approved by the Authority, or may consist of the deposit with the Authority or other depositary approved by the Authority as collateral of such securities as the Authority may approve.

Article XIX

Agency Police

Members of the police force established by the Authority, regardless of their residence, shall have in each State, on the crossings, transportation or terminal facilities and other projects and the approaches thereto, owned, operated or controlled by the Authority, and at such other places and under such circumstances as the law of each State may provide, all the powers of investigation, detention and arrest conferred by law on peace officers, sheriffs or constables in such State or usually exercised by such officers in each State.

Article XX

Reports and Audits

The Authority shall make annual reports to the Governors and Legislatures of the State of Delaware and the State of New Jersey, setting forth in detail its operations and transactions, and may make such additional reports from time to time to the Governors and Legislatures as it may deem desirable.

It shall, at least annually, cause an independent audit of its fiscal affairs to be made and shall furnish a copy of such audit report together with such additional information or data with respect to its affairs as it may deem desirable to the Governors and Legislatures of each State.

It shall furnish such information or data with respect to its affairs as may be requested by the Governor or Legislature of each State.

Article XXI

Boundaries Unaffected

The existing territorial or boundary lines of the States, or the jurisdiction of the two States established by said boundary lines, shall not be changed hereby.

Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is hereby given to the States of Delaware and New Jersey to enter into the compact set forth in this resolution, except that nothing contained in such compact shall be construed as impairing or in any manner affecting any right or jurisdiction of the United States in and over the area which forms the subject of such compact.

SEC. 2. In addition to any other requirement of law, any project constructed by the Delaware River and Bay Authority in or over the navigable waters of the United States shall be subject to the procedural requirements of section 2(a) of the Fish and Wildlife Coordination Act, as amended (48 Stat. 401; 16 U.S.C. 662(a)).

SEC. 3. Nothing in this resolution shall be construed as—

(a) amending or superseding the provisions of the Act of September 27, 1961 (75 Stat. 688), or

(b) granting the consent of Congress to the use of tolls collected on any crossing for the financing of any transportation or terminal facility constructed or operated by the Authority, or

(c) granting advance consent of Congress for the performance by the Authority of other functions, as contemplated by Article IV, paragraph (c) of the Compact or for the assumption by the Authority of additional powers, as contemplated by Article VIII of the Compact.

SEC. 4. The right is hereby reserved to the Congress or any of its standing committees to require of the Authority the disclosure and furnishing of such information and data as is deemed appropriate by the Congress or any committee thereof having jurisdiction of the subject matter of this resolution.

SEC. 5. The right to alter, amend, or repeal this joint resolution is hereby expressly reserved.

The resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BYRD ARCTIC EXPEDITION OF 1926

The Clerk called the bill (H.R. 8419) to provide for the presentation of medals to the officers and men of the Byrd Arctic Expedition of 1926.

Mr. GROSS. Mr. Speaker, reserving the right to object, I should like to ask the gentleman if there is any monetary award whatever in connection with the presentation of these medals?

Mr. RIVERS of South Carolina. There is no monetary award. There were approximately 41 men who participated in this event which led to the first aerial flight over the North Pole by the late Richard E. Byrd and Floyd Bennett. These are the last remaining members of that 1926 expedition.

I think the cost would be merely that of designing and casting the medals, not more than a few hundred dollars. There is no monetary award involved.

Mr. GROSS. We will be confronted later in the day under suspension of the rules with a bill that would establish monetary awards. I will oppose it.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Navy shall present to the officers and men of the Byrd Arctic Expedition of 1926 medals of appropriate design and suitably inscribed to express the high admiration of the Congress and the American people for their heroic services in connection with such expedition, including the first aerial flight over the North Pole by then Commander Richard E. Byrd and Floyd Bennett. The Secretary of the Treasury shall cause to be struck such medals as the Secretary of the Navy may determine to be necessary to carry out the provisions of this Act. In the case of a posthumous presentation of any medal authorized by this Act, the Secretary of the Navy shall determine the appropriate recipient thereof.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

REQUIRE FILING OF SETTLEMENTS IN PATENT INTERFERENCES

The Clerk called the bill (H.R. 12513) to provide for public notice of settlements in patent interferences, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives by the United States of America in Congress assembled, That section 135, "Interferences", title 35 of the United States Code, is amended by adding thereto the following paragraph:

"No agreement or understanding between parties to an interference proceeding made in connection with or in contemplation of the termination of the proceeding, shall be enforceable unless in writing and a copy thereof filed in the Patent Office before the termination of the proceedings between said parties. A true copy of the agreement or understanding, including any collateral agreements referred to therein, must be filed; and, if the party filing the same so requests, the copy shall be kept separate from the file of the interference, and made available only to Government agencies on written request, or to any person on a showing of good cause. Failure to file the copy of such agreement of understanding shall render permanently unenforceable any patent, of such parties, involved in the interference or any patent subsequently issued on any application, of such parties, so involved. The Commissioner may, however, on a showing of good cause for failure to file within the time prescribed, permit the filing of the agreement or understanding during the six-month period subsequent to the termination of the proceeding as between the parties to said agreement or understanding."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

USE OF PUBLIC SPACE OVER AND UNDER 10TH STREET SW., DISTRICT OF COLUMBIA

The Clerk called the bill (H.R. 12398) to authorize the Administrator of General Services, in connection with the construction and maintenance of a Federal office building, to use the public space over and under 10th Street SW., in the District of Columbia.

Mr. FORD. Mr. Speaker, reserving the right to object, it seems to me this bill would be in violation of the Consent Calender rules and regulations.

I would like to have an explanation of the bill.

Mr. McFALL. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from California.

Mr. McFALL. The bill permits the use of public space over 10th Street for public building No. 5, which has been approved in the regular manner by the House and Senate Public Works Committees. Did the gentleman have any specific question in mind with regard to the violation of the rules of the Consent Calendar procedure?

Mr. FORD. I note that the estimated cost of the building is about $42 million. It is certainly a unique and unusual type of construction. I do not know of any other similar type of construction in the District of Columbia.

I wonder if we should not just let it go by for a couple of weeks and see if there are any bona fide objections to this unusual and unique approach to the utilization of this space.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Iowa.

Mr. GROSS. I would also like to know if this bill authorizes construction in any way, shape, form, or manner, by way of the Consent Calendar. I would like also to know if there is any restriction against Federal employees bringing their dogs to the offices in the building if one is to be constructed?

Mr. FORD. I suspect the new approach is to provide adequate and proper space for any purpose.

Mr. GROSS. The gentleman from Iowa likes dogs, but he thinks dogs belong in their proper place. And he doubts that a Federal office building, including the Justice Department, is the proper place. I wonder, too, about the number of secretaries that are necessary to take Attorney General Kennedy's dog outside periodically for air.

Mr. BROWN. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Ohio.

Mr. BROWN. Perhaps they are going to construct this building for the dogs, because the country seems to be going to the dogs anyway.

Mr. FORD. I did not intend to get into this aspect of the problem at the time I reserved the right to object. I think there are enough serious questions involved that we ought to pass it over for a few weeks, and in the meantime take a good look at it. There have been so many delays on these projects that another 2 weeks I do not think is material.

Mr. McFALL. Whether or not the gentleman wants to ask unanimous consent to put it over for 2 weeks is within his own discretion, but in reply to his question: This building has previously been fully authorized by the Public Works Committee in the procedure required by the Public Buildings Act of 1959. This bill does not authorize the building, so that it does not authorize a $42 million building, and it is not prohibited by the Consent Calendar procedure. All the bill does is to specifically permit the use of the public space over 10th Street. It does not have anything to do with the building itself. It permits the use of the public space so that a new type of design that has been approved by the agencies might be used in this manner.

Mr. FORD. We are having such a controversy in the other body about the public interest in space and related areas. Our colleagues in the other body went on for 5 or 6 days, not discussing the merits of the issue but rather some procedural matters, making a spectacle over there, in my opinion. I think we ought to let this go over. I therefore withdraw my reservation of objection and ask unanimous consent that the bill be passed over without prejudice.

Mr. AUCHINCLOSS. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield to the gentleman from New Jersey.

Mr. AUCHINCLOSS. May I say to the gentleman that this measure has had the very careful consideration—and I speak for the minority—by the Committee on Public Works. I think it is in the interest of economy and efficiency. I do not believe that if we postpone consideration of it for a few weeks longer there will be any change in the situation whatsoever. Therefore, I hope the gentleman from Michigan [Mr. FORD] will think that over and, perhaps, withdraw his reservation.

Mr. FORD. The gentleman from New Jersey [Mr. AUCHINCLOSS] is one of the most persuasive and effective Members in the House of Representatives. Solely and exclusively because of his intercession I will withdraw my reservation.

Mr. AUCHINCLOSS. I thank the gentleman.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services, in connection with the construction and maintenance of a Federal office building on the south side of Independence Avenue Southwest in the District of Columbia, is authorized to use the public space over and under that portion of Tenth Street Southwest which is adjacent to such property as has been or may be acquired by the Administrator of General Services as a site for said building. Such authority shall be exercised only to the extent that such use is not inconsistent with the use of said street by the general public for the purpose of travel.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that S. 3525, to authorize the Administrator of General Services, in connection with the construction and maintenance of a Federal office building, to use the public space under and over 10th Street SW. in the District of Columbia, and for other purposes, an identical bill, be considered in lieu of H.R. 12398, the House bill.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services, in connection with the construction and maintenance of a Federal office building on the south side of Independence Avenue Southwest in the District of Columbia, is authorized to use the public space over and under that portion of Tenth Street Southwest which is adjacent to such property as has been or may be acquired by the Administrator of General Services as a site for said building. Such authority shall be exercised only to the extent that such use is not inconsistent with the use of said street by the general public for the purpose of travel.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill was laid on the table.

PROTECTION OF CLASSIFIED INFORMATION

The Clerk called the bill (H.R. 11363) to amend the Internal Security Act of 1950 to provide for the protection of classified information released to or within U.S. industry, and for other purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. LINDSAY. Mr. Speaker, reserving the right to object, I would like to ask the author of the bill a couple of questions about bringing this bill up under the Consent Calendar.

I objected to this bill on May 21 when the bill was then brought up under the Consent Calendar. I suggested, in view of the doubtful constitutionality of this bill and its extremely controversial nature, that it would be proper only to consider it under suspension of the rules or under a rule itself, but not by unanimous consent on the Consent Calendar.

Mr. Speaker, unless I, perhaps, misunderstood the gentleman from Pennsylvania, I got the impression from the colloquy we had on May 21 that the bill would be brought up under a procedure which would permit full debate.

Am I correct in thinking that?

Mr. WALTER. If the gentleman will yield—I know the gentleman is under a wrong impression. Actually, the matter here is so very simple that no one on our committee felt that the time of the House should be taken up by doing more than merely explaining what was in the bill. After all, what the bill provides is now contained in an Executive order. If the security of the United States is to be protected and if security risks and unauthorized people are to be deprived of the opportunity to know the secrets of the Department of Defense, then we must have legislation on this subject. As to the now existing Executive order covering this area, the Supreme Court in the case of Greene against McElroy indicated that any such order ought to be supported by legislation. Now, they did not go so far as to say they would nullify any Executive order. But they made it abundantly clear, especially to those of us who are not so sure about what the Supreme Court is going to do on tomorrow, that it was necessary to enact legislation in order to protect the vital defense secrets of our Republic.

Mr. LINDSAY. As I read Greene against McElroy, the Supreme Court did not pass on the constitutionality of the procedures that were in question.

Mr. WALTER. But the gentleman has passed on the constitutionality himself.

Mr. LINDSAY. The Court did not pass on it, but it indicated, I think pretty clearly, that the constitutionality of a procedure that does not provide for cross-examination and Court review, are under very grave doubt, and under those circumstances it seems to me that this bill ought to be fully debated. It is serious enough when men can be separated from their employment through procedures which do not permit confrontation and the opportunity to cross-examine in the Government establishment itself, but when this procedure goes into the whole economy of the country, then you have something that is quite serious, in my judgment.

Mr. WALTER. I am afraid that the gentleman does not understand what the bill provides, because it does——

Mr. LINDSAY. I have read the bill and understand it.

Mr. WALTER. It does provide for confrontation. It deprives a person of confrontation when, in the judgment of the Secretary of Defense, it is not in the public interest to permit a person against whom charges have been filed to know who the people are who are working for the United States in the security field. But confrontation is generally mandated in all other cases. Furthermore, everyone is entitled to judicial review under the provisions of this law.

Mr. LINDSAY. The gentleman just is not correct about that. I have read the bill a dozen times. There is no judicial review written into this bill. The only possible court review for a person who has been discharged from employment would be through nonstatutory attempts at court review, possibly by an injunction suit attacking the constitutionality of the bill. But the bill has no provision for judicial review written into it. It seems to me that it should have.

Mr. WALTER. Of course, the general basic principles of law apply to this. If there has been an abuse and if a decision has been capricious and arbitrary, of course the general law applies.

Mr. LINDSAY. Mr. Speaker, when President Eisenhower retired from the Presidency he made a very important farewell address in which he issued a stern warning to "guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex." He went on:

> We must never let the weight of this combination endanger our liberties or democratic process.

Mr. WILLIS. Mr. Speaker, will the gentleman yield?

Mr. LINDSAY. I yield to the gentleman.

Mr. WILLIS. The gentleman will concede, I think, however, that this bill would implement an executive order either issued by or certainly effective during the administration of the recent great President, Mr. Eisenhower. So he is in favor of it. That was the rule while he was in office. And this carries out the suggestion of the Supreme Court in the case of Greene against McElroy that it would be best for Congress to give its blessing to this Executive order. That is all the bill does.

Mr. LINDSAY. Of course, I think the gentleman has not stated accurately what the majority opinion of the Supreme Court was. The Court said that Congress had not authorized the procedures——

Mr. WILLIS. That is right.

Mr. LINDSAY (continuing). That were being used by the executive branch at that time.

Mr. WILLIS. That is right.

Mr. LINDSAY. And then it went on to say:

> We do not say whether or not those procedures that are being used are constitutional.

Then it went on and further indicated that they were of doubtful constitutionality.

Mr. WILLIS. Mr. Speaker, will the gentleman yield further?

Mr. LINDSAY. I yield further.

Mr. WILLIS. Of course, the Supreme Court acted as the gentleman described; namely, it said in that case that what was before it was simply an order of the Secretary of Defense, not an Executive order of the President, and without congressional approval. Then it proceeded to say:

> Well, we, of course, want to know what we may have before us if and when Congress acts.

But it could not anticipate the bill that we would pass to carry out its own suggestion.

Mr. LINDSAY. Does not the gentleman think it would be desirable to have the bill on the floor for debate so that those who are opposed to the bill in its present form, which would include myself, would have full opportunity to lay out an argument, and the gentleman from Louisiana and the chairman of the Committee on Un-American Activities likewise would be able to lay a foundation which the Court could later read which would argue just why the procedures established in the bill are necessary and constitutional?

Mr. WILLIS. I would never be in favor of depriving a Member of his rights. We are now on the Consent Calendar and a Member has the right to object. I think we can debate it today. I have no objection to debating it. I think these few remarks at least help tell us what this bill is all about.

Mr. LINDSAY. I have amendments that I would like to offer to the bill, if amendments were permitted. I think perhaps some other Members might have amendments that they would like to offer.

Mr. SCHERER. Mr. Speaker, will the gentleman yield?

Mr. LINDSAY. I yield to the gentleman.

Mr. SCHERER. The fact is that the Executive order issued by President Eisenhower followed the case of Greene against McElroy. It was not the procedures now in existence under the Executive order by President Eisenhower that were under attack in the Greene against McElroy case.

Mr. LINDSAY. Will the gentleman answer this question: Why is it necessary to have the bill at all?

Mr. SCHERER. Because the Supreme Court said in Greene against McElroy that the matter could be handled by Executive order, and it preferred that the Executive order be backed by legislative authority. That is all the Committee on Un-American Activities is doing in this bill, implementing by legislation the Executive order which is now in existence. This Executive order was issued by President Eisenhower following the decision of the Supreme Court in Greene against McElroy. All we are trying to do now is further comply with that decision by implementing the Executive order with legislation. It is just that simple, as the chairman of the committee has said.

Mr. LINDSAY. Going back to the question of what the Court said, I think the gentleman from Pennsylvania would agree that if a case under the procedures established in this bill came before the Supreme Court, it is not at all certain that the procedures would be sustained as constitutional. I, myself, think they would be thrown out as a violation of the Fifth Amendment. I assume the gentleman thinks that it would get by.

Mr. WALTER. Mr. Speaker, I have the feeling that a decision of the Supreme Court is like an excursion ticket—"Good for today only." That is why I think it is important that we make it abundantly clear what is being done and what we intend to do by this legislation.

Mr. LINDSAY. I think it is important that we make it abundantly clear that we know what we are doing. If we pass a bill of this kind, I think it should be debated on the floor with the opportunity to offer amendments.

So, Mr. Speaker, I am going to have to object to the bill being considered on the Consent Calendar.

The SPEAKER. Objection is heard.

Mr. WALTER. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. WALTER. In view of the fact that this bill was objected to previously, and was rereferred to the committee for the purpose of amplifying the report, that this was done and it was then reinstated on the calendar, are not three objections necessary?

The SPEAKER. The present bill is on the calendar de novo. It has a new number and a new report. At this stage one objection is all that is necessary.

Mr. LINDSAY. Mr. Speaker, in his farewell address to the Nation, President Eisenhower issued a stern warning on how the acquisition of unwarranted influence can endanger American rights and liberties. President Eisenhower said:

> This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence—economic, political, even spiritual—is felt in every city, every statehouse, every office of the Federal Government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources and livelihood are all involved; so is the very structure of our society.
>
> In the councils of Government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.
>
> We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together.

Mr. Speaker, this bill, H.R. 11363, which seeks to establish a defense plant security program, embodies the essence of what President Eisenhower so eloquently warned us about.

I object to the consideration on the Consent Calendar of this bill, an amendment to the Internal Security Act of 1950. A bill of this sort should not be approved by the House by automatic unanimous-consent procedures. I objected to this bill also on May 21, 1962, when the Committee on Un-American Activities then sought to put it through by unanimous consent. I urged that because of the bill's doubtful constitutionality, it be debated on the House floor. The gentleman from Pennsylvania assured the House that he would be delighted to debate the bill, and yet here it is again on the Consent Calendar.

This bill purports to provide procedures for denying employees of the private arena access to classified material involved in certain Government contracts. The arena includes by definition "any industrial or educational research organization, institution, enterprise, or other legal entity, located in the United States, whether or not operated for profit."

The danger of this bill is that it makes possible the forceable separation of a man from his private employment by the Government without due process. Scientist X or educator Y can be denied access to matters essential to his work within a company or university without confrontation, or cross-examination of evidence used against him.

It has been serious enough when procedures of this kind have been used in the governmental establishment itself. Now it is extended to the general economy.

A further deficiency in this bill is that it does not spell out procedures for court review. The consequences of a bill of this kind and the procedures contained in it are most serious for the whole country. Therefore, provisions for court review should be carefully written into the legislation and not left to the vague possibility of some nonstatutory proceeding.

COMPENSATION FOR USE OF KWAJALEIN AND DALAP ISLANDS

The Clerk called the bill (H.R. 11952) to assure payment of just compensation for the use and occupancy of certain lands on Kwajalein and Dalap Islands, Trust Territory of the Pacific Islands, and for other purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, reserving the right to object, I would simply like to observe that there are no cost estimates whatever with reference to this bill. I would like to point out further that the United Nations holds the trusteeship over the Kwajalein and Dalap Islands.

I wonder why the United Nations does not take care of these claims instead of saddling them on the United States.

Mr. ASPINALL. The Trust Territory of the Pacific Islands is under the mandate of the United States of America. We already have the islands under our control.

Mr. GROSS. We are the administrator of the islands, and that is all.

Mr. ASPINALL. Those people we are administering and whose rights we are protecting are protected in their own loss of property. It so happens that the moneys which have been set aside for this have already been taken care of. They have been offered $500 an acre for their claims. Because of some misunderstanding between the natives and their attorney, I think their attorney decided we should give them an opportunity to go before the Court of Claims, but in no instance could they be given more than $500.

Mr. GROSS. Is it not a fact that the United Nations is pressuring us to settle those claims?

Mr. ASPINALL. No. We have been endeavoring to settle these claims since 1946, when we took over the islands under the mandate.

Mr. GROSS. Does not the gentleman think the United Nations should have the responsibility for settling these claims? Does the gentleman think the United Nations in this case or any other will ever face up to its responsibilities?

Mr. ASPINALL. I do not think the gentleman from Colorado is in a position to answer that at the present time. I will say this: Whenever the decision is made by these people as to what is going to happen to them and their islands, I hope they are on our side because it is a security region.

Mr. FORD. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Michigan.

Mr. FORD. Will the gentleman from Colorado answer this question: In this legislation are the claimants and their attorneys completely and totally willing to accept the verdict? They will not appeal? As I understand it this is an offer to give them a further opportunity to have their case adjudicated, but are they willing and are they on record to accept the decision without any further appeals or controversy?

Mr. ASPINALL. If the gentleman will yield, the action or proceeding under the terms of this legislation would be final. There was written into the report, as I am sure my colleague from Michigan has found out, a statement against arbitration. In other words, we freeze out the matter of arbitration. This is the final action.

Mr. GROSS. I withdraw my reservation of objection, Mr. Speaker.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person from whom the United States or the government of the Trust Territory of the Pacific Islands has taken rights of possession, use, and occupancy of lands on Kwajalein and Dalap Islands within the said trust territory to which he was entitled under the traditions and customs of the Marshallese people and who or whose iroij elab has not accepted compensation in full satisfaction for all of his claims and demands against the United States and the government of said trust territory arising out of said taking may, within one year from the date of this Act, file a petition for the determination by the United States Court of Claims of his claim for just compensation. Upon the timely filing of such petition, the said court shall have jurisdiction to hear aind determine the value of the rights taken in the same manner and under the same rules as any other cause before it and in the light of such principles of equity, justice, and fair dealing as are pertinent to the cause. Any such claim may be heard and determined notwithstanding laches or the expiration of any period of limitations which would be applicable thereto in the absence of this Act. The judgment of the Court of Claims may provide either for payment of a lump sum for the indefinite possession, use, and occupancy by the United States and the government of the trust territory of the lands subject thereto or for the payment of an annual sum for such possession, use, and occupancy. Any judgment of the Court of Claims shall be subject to review by the Supreme Court of the United States on writ of certiorari and shall, whether against the United States or against the government of the trust territory. or both, be paid in accordance with the provisions of title 28, United States Code, section 2517, and of section 1302 of the Act of July 27, 1956 (70 Stat. 694, as amended; 31 U.S.C. 724a). The payment of any claim, after its determination in accordance with this section, shall be a full discharge of the United States and the government of the trust territory of all claims and demands touching any of the matters involved in the controversy and the failure to prosecute a claim as hereinbefore provided shall forever bar such claim.

Sec. 2. The iroij elab of any wato shall be a necessary party to any suit instituted under this Act. The alab and rijerbal of such wato shall be proper but not necessary parties to any such suit. The iroij elab shall be responsible for proper distribution among himself, the alab, the rijerbal and any others interested in such wato of any payment made to him. Any dispute among them with respect to such distribution which cannot be resolved otherwise than by litigation shall be determined by the courts of the trust territory in accordance with the laws of the trust territory and the traditions and customs of the Marshallese people.

Sec. 3. The Attorney General of the United States or his assistant shall represent the United States and the government of the trust territory in all cases arising under this Act and may call upon the attorney general of the trust territory for such assistance as he is able to render, and shall have authority, with the approval of the Court of Claims, to compromise any such case. Any such compromise settlement shall be reported to the Congress by the Attorney General, stating the name of each claimant, the amount claimed, and the amount awarded.

Sec. 4. The fees of any attorney or attorneys representing Marshallese claimants in any action brought pursuant to this section, shall be fixed by the Court of Claims at such amount as the court, in accordance with standards obtaining for prosecuting similar contingent claims, finds to be adequate compensation for services rendered and results obtained, plus reasonable expenses incurred in the prosecution of the claim. In fixing such fees, the court may give due weight to the fact that appropriated funds in the amount of approximately $500 per acre have heretofore been made available and are now available for a nonlitigious settlement of the claims referred to in section 1 of this Act, but the appropriation and availability of such amount shall not be construed as an admission by the United States or the government of the trust territory that this is the value of the rights of possession, use, and occupancy taken by them or be admitted as evidence to prove the same.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That any person from whom the United States, on or before April 1, 1946, took rights of possession, use, occupancy, or usufruct of lands on Kwajalein Atoll or Dalap Island within the Trust Territory of the Pacific Islands to which he or his predecessor in interest was entitled under the traditions and customs of the Marshallese people and to whom or whose representative compensation in full satisfaction for all of his claims against the United States and the government of said Trust Territory arising out of said taking has not been paid may, within one year from the date of this Act, file a petition for the determination by the United States Court of Claims of his claim for just compensation. Upon the timely filing of such petition the said court shall have jurisdiction to hear and determine the value of the rights taken in the same manner and under the same rules as any other cause before it, or as near thereto as is feasible in the circumstances, and in the light of such principles of equity, justice, and fair dealing as are pertinent to the cause. Any such claim may be heard and determined notwithstanding laches or the expiration of any period of limitations which would be applicable thereto in the absence of this Act. The judgment of the Court of Claims may provide for payment of a lump sum for the possession, use, and occupancy (including indefinite possession, use, and occupancy) by the United States and the government of the Trust Territory of the lands subject thereto and/or for the payment of an annual sum for such possession, use, and occupancy, but shall not include compensation for any period prior to that date during or after World War II on which the island where the land in question is located was finally determined by competent military authority to be secure. If the judgment includes provision for payment of an annual sum, the Court shall retain jurisdiction of the cause and may, on motion of either party, redetermine the amount thereafter payable from time to time, but no such redetermination shall be sought or made more often than once every 10 years. Any judgment of the Court of Claims shall be subject to review by the Supreme Court of the United States on writ of certiorari and shall be paid in accordance with the provisions of title 28, United States Code, section 2517, and of section 1302 of the Act of July 27, 1956 (70 Stat. 694), as amended (31 U.S.C. 724a). The payment of any claim, after its determination in accordance with this section, shall be a full discharge of the United States and the government of the Trust Territory of all claims and demands touching any of the matters involved in the controversy. No claim which could be prosecuted as hereinbefore provided but is not so prosecuted may thereafter be entertained by any court of the United States or the Trust Territory or, except as provided in section 6 of this Act, by any administrative agencey thereof.

"Sec. 2. It is the purpose of this Act to assure every person who or whose representative has not been compensated for deprivation of rights of possession, use, occupancy, or usufruct, as described in section 1 of this Act, of an opportunity to have his claim judicially determined. To this end, the interests of any such person who is not himself a party to a suit instituted under this Act shall be represented by the persons named in Marshall Islands Congress resolution numbered 16 of 1956. Any dispute with respect to distribution of sums paid to parties under any judgment in their favor or under any compromise settlement made as provided in section 4 of this Act which cannot be resolved otherwise than by litigation shall be determined by the courts of the trust territory in accordance with the laws of the trust territory and the traditions and customs of the Marshallese people.

"Sec. 3. Any judge or commissioner of the Court of Claims may, for the purposes of this Act, sit at a convenient place or places in the United States or the trust territory to take evidence. Subpenas issued out of said court upon persons residing in the trust territory shall be served by the sheriff of the Marshall Islands district or his deputy, and a failure to comply therewith shall be punishable by the high court of the trust territory in accordance with the laws thereof in the same manner as if said subpena had issued out of said high court. The government of the trust territory shall, for the purposes of this Act, be deemed an agency of the United States within the purview of section 2507 of title 28 of the United States Code.

"Sec. 4. The Attorney General of the United States or his assistant shall represent the United States and the government of the trust territory in all cases arising under this Act and may call upon the attorney general of the trust territory for such assistance as he is able to render, and shall have authority, with the approval of the Court of Claims, to compromise any such case. Any such compromise settlement shall be reported to the Congress by the Attorney General, stating the name of each claimant, the amount claimed, and the amount awarded.

"Sec. 5. The fees of any attorney or attorneys representing Marshallese claimants in any action brought pursuant to this Act shall be fixed by the Court of Claims at such amount as the court, in accordance with standards obtaining for prosecuting similar contingent claims, finds to be adequate compensation for services rendered and results obtained, plus reasonable expenses incurred in the prosecution of the claim.

"Sec. 6. Nothing contained in this Act shall be construed to forbid the payment by the High Commissioner of the Trust Territory from funds heretofore appropriated and made available for this purpose of approximately $500 per acre in full satisfaction of all claims relating to any specified tract of land or of not more than $250 per acre in partial satisfaction of such claims, but neither the appropriation and availability of the first of said amounts nor any other offer by an officer of the United States or of the government of the Trust Territory shall be construed as an admission by the United States or the government of the Trust Territory that the same is the value of the rights of possession, use, occupancy and usufruct taken or be admitted as evidence to prove the same. Any claimant by whom or on whose behalf suit could be but is not instituted within one year, as provided in this Act, shall thereafter be paid a proper portion of such appropriated funds and such payment shall constitute full satisfaction of all of his claims and demands with respect to the land to which it pertains."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed. A motion to reconsider was laid on the table.

AMENDING SECTION 2 OF THE MATERIALS ACT

The Clerk called the bill (H.R. 9280) to amend section 2 of the Act of July 31, 1947 (61 Stat. 681), and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the Act of July 31, 1947 (61 Stat. 681; 30 U.S.C. 602), is hereby amended to read as follows:

"Sec. 2. Except where he determined that the public interest will not be served thereby, the Secretary shall dispose of materials under this Act to the highest responsible qualified bidder by competitive bidding after adequate public notice."

Sec. 2. The Act of March 4, 1913 (37 Stat. 1015), as amended by the Act of July 3, 1926 (44 Stat. 890; 16 U.S.C. 614-615), is hereby repealed. Rights and liabilities existing under that Act on the date of the enactment of this Act shall not be affected thereby.

With the following committee amendment:

On page 1, strike out lines 5 through 9 and insert in lieu thereof the following:

"Sec. 2. (a) The Secretary shall dispose of materials under this Act to the highest responsible qualified bidder after formal advertising and such other public notice as he deems appropriate: *Provided, however,* That the Secretary may authorize negotiation of a contract for the disposal of materials if—

"(1) the contract is for the sale of less than 250,000 board-feet of timber; or, if

"(2) the contract is for the disposal of materials to be used in connection with a public works improvement program on behalf of a Federal, State, or local governmental agency and the public exigency will not permit the delay incident to advertising; or, if

"(3) the contract is for the disposal of property for which it is impracticable to obtain competition.

"(b) A report shall be made to Congress on January 1 and July 1 of each year of the contracts made under clauses (2) and (3) of subsection (a) during the period since the date of the last report. The report shall—

"(1) name each purchaser;

"(2) furnish the appraised value of the material involved;

"(3) state the amount of each contract;

"(4) describe the circumstances leading to the determination that the contract should be entered into by negotiation instead of competitive bidding after formal advertising."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

PETRIFIED WOOD

The Clerk called the bill (H.R. 10540) to exclude deposits of petrified wood from appropriation under the U.S. mining laws.

The **SPEAKER**. Is there objection to the present consideration of the bill?

Mr. **SHORT**. Reserving the right to object, Mr. Speaker, may I inquire from the gentleman from Oklahoma if this bill would prevent the filing of a mining claim on Federal land for the removal of petrified wood?

Mr. **EDMONDSON**. That is the purpose of the bill.

Mr. **SHORT**. We have a huge amount of petrified wood, one of the few deposits in the United States, so I have an interest in this legislation. I thank the gentleman.

Mr. **EDMONDSON**. It would have that purpose. There would still be authority for people to come in and take out specimens of rock, but this would take it out from under the Mining Claims Law.

Mr. **SHORT**. I thank the gentleman.

The **SPEAKER**. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3 of the Act of July 23, 1955 (69 Stat. 368; 30 U.S.C. 611), is amended to read: "No deposit of common varieties of sand, stone, gravel, pumice, pumicite, or cinders and no deposit of petrified wood shall be deemed a valuable mineral deposit within the meaning of the mining laws of the United States so as to give effective validity to any mining claim hereafter located under such mining laws: *Provided, however,* That nothing herein shall affect the validity of any mining location based upon discovery of some other mineral occurring in or in association with such a deposit. 'Common varieties' as used in this Act does not include deposits of such materials which are valuable because the deposit has some property giving it distinct and special value and does not include so-called 'block pumice' which occurs in nature in pieces having one dimension of two inches or more. 'Petrified wood' as used in this Act means agatized, opalized, petrified, or silicified wood, or any material formed by the replacement of wood by silica or other matter."

SEC. 2. The Secretary of the Interior may provide by regulation that limited quantities of petrified wood may be removed without charge from any public lands which he may specify.

With the following committee amendment:

Page 2, line 10, strike out all of section 2 and insert in lieu thereof:

"SEC. 2. The Secretary of the Interior shall provide by regulation that limited quantities of petrified wood may be removed without charge from those public lands which he shall specify."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AMENDING THE MINERAL LEASING ACT

The Clerk called the bill (H.R. 11049) to provide for the relief of certain oil and gas lessees under the Mineral Leasing Act.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 31 of the Mineral Leasing Act of February 25, 1920 (41 Stat. 450), as amended (30 U.S.C. 188), is further amended by designating the first paragraph thereof as subsection "(a)", the second paragraph as subsection "(b)", and adding a new subsection to read as follows:

"(c) Where any lease has been or may be terminated automatically by operation of law under this section for failure to pay rental timely and it is shown to the satisfaction of the Secretary of the Interior that the failure to pay timely the lease rental was justifiable or not due to a lack of reasonable diligence, he in his judgment may reinstate the lease subject to the following conditions:

"(1) A petition for reinstatement, together with the required rental, for any lease (a) terminated prior to the effective date of this Act must be filed with the Secretary of the Interior within one hundred and eighty days after the effective date of this Act; or (b) terminated after the effective date of this Act must be filed with the Secretary of the Interior within ninety days after such termination;

"(2) No valid lease has been issued affecting any of the lands in the terminated lease prior to the filing of the petition for reinstatement."

SEC. 2. Nothing in this Act shall be construed as limiting the authority of the Secretary of the Interior to issue, during the periods in which petitions for reinstatement may be filed, oil and gas leases for any of the lands affected.

Amend the title so as to read: "A bill to amend the Mineral Leasing Act of February 25, 1920."

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That section 31 of the Mineral Leasing Act of February 25, 1920 (41 Stat. 450), as amended (30 U.S.C. 188), is further amended by designating the first paragraph thereof as subsection '(a)', the second paragraph as subsection '(b)', and adding a new subsection to read as follows:

"'(c) Where, prior to the effective date of this subsection, any lease has been terminated automatically by operation of law under this section for failure to pay rental timely and it is shown to the satisfaction of the Secretary of the Interior that the failure to pay timely the lease rental was caused by reasonable reliance by the lessee on information or data furnished by the United States or one of its officers or agents, the Secretary shall reinstate the lease if—

"'(1) A petition for reinstatement, together with the accrued rental, is filed with the Secretary of the Interior within ninety days after the effective date of this subsection; and

"'(2) No valid lease has been issued affecting any of the lands in the terminated lease prior to the filing of the petition for reinstatement.'

"SEC. 2. Section 31 of the Mineral Leasing Act of February 25, 1920, supra, is further amended by deleting the proviso at the end of the section and substituting therefor the following: '*Provided, however,* That when the time for payment falls upon any day in which the proper office for payment is not open, payment may be made the next official working day and shall be considered as timely made: *And provided further,* That the deposit with the Post Office Department, by registered or certified mail of a correctly addressed and sealed envelope containing a valid check or money order in the correct amount of the rental on or before the anniversary date of the lease for any lease on which there is no well capable of producing oil or gas in paying quantities shall, for the purposes of this section, constitute payment of rental to the United States and be considered as timely made.'

"SEC. 3. Nothing in this Act shall be construed as limiting the authority of the Secretary of the Interior to issue, during the periods in which petitions for reinstatement may be filed, oil and gas leases for any of the lands affected."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, read the third time, and passed.

The title was amended so as to read: "A bill to amend the Mineral Leasing Act of February 25, 1920".

A motion to reconsider was laid on the table.

AUTHORIZE VIRGIN ISLANDS TO ISSUE CERTAIN BONDS

The Clerk called the bill (H.R. 11953) to authorize the government of the Virgin Islands to issue general obligation bonds.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection (b) of section 8 of the Revised Organic Act of the Virgin Islands, as amended (68 Stat. 497, 500; 48 U.S.C. 1574(b)), is redesignated as paragraph (i) of such subsection (b), and is amended by deleting the last sentence thereof and by striking out the word "subsection" and inserting in lieu thereof the word "paragraph (i)".

(b) Subsection (b) is further amended by adding the following new paragraph (ii):

"(ii) (A) Subject to the provisions of this paragraph (ii), the legislature of the government of the Virgin Islands may cause to be issued such negotiable general obligation bonds or other evidence of indebtedness as it may deem necessary and advisable to construct, improve, extend, better, repair, reconstruct, acquire, and operate any and all types of public works, which shall include, but not be limited to, schools, streets, bridges, wharves, harbor facilities, sewers, sewage-disposal plants, municipal buildings, libraries, gymnasia and athletic fields, firehouses, electric distribution systems or other projects pertaining to electric systems, and other public utilities, or to clear slums, accomplish urban redevelopment, or provide low-rent housing: *Provided,* That no public indebtedness of the Virgin Islands shall be incurred in excess of 10 per centum of the aggregate assessed valuation of the taxable real property in the Virgin Islands. Bonds issued pursuant to this paragraph (ii) shall bear such date or dates, may be in such denominations, may mature in such amounts and at such time or times, not exceeding thirty years from the date thereof, may be payable at such place or places, may be sold at either public or private sale, may be redeemable (either with or without premium) or nonredeemable, may carry such registration privileges as to either principal and interest, or principal only, and may be executed by such officers and in such manner, as shall be prescribed by the legislature of the government of the Virgin Islands. In case any of the officers whose signatures appear on the bonds or coupons shall cease to be such officers before delivery of such bonds, such signature, whether manual or facsimile, shall nevertheless be valid and sufficient for all purposes, the same as if such officers had remained in office until such delivery. The bonds so issued shall bear interest at a rate not to exceed that specified by the legislature, and shall be payable semiannually. All such bonds shall be sold for not less than the principal amount thereof plus accrued interest. All bonds issued by the government of the Virgin Islands, including specifically interest thereon, shall be exempt from taxation by the Government of the United States, or by the government of the Virgin Islands or any political subdivision thereof, or by any State, territory, or possession or by any political subdivision of any State, territory, or possession, or by the District of Columbia.

"(B) The proceeds of the bond issues or other obligations herein authorized shall be expended only for the public improvements set forth in the preceding subparagraph, or for the reduction of the debt created by such bond issue or obligation, unless otherwise authorized by the Congress.

"(C) Bonds or other obligations issued pursuant to this paragraph (ii) shall not be a debt of the United States, nor shall the United States be liable thereon."

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

SETTLEMENT OF CLAIMS, TERRITORY OF THE PACIFIC ISLANDS

The Clerk called the bill (H.R. 12078) to provide for the settlement of claims of certain residents of the Trust Territory of the Pacific Islands.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress hereby assumes compassionate responsibility to compensate inhabitants of the Rongelap Atoll, in the Trust Territory of the Pacific Islands, for radiation exposures sustained by them as a result of a thermonuclear detonation at Bikini Atoll in the Marshall Islands on March 1, 1954.

Sec. 2. There is authorized to be appropriated for such purpose out of the Treasury of the United States the sum of $1,000,000 to remain available until expended under the supervision of the Secretary of the Interior (hereafter referred to as the "Secretary") for the general benefit of the affected inhabitants of Rongelap. The Secretary may segregate a portion of the sum for each affected individual, and hold it in trust for the individual or his heirs or legatees (hereinafter referred to as the "beneficiary" or "beneficiaries"), subject to the provisions of this Act. The amounts segregated and held by the Secretary in trust for individual beneficiaries, and the unsegregated balance, shall, if invested by him, be invested in a manner that in his judgment is prudent.

Sec. 3. (a) The interest or dividends earned from each trust held for an individual beneficiary shall be paid at least annually by the Secretary to such beneficiary. When, in the opinion of the Secretary, there appears to be a substantial benefit to be derived therefrom by any beneficiary, the Secretary may, upon request of the beneficiary, and under such conditions as he may deem appropriate, make the principal sum, or any part thereof, available for expenditure by such beneficiary. Any payment under this subsection may be made directly to a beneficiary who is twenty-one years of age or older. In the case of a beneficiary who is less than twenty-one years of age or who is, in the opinion of the Secretary, mentally incompetent, payment may be made in the discretion of the Secretary to the beneficiary, a parent, relative, other person, or institution for his benefit.

(b) The principal, interest, and dividends from funds held for the general benefit of the affected inhabitants of Rongelap shall be used for such purposes as the Secretary deems appropriate.

Sec. 4. A trust for an individual beneficiary created pursuant to this Act may be terminated by the Secretary at any time, and if after reasonable search the beneficiary cannot be located, the principal and accumulated interest and dividends may be added to the unsegregated balance of the funds held for the general benefit of the affected inhabitants of Rongelap.

Sec. 5. The Secretary is authorized to pay reasonable attorney fees for legal services rendered on behalf of a beneficiary, or beneficiaries, prior to the date of enactment of this Act. Such fees shall be paid out of the funds authorized to be appropriated in section 2 of this Act, but the total of such fees paid shall not exceed 5 per centum of the appropriated funds.

Sec. 6. The decisions of the Secretary in carrying out the provisions of this Act shall be final and not subject to review.

With the following committee amendment:

Page 1, line 11, strike out the figure "$1,000,000" and insert in lieu thereof "$950,000".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

ASSISTANCE FOR CERTAIN FEDERALLY IMPACTED AREAS

The Clerk called the bill (S. 3327) to make certain federally impacted areas eligible for assistance under the public facility loan program.

Mr. FORD. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

Mr. RAINS. Mr. Speaker, reserving the right to object, this bill, if I may say to the gentleman from Michigan, was originally introduced by my colleague, Senator Sparkman. The Senate passed the bill. It came out of the Committee on Banking and Currency, both the subcommittee and the full committee, without a single objection.

The purpose of the bill is to remove the 50,000 population ceiling under the Community Facilities Act for two cities only, Huntsville, Ala., and Hampton, Va. It is limited to these two cities and they are places where hospitals are desperately needed because of the NASA space programs going on in these areas. It enables them to borrow money under the community facilities program which other cities are now doing which do not have missile programs. I might point out that depressed areas or redevelopment areas are eligible for community facility loans if their population does not exceed 150,000.

I hope the gentleman will see his way clear not to object to the bill. We are anxious to get it passed as quickly as possible.

Mr. FORD. I may say to the gentleman that I probably will ask that the bill be passed over without prejudice so we will have a chance to take a little closer look at it. I think, however, it is appropriate at this time to note specifically that we are extending this legislation for two cities that are allegedly impacted under the national aeronautics and space program. If my information is accurate, last week the House Committee on Education and Labor in effect approved legislation which approved Federal aid to education by the expansion of Federal aid to impacted areas under our defense work from a point where it took in from 3 to 5 percent to one where it takes in 7 to 10 percent of our metropolitan areas which is in reality aid to education but under the guise of aid to impacted areas.

Now you are doing much the same thing in a much more restricted and limited way. I do not like this approach any more than I do the approach under the Federal aid to education program.

I simply want to record my position on the legislation.

Mr. RAINS. If I may point out to the gentleman from Michigan, the gentleman referred to impacted areas under legislation affecting schools and providing Federal funds. That is not true in this case. This is merely a loan which these two cities need desperately to build these hospital facilities. I repeat, this is a repayable loan, not a grant. It would not cost the taxpayer a cent.

Mr. FORD. A loan at an interest rate higher or lower than it costs the Government to borrow, or at cost?

Mr. RAINS. It would be at a rate to cover what the Federal Government has to pay for its money.

Mr. FORD. Plus a service charge?

Mr. RAINS. There is a small service charge in it, that is correct.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. FORD. I yield.

Mr. GROSS. I note that there are no departmental or agency reports in connection with the report on this bill, not a line from any department or agency of the Government.

Mr. RAINS. I cannot imagine, I will say to the gentleman from Iowa, in a matter of this type why there should be anything from the departments. It is a matter for the Congress to determine whether or not these two cities participate because of population increases.

Mr. FORD. The gentleman from Iowa has called to my attention, and I appreciate what he said, that there are no departmental views. About 2 or 3 weeks ago we forewarned committees—and I think in that case it was the Banking and Currency Committee—that had not followed the procedure of getting departmental views and including them in the committee report, we would have to ask that the bill be passed over.

For that reason, Mr. Speaker, I withdraw my reservation of objection and ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from Michigan?

There was no objection.

PONCA TRIBE OF NATIVE AMERICANS OF NEBRASKA

The Clerk called the bill (S. 3174) to provide for the division of the tribal assets of the Ponca Tribe of Native Americans of Nebraska among the members of the tribe, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the membership roll of the Ponca Tribe of Native Americans of Nebraska shall be closed at midnight of the date of enactment of this Act, and no child born thereafter shall be eligible for enrollment. The Secretary of the Interior with advice and assistance of the tribe is authorized and directed, pursuant to such regulations as may be issued by him, to prepare a final roll for the purposes of this Act of the members of the tribe consisting of the persons whose names appear on the census roll of April 1, 1934, with the supplement thereto of January 1, 1935, and their descendants of not less than one-fourth degree Indian blood of the Ponca Tribe of Native Americans of Nebraska, regardless of place of residence, who are living at the time the roll is closed, and in so doing shall provide a reasonable opportunity for any person to protest against the inclusion or omission of any name on or from the roll. The Secretary's decision on all protests shall be final and conclusive. After all protests are disposed of, the final roll shall be published in the Federal Register. Upon publication of the roll in the Federal Register, the Secretary shall give the adult members an opportunity to indicate their agreement to the division of tribal assets in accordance with the provisions of this Act and when a majorty of the adult members have indicated their agreement, the Secretary shall publish in the Federal Register a notice of that fact.

SEC. 2. Each member whose name appears on the final roll of the tribe as published in the Federal Register shall be entitled to receive in accordance with the provisions of this Act an equal share of the tribe's assets that are held in trust by the United States. This right shall constitute personal property which may be inherited or bequeathed, but it shall not otherwise be subject to alienation or encumbrance.

SEC. 3. (a) All property of the United States used for the benefit of the Ponca Tribe of Native Americans of Nebraska is hereby declared to be a part of the assets of the tribe, and all of the tribe's assets shall be distributed in accordance with the provisions of this section. The distribution shall be completed within three years from the date of this Act, or as soon thereafter as practicable.

(b) The tribe shall designate any part of the tribe's property that is to be set aside for church, park, playground, or cemetery purposes, and the Secretary is authorized to convey such property to trustees or agencies designated by the tribe for that purpose and approved by the Secretary.

(c) Each member may select for homesite purposes and receive title to not to exceed five acres of tribal land that is being used for homesite purposes by such member, or that is not used and selected by some other member. The member shall pay the current market value of the homesite selection excluding any improvements or repairs constructed by such member, his wife, children, or ancestor, as determined by the Secretary of the Interior.

(d) All assets of the tribe that are not selected and conveyed to members shall be sold by competitive bid at not less than the current market value, and any member shall have the right to purchase property offered for sale for a price not less than the highest acceptable bid therefor. If more than one member exercises such right, the property shall be sold to the member exercising the right who offers the highest price.

(e) The net proceeds of all sales of tribal property, and all other tribal funds, shall be used to pay, as authorized by the Secretary, any debts of the tribe. The remainder of such proceeds and funds shall be divided equally among the members whose names are on the final roll, or their heirs or legatees. Any debt owed by a member, heir, or legatee to the tribe or to the United States may be set off as authorized by the Secretary against the distributive share of such person. Any member of the tribe who purchases tribal property in accordance with this section may apply on the purchase price his share of the proceeds of all sales of tribal property, and the Secretary of the Interior shall adopt sales procedures that permit such action.

SEC. 4. (a) The Secretary of the Interior is authorized to partition or to sell the complete interest (including any unrestricted interest) in any land in which an undivided interest is owned by a member of the Ponca Tribe of Native Americans of Nebraska in a trust or restricted status, provided the partition or sale is requested by the owners of a 25 per centum interest in the land, and the partition or sale is made within three years from the date of this Act. Any such sale shall be by competitive bid, except that with the concurrence of the owners of a 25 per centum interest in the land any owner of an interest in the land shall have the right to purchase the land within a reasonable time fixed by the Secretary of the Interior prior to a competitive sale at not less than its current market value. If more than one preference right is exercised, the sale shall be by competitive bid limited to the persons entitled to a preference. If the owners of a 25 per centum interest in the land so request, mineral rights may be reserved to the owners in an unrestricted status. The Secretary of the Interior may represent for the purposes of this section any Indian owner who is a minor, or who is non compos mentis, and, after giving reasonable notice of the proposed partition or sale by publication, he may represent an Indian owner who cannot be located.

(b) All restrictions on the alienation or taxation of interests in land that are owned by members of the Ponca Tribe of Native Americans of Nebraska three years after the date of this Act shall be deemed removed by operation of law, and an unrestricted title shall be vested in each such member.

SEC. 5. The Secretary of the Interior is authorized to make such land surveys and to execute such conveyancing instruments as he deems necessary to convey marketable and recordable title to the individual and tribal assets disposed of pursuant to this Act. Each grantee shall receive an unrestricted title to the property conveyed.

SEC. 6. Nothing in this Act shall affect any claims heretofore filed against the United States by the Ponca Tribe of Native Americans of Nebraska.

SEC. 7. Nothing in this Act shall affect the rights, privileges, or obligations of the tribe and its members under the laws of Nebraska.

SEC. 8. No property distributed under the provisions of this Act shall at the time of distribution be subject to any Federal or State income tax. Following any distribution of property made under the provisions of this Act, such property and income derived therefrom by the distributee shall be subject to the same taxes, State and Federal, as in the case of non-Indians: *Provided,* That for the purpose of capital gains or losses the base value of the property shall be the value of the property when distributed to the grantee.

SEC. 9. Such amounts of tribal funds as may be needed to meet the expenses of the tribe under this Act as approved by the Secretary of the Interior, shall be available for expenditure. There is authorized to be appropriated out of any moneys in the Treasury not otherwise appropriated such sums as may be necessary to reimburse the tribe for such expenditures, and carry out the responsibilities of the Secretary under the provisions of this Act.

SEC. 10. When the distribution of tribal assets in accordance with the provisions of this Act has been completed, the Secretary of the Interior shall publish in the Federal Register a proclamation declaring that the Federal trust relationship to such tribe and its members has terminated. Thereafter, the tribe and its members shall not be entitled to any of the special services performed by the United States for Indians or Indian tribes because of their Indian status, all statutes of the United States that affect Indians or Indian tribes because of their Indian status shall be inapplicable to them, and the laws of the several States shall apply to them in the same manner they apply to other persons or citizens within their jurisdiction. Nothing in this Act, however, shall affect the status of any Indian as a citizen of the United States.

With the following committee amendment:

Page 1, line 3, through page 2, line 17, strike out all of section 1 and insert in lieu thereof the following: "That the Secretary of the Interior shall, with the advice and assistance of the Ponca Tribe of Native Americans of Nebraska and pursuant to such regulations as he may prescribe, prepare a roll of the members of the tribe and record thereon persons whose names appeared on the census roll of April 1, 1934, and the supplement thereto of January 1, 1935, and their descendants of not less than one quarter degree Indian blood of the Ponca Tribe, regardless of place of residence, who are living on the date of this Act. He shall provide a reasonable opportunity for any person to protest against the inclusion or omission of any name on or from the roll and his decision on such protests shall be final and conclusive. After all protests are disposed of, the roll shall be published in the Federal Register. The Secretary shall thereupon give the adult members of the tribe whose names appear on the roll an opportunity to indicate their agreement or disagreement with a division of tribal assets in accordance with the provisions of this Act. If a majority of those indicating agreement or disagreement are favorable to such division, the Secretary shall publish in the Federal Register a notice of that fact and the roll prepared by him shall thereupon become final and the following sections of this Act shall become effective."

The committee amendment was agreed to.

Mr. HALEY. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Haley: On page 4, line 14, strike out the comma, insert a period in lieu thereof, and strike out the remainder of the line.

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

DISPOSITION OF JUDGMENT FUNDS OF THE CHEROKEE NATION OR TRIBE OF INDIANS OF OKLAHOMA

The Clerk called the bill (H.R. 11590) to provide for the disposition of judgment funds of the Cherokee Nation or Tribe of Indians of Oklahoma.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized and directed to distribute per capita to all persons whose names appear on the rolls of the Cherokee Nation, which rolls were closed and made final as of March 4, 1907, pursuant to the Act of April 26, 1906 (34 Stat. 137), and subsequent additions thereto, all funds which were appropriated by the Act of September 30, 1961 (75 Stat. 733), in satisfaction of a judgment that was obtained by the Cherokee Tribe in the Indian Claims Commission against the United States in docket numbered 173, together with the interest accrued thereon, except $1,432,084.17 which by stipulation of the parties has been set aside for the payments of any offsets that are finally determined to be due the United States, and except the amount allowed for attorney fees and expenses.

Sec. 2. (a) Except as provided in subsections (b) and (c) of this section, a share or proportional share payable to a living adult shall be paid directly to such adult; (b) a share payable to a deceased enrollee shall be distributed to his heirs or legatees upon the filing of proof of death and inheritance satisfactory to the Secretary of the Interior, or his authorized representative, whose findings and determinations upon such proof shall be final and conclusive: *Provided*, That proportional shares of deceased heirs amounting to $5 or less shall not be distributed, and no inherited share amounting to $2 or less shall be paid, and the money shall revert to the tribe; (c) a share or proportional share payable to a person under twenty-one years of age or to a person under legal disability shall be paid in accordance with such procedures as the Secretary determines will adequately protect the best interests of such persons.

Sec. 3. (a) All claims for per capita shares, whether by a living enrollee or by the heirs or legatees of a deceased enrollee, shall be filed with the Area Director of the Bureau of Indian Affairs, Muskogee, Oklahoma, not later than three years from the date of approval of this Act. Thereafter, all claims and the right to file same shall be forever barred and the unclaimed shares shall revert to the tribe, and such tribal funds may be advanced or expended for any purpose that is authorized by the principal chief of the Cherokee Nation and approved by the Secretary of the Interior.

Sec. 4. No part of any funds which may be distributed in accordance with the provisions of this Act shall be subject to Federal or State income tax or inheritance tax.

Sec. 5. No part of any of the funds which may be so distributed shall be subject to any lien, debt, or claim of any nature whatsoever against the tribe or individual Indians except delinquent debts owed by the tribe to the United States, or owed by individual Indians to the tribe or to the United States.

Sec. 6. Payments made under this Act shall not be held to be "other income and resources", as that term is used in sections 2(a)(10)(A), 402(a)(7), 1002(a)(8), and 1402(a)(8) of the Social Security Act (42 U.S.C. 302(a)(10)(A), 602(a)(7), 1202(a)(8), and 1352 (a)(8)).

Sec. 7. All costs incident to making the payments authorized by this Act shall be paid by appropriate withdrawals from the judgment funds and interest on the judgment fund, using the interest fund first, but there are authorized to be appropriated not to exceed $500,000 to reimburse the judgment fund and the interest fund.

Sec. 8. The Secretary of the Interior is authorized to prescribe rules and regulations to carry out the provisions of this Act.

With the following committee amendments:

Page 2, line 14, strike out "$5" and insert "$10".

Page 2, line 16, strike out "$2" and insert "$5".

Page 2, line 22, strike out "Sec. 3." and insert "Sec. 3. (a)".

Page 3, line 3, change the comma to a period, strike out the remainder of the sentence and add a new subsection to read as follows:

"(b) Tribal funds that revert to the tribe pursuant to this Act, including interest and income therefrom, may be advanced or expended for any purpose that is authorized by the principal chief of the Cherokee Nation and approved by the Secretary of the Interior."

Page 3, line 9, strike out the words "or inheritance tax".

The committee amendments were agreed to.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EDMONDSON. Mr. Speaker, this is a day of justice long awaited and long prayed for by the Cherokee people. It takes another long step toward righting a wrong that dates back to the 19th century, when the Government forced the Cherokees to sell at an unconscionably low price a great tract of land in what is now western Oklahoma.

I am proud and happy, Mr. Speaker, that this bill has passed by unanimous vote in the House and with the unanimous recommendation of the great Committee on Interior and Insular Affairs. My special thanks go to the able chairman of that committee, the gentleman from Colorado, the Honorable Wayne Aspinall, and to one of the best friends of the American Indian in Washington, the chairman of the Subcommittee on Indian Affairs, the gentleman from Florida, the Honorable James Haley.

There can be no doubt of the overwhelming support of the Cherokee people for this bill, which represents the final result of many months of meetings, conferences, and tribal consideration. This bill was recommended for passage by the distinguished principal Chief of the Cherokee Nation, the Honorable W. W. Keeler, and by the executive committee of the tribe.

It has also had the strong support of the great Secretary of the Interior, Stewart Udall, and of the Commissioner of Indian Affairs, the Honorable Philleo Nash. The Office of President Kennedy has given the direct and helpful support of the White House to expediting the appropriation of funds to discharge this longstanding obligation, and to early passage of this legislation.

All members of the Oklahoma delegation, in both the House and the other body, have joined in support of this bill.

I earnestly hope it will reach the President's desk in the near future, in order that distribution of these funds may get underway without further delay.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FINAL DISPOSITION OF THE PROPERTY OF THE CHOCTAW TRIBE

The Clerk called the bill (H.R. 12355) to amend the law relating to the final disposition of the property of the Choctaw Tribe.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of August 25, 1959 (73 Stat. 420), is amended as follows: The words "three years", which appear twice in section 1(a), once in section 1(d), once in section 11, once in section 12(a), and once in section 12(b) are changed to "six years".

Sec. 2. Section 12(c) of such Act is amended by changing the period to a comma and adding "and for a period of three years after such legal entity is organized it shall have the same immunity from the defense of laches or a statute of limitations that the Choctaw Tribe had prior to such time."

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EDMONDSON. Mr. Speaker, unanimous approval by the House of this measure helps make possible an orderly and complete preparation of the steps necessary to carry out the provisions of the act of August 25, 1959, with respect to the tribal lands of the Choctaw Tribe.

Like the Cherokee bill on which we also acted today, this measure has had the unanimous support of the Oklahoma delegation, all of whom have been aware of the great injustice which would result if additional time were not permitted under the 1959 act.

While this measure bears the name of Oklahoma's Second District Congressman, a member of the House Subcommittee on Indian Affairs, it was introduced at the request of our distinguished colleague from the Third Congressional District in Oklahoma, the Honorable CARL ALBERT, and at the further request of Choctaw tribal representatives.

It is imperative that final action be secured upon it in advance of a deadline date of August 25, 1962, and for this reason we are doubly appreciative of the priority which has been given this bill by the great Committee on Interior and Insular Affairs and by this body.

I know of no objection to this measure from any quarter and trust it will be speedily advanced in the other body and signed into law by the President.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

INCORPORATION OF THE NAVAL SEA CADET CORPS

The Clerk called the bill (S. 1308) to incorporate the Sea Cadet Corps of America, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following named persons: John J. Bergen, William J. Catlett, Junior, Morgan Fitch, George Halas, John S. Leahy, Junior, and J. Paull Marshall; members of the Navy League National Sea Cadet Committee and their associates and successors, are hereby created and declared to be a body corporate by the name of the Naval Sea Cadet Corps (hereinafter referred to as the "corporation") and by such name shall be known and have perpetual succession and the powers, limitations, and restrictions herein contained.

OBJECTS AND PURPOSES OF THE CORPORATION

SEC. 2. The objects and the purposes of the corporation shall be, through organization and cooperation with the Department of the Navy, to encourage and aid American boys to develop an interest and skill in basic seamanship and in its naval adaptations, to train them in seagoing skills and to teach them patriotism, courage, self-reliance, and kindred virtues.

COMPLETION OF ORGANIZATION

SEC. 3. The persons named in the first section, their associates and successors are hereby authorized to complete the organization of the corporation by the selection of officers, the adoption of a constitution and bylaws, the promulgation of rules or regulations that may be necessary for the accomplishment of the purposes of this corporation, and the doing of such other acts as may be necessary for such purposes.

CORPORATE POWERS

SEC. 4. The corporation shall have power—

(1) to have succession by its corporate name;

(2) to sue and the sued, complain and defend in any court of competent jurisdiction;

(3) to adopt, use, and alter a corporate seal;

(4) to choose such officers, managers, agents, and employees as the business of the corporation may require;

(5) to adopt, amend, and alter a constitution and bylaws, not inconsistent with the laws of the United States or any State in which the corporation is to operate, for the management of its property and the regulation of its affairs;

(6) to contract and be contracted with;

(7) to take by lease, gift, purchase, grant, devise, or bequest from any private corporation, association, partnership, firm or individual and to hold any property, real, personal or mixed, necessary or convenient for attaining the objects and carrying into effect the purposes of the corporation, subject, however, to applicable provisions of law of any State (A) governing the amount or kind of property which may be held by or (B) otherwise limiting or controlling the ownership of property by, a corporation operating in such State;

(8) to transfer, convey, lease, sublease, encumber and otherwise alienate real, personal, or mixed property; and

(9) to borrow money for the purposes of the corporation, issue bonds therefor, and secure the same by mortgage, deed of trust, pledge or otherwise, subject in every case to all applicable provisions of Federal and State laws.

PRINCIPAL OFFICE, SCOPE OF ACTIVITIES; DISTRICT OF COLUMBIA AGENT

SEC. 5. (a) The principal office of the corporation shall be located in Tacoma, Washington, or in such other place as may be later determined by the board of directors, but the activities of the corporation shall not be confined to that place, but may be conducted throughout the various States, territories, and possessions of the United States.

(b) The corporation shall have in the District of Columbia at all times a designated agent authorized to accept service of process for the corporation; and notice to or service upon such agent, or mailed to the business address of such agent, shall be deemed notice to or service upon the corporation.

MEMBERSHIP

SEC. 6. Eligibility for membership in the corporation and the rights, privileges, and designation of classes of members shall, except as provided in this title, be determined as the constitution and bylaws of the corporation may provide.

BOARD OF DIRECTORS: COMPOSITION, RESPONSIBILITIES

SEC. 7. (a) Upon the enactment of this title, the membership of the initial board of directors of the corporation shall consist of the present members of the board of directors of the Sea Cadet Corps of America, the corporation described in section 17 of this Act, or such of them as may then be living and are qualified members of said board of directors, to wit: John J. Bergen, William J. Catlett, Junior, Morgan Fitch, George Halas, John S. Leahy, Junior, and P. Paull Marshall.

(b) Thereafter, the board of directors of the corporation shall consist of such number (not less than three and not more than fifteen), shall be selected in such manner (including the filling of vacancies), and shall serve for such term as may be prescribed in the constitution and bylaws of the corporation.

(c) The board of directors shall be the governing board of the corporation, and shall be responsible for the general policies and program of the corporation and for the control of all funds of the corporation.

OFFICERS; ELECTION AND DUTIES OF OFFICERS

SEC. 8. (a) The officers of the corporation shall be a president, one or more vice presidents (as may be prescribed in the constitution and bylaws of the corporation), a secretary, and a treasurer, and such other officers as may be provided in the constitution and bylaws.

(b) The officers of the corporation shall be elected in such manner and for such terms and with such duties as may be prescribed in the constitution and bylaws of the corporation.

USE OF INCOME: LOANS TO OFFICERS, DIRECTORS, OR EMPLOYEES

SEC. 9. (a) No part of the income or assets of the corporation shall inure to any of its members, directors, or officers as such, or be distributable to any of them during the life of the corporation or upon its dissolution or final liquidation. Nothing in this subsection, however, shall be construed to prevent the payment of compensation to officers of the corporation in amounts approved by the board of directors of the corporation.

(b) The corporation shall not make loans to its officers, directors, or employees. Any director who votes for or assents to the making of a loan or advance to an officer, director, or employee of the corporation, and any officer who participates in the making of such a loan or advance, shall be jointly and severally liable to the corporation for the amount of such loan until the repayment thereof.

NONPOLITICAL NATURE OF CORPORATION

SEC. 10. The corporation, and its officers and directors as such, shall not contribute to or otherwise support or assist any political party or candidate for public office.

LIABILITY FOR ACTS OF OFFICERS AND AGENTS

SEC. 11. The corporation shall be liable for the acts of its officers and agents when acting within the scope of their authority.

PROHIBITION AGAINST ISSUANCE OF STOCK OR PAYMENT OF DIVIDENDS

SEC. 12. The corporation shall have no power to issue any shares of stock or to declare or pay any dividends.

BOOKS AND RECORDS: INSPECTION

SEC. 13. The corporation shall keep correct and complete books and records of account and shall keep minutes of the proceedings of its members, board of directors, and committees having any authority under the board of directors, and it shall also keep at its principal office a record of the names and addresses of its members entitled to vote. All books and records of the corporation may be inspected by any member entitled to vote, or his agent or attorney, for any proper purpose, at any reasonable time.

AUDIT OF FINANCIAL TRANSACTIONS

SEC. 14. (a) Annual audits shall be made by an independent licensed or certified public accountant or a firm of independent licensed or certified public accountants, in accordance with generally accepted auditing standards. The audit shall be conducted at the place or places where the accounts of the corporation are normally kept. All books, accounts, financial records, reports, files, and all other papers, things, or property belonging to or in use by the corporation and necessary to facilitate the audit shall be made available to the person or persons conducting the audit; and full facilities for verifying transactions with the balances or securities held by depositories, fiscal agents, and custodians shall be afforded to such person or persons.

(b) A report of such audit shall be made by the corporation to the Congress not later than March 1 of each year. The report shall set forth the scope of the audit and shall include a verification by the person or persons conducting the audit of statements of (1) assets and liabilities, (2) capital and surplus or deficit, (3) surplus or deficit analysis, (4) income and expense, and (5) sources and application of funds. Such report shall not be printed as a public document.

USE OF ASSETS ON DISSOLUTION OR LIQUIDATION

SEC. 15. Upon dissolution or final liquidation of the corporation, after discharge or satisfaction of all outstanding obligations and liabilities, the remaining assets, if any, of the corporation shall be distributed in accordance with the determination of the board of directors of the corporation and in compliance with the constitution and bylaws of the corporation and all Federal and State laws applicable thereto.

EXCLUSIVE RIGHT TO NAME, EMBLEM, SEALS, AND BADGES

SEC. 16. The corporation shall have the sole and exclusive right to the name "Naval Sea Cadet Corps" and to have and to use in carrying out its purposes, distinctive insignia, emblems, and badges, descriptive or designating marks, and words or phrases, as may be required in the furtherance of its functions. No powers or privileges hereby granted shall, however, interfere or conflict with established or vested rights.

TRANSFER OF ASSETS

SEC. 17. The corporation may acquire the assets of the Sea Cadet Corps of America, a corporation organized under the laws of the State of Washington, upon discharging or satisfactorily providing for the payment and discharge of all of the liability of such corporation and upon complying with all laws of the State of Washington applicable thereto.

ANNUAL REPORT

SEC. 18. The corporation shall report annually to the Secretary of the Navy concerning its proceedings and activities for the preceding calendar years. The Secretary of the Navy shall communicate to Congress the whole of such reports, or such portion thereof as he shall see fit.

RESERVATION OF RIGHT TO AMEND OR REPEAL CHAPTER

SEC. 19. The right to alter, amend, or repeal this title is expressly reserved.

Amend the title so as to read: An Act to incorporate the Naval Sea Cadet Corps."

With the following committee amendments:

1. On page 4, line 23, insert after the word "title" the following: "and for not more than one year thereafter,".
2. On page 5, line 8, strike out the word "three" and insert the word "ten".
3. On page 5, line 9, strike out the word "fifteen" and insert "twenty-five".
4. On page 7, strike out the sentence beginning on line 20 and insert:

"The accounts of the corporations shall be audited annually in accordance with generally accepted auditing standards by independent certified public accountants or independent licensed public accountants, certified or licensed by a regulator authority of a State or other political subdivision of the United States."

The committee amendments were agreed to.

The bill was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "An act to incorporate the Naval Sea Cadet Corps."

A motion to reconsider was laid on the table.

GREETINGS TO THE BETHEL HOME DEMONSTRATION CLUB

The Clerk called House concurrent resolution (H. Con. Res. 474) extending the greetings and felicitations of the Congress to the Bethel Home Demonstration Club of Bethel Community, Sumter County, S.C.

There being no objection, the Clerk read the House concurrent resolution, as follows:

Whereas the Bethel Home Demonstration Club, founded in Sumter County, South Carolina, in March of 1915, was the first home demonstration club in the United States; and

Whereas home demonstration clubs have been of great value to the people of the United States by aiding in the diffusion of knowledge and skills among the women of rural America; and

Whereas Winthrop College, the South Carolina college for women, pioneered in developing the concepts and in providing leadership for the home demonstration club movement; and

Whereas the year 1962 is the one hundredth anniversary year of the United States Department of Agriculture and of the land-grant college system: Now, therefore, be it

Resolved by the House of Representatives (*the Senate concurring*), That the Congress of the United States recognizes that the Bethel Home Demonstration Club of the Bethel Community, Sumter County, South Carolina, was the first such club to be established in the United States, and extends its greetings and felicitations to the Bethel Home Demonstration Club on the occasion of the one hundredth anniversary year of the establishment of the United States Department of Agriculture and the land-grant college system.

The House concurrent resolution was agreed to.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that the gentlewoman from South Carolina [Mrs. RILEY] may extend her remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mrs. RILEY. Mr. Speaker, it gives me great pleasure to support House Concurrent Resolution 474, which is before the House for consideration today.

Several days ago I appeared before the House Judiciary Committee, and I submit for the RECORD the statement which I made at that time concerning this bill:

JULY 19, 1962.

Mrs. RILEY. Mr. Chairman and members of the committee, Bethel Home Demonstration Club, Sumter County, S.C., was the first Home Demonstration Club established in the world. The date was March 1915.

This has been made a matter of record by resolution adopted on March 21, 1962, by the State of South Carolina House of Representatives and concurred by the State Senate as per attached resolution.

Nineteen hundred and sixty-two is both the 100th anniversary of the U.S. Department of Agriculture and the land-grant college system and the 47th year of the Bethel Home Demonstration Club, Sumter County, S.C.

They would like to celebrate this this fall with a memorial service for the charter members.

On May 7, 1962, at the request of the president of Bethel Home Demonstration Club, Sumter County, S.C., I introduced House Concurrent Resolution 474 now pending before your committee, the two South Carolina Senators, THURMOND and JOHNSTON concurring and introducing Senate Concurrent Resolution 75 for the purpose of establishing officially on a national basis the fact Bethel Home Demonstration Club of Sumter County, S.C. was the first Home Demonstration Club established in the world.

I shall appreciate very much your careful consideration of this bill and your cooperation in favorably reporting it.

I thank you.

Mr. Speaker, I hope that this legislation passes the House and becomes law.

DIRECTING SECRETARY OF INTERIOR TO CONVEY CERTAIN PUBLIC LANDS IN STATE OF NEVADA

The Clerk called the bill (S. 3089) to amend the act directing the Secretary of the Interior to convey certain public lands in the State of Nevada to the Colorado River Commission of Nevada in order to extend for 5 years the time for selecting such lands.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to direct the Secretary of the Interior to convey certain public lands in the State of Nevada to the Colorado River Commission of Nevada acting for the State of Nevada", approved March 6, 1958 (72 Stat. 31), is amended as follows:

(1) in section 2, strike out "five years" and insert in lieu thereof "ten years"; and

(2) in section 3, strike out "five-year" and insert in lieu thereof "ten-year".

With the following committee amendments:

Page 1, line 8, through page 2, line 2, strike out all of the present language and insert in lieu thereof the following:

"(1) in section 2, strike out 'five years' and insert in lieu thereof 'ten years';

"(2) in section 3, strike out 'five-year' and insert in lieu thereof 'ten-year'; and

"(3) at the end of section 4(c) add: 'The appraisal shall be of the fair market value of the lands as of the effective date of this Act.'."

The committee amendments were agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DIRECTING SECRETARY OF INTERIOR TO CONVEY CERTAIN PUBLIC LANDS IN THE STATE OF CALIFORNIA

The Clerk called the bill (H.R. 2952) to direct the Secretary of the Interior and the Administrator of General Services to convey certain public and acquired lands in the State of California to the city of Needles.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior or the Administrator of General Services, if the lands herein described come within his jurisdiction for disposal purposes, shall issue to the city of Needles, in the county of San Bernardino, State of California, upon payment by the city into the Treasury of the United States, not more than five years after the Secretary or the Administrator has notified the city of the purchase price which shall be an amount equal to the fair market value of the lands as determined by the Secretary or the Administrator after the appraisal of the lands by contract appraisal or otherwise, a patent or deed for the following described lands situated within the city limits of said city of Needles or adjacent thereto, in the State of California comprising a total of

492.6 acres more or less (all range references are to San Bernardino base and meridian):

(a) The southwest quarter of the northeast quarter of section 29 in township 9 north, range 23 east, comprising 12.6 acres more or less.

(b) The southwest quarter of the northwest quarter of section 30 in township 9 north, range 23 east, subject to Atchison, Topeka, and Santa Fe Railway right-of-way, comprising 40 acres more or less (otherwise described as Government lot 2 in said section 30).

(c) The southeast quarter of the northwest quarter of section 30 in township 9 north, range 23 east, subject to Atchison, Topeka, and Santa Fe Railway right-of-way, comprising 40 acres more or less.

(d) The south half of the southeast quarter of the southwest quarter of section 30, township 9 north, range 23 east, comprising 20 acres more or less.

(e) The north half of the north half of the northeast quarter of the northwest quarter of section 31 in township 9 north, range 23 east, comprising 10 acres more or less.

(f) The northeast quarter of section 31 in township 9 north, range 23 east, comprising 160 acres more or less.

(g) The southeast quarter of the northwest quarter of section 32 in township 9 north, range 23 east, comprising 40 acres more or less.

(h) The southeast quarter of the southeast quarter of section 32 in township 9 north, range 23 east, subject to United States Highway 66–95 right-of-way, comprising 40 acres more or less.

(i) All premises described in lease from United States to city of Needles, dated June 7, 1960:

PARCEL 1. Those portions lying west of the present west bank of the Colorado River of the lands acquired by the United States from Monaghan and Murphy Company, a California corporation, by grant deed recorded August 20, 1947, in book 2069 at page 128 of the official records of San Bernardino County, California.

PARCEL 2. Those lands acquired by the United States from said Monaghan and Murphy Company by grant deeds recorded August 20, 1947, in book 2063 at page 479 and book 2065 at page 195 of said official records.

PARCEL 3. Those lands acquired by the United States from Daniel J. Murphy and others by grant deed recorded September 17, 1947, in book 2133 at page 215 of said official records.

PARCEL 4. The following lots and blocks in the city of Needles, county of San Bernardino, State of California:

(A) Lots 1 to 12 inclusive, and 20 to 24, inclusive, in block 40, saving and excepting therefrom those portions of lots 22, 23, and 24 in said block 40, lying north and east of a line drawn from the northwest (northeast) corner of said lot 22, to a point in the east boundary of said lot 24, distant 75 feet south from the northeast corner of said lot 24, as conveyed to California, Arizona, and Santa Fe Railway Company, as per deed recorded in book 630 of deeds, page 105, records of said county.

All of blocks 41, 42, 43, together with the easterly half of Water Street as shown on the hereinafter referred to map of Needles from the south lines of Pinney Avenue to the northerly line of the station grounds of the Atchison, Topeka, and Santa Fe Railway Company, and the alley lot 25 feet wide lying within said block and extending from the south line of Pinney Avenue to the northerly line of said station grounds,

Lot 1 of block 44, together with the westerly one-half of Water Street as shown on said map from the south line of Pinney Avenue to the northerly line of said station grounds,

Lot 8 in block 51.

Lots 7 and 8 in block 52.

All of block 53, excepting therefrom lots 17 and 18,

All of block 54,

All of block 55, excepting therefrom lots 8 and 9,

Lots 1 to 4, inclusive, in block 101, and

Lots 1 to 6, inclusive, in block 102,

according to map of Needles, in the city of Needles, in said county and State, as per plat recorded in book 13 of maps, pages 17 and 18, and in book 19 of maps, pages 65 and 66, records of said county.

(B) Lots 2 to 6, inclusive, and lots 9 to 12, inclusive, in block 1.

Lot 1 in block 2, saving and excepting therefrom the following: Beginning at a point 120 feet north of the southeast corner of lot 1, block 2 of Pinney addition to city of Needles; thence north 30 feet; thence west 20 feet on the north boundary line of said lot; thence south 30 feet to a point 20 feet west of the point of beginning; thence 20 feet to the point of beginning.

Lots 1 and 2 in block 6, except from said lot 2, the northerly 60 feet thereof; all in Pinneys addition to Needles, in the city of Needles, county of San Bernardino, State of California, as per plat recorded in book 11 of maps at page 38, records of said county.

(C) All of blocks 21, 38, and 39 and lots 21 to 31, inclusive, in block 48 of Denair's subdivision, sometimes called Denair's subdivision numbered 2, in the city of Needles, in said county and State, as per plat recorded in book 16 of maps, at pages 53 and 54, records of said county,

together with any lands adjoining said parcels 1 to 4, inclusive, acquired by the United States by reason of abandonment of streets and alleys.

SEC. 2. The conveyance authorized and directed by this Act shall be made subject to any existing valid claims against the lands described in the first section of this Act, and to any reservations necessary to protect continuing uses of said lands by the United States.

SEC. 3. All moneys received from the conveyance of lands under the terms of this Act shall be disposed of in the same manner as moneys received from the sale of public lands, except that moneys received as reimbursement for costs of appraisal, survey, and extinguishing adverse claims may be used by the Secretary for said purposes without appropriation.

SEC. 4. The lands described in the first section of this Act shall be segregated from all forms of appropriation under the public land laws including the mining and mineral leasing laws, from the date of approval of this Act, until the Secretary shall provide otherwise by publication of an order in the Federal Register.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following language:

"That the Secretary of the Interior shall issue to the city of Needles, in the county of San Bernardino, State of California, upon payment by the city into the Treasury of the United States, not more than five years after the Secretary has notified the city of the purchase price which shall be an amount equal to the fair market value plus the cost of any appraisal of the lands as of the effective date of this Act as determined by the Secretary after the appraisal of the lands by contract appraisal or otherwise, a patent or deed for the following described lands situated within the city limits of said city of Needles or adjacent thereto, in the State of California comprising a total of 340 acres more or less (all range references are to San Bernardino base and meridian with a reservation to the United States of the coal, phosphate, sodium, potassium, oil, gas, oil shale, native asphalt, solid and semisolid bitumen and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried), together with the right to prospect for, mine, and remove the same under applicable provisions of law:

"(a) The southwest quarter of the northwest quarter of section 30 in township 9 north, range 23 east, subject to Atchison, Topeka, and Santa Fe Railway right-of-way, comprising 40 acres more or less (otherwise described as Government lot 2 in said section 30) whenever the Secretary of the Interior determines that there is no further Federal need for this parcel.

"(b) The southeast quarter of the northwest quarter of section 30 in township 9 north, range 23 east, subject to Atchison, Topeka, and Santa Fe Railway right-of-way, comprising 40 acres more or less.

"(c) The north half of the south half of the southeast quarter of the southwest quarter, and the southwest quarter of the southwest quarter of the southeast quarter of the southwest quarter, and the southeast quarter of the southeast quarter of the southeast quarter of the southwest quarter section 30, township 9 north, range 23 east, comprising 15 acres more or less.

"(d) The northeast quarter of the northeast quarter of the northeast quarter of the northwest quarter, and the northwest quarter of the northwest quarter of the northeast quarter of the northwest quarter section 31, township 9 north, range 23 east, comprising 5 acres more or less.

"(e) The northeast quarter of section 31 in township 9 north, range 23 east, comprising 160 acres more or less.

"(f) The southeast quarter of the northwest quarter of section 32 in township 9 north, range 23 east, comprising 40 acres more or less.

"(g) The southeast quarter of the southeast quarter of section 32 in township 9 north, range 23 east, subject to United States Highway 66–95 right-of-way, comprising 40 acres more or less.

"SEC. 2. The conveyance authorized and directed by this Act shall be made subject to any existing valid claims against the lands described in the first section of this Act, and to any reservations necessary to protect continuing uses of said lands by the United States.

"SEC. 3. The lands described in the first section of this Act shall be segregated from all forms of appropriation under the public land laws including the mining and mineral leasing laws, from the date of approval of this Act, until the Secretary shall provide otherwise by publication of an order in the Federal Register.

"SEC. 4. The execution of the patents or deeds described in section 1 of this Act shall not relieve any person of any liability to the United States arising prior to the date of such conveyances for unauthorized use of the conveyed lands."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended to read as follows: "A bill to direct the Secretary of the Interior to convey certain public lands in the State of California to the city of Needles."

A motion to reconsider was laid on the table.

INVESTIGATION OF CLAIMS FOR PROPERTY DAMAGE DUE TO ARTIFICIAL RAISING OF WATER LEVEL OF LAKE ONTARIO

The Clerk called the bill (H.R. 10955) to authorize the Foreign Claims Settlement Commission of the United States to investigate the claims of citizens of the United States who suffered property damage in 1951 and 1952 as the result of the artificial raising of the water level of Lake Ontario.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, reserving the right to object, does this open the door to payment of damages out of the U.S. Treasury because the Canadian Government artificially raised the water level in Lake Ontario? Does this open the door to our payment of damages that have been inflicted by the Canadian Government or by Canadian interests?

Mr. LANE. Mr. Speaker, may I say to the gentleman there is nothing in this bill that will authorize us to pay any of these claims. This is merely an authorization that the Government seeks to have the Foreign Claims Settlement Commission investigate these claims, because, after all, there was an agreement back some years ago that Canada would reimburse those who were damaged as a result of the flooding of this area. This has been under consideration for some period of time.

Our Government felt that the only way to find out here what the situation was was to have the Foreign Claims Settlement Commission review the claims of these citizens of the United States who suffered this damage back in 1951.

Mr. GROSS. Is there any question about the fact that damages were sustained by citizens of the United States by virtue of the construction of this dam in the St. Lawrence River?

Mr. LANE. As I understand it, there are about 1,000 claims.

Mr. GROSS. Is there any question about the fact that they did suffer damage?

Mr. LANE. As I answered the gentleman, there is a question as to whether or not the damages they claim come especially from the flooding or whether they were from other particular reasons.

Mr. GROSS. Let me ask the gentleman this question:

Is it not true that the Canadian Government now refuses to arbitrate?

Mr. LANE. Yes; at the present time. I will say further to the gentleman that this matter was taken into court and claims were filed there, and the decision was rendered not on the claims themselves or the validity of any of these claims but, rather, on the service that was made on the Canadian Government. We feel now that much of this information is available to the Foreign Claims Settlement Commission through the Corps of Engineers, because when these claims were filed some time ago—a few years back——

Mr. GROSS. Yes; 10 or 12 years ago, was it not?

Mr. LANE. Yes; that is right. Much of this information is available, but it has to be gathered together.

Mr. GROSS. Does the gentleman think we could refer this to the United Nations for settlement?

Mr. LANE. I hardly doubt that.

Mr. GROSS. This is an international case, is it not?

Mr. LANE. To a certain extent, but it just goes back to this agreement.

Mr. GROSS. Does the gentleman suppose we could get the United Nations Emergency Police Force to collect from the Canadians, as the U.N. is now trying to put the pressure on Tshombe in Katanga? Does the gentleman suppose we could get the United Nations police force to collect from the Canadians, if it is found that they do owe American citizens for damages?

Mr. LANE. All the bill does is to authorize the Claims Commission to investigate the claims of the citizens and to give them consideration so we will know whether or not our citizens are entitled to claims.

Mr. GROSS. The Canadian Government absolutely refuses to arbitrate a matter of this kind, is that not correct?

Mr. LANE. At the present time the Canadian Government has not done anything.

Mr. GROSS. Mr. Speaker, in the hope that someone somewhere can work out a settlement that will be acceptable and provide justice to the Americans who have suffered damage in this case—a settlement that will not come out of the U.S. Treasury—I am going to withdraw my objection.

However, I would like to observe that had the U.S. Government or American interests caused damage to Canadian property owners—had the situation been reversed—the State Department and others would have long since rushed to Congress and secured legislation to pay all claims. This ought to be a real good lesson for those who are so free with the dollars gouged out of American taxpayers.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

There was no objection.

Mr. LANE. Mr. Speaker, I ask unanimous consent that S. 2978 to authorize the Foreign Claims Settlement Commission of the United States to investigate the claims of citizens of the United States who suffered property damage in 1951 and 1952 as the result of the artificial raising of the water level of Lake Ontario, an identical bill, be considered in lieu of H.R. 10955, the House bill.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The Clerk read the Senate bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any other provision of law, the Foreign Claims Settlement Commission of the United States (hereinafter referred to as the "Commission") is authorized and directed to accept claims of citizens of the United States for damages caused during 1951 and 1952 by the construction and maintenance of Gut Dam in the Saint Lawrence River by the Canadian Government, and the Commission is further authorized and directed with respect to each such claim to determine the validity thereof and the amount of damages caused by Gut Dam.

SEC. 2. Within sixty days after the enactment of this Act the Commission shall give public notice by publication in the Federal Register of the time when, and the limit of time within which, claims may be filed, which limit shall not be more than twelve months after such publication.

SEC. 3. The Commission shall, as soon as practicable after all claims are determined by it, submit to the President a report and a list of claims determined to be valid, and the amount of each such claim and a list of claims determined to be invalid, for such action by the President as he may deem appropriate.

SEC. 4. (a) There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

(b) The Commission is authorized and directed to utilize its existing personnel and facilities to the maximum extent practicable to carry out the provisions of this Act.

(c) Nothing herein shall be construed as authorizing the Commission to pay or certify for payment any claim filed hereunder.

SEC. 5. If the Government of Canada enters into an agreement with the Government of the United States providing for arbitration or adjudication of the claims filed under this Act, the Commission shall discontinue its investigation and determination of the claims and transfer or otherwise make available to the Secretary of State all records and documents relating to the claims or, on the request of the Secretary of State, return to claimants documents filed in support of their claims.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill, H.R. 10955, was laid on the table.

PROVIDING FOR THE RELIEF OF CERTAIN ENLISTED MEMBERS OF THE COAST GUARD

The Clerk called the bill (H.R. 12459) to provide for the relief of certain enlisted members of the Coast Guard.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. FORD. Mr. Speaker, reserving the right to object, I would like to ask someone on the committee a question concerning this proposed legislation.

Does this legislation, if enacted into law, absolve everybody of any responsibility for the error that was made?

Mr. LANE. Will the gentleman yield?

Mr. FORD. I would be glad to yield to the gentleman from Massachusetts.

Mr. LANE. I would like to answer the gentleman from Michigan by saying that it certainly would. I know the gentleman's interest with reference to the disbursing officer who has certified these payments to these servicemen, and I realize the gentleman's interest in absolving the disbursing officers from time to time in such cases, but in this particular case may I say, Mr. Speaker, in answer to the gentleman from Michigan [Mr. FORD] that these payments were certified on the basis of a determination by the military commander—the officer who was in charge of the base there. There was no Government mess available to those units concerned. This was made on the basis of the particular military mission of the units and their required high state of operational readiness, and it would be equitable not to relieve the officers.

What I am trying to say, Mr. Speaker, is that the commanding officer has certified these payments and the disbursing officer had to take his order from the commanding officer. For that reason, these payments for this mess were taken care of because of these enlisted men who were there on this emergency service.

Mr. FORD. The enlisted men were completely without fault in this case, were they not?

Mr. LANE. That is very true; in each of these cases.

Mr. FORD. But in each of these instances there is someone at fault, and unless we start pinning responsibility on somebody—I do not care whether it is the commanding officer or the disbursing officer—we are not going to get the job done properly according to the law or regulations. The people who received the money were the unfortunate beneficiaries of the error of someone else.

The gentleman from Massachusetts and I have gone round and round on these problems. I want him to know that unless we start pinning the responsibility on somebody, whether it is the commanding officer, or some disbursing officer, I will not permit these bills to pass on the Consent Calendar.

Mr. GROSS. Mr. Speaker, will the gentleman yield for one observation?

Mr. FORD. I yield to the gentleman from Iowa.

Mr. GROSS. I will say to the gentleman that he should take a look at the Private Calendars if he wants to see this sort of thing being carried on. I want to commend the gentleman for his protest on this bill.

Mr. FORD. I am delighted to have the gentleman from Iowa alert me to things that are going on on the Private Calendar about which I was not informed. All I can do as a member of the Consent Calendar objector's committee, is to handle the problems we have here. The gentleman from Massachusetts [Mr. LANE] knows my attitude. He does seek to hold these bills under some control. But I just want to alert him again that unless we pin the responsibility on someone, these problems are going to grow, they are going to be more numerous and be more prevalent rather than otherwise.

So, Mr. Speaker, I withdraw my reservation and ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

AMENDING THE HATCH POLITICAL ACTIVITIES ACT

The Clerk called the bill (H.R. 12661) to amend section 9(b) of the act entitled "An act to prevent pernicious political activities"—the Hatch Political Activities Act—to eliminate the requirement that the Civil Service Commission impose no penalty less than 90 days' suspension for any violation of section 9 of the act.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, reserving the right to object, I would point out that this bill strikes out the 90 days' suspension for violation of the Hatch Act and leaves it completely discretionary with the Civil Service Commission whether an employee is suspended for 5 days or 500 days. I do not like leaving it discretionary so that the Civil Service Commission can make fish of one and fowl of another for violating the Hatch Act.

Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

The SPEAKER pro tempore. This concludes the call of the eligible bills on the Consent Calendar.

NATIONAL BANK BRANCHES IN FOREIGN COUNTRIES

Mr. SPENCE. Mr. Speaker, I move to suspend the rules and pass the bill (S. 1771) to improve the usefulness of national bank branches in foreign countries.

The Clerk read as follows:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 25 of the Federal Reserve Act, as amended, is amended by adding the following new paragraph at the end thereof:
>
> "Regulations issued by the Board of Governors of the Federal Reserve System under this section, in addition to regulating powers which a foreign branch may exercise under other provisions of law, may authorize such a foreign branch, subject to such conditions and requirements as such regulations may prescribe, to exercise such further powers as may be usual in connection with the transaction of the business of banking in the places where such foreign branch shall transact business. Such regulations shall not authorize a foreign branch to engage in the general business of producing, distributing, buying, or selling goods, wares, or merchandise; nor except to such limited extent as the Board may deem to be necessary with respect to securities issued by any 'foreign state' as defined in section 25(b) of this Act, shall such regulations authorize a foreign branch to engage or participate, directly or indirectly, in the business of underwriting, selling, or distributing securities."

The SPEAKER pro tempore. Is a second demanded?

Mr. McDONOUGH. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. SPENCE. Mr. Speaker, this bill is designed to increase the usefulness of foreign branches of our national banks. We have an expanding economy in a world that is growing smaller all the time. Our foreign trade means much to us. These foreign branches of American banks are helping to carry out the policy of our national goals. They help to encourage the same purposes as the Export-Import Bank, the Inter-American Bank, the International Bank for Reconstruction and Development, and the International Monetary Fund. They help us in our competition in foreign trade. They help to increase our foreign trade. Our competition in foreign trade is growing greater all the time. This has been caused in part by international agreements of which the European Common Market is an example.

Mr. Speaker, there was no substantial opposition to the bill and I ask that it be passed.

Mr. McDONOUGH. Mr. Speaker, I asked for the second for the purpose of informing the House of the pertinent parts of this bill and the purpose and intent of it.

The bill, as the chairman of the committee explained, provides for branches of national banks in foreign countries. To remove any doubt in the minds of any Member of the House that this may provide any tax evasion opportunities, it is definitely not for that purpose and will not provide any such opportunity for any bank that operates a branch in a foreign country.

It does provide for a broader facility for foreign trade and the foreign exchange. There was no objection to the bill as far as the committee was concerned. There were no negative witnesses. There is no particular reason in my mind why the bill should not pass. I wanted this opportunity of explaining our side of the question.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. McDONOUGH. I yield to the gentleman from Iowa.

Mr. GROSS. It is my understanding that the Federal Reserve System is continuing to buy a substantial amount of foreign currency to bolster the position of the dollar in the international money market. It seems to me I read over the weekend, if I recall the figures correctly, that $468 million was purchased in a comparatively recent time of foreign currencies. I notice gold is continuing to leave this country despite the fact we are investing in foreign currencies. Is this bill intended to encourage the purchase of foreign currencies?

Mr. McDONOUGH. No, there is nothing in the bill that would stimulate that. The bill does not prevent that, but there is nothing in the bill to stimulate it. As a matter of fact, the bill is designed to help the facilities of banks which have branches in foreign countries. I would not say that it would encourage the reduction of our gold balance or our balance of payments.

Mr. GROSS. The gentleman would not say this was just another step along the path of one-world government, one-world association, or as some people call it, the independent interdependent one world?

Mr. McDONOUGH. I would not say it would move in that direction. However, many of the things we are doing move in that direction, there is no question about it.

The SPEAKER pro tempore. The question is, Will the House suspend the rules and pass the bill S. 1771?

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

REAL ESTATE AND CONSTRUCTION LOANS APPLICABLE TO NATIONAL BANKS

Mr. SPENCE. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 7796) to amend certain lending limitations on real estate and construction loans applicable to national banks.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the fourth sentence of the first paragraph of section 24 of the Federal Reserve Act (12 U.S.C. 371) is amended to read as follows: "No such association shall make such loans in an aggregate sum in excess of the amount of the capital stock of such association paid in and unimpaired plus the amount of its unimpaired surplus fund, or in excess of 70 per centum of the amount of its time and savings deposits, whichever is the greater."

SEC. 2. The first sentence of the third paragraph of section 24 of the Federal Reserve Act (12 U.S.C. 371) is amended to read as follows:

"Loans made to finance the construction of industrial or commercial buildings and having maturities of not to exceed eighteen months where there is a valid and binding agreement entered into by a financially responsible lender to advance the full amount of the bank's loan upon completion of the buildings and loans made to finance the construction of residential or farm buildings and having maturities of not to exceed eighteen months, shall not be considered as loans secured by real estate within the meaning of this section but shall be classed as ordinary commercial loans whether or not secured by a mortgage or similar lien on the real estate upon which the building or buildings are being constructed: *Provided,* That no national banking association shall invest in, or be liable on, any such loans in an aggregate amount in excess of 100 per centum of its actually paid-in and unimpaired capital plus 100 per centum of its unimpaired surplus fund."

The SPEAKER pro tempore. Is a second demanded?

Mr. McDONOUGH. I demand a second, Mr. Speaker.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. SPENCE. Mr. Speaker, national banks can now lend upon real estate only the amount of their unimpaired and paid-in capital stock and unimpaired surplus or 60 percent of their time and savings deposits. This bill increases the amount they can lend upon real estate mortgages from 60 to 70 percent of their time and savings deposits. The bill also increases the maturity of construction loans on residential and farm dwellings from 9 to 18 months. It will enable the banks to make more loans for the building of homes for our people. The amount for this purpose would be theoretically increased by $4 billion. Under this legislation banks in smaller communities would be enabled to make more mortgage loans for much needed homes.

This bill was endorsed by all interested governmental agencies.

Mr. McDONOUGH. Mr. Speaker, I asked for a second in order that we might be sure that the House was advised of the purpose and intent of the bill.

The bill provides for additional funds to be made available in the construction and real estate market. There is an increase of 60 to 70 percent in the time and savings deposits of the national banks, and of the time from 9 to 18 months on loans.

There is no opposition that I recall in the committee, none of any consequence.

I do not object to the bill's passing. I merely wanted to have its purpose and intent explained.

The SPEAKER. The question is, Will the House suspend the rules and pass the bill H.R. 7796?

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

ANNOUNCEMENT

Mr. TEAGUE of Texas. Mr. Speaker, I would like to announce to the House that I have asked the Speaker to withdraw from consideration under suspension this afternoon the next bill. This request was made because of a number of requests that have come to the gentleman from Texas that this bill be considered under a rule. I have asked the chairman of the Rules Committee for a hearing and I do not contemplate that this will delay the legislation in any way, shape, or manner.

LIBERALIZING EFFECTIVE DATES

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 7600) to amend title 38, United States Code, to revise the effective-date provisions relating to awards, and for other purposes, as amended.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3010 of title 38, United States Code, is amended to read as follows:

"§ 3010. Effective dates of awards

"(a) Unless specifically provided otherwise in this chapter, the effective date of an award based on an original claim, a claim reopened after final adjudication, or a claim for increase, of compensation, dependency and indemnity compensation, or pension, shall be fixed in accordance with the facts found, but shall not be earlier than the date of receipt of application therefor.

"(b) The effective date of an award of disability compensation to a veteran shall be the day following the date of his discharge or release if application therefor is received within one year from such date of discharge or release.

"(c) The effective date of an award of disability compensation by reason of section 351 of this title shall be the date such injury or aggravation was suffered if an application therefor is received within one year from such date.

"(d) The effective date of an award of death compensation, dependency and indemnity compensation, or death pension, where application is received within one year from the date of death, shall be the first day of the month in which the death occurred.

"(e) The effective date of an award of dependency and indemnity compensation to a child shall be the first day of the month in which the child's entitlement arose if application therefor is received within one year from such date.

"(f) An award of additional compensation on account of dependents based on the establishment of a disability rating in the percentage evaluation specified by law for the purpose shall be payable from the effective date of such rating; but only if proof of dependents is received within one year from the date of notification of such rating action.

"(g) Subject to the provisions of section 3001 of this title, where compensation, dependency and indemnity compensation, or pension is awarded or increased pursuant to any Act or administrative issue, the effective date of such award or increase shall be fixed in accordance with the facts found but shall not be earlier than the effective date of the Act or administrative issue. In no event shall such award or increase be retroactive for more than one year from the date of application therefor or the date of administrative determination of entitlement, whichever is earlier.

"(h) Where an award of pension has been deferred or pension has been awarded at a rate based on anticipated income for a year and the claimant later establishes that income for that year was at a rate warranting entitlement or increased entitlement, the effective date of such entitlement or increase shall be fixed in accordance with the facts found if satisfactory evidence is received before the expiration of the next calendar year.

"(i) Whenever any disallowed claim is reopened and thereafter allowed on the basis of new and material evidence resulting from the correction of the military records of the proper service department under section 1552 of title 10, or the change, correction, or modification of a discharge or dismissal under section 1553 of title 10, or from other corrective action by competent authority, the effective date of commencement of the benefits so awarded shall be the date on which an application was filed for correction of the military record or for the change, modification, or correction of a discharge or dismissal, as the case may be, or the date such disallowed claim was filed, whichever date is the later, but in no event shall such award of benefits be retroactive for more than one year from the date of reopening of such disallowed claim. This subsection shall not apply to any application or claim for Government life insurance benefits.

"(j) Where a report or a finding of death of any person in the active military, naval, or air service has been made by the Secretary concerned, the effective date of an award of death compensation, dependency and indemnity compensation, or death pension, as applicable, shall be the first day of the month fixed by the Secretary as the month of death in such report or finding, if application therefor is received within one year from the date such report or finding has been made; however, such benefits shall not be payable to any person for any period for which such person has received, or was entitled to receive, an allowance, allotment, or service pay of the deceased."

SEC. 2. Section 3012 of title 38, United States Code, is amended by striking out subsection (b), and by amending subsection (c) to read as follows:

"(b) The effective date of a reduction or discontinuance of compensation, dependency and indemnity compensation, or pension—

"(1) by reason of marriage or remarriage, or death of a payee shall be the last day of the month before such marriage, remarriage, or death occurs;

"(2) by reason of marriage, divorce, or death of a dependent of a payee shall be the last day of the month in which such marriage, divorce, or death occurs;

"(3) by reason of receipt of active service pay or retirement pay shall be the day before the date such pay began;

"(4) by reason of change in income or corpus of estate shall be the last day of the month in which the change occurred;

"(5) by reason of a change in disability or employability of a veteran in receipt of pension shall be the last day of the month in which discontinuance of the award is approved;

"(6) by reason of change in law or administrative issue, change in interpretation of a law or administrative issue, or, for compensation purposes, a change in service-connected or employability status or change in physical condition shall be the last day of the month following sixty days from the date of notice to the payee (at his last address of record) of the reduction or discontinuance;

"(7) by reason of the discontinuance of school attendance of a payee or a dependent of a payee shall be the last day of the month in which such discontinuance occurred;

"(8) by reason of termination of a temporary increase in compensation for hospitalization or treatment shall be the last day of the month in which the hospital discharge or termination of treatment occurred, whichever is earlier;

"(9) by reason of an erroneous award based on an act of commission or omission by the beneficiary, or with his knowledge, shall be the effective date of the award; and

"(10) by reason of an erroneous award based solely on administrative error or error in judgment shall be the date of last payment."

SEC. 3. Section 351 of title 38, United States Code, is amended by striking out "; except that no benefits shall be awarded unless application be made therefor within two years after such injury or aggravation was suffered, or such death occurred", and by adding at the end thereof the following: "Where an individual is hereafter awarded a judgment against the United States in a civil action brought pursuant to section 1346(b) of title 28, United States Code, or hereafter enters into a settlement or compromise under section 2672 or 2677 of title 28, United States Code, by reason of a disability, aggravation, or death treated pursuant to this section as if it were service-connected, then no benefits shall be paid to such individual for any month beginning after the date such judgment, settlement, or compromise on account of such disability, aggravation, or death becomes final until the aggregate amount of benefits which would be paid but for this sentence equals the total amount included in such judgment, settlement, or compromise."

SEC. 4. (a) Chapter 53 of title 38, United States Code, is amended by adding the following new section:

"§ 3110. Payment of benefits for month of death

"If, in accordance with the provisions of section 3010(d) of this title, a widow is entitled to death benefits under chapter 11, 13, or 15 of this title for the month in which a veteran's death occurs, the amount of such death benefits for that month shall be not less than the amount of benefits the veteran would have received under chapter 11 or 15 of this title for that month but for his death."

(b) The analysis of chapter 53 of title 38, United States Code, is amended by adding at the end thereof the following:

"3110. Payment of benefits for month of death."

SEC. 5. (a) Sections 3004 and 3011 of title 38, United States Code, are repealed.

(b) The analysis of chapter 51 of title 38, United States Code, is amended by striking out "3004. Disallowed claims." and "3011. Effective dates of increases".

SEC. 6. Sections 110 and 359 of title 38, United States Code, are amended by adding the following sentence at the end of each section: "The mentioned period shall be computed from the date determined by the Administrator as the date on which the status commenced for rating purposes."

SEC. 7. This Act shall take effect on the first day of the second calendar month which begins after the date of enactment of this Act, but no payments shall be made by reason of this Act for any period before such effective date. Payments for any period before such effective date shall be made under prior laws and regulations. The provisions of this Act with respect to reductions and discontinuances shall be applicable only where the event requiring such reduction or discontinuance occurs on or after such effective date. If such event occurred before such effective date, action shall be taken pursuant to the prior laws and regulations.

The **SPEAKER** pro tempore. Is a second demanded?

Mr. **GROSS**. Mr. Speaker, I demand a second to be sure that there may be some explanation of the bill.

The **SPEAKER** pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The **SPEAKER** pro tempore. The gentleman from Texas will be recognized for 20 minutes and the gentleman from Iowa for 20 minutes.

The gentleman from Texas is recognized.

Mr. **TEAGUE** of Texas. Mr. Speaker, this bill, H.R. 7600, requested by the Veterans' Administration and supported by the American Legion, Veterans of Foreign Wars, Disabled American Veterans, and AMVETS, primarily makes certain desirable modifications in the provisions of existing laws governing the effective dates of awards, reductions, and discontinuances of monetary benefits—service-connected disability and death compensation, non-service-connected disability and death pension, educational payments, and so forth.

Enactment of this bill would make more nearly uniform all effective date provisions and resolve a number of problem areas. Generally, the basic changes fall under five headings:

First. Disability benefits, in the event of the veteran-payee's death, would be discontinued the last day of the month before such death occurs, and death benefits would be awarded effective the first day of the month in which the death occurs—if claim therefor is filed within 1 year from death. Currently, disability benefits are discontinued as of the date of the veteran's death and benefits to his survivors are awarded effective the next day—if claim therefor is filed within 1 year from death. This change would considerably simplify administration. In the light of a savings provision in section 4 of the bill, no eligible widow would be adversely affected by this change.

Second. The 2-year statute of limitation—set forth in 38 U.S.C. 351—within which claim must be filed for disability or death compensation or dependency and indemnity compensation authorized by that section for disability or death suffered as a result of hospitalization or medical or surgical treatment, or the pursuit of a course of vocational rehabilitation, would be repealed. Also, duplicate recoveries from the United States for the same disability or death under section 351 and the Federal Tort Claims Act would be precluded by providing a setoff against compensation benefits of the amount of any recovery pursuant to a civil judgment, settlement, or compromise.

Third. A uniform rule would be provided, for the first time, governing the effective dates of liberalizing laws or administrative issues that are enacted or promulgated in the future. This provision would, in many cases, obviate the necessity of a potential beneficiary filing a specific claim for the new benefit and would instead permit the Veterans' Administration, where feasible, to identify such beneficiaries and apply the provisions of the liberalized law and administrative issue on its own initiative. The provision would permit a retroactive period of payment of not more than 1 year, but in no event prior to the effective date of the law or issue.

Fourth. A 1-year period would be provided for the submission of necessary evidence to perfect a claim for compensation and pension reopened after final adjudication as well as a claim for increased monetary benefits, similar to, and under the same circumstances as, the period currently provided by law for the perfection of original claims for such benefits.

Fifth. Uniform rules would be established for the reduction or discontinuance of erroneous awards first, based upon acts of commission or omission by beneficiaries—as of the date of the erroneous award; and, second, based upon administrative error or error in judgment—as of the date of last payment. The latter category would include errors arising from a misunderstanding of instructions, regulations, or the construction of statutes.

The Veterans' Administration advises that there might be some slight additional cost and at the same time there would be a slight savings, roughly offsetting each other, thus there would not be any substantial impact on the present cost levels.

The **SPEAKER** pro tempore. The question is, Will the House suspend the rules and pass the bill, H.R. 7600, as amended?

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

HOSPITAL AND MEDICAL CARE FOR CERTAIN PEACETIME VETERANS

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (S. 3109) to amend chapter 17 of title 38, United States Code, in order to authorize hospital and medical care for peacetime veterans suffering from noncompensable service-connected disabilities. I may say that H.R. 9922 is identical with this Senate bill.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph (1) of section 610(a) of title 38, United States Code, is amended to read as follows:

"(1) (A) any veteran for a service-connected disability; or

"(B) a veteran of any war for a nonservice-connected disability if he is unable to defray the expenses of necessary hospital care;".

SEC. 2. Section 612(a) of title 38, United States Code, is amended to read as follows:

"(a) Except as provided in subsection (b), the Administrator, within the limits of Veterans' Administration facilities, may furnish such medical services as he finds to be reasonably necessary to any veteran for a service-connected disability. In the case of any veteran discharged or released from the active military, naval, or air service for a disability incurred or aggravated in line of duty, such services may be so furnished for that disability, whether or not service connected for the purposes of this chapter."

The SPEAKER pro tempore. Is a second demanded?

Mr. GROSS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas will be recognized for 20 minutes and the gentleman from Iowa for 20 minutes.

The gentleman from Texas is recognized.

Mr. TEAGUE of Texas. Mr. Speaker, this proposal, which is favored by the Veterans' Administration, seeks to provide hospital and medical care to peacetime veterans who are suffering from noncompensable service-connected disabilities. Under existing law wartime veterans are entitled to hospitalization under these conditions. Peacetime veterans, on the other hand, must have a disability which is compensable; that is, 10 percent or more in degree.

Enactment of this legislation will permit a peacetime veteran to receive medical and hospital care for this disability even though he is not receiving service-connected compensation for it.

The Veterans' Administration estimates that the cost will be $1,562,000 for the first year, with the cost generally decreasing over the succeeding 4 years.

The SPEAKER pro tempore. The question is, Will the House suspend the rules and pass the bill S. 3109?

So (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider and a similar House bill (H.R. 9922) were laid on the table.

CERTAIN VETERANS BLINDED BY REASON OF A SERVICE-CONNECTED DISABILITY AFFORDED VOCATIONAL REHABILITATION TRAINING

Mr. TEAGUE of Texas. Mr. Speaker, the bill H.R. 10857 is identical to a Senate bill, S. 2869, which has passed the Senate.

Mr. Speaker, I move to suspend the rules and pass the bill (S. 2869) to amend chapter 31 of title 38, United States Code, to afford additional time during which certain veterans blinded by reason of a service-connected disability may be afforded vocational rehabilitation training.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 31 of title 38, United States Code, is amended by adding after section 1502 the following new section:

"§ 1502A. Blinded veterans

"A veteran who is found to be in need of vocational rehabilitation to overcome the handicap of blindness resulting from a service-connected disability which affords basic eligibility for vocational rehabilitation under section 1502(a) of this title may be afforded such vocational rehabilitation after the termination date otherwise applicable to him, but not beyond June 30, 1975, if—

"(1) he had not previously been rehabilitated (that is, rendered employable) as the result of training furnished under this chapter, or

"(2) his blindness either has worsened, or has developed as a result of the worsening of his service-connected disability, since he was declared rehabilitated to the extent that it precludes his performing his duties of the occupation for which he was previously trained under this chapter."

SEC. 2. The table of sections at the head of chapter 31 of title 38, United States Code, is amended by adding immediately below item 1502 thereof the following:

"1502A. Blinded veterans."

The SPEAKER pro tempore. Is a second demanded?

Mr. SAYLOR. Mr. Speaker, I demand a second.

Mr. TEAGUE of Texas. Mr. Speaker, I ask unanimous consent that a second be considered as ordered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. TEAGUE of Texas. Mr. Speaker, the vocational rehabilitation and education program ends for World War II veterans on July 25, 1965, and for the Korean group on January 31, 1968. This bill would extend these termination dates for blinded veterans of World War II and Korea until June 30, 1975, in the following two instances: First, where the veteran has not been previously rehabilitated; and second, where his blindness has worsened since he received rehabilitation training so as to prevent him from pursuing his occupation for which he was trained.

Under date of March 7, 1961, the Committee on Veterans' Affairs reported H.R. 848 which sought to place the vocational rehabilitation program on a permanent basis. It passed the House on March 21, 1961. A clarifying amendment to that bill would have covered blind veterans and all others in this category. That bill was and still is, favored by the Veterans' Administration and is pending in the Senate Labor and Public Welfare Committee.

The Blinded Veterans' Association strongly urges approval of this bill and the Veterans' Administration estimates that the cost would not exceed $500,000 in any one year.

Mr. SAYLOR. Mr. Speaker, S. 2869 would extend the present termination dates for vocational rehabilitation for certain blinded World War II and Korean conflict veterans to June 30, 1975. The extension would be applied only in instances where the veteran has not previously been rehabilitated or his blindness has become severe enough to preclude the pursuit of the occupation for which he was previously trained.

The cost of this benefit, according to the Veterans' Administration, would not exceed $500,000 in any one year. I am pleased to endorse this bill.

Mrs. PFOST. Mr. Speaker, I rise to speak in favor of the two pieces of veterans legislation which are before us for a vote today.

I strongly urge the Members to approve both measures. The first, H.R. 9922 on hospital and medical care for service-connected peacetime veterans, would resolve a minor inequity in the program which, in effect, discriminates against the cold war soldier. And the second bill, H.R. 10857, a highly commendable measure, would extend until June 30, 1975, the time limit for blinded veterans of World War II and the Korean conflict to receive vocational rehabilitation. This program had been scheduled to expire in July 1965 for World War II veterans and January 1968 for Korean veterans.

The Veterans' Administration now provides hospital care and outpatient treatment for the war veteran who was wounded or injured while in uniform, regardless of whether or not the veteran was given a disability discharge or awarded compensation. This means, in short, that the war veteran is always eligible to receive treatment for minor service-connected injuries.

It will apply even though the injury is less than 10 percent disabling and the particular veteran is not being awarded compensation for the injury.

This is a fair arrangement, and only proper, in the light of the sacrifices which the war veteran has made and the risks he has taken in the defense of democracy and freedom in the world.

But it is also well to keep in mind while considering veterans' legislation that where the Korean conflict and World War II left off, the cold war took over. To term the veteran who served his time in the Armed Forces of our country a "peacetime" veteran during these years of the cold war is hardly appropriate. Even this war, as every Member of the House knows, has often had the stillness shattered by the crackle of machinegun fire and the heavy thump of mortars—witness southeast Asia today. Hence the young man who serves his country during this period of world tension is also entitled to fair treatment from his country should he be injured, even slightly, in the line of duty.

By contrast to the war veteran, these cold war ex-servicemen are not eligible for hospitalization or outpatient treatment unless they were released from service for disability or are receiving compensation for a service-connected disability. These eligibility requirements clearly discriminate against this group of former servicemen and should be corrected. That is what this bill would do—right this inequity.

The cost, moreover, would be very modest. The Veterans' Administration says it would cost an estimated $1.5 million during the first year, with the costs decreasing over the next 4 years. Surely this is a small sum to provide for men who have shouldered arms on behalf of our Nation during these times.

The second bill provides an extended program of vocational rehabilitation for blinded veterans, and deserves quick passage by the House.

The measure would extend the maximum period during which vocational rehabilitation could be given to blinded veterans of World War II by 10 years and of the Korean conflict by more than 7 years.

The time extension is warranted by the fact that some veterans with sight injuries still face the prospect of future blindness and will need help when this eventuality occurs. The cost of the program, as I understand it, will be less than $500,000 in any single year. It is a small program, but it will do so much good, and I urge the bill's passage here today.

In conclusion, I would also urge the House Veterans Committee to undertake studies on other specialized injuries incurred by our veterans—such as paraplegics and others—so that similar long-range programs could be worked out on their behalf should the nature of their injuries deprive them of the means of livelihood in which they might now be engaged.

Mr. Speaker, these bills afford Members of the House an opportunity to show our appreciation to these deserving veterans who have done so much for us. I hope the bills will carry overwhelmingly.

The SPEAKER pro tempore. The question is on suspending the rules and passing the bill.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A similar House bill (H.R. 10857) was laid on the table.

GENERAL LEAVE TO EXTEND REMARKS

Mr. TEAGUE of Texas. Mr. Speaker, I ask unanimous consent that all Members who desire to do so may have 5 legislative days in which to extend their remarks in the Record on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDING THE ACT AUTHORIZING NATIONAL MEDALS OF SCIENCE

Mr. ANFUSO. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4055) to amend the act of August 25, 1959, to authorize the payment of a monetary award to recipients of the National Medal of Science.

The Clerk read as follows:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 2(a) of the Act entitled "An Act to establish a National Medal of Science to provide recognition for individuals who make outstanding contributions in the physical, biological, mathematical, and engineering sciences", approved August 25, 1959 (Public Law 86–209), is amended by adding at the end thereof the following new sentence: "Each individual awarded the medal shall also receive as a part of such award a lump-sum payment of such amount, not exceeding $10,000, as the President may prescribe in the case of such individual."

The SPEAKER pro tempore. Is a second demanded?

Mr. GROSS. Mr. Speaker, I demand a second.

Mr. ANFUSO. Mr. Speaker, I ask unanimous consent that a second be considered as ordered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ANFUSO. Mr. Speaker, the purpose of this bill is to provide additional incentives for scientific achievement and particularly to encourage more young people to undertake the necessary training to follow careers in science and engineering. It is believed that a monetary award to the National Medal of Science would provide a much more meaningful incentive than the medal alone. The 86th Congress enacted Public Law 86–209, which authorized the President to award National Medals of Science to a maximum of 20 individuals in any one calendar year for outstanding contributions to knowledge in the physical, biological, mathematical, or engineering sciences.

Mr. Speaker, that bill which became public law was passed unanimously by the House Science and Astronautics Committee. At that time the committee also provided for the $10,000 cash award. It was brought up on the Consent Calendar in the 86th Congress, and after an objection that portion of the bill providing for a cash award was withdrawn and the bill was passed without the cash award.

The bill was again presented in the 87th Congress. This time, it was again passed unanimously by the committee and the committee authorized that this $10,000 cash award be made. The bill has been approved by the Bureau of the Budget, the National Science Foundation, the National Aeronautics and Space Administration, and the Department of Health, Education, and Welfare.

Mr. Speaker, the National Science Foundation, speaking for the bill on June 14, 1962, and speaking through its Director, Dr. Alan T. Waterman, had this to say:

> We believe that, while the honor is more important than the stipend, additional recognition of the contributions to science made by recipients of the National Medal of Science, through payment of a monetary award, would be desirable, particularly since they may thus be enabled to engage in additional scientific activities. Other awards recognizing outstanding scientific achievement, such as the Nobel Prizes and the Enrico Fermi Award, provide substantial stipends. We feel that provision of stipends would also be appropriate in the case of the National Medal of Science.

Mr. Speaker, Assistant Secretary of the Department of Health, Education, and Welfare, Mr. Wilbur J. Cohen, speaking for the Department of Health, Education, and Welfare, in a letter to the committee dated November 20, 1961, had this to say:

> In our opinion, a cash award, such as that proposed in this bill, is a logical and desirable complement to the National Medal of Science. The prestige and honor associated with the receipt of this medal would, we believe, be enhanced by such a tangible indication of the recognition accorded to outstanding scientists by the Federal Government.
>
> We would also like to point out that the Fermi and Lawrence Awards made by the Atomic Energy Commission for outstanding accomplishments in the field of atomic energy include both medals and cash awards. The provisions of H.R. 4055 would enable the Government to provide more equivalent recognition to outstanding scientists across the entire spectrum of physical, biological, mathematical and engineering sciences.

I might say, Mr. Speaker, that since Public Law 86–291 was passed, so far there have not been any awards made, because the President has had the matter under study. He has appointed a committee of very eminent scientists who at the present time are considering the awards which may be made under this act and would consider cash awards in addition to the medal if authorized under this bill, H.R. 4055.

I would like to mention to the House that the Chairman of this Committee is Prof. Frederick Seitz, of the University of Illinois, who is the head of the National Academy of Sciences.

Other members of the Committee are: Prof. Hans A. Bethe, Department of Physics, Cornell University; Dr. Frank Brink, Jr., the Rockefeller Institute; Dean Gordon S. Brown, School of Engineering, MIT; Prof. Harrison S. Brown, Division of Geological Sciences, California Institute of Technology; Dean Kenneth E. Clark, College of Arts and Sciences, University of Colorado; Prof. Paul M. Doty, Department of Chemistry, Conant Laboratory 308, Harvard University; Dr. Sterling B. Hendricks, U.S. Department of Agriculture—plant physiology; Dr. August B. Kinzel, Union Carbide & Carbon Research Laboratory—metallurgy; Dean Frederick C. Lindvall, Division of Engineering, California Institute of Technology; Prof. W. Albert Noyes, Jr., Department of Chemistry, University of Rochester; and Prof. Albert W. Tucker, Department of Mathematics, Princeton University.

I am sure everyone will agree that this is a very outstanding Committee. I can assure the House that no individual will receive this award unless he has made an outstanding contribution in the field of science, technology, and engineering.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. ANFUSO. I yield to the gentleman from Pennsylvania.

Mr. FULTON. I want to say I favored this bill. It came out unanimously from our Science and Astronautics Committee. However, I would like to ask the gentleman a question: There are 20 medals which may be awarded for scientific achievement by the President each year, but it is not expected that the full 20 will be issued. Likewise, the $10,000 limit per medal as the stipend that goes along with the medal is the maximum. It is not expected that the full $10,000 will be awarded with each medal in every case, and this will be a highly unusual top award? Is this not a fact?

Mr. ANFUSO. The gentleman is absolutely right. At the present time I understand there are only several awards being considered. I might say to the Members of the House that if any one of these gentlemen who is deserving of this award makes a scientific breakthrough it could save the country millions of dollars and possibly even run into billions of dollars.

Mr. FULTON. Actually, this stipend, with an upper limit of $10,000, is a moderate amount compared to the Nobel Prize and other awards, it is not?

Mr. ANFUSO. The Fermi Award, as the gentleman knows, is $50,000, and the Nobel Award is approximately $50,000.

Mr. FULTON. This award which is to be made by the President is not a worldwide program? It is a program limited to the citizens of the United States?

Mr. ANFUSO. This is restricted to American scientists, engineers, and technicians to inspire them to greater achievements for the benefit of mankind.

Mr. FULTON. They must be U.S. citizens and not just visiting here?

Mr. ANFUSO. That is correct.

Mr. FULTON. I would have one criticism of the President's Committee, if you let this open for a criticism.

Mr. ANFUSO. The gentleman certainly may have that opportunity.

Mr. FULTON. I think it is an excellent Committee but, first, I would like a few more people from both industry and labor who are operating in the scientific field as members of this Committee and, second, I am sure the President did not intend it, but he did not include a woman. Women should be encouraged in the scientific field as well.

Mr. ANFUSO. I might say to the gentleman from Pennsylvania, who has worked very hard for the passage of this bill, and also for the general progress made by the House Science and Astronautics Committee, that I shall be glad to join with the gentleman in making further recommendations.

Mr. FULTON. May I compliment my friend, the gentleman from New York [Mr. ANFUSO], on a good statement, and say that he, too, has been trying to give women their adequate place in space.

Mr. GROSS. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, it is indeed interesting to discover that the gentleman from Pennsylvania [Mr. FULTON], after a lapse of 2 short years, finds money awards are now very much in order. On August 17, 1959, he joined with our late colleague, the gentleman from Louisiana, Mr. Brooks, who was then chairman of the so-called Space Committee, that it was not at all necessary to provide cash awards to the winners of these medals. Now he has become very liberal, or at least more liberal than he was in the past.

Mr. FULTON. Mr. Speaker, will my good friend yield?

Mr. GROSS. I yield to the gentleman.

Mr. FULTON. The question came up of the method of operation of the funds. We did not then have the assurance that these would be moderate amounts.

Mr. GROSS. The amounts, by the way, are exactly the same as proposed in 1959—$10,000 each to 20 individuals or $200,000 of the taxpayer's money each year.

Mr. FULTON. I might say to my good friend from Iowa that there was an attempt on the floor at that time to cut it out completely. We wanted the award bill, but we were not foreclosing completely the giving of monetary stipends. My feeling is—and I am glad the gentleman brought up the point—that the awards should be moderate in amount and that $10,000 should not be the uniform amount of the award, that $10,000 should be highly unusual. So I am moving along the same line that the gentleman is speaking of.

Mr. GROSS. How many medals have been awarded?

Mr. FULTON. There have been no medals awarded as yet. The Committee has been appointed by the President.

Mr. GROSS. Then how important is this program on which it is asked that we spend $200,000 a year in addition to the awarding of medals?

Mr. FULTON. May I say to the gentleman that I do not expect this program to run more than $15,000 to $25,000.

Mr. GROSS. Then why have you not put that limitation in the bill? It provides for $200,000.

Mr. FULTON. The $10,000 referred to is a maximum for each stipend, not the customary amount. As the gentleman will remember in my colloquy with the gentleman from New York, we already made the point that that would be very unusual. There is a limit of 20 medals that can be awarded under the previous legislation.

Mr. GROSS. Mr. Speaker, let me turn to somebody else for an answer to a question or two. I did not yield for a speech.

Mr. FULTON. I am glad that we agree as much as we do, let me say to the gentleman.

Mr. GROSS. Let me ask the gentleman from New York a question. Why have there been no awards of medals that were authorized in 1959? The House was told then that it was the medals, not money, that was so important.

Mr. ANFUSO. Let me say to the gentleman that the President has been extremely cautious in the selection of an outstanding committee, such as I read off a few moments ago. Now that that Committee has been appointed, we have had the cooperation of the Department of Defense.

Mr. GROSS. What President is the gentleman talking about? This bill was first passed under President Eisenhower.

Mr. ANFUSO. This bill was passed right at the end of the 86th Congress; it was passed in August. When the new Congress came in, the bill was reintroduced. We conducted hearings again. We brought back Dr. Waterman; we brought back the Department of Health and all of the necessary departments. All of them, including the scientific adviser to the President, said that this would be a good thing. I might add also that at the present time these people who are being considered for an award have made outstanding contributions, and if any one of these contributions should prove helpful or effective it would save the country millions of dollars.

Mr. GROSS. Mr. Speaker, let me remind the gentleman that his speech is on my time.

Mr. ANFUSO. I shall be glad to yield the gentleman any additional time he may require.

Mr. GROSS. Let me ask the gentleman, why is it necessary to set this precedent of giving these people $10,000 each in addition to a medal? Why cheapen the medal by giving them a cash award of $10,000 each and this out of a busted U.S. Treasury?

Mr. ANFUSO. The precedent has already been established by the Fermi and the Laurence Awards.

Mr. GROSS. The taxpayers are not paying for those. Mr. Speaker, I decline to yield further to the gentleman.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I do not want a speech, I want answers to a few questions, if I can get them.

Mr. FULTON. We all make our living as speakers, so I am surprised at the gentleman's attitude.

I should like to say this seriously to the gentleman. Would the gentleman like a limit in this bill of maybe $50,000 a year in total expenditures?

Mr. GROSS. No. Let me say to the gentleman that I do not believe there should be any cash award. It is not necessary to establish a cash award. If we are going to do that, let us give every winner of the Distinguished Service Cross or any other medal that is awarded by the various military services for exceptional bravery or exceptional duty a $10,000 award. Where is it proposed to stop if you start paying out $10,000 for awards such as these? Just where do you stop? Why should this group be treated differently than those who are willing to lay down their lives for their country? Must we put a dollar sign on everything we do?

Mr. FULTON. If the gentleman is asking me a question, I will answer it. My point is that this would be $50,000 in awards, and then you could say to the Appropriations Committee, "I do not think you should spend that amount."

Mr. GROSS. Why do you not say that in the bill? I say again you cheapen the medal by handing out a cash award. But tell me, where do you expect this thing to end. The taxpayers of the United States do not pay the cash award that goes with the Nobel Prize. We are talking here about tax money.

Mr. FULTON. One of our problems in this country is meeting this new challenge of this new scientific role that is coming on us so fast that we should encourage and we should honor the scientific men who are meeting this challenge.

Mr. GROSS. This Government is already spending all kinds of money to encourage scientific studies. There are supergrades and scientific and professional grades, Public Law 313. Where do you expect this thing to end?

Mr. FULTON. As the gentleman well knows, I have asked our chairman to refer to the gentleman's committee the matter of hiring extra scientists at higher salaries than the regular grades get. When that came up I asked the Committee on Post Office and Civil Service to look into it. So I do think we have a point on that. On the other hand, we should not be honoring these people who are jazz artists and twist artists in this country. We should give every honor and appropriate stipends to these tremendous scientists who are doing a wonderful job.

Mr. ANFUSO. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New York.

Mr. ANFUSO. I think if I said the money for these awards will go to complete the research that is now being conducted, the gentleman would withdraw his objection. This award is to give incentives to these people to continue their research in or out of Government. They now do it on their spare time.

Mr. GROSS. Do you advocate giving those who are awarded the Congressional Medal of Honor $10,000 or $50,000 to try to encourage others to show exceptional bravery on the battlefield? Why not give awards to any number of people for exceptional service? Where do you think this sort of thing is going to stop?

Mr. ANFUSO. The gentleman is interested in saving the taxpayers' money. In the long run it will save the taxpayers millions of dollars.

Mr. GROSS. That is strictly an assumption on the gentleman's part. This is your theory. Give more people more money and maybe there will be a dollar saved somewhere.

Mr. ANFUSO. Does the gentleman think this will come out of the budget of the National Science Foundation? It spends millions of dollars in research. To spend $50,000 for scientific research, is not an unreasonable amount.

Mr. GROSS. What was the figure the gentleman used? $50,000?

Mr. ANFUSO. I say this is the figure the committee could arrive at. I do not think we should limit it. If they can find $50,000, that is the limit, but if they can find $20,000, that is a different story.

Mr. GROSS. The gentleman has not answered my question. How much further do you suggest the Government go in paying cash awards on this basis? If you get this through, and I hope you will not, and you are not going to get it through today, I promise you that, where do you expect this thing to end? Why not do this for everybody else throughout the country who provides some outstanding service?

Mr. ANFUSO. In the gentleman's own committee, the House Committee on Post Office and Civil Service, you are asking for $20,000 to $25,000.

Mr. GROSS. For what?

Mr. ANFUSO. Incentive awards. Here is a bill through which we are trying to encourage scientists and young men and women to enter the field of science.

Mr. GROSS. The incentive awards program is for those who have made suggestions that result in savings or more efficiency.

Mr. ANFUSO. We have it on the best authorities that these inventions will save the taxpayers an awful lot of money.

Mr. GROSS. What inventions? You say you are going to give $10,000 to inventors.

Mr. ANFUSO. That is right, that is correct. The man might be a technician working for $10,000 or $12,000 a year. He may be working at night, he may be working at home. I think the man who makes an important discovery under such conditions should receive an incentive award.

Mr. GROSS. Mr. Speaker, I yield to the gentleman from California [Mr. HOSMER].

Mr. HOSMER. I think the gentleman from Iowa has very cogently expressed it. There is an emphasis, of course, on science today, but there is also an emphasis, or should be, on excellence in all fields which could make a contribution to the welfare of the country.

The awards system which has been adopted by some foreign governments, and I refer to the National Academy system which for many decades has been an institution in France whereby a person who makes a particularly significant contribution in any of the fields of science or learning is recognized with membership in the academy but he does not receive a monetary stipend. It resolves around the prestige of the award and not the monetary stipend.

Mr. GROSS. That is right.

Mr. HOSMER. I think the time is ripe for something like that in this country.

Mr. GROSS. Our late colleague, the gentleman from Louisiana, Mr. Brooks, said on August 17, 1959, when this same bill ran into trouble on the floor of the House:

> The important thing is the award of the medal, not the money.

So the monetary award was eliminated from the bill in 1959, but here it comes crawling back in under the rug.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield.

Mr. SCHWENGEL. I rise in support of the gentleman's position. I am opposed to the monetary award. I feel that even though it is insignificant it should not be granted.

There has been quite a little agitation recently for the creation of a National Medal of Merit, but we have heard no monetary standards provided.

All the people who have studied this question have come to the conclusion, and I agree with them, that the monetary stipend would be insignificant compared to the award presented by Congress or a committee set up by Congress for that purpose.

One of the objections I have to this bill is that it does not provide any way by which these people shall be selected or chosen. Even if we disregard and took out the monetary stipend the bill still does not provide for a properly constituted committee to give due consideration to those who make application or for whom application is made.

I think the bill is drawn up in too poor form for us to consider.

Mr. GROSS. Mr. Speaker, I am opposed to the monetary award. I am not opposed to the issuance of medals. I was opposed to the bill in 1959, opposed to the issuance of medals coupled with this kind of monetary award. I say to you that once this bill is passed with this monetary provision in it there will be no stopping it from reaching into the rest of the Government. I am opposed to it.

Mr. Speaker, I reserve the balance of my time.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. ANFUSO. I yield.

Mr. FULTON. These awards are not specifically to employees of the Federal Government. These awards are made to U.S. citizens whoever or wherever they may be, whether in Government research, private industry, universities, schools, colleges, high schools, or grade schools; and have no fixed educational requirement or qualification. If a young person makes a tremendous discovery—and some of these young people in the field of research are exceptionally intelligent—I think they should be recognized even in a small amount as well as being given a medal, if the contribution is outstanding in science and research. So youth or age is no barrier or qualification.

In all good humor, I would compliment the gentleman from Iowa because I know of his interest in research and development, as well as balancing the budget. He was one of those who voted "aye" on the 23d of May for the increase of $2 billion in the National Aeronautics and Space Administration budget for the fiscal year 1963 increasing the budget to $3,787 milion, including a deficiency authorization. Likewise, the gentleman from Iowa voted for the compromise with the Senate, in the conference report that passed last week on the National Aeronautics and Space Administration budget.

The gentleman is generous in research and development and we should not underestimate him or his interest on programs of that type. So that when he does say he opposes an amount that will equal in all about $50,000 a year as stipends to accompany science medals, he has a right to do it, considering the gentleman from Iowa's past generosity to the Science and Astronautics Committee, for which we thank him humbly.

If the President makes these awards in the spirit that we know the President will, no matter whether the President is a Republican or a Democrat, they will be awarded to national figures, towering figures in science and research for work that we as citizens of the United States are proud of when we face the world. Second, they will have been awarded for tremendous benefits for humanity or revolutionary science progress in every field of basic and applied research and development in this country. The award is a small amount. But it is something more than just pinning a medal on a man. We say, "Here is some money you may have to go ahead with future research and development, or spend for equipment, travel, study, or your family or rest, as you like." We in Pittsburgh are very proud of Dr. Salk for his polio vaccine and the great accomplishment in the field of polio so far as young people are concerned particularly. We feel a man of that stature is a person of the type we are talking about in reference to this kind of a science award.

May I finish with a question. Has not this bill passed our committee unanimously?

Mr. ANFUSO. This bill passed our committee unanimously twice. I might say, to keep the record straight, that Mr. Brooks voted for the $10,000 stipend. The only reason he made the statement he did on the floor was because there was objection and we wanted to pass the bill from the Consent Calendar.

Mr. FULTON. The gentleman joins me in thanking the gentleman from Iowa for his generosity on May 23 of this year when he was one of the 342 who voted unanimously, with no opposition, for the authorization of the NASA budget when it passed $3.78 billion, an increase of $2 billion in 1 year. Such generosity should not be overlooked by any of us. Does the gentleman not compliment the gentleman from Iowa?

Mr. ANFUSO. I not only compliment the gentleman but I think he is a very distinguished Member of the House and he voted to bring about unanimous passage of a bill which the whole country will recognize as being beneficial.

Mr. FULTON. May I ask the gentleman from New York, Does he think the $2 billion increase this year in NASA authorizations over last year was necessary and that the country will understand that even conservative Members of the Congress, such as the gentleman from Iowa, from New York, and myself, nevertheless voted for the necessary $2 billion increase for research and development in the space field?

Mr. ANFUSO. I do, and the entire House agrees, I am sure.

Mr. FULTON. We of the House Science and Astronautics Committee are appreciative of the gentleman from Iowa having gone along with us on our full research and development program for the current fiscal year, 1963, and should not complain too much when he does not agree on these few small items for moderate stipends for recipients of science medals awarded by the President under this legislation.

Mr. GROSS. Mr. Speaker, I yield myself 1 minute.

Mr. Speaker, I am overwhelmed by all of this kindness. Let me say that if you want to reward me for my generosity with respect to space exploration, you will take this bill back to the committee and knock out the $10,000 awards to these individuals. That will be the best reward I could have for supporting the space program. Furthermore, if you do not have someone showing signs of getting to the moon next year, do not count on me to support another $2 billion increase.

You had better be getting somebody up there awfully close to the moon, or I will be running out of votes in support of your program.

Mr. ANFUSO. I thank the gentleman.

Mr. FULTON. Mr. Speaker, will the gentleman yield?

Mr. ANFUSO. I yield to the gentleman from Pennsylvania.

Mr. FULTON. I had been a member of the House Foreign Affairs Committee of this House for 14 years before I left to become one of the ranking members of the Science and Astronautics Committee. The gentleman from Iowa should be given a vote of thanks for his vote for the foreign aid program before this House in 1950 when it passed unanimously. We really appreciate the gentleman more than the gentleman thinks today.

Mr. GROSS. Mr. Speaker, if I ever voted for the foreign giveaway program, I do not know when it was. If I did so, it was because I could not get a chance to go on the record against it, if I am ever considered to have been for it.

I will have to go back and look up that record.

Mr. FULTON. It was in 1950. I compliment the gentleman because the gentleman did vote for it.

Mr. GROSS. Voted for the foreign giveaway bill?

Mr. FULTON. Yes. It went through unanimously.

Mr. GROSS. I do not believe that. If it went through unanimously, it was on one of those voice votes where the voice votes are not recorded, because I have never yet voted for it, and never intend to.

The SPEAKER. The question is on the motion of the gentleman from New York [Mr. Anfuso] that the House suspend the rules and pass the bill, H.R. 4055.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present, and make the point of order that a quorum is not present.

The SPEAKER. The gentleman from Iowa [Mr. Gross] makes the point of order that a quorum is not present. In accordance with the unanimous-consent request adopted on last Thursday by the House, further consideration of the bill will be postponed until Wednesday next.

Does the gentleman from Iowa withdraw his point of order?

Mr. GROSS. I withdraw my point of order, Mr. Speaker.

COMMITTEE ON RULES

Mr. SISK. Mr. Speaker, I ask unanimous consent that the Committee on Rules have until midnight tonight to file certain privileged reports for printing under the rule.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

COOPERATIVE FORESTRY RESEARCH

Mr. GRANT. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 12688) to authorize the Secretary of Agriculture to encourage and assist the several States in carrying on a program of forestry research, and for other purposes, with amendments.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is hereby recognized that research in forestry is the driving force behind progress in developing and utilizing the resources of the Nation's forest and related range lands. The production, protection, and utilization of the forest resources depend on strong technological advances and continuing development of the knowledge necessary to increase the efficiency of forestry practices and to extend the benefits that flow from forest and related range lands. It is recognized that the total forestry research efforts of the several State colleges and universities and of the Federal Government are more fully effective if there is close coordination between such programs, and it is further recognized that forestry schools are especially vital in the training of research workers in forestry.

Sec. 2. In order to promote research in forestry, the Secretary of Agriculture is hereby authorized to cooperate with the several States for the purpose of encouraging and assisting them in carrying out programs of forestry research.

Such assistance shall be in accordance with plans to be agreed upon in advance by the Secretary and (a) land-grant colleges or agricultural experiment stations established under the Morrill Act of July 2, 1862 (12 Stat. 503), as amended, and the Hatch Act of March 2, 1887 (24 Stat. 440), as amended, and (b) other State-supported colleges and universities offering graduate training in the sciences basic to forestry and having a forestry school; however, an appropriate State representative designated by the State's Governor shall, in any agreement drawn up with the Secretary of Agriculture for the purposes of this Act, certify those eligible institutions of the State which will qualify for assistance and shall determine the proportionate amounts of assistance to be extended these certified institutions.

Sec. 3. To enable the Secretary to carry out the provisions of this Act there are hereby authorized to be appropriated such sums as the Congress may from time to time determine to be necessary but not exceeding in any one fiscal year one-half the amount appropriated for Federal forestry research conducted directly by the Department of Agriculture for the fiscal year preceding the year in which the budget is presented for such appropriation. Funds appropriated and made available to the States under this Act shall be in addition to allotments or grants that may be made under other authorizations.

Sec. 4. The amount paid by the Federal Government to any State-certified institutions eligible for assistance under this Act shall not exceed during any fiscal year the amount available to and budgeted for expenditure by such college or university during the same fiscal year for forestry research from non-Federal sources. The Secretary is authorized to make such expenditures on the certificate of the appropriate official of the college or university having charge of the forestry research for which the expenditures as herein provided are to be made. If any or all of the colleges or universities certified for receipt of funds under this Act fails to make available and budget for expenditure for forestry research in any fiscal year sums at least as much as the amount for which it would be eligible for such year under this Act, the difference between the Federal funds available and the funds made available and budgeted for expenditure by the college or university shall be reapportioned by the Secretary to other eligible colleges or universities of the same State if there be any which qualify therefor and, if there be none, the Secretary shall reapportion such differences to the qualifying colleges and universities of other States participating in the forestry research program.

Sec. 5. Apportionments among participating States and administrative expenses in connection with the program shall be determined by the Secretary after consultation with a national advisory board of not less than seven officials of the forestry schools of the State-certified eligible colleges and universities chosen by a majority of such schools. In making such apportionments consideration shall be given to pertinent factors including, but not limited to, areas of non-Federal commercial forest land and volume of timber cut annually from growing stock.

Sec. 6. The Secretary is authorized and directed to prescribe such rules and regulations as may be necessary to carry out the provisions of this Act and to furnish such advice and assistance through a cooperative State forestry research unit in the Department of Agriculture as will best promote the purposes of this Act. The Secretary is further authorized and directed to appoint an advisory committee which shall be constituted to give equal representation to Federal-State agencies concerned with developing and utilizing the Nation's forest resources and to the forest industries. The Secretary and the national advisory board shall seek at least once each year the counsel and advice of the advisory committee to accomplish effectively the purposes of this Act.

Sec. 7. The term "forestry research" as used in this Act shall include investigations relating to: (1) Reforestation and management of land for the production of crops of timber and other related products of the forest; (2) management of forest and related watershed lands to improve conditions of waterflow and to protect resources against floods and erosion; (3) management of forest and related rangeland for production of forage for domestic livestock and game and improvement of food and habitat for wildlife; (4) management of forest lands for outdoor recreation; (5) protection of forest land and resources against fire, insects, diseases, or other destructive agents; (6) utilization of wood and other forest products; (7) development of sound policies for the management of forest lands and the harvesting and marketing of forest products; and (8) such other studies as may be necessary to obtain the fullest and most effective use of forest resources.

Sec. 8. The term "State" as used in this Act shall include Puerto Rico.

The SPEAKER. Is a second demanded?

Mr. HOEVEN. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. GRANT. Mr. Speaker, the purpose of this bill is to establish research in forestry as a definite and specific part of the agricultural research programs which are carried out cooperatively with the U.S. Department of Agriculture, the land-grant colleges, experiment stations, and other State-supported educational institutions.

Mr. Speaker, in the hearings we have the endorsement of the Department of Agriculture, the Association of State Foresters, the American Association of Land Grant Colleges and State Universities, the Commission on Forestry at Land Grant and Other State Institutions, the American Paper & Pulp Association, the American Pulpwood Association, the National Lumber Manufacturers Association, the Society of American Foresters, and the Forest Farmers Association.

Mr. Speaker, briefly, this adds emphasis to the present experiments carried on in research by the land-grant colleges and other colleges in the respective States where they have courses in forestry and courses which lead to forestry degrees.

Mr. Speaker, the gentleman from Maine [Mr. McIntire], a member of the subcommittee, has worked very diligently on this subject. I am sure that the gentleman shall be glad to further explain this legislation to the Members of the House.

Mr. HOEVEN. Mr. Speaker, this bill was unanimously reported by the Committee on Agriculture.

Mr. Speaker, I yield to the gentleman from Maine [Mr. McIntire].

Mr. McINTIRE. Mr. Speaker, H.R. 12688 is designed to advance the very desirable end of forestry research, doing this by providing Federal matching grants to land-grant colleges and other State-supported institutions qualified for research work in forestry.

In a large sense, this legislation represents a goal long sought after, and it seeks to lend vitality and dynamics to a research force that presently is functioning at considerably less than optimum capacity. The legislation before this House would do this by providing a "line item" authorization directed toward forestry research in the forestry schools and experiment stations of our land-grant colleges and through the facilities of other qualified State-supported educational institutions.

I am convinced that this approach is superior to one that would authorize additional funds for the expansion of forestry research through the Hatch Act and the Forest Service, and I have arrived at this decision through consultation and association with representatives of the U.S. Forest Service, land-grant colleges, and others interested and involved in forestry research work.

I would like to direct attention to the fact that the approach embodied in H.R. 12688 is neither new nor unique, for money flowing from this authorization would be directed to forestry research in much the manner that Hatch Act funds are apportioned for agricultural research. I would further say that presently under the Hatch Act there are some funds extended for furthering forestry research; however, the research permitted through this facility falls far short of the clear-cut and direct approach to forestry research implicit to the legislation before this House of Representatives.

Mr. Speaker, I would like to place particular emphasis on the fact that it is not the object of this legislation to interfere or conflict with existing Federal-State programs; instead, this legislation provides a vehicle for implementing an even stronger than present research service, doing this in coordination with, rather than in opposition to, those Federal-State research programs operating in forestry and agriculture.

In summary, then, this legislation gives recognition to outstanding results that have been, and are being, accomplished through Federal-State cooperative programs. It moves forward to capitalize on the splendid cooperation that presently is in evidence among the States, the U.S. Forest Service, and our schools of forestry. And this very desirable objective would be attained merely by extending support to those programs of forestry research which presently are in process at our land-grant and other State-supported academic institutions.

I heartily urge the approval of H.R. 12688.

Mr. HOEVEN. Mr. Speaker, I yield 1 minute to the gentleman from Pennsylvania [Mr. Gavin].

Mr. GAVIN. Mr. Speaker, I want to take this opportunity to associate myself with the remarks of the distinguished gentleman from Maine [Mr. McIntire]. When the hearings were conducted, as I understand it, on the previous bill, testimony in strong support of this forestry research legislation was offered by representatives of the following interests: Department of Agriculture; Association of State Foresters; American Association of Land Grant Colleges and State Universities; Commission on Forestry at Land Grant and Other State Institutions; American Paper & Pulp Association; National Lumber Manufacturers Association; the Society of American Foresters; and Forest Farmers Association.

Also I understand there was no witness who appeared in opposition to this proposed legislation. May I ask the gentleman if that is correct?

Mr. McINTIRE. That is correct.

Mr. GAVIN. Mr. Speaker, I want to say that I wholeheartedly support this legislation and I am pleased at the opportunity to vote for it. The committee deserves our hearty commendations for their work as this is a very worthwhile piece of legislation.

Mr. GRANT. Mr. Speaker, I yield to the gentleman from Florida [Mr. SIKES] such time as he may require.

Mr. SIKES Mr. Speaker, I wish to compliment the distinguished gentleman from Maine [Mr. McINTIRE] and the Committee on Agriculture for bringing this legislation to the floor. It is sound and worthwhile legislation for which there is a definite need. I have introduced an identical bill.

There are many States in which timber resources are among the most important assets. Mine is one of them. Timber and timber products constitute one of Florida's most important industries. Yet in Florida and in many other States where forestry is so important, we do not have a State forestry research program which measures up to the need. The program is handicapped by lack of money and lack of facilities. H.R. 12688 would help to correct these deficiencies.

It is easy to understand also that this bill would provide for the first time close coordination between forestry research programs being carried on in the different States. Possible duplications can be eliminated and a more effective overall approach to the problems of forestry can be provided. It is notable that this is a matching fund program which will require a realistic interest on the part of the participating States.

A well-rounded, progressive program of forestry research certainly is needed to supply the knowledge required to meet the expanding future needs for the resources derived from forest lands of the Nation. This bill can help to provide such a program in all its various aspects of improvement of forestry and related lands and resources and of growing, utilizing, and marketing timber and other products and services of the forest. The support shown for this measure is very widespread, and I am confident there will be no serious opposition to its passage here today.

Mr. GRANT. Mr. Speaker, I yield such time as he may require to the gentleman from Louisiana [Mr. WAGGONNER].

Mr. WAGGONNER. Mr. Speaker, I take this moment or two to ask a question or two of the gentleman from Maine [Mr. McINTIRE]. It is intended, I am sure, that these moneys that will be expended on research will not be spent for duplicated research. What plans have been made to see that identical or similar research projects are not undertaken by more than one school within any one State or area by the State-supported college or university?

Mr. McINTIRE. Mr. Speaker, the legislation provides that the Governor of the State shall designate someone within the State to be the person who shall advise the Secretary of Agriculture which of the institutions within the State that are otherwise eligible shall receive funds and what the proportion of funds available to that State shall be as respecting the institutions designated to participate.

There is provided in the legislation also that the officials of the schools of forestry shall, from among themselves, select a committee which shall advise the Secretary relative to the apportionment of funds. This is a committee, not appointed by the Secretary, but selected by the officials of the eligible schools.

There is also a provision that there shall be another advisory committee within this framework of legislation that the Secretary shall appoint, one-half of whom shall come from the public side, so to speak—the Federal and State representatives in the forestry area of interest—and the other from the nonpublic side. These men will coordinate with the Secretary in examination of the research program and make recommendations to it. There will be the same supervision of the character of research projects to avoid overlapping that we have now as between our agricultural experiment stations, largely under the Hatch Act.

The report also states very specifically that as suggested by the witness from the Department of Agriculture, the administration of these funds will be put into the framework of what is now in the Department, the cooperative experiment stations' services.

The head of this group within the Department has a specific responsibility in making sure there is a minimum contribution.

Mr. WAGGONNER. I have one other question, and it is this. Am I led to believe from the report that undergraduate schools of forestry would be eligible for participation?

Mr. McINTIRE. This is strictly a matter of whether they are publicly supported.

Mr. WAGGONNER. If they are publicly supported and have undergraduate work only and would be approved by the State official, they would be able to participate?

Mr. McINTIRE. Our idea is that this will probably to a large extent support work and research which would be above the baccalaureate degree, but there is no provision on this point.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. WAGGONNER. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Speaker, I rise in support of this bill. I hold in my hand telegrams and communications similarly in support of it. Therefore, I would like to compliment the chairman of the Forestry Subcommittee of the House Committee on Agriculture, as well as the author of the bill—Hon. CLIFF McINTIRE, of Maine—for this worthwhile legislation.

Few realize that we have two of the great national forests in the district I am privileged to represent, the Clark and the Mark Twain. We have a farm advisory committee which has been in the field doing research on this matter on two occasions, because it is important to restore the bluestem grass in this area, where certain diseases have taken over, in addition to the ravages of cultivation and man. They are the winged elm and cedar trees. For example, we have studied chemical defoliating agents vis-a-vis selected "burning" at chosen times, and in prescribed conditions. To our surprise the University of Missouri-U.S. Forestry research findings agree with ours, that under such conditions the controlled burn technique is best, if followed by reseeding and minimal fertilizing so the native bluestem can regain its hold on the thin soil of the hills and valleys. This is essential to our great dairy, grazing and livestock producing areas. The experimental field stations, our committee, and the University of Missouri—a land-grant college—all support this legislation under State guidance.

Mr. GRANT. Mr. Speaker, I yield to the gentleman from West Virginia [Mr. BAILEY] such time as he may desire.

Mr. BAILEY. Mr. Speaker, I should like to advise my colleagues of the House that there is legislation now pending before the Rules Committee which will greatly enlarge the activities of the land-grant colleges and State universities to permit them to receive Federal support for extension work in fields in which Federal funds have not previously been authorized. I think this legislation might be of the kind that would fit in very well with the enlargement of the authority of these colleges. My State of West Virginia, like the State of the gentleman from Maine who has sponsored this legislation, is one in which a large part of the acreage is covered in forest lands. We have two extensive national forests in West Virginia. Naturally, the forests are one of the natural resources of the State of West Virginia and will continue to be so.

I should like to associate myself with the gentleman who sponsored this bill and the activities of the committee which reported it.

Mr. GRANT. Mr. Speaker, I yield such time as he may desire to the gentleman from Montana [Mr. OLSEN].

Mr. OLSEN. Mr. Speaker, I desire to commend the gentleman from Maine [Mr. McINTIRE] for introducing this legislation and the committee for bringing it to the floor. The first district of Montana is extensive in its acreage of national forest reserves and private forests. I rise in support of the bill. I think this legislation will very much broaden and extend research activity in support of the forest products industry so vital to my district and so vital to this country.

I see H.R. 12688 as a kind of decentralization of research in forestry. Until now, research in forestry has been dominated by the Forest Service of the Department of Agriculture, and they have done a most excellent job. However, I think more divergent ideas and a multiplicity of ideas will be obtained by enlisting the State-supported forestry schools of the Nation.

While I am on my feet, I wish to also endorse the other legislation being brought by this Committee on Agriculture to the floor of the House today. H.R. 9728, a bill to authorize an increase in appropriations and in activities in cooperative forest management, deserves support of all of us. One-half of all of the privately owned commercial forest land is in private ownership of small holdings. These are the "woodpile" for tomorrow, and technical assistance is greatly needed to make poorly managed areas more productive. These holdings comprise the most accessible and potentially some of the most productive woodland. This bill will do great service to the Nation by assisting these forest lands to furnish its share of the Nation's future timber supply.

Further, I wish to remark with regard to S. 3064 that it is vital to the Nation that we have an adequate national survey of the forest resources. The additional authorization for a survey, I am sure, we can unanimously agree to.

I recommend all of these bills to my colleagues.

Mrs. HANSEN. Mr. Speaker, I would like to join my colleagues in commending the gentleman from Alabama, Congressman GRANT, chairman of the Subcommittee on Forestry, as well as the gentleman from Maine, Congressman McINTIRE, for their work on behalf of H.R. 12688. I would also like to again commend the gentleman from Alabama for H.R. 9728 and the entire committee for S. 3064. These three bills are of particular importance to the forest economy of the State of Washington and our Nation.

Each supports a different and essential phase of Federal participation in forest management and development. Two are based on a continuing program of proven usefulness and the third is based on a well-demonstrated need.

I trust the House will pass these pieces of legislation as they were reported from the Agriculture Committee—without objection.

H.R. 9728

H.R. 9728 is a bill to amend the Cooperative Forest Management Act to authorize an increase from $2,500,000 to $5 million in Federal participation in Federal-State technical assistance programs for small forest and woodland owners.

Under this act, Federal funds are made available on a 50–50 matching basis. State and private expenditures, however, have been exceeding Federal outlays at a ratio of about 2 to 1.

As the committee report points out, three-fourths of the 435 million acres of State and private forest lands in the United States are held by nearly 4.5 million small woodland owners.

These holdings, properly managed, will provide an important part of the future timber supply of this Nation. I have been advised that 49 States are participating in the Cooperative Forest Management Act and that soon there will be 50.

The Federal Government should be prepared to meet its share.

H.R. 10853

H.R. 10853 is a bill to amend the act of May 22 relating to the comprehensive survey of timber and forest products required to be made by the Secretary of Agriculture.

The amendment raises the authorization ceiling for appropriations necessary to keep the survey current from $1,500,000 to $2,500,000.

The present authorization was set in 1949. The increase allows for rising costs involved in carrying out this important work.

H.R. 12688

H.R. 12688 is a bill to authorize the Secretary of Agriculture to encourage and assist the several States in carrying on a program of forestry research.

For the past 100 years such assistance has been provided in fields of agriculture research, of which forestry has received a small amount.

The need is great to step up the total research effort in the production, protection and utilization of forest resources. Land grant and forestry colleges are in a position to participate in such effort on a 50–50 matching funds basis, which this measure provides.

This and the two measures previously mentioned have my wholehearted support. I hope the House recognizes the need for their enactment.

Mr. ULLMAN. Mr. Speaker, the bill now before us is designed to advance forestry research by providing Federal matching grants to land-grant colleges and other State-supported institutions qualified to conduct research in forestry.

This bill has the strong support of the Forest Service, officials of the land-grant colleges, as well as members of the private lumber industry. The distinguished gentleman from Maine [Mr. McINTIRE], who is the author of this bill, states that in the hearings held by the House Subcommittee on Forests not a single witness appeared to offer testimony in opposition to this legislation.

If enacted, it will mark another forward step in the field of forestry research and will no doubt result in many long-range benefits to the lumber industry, the general economy, and to the Nation.

Mr. Speaker, I am happy to support this bill and I urge its passage.

Mrs. GREEN of Oregon. Mr. Speaker, the forest-related industries are a principal economic artery of the Pacific Northwest. They account for the largest single bloc of workers as well as the largest payroll. Thus it is vital that these industries be assisted in a continuing program of research, modernization, and improvement.

Thus, Mr. Speaker, it is on this basis that I support H.R. 12688, designed to assist forestry research by providing Federal matching grants to land-grant colleges and other State-supported institutions qualified to conduct forestry research. I will add that I am delighted as a Representative from the Portland area of the State of Oregon to support this legislation by my distinguished colleague, the gentleman from Maine, Representative CLIFFORD G. McINTIRE, from the State of Maine which also contains a city by the same name. The gentleman from Maine, Representative McINTIRE, and I sit on opposite sides of the political aisle and live on opposite coasts of our great country, but we are joined together in support of this bill.

I have received telegrams and letters supporting this legislation from private and public groups in my home State. The director of a very fine forest and agricultural research unit at Oregon State University, Mr. F. E. Price, wholeheartedly endorses the bill. The measure has the support of the Forest Service, the land-grant colleges and the private lumber industry. I understand that not a single opposing witness appeared during hearings on the bill.

Existing programs, such as the Hatch program, do not provide sufficient funds for a forestry research. The bill before us today will strengthen and supplement existing programs. The legislation would stimulate both forestry schools and graduate work in the field. I commend H.R. 12688 for passage, Mr. Speaker.

Mrs. PFOST. Mr. Speaker, I want to thank the gentleman from North Carolina [Mr. COOLEY], chairman of the Committee on Agriculture, for his action in bringing three bills relative to our forest program to the floor today. I know the people of Idaho are grateful to the distinguished chairman and are appreciative of his deep understanding of the problems relative to our forest resources. Idaho ranks second only to Alaska in national forest acreage and that is why every bill affecting forests becomes of special concern to the people there.

The three bills on which the Members will vote today involve cooperative forestry research—H.R. 12688; a forest survey authorization—S. 3064; and an amendment to the Cooperative Forest Management Act—H.R. 9728. I will take them up in that order.

The purpose of the research measure is to specifically establish research in forestry as a definite part of the agricultural research programs now being cooperatively carried out by the Agriculture Department, the land-grant colleges, and their experiment stations and other State-supported educational institutions.

This program as it now stands is on a rather modest scale and it must be broadened considerably if it is to have any kind of meaningful impact on the future.

Research may, indeed, be the key to helping the depressed lumber industry in the Northwest by developing new wood products in the laboratory. I know that this area holds exciting promise for the future in terms of finding yet undreamed of uses for the byproducts of our forests. These studies are being carried out in the Gem State at the University of Idaho, along with other colleges and experimental stations, as well as by private industry.

This bill would enable Congress to specifically set aside appropriations for cooperative foresty research under the guidance of the Agriculture Department. These funds would then be made available to the States on a matching basis, and would be used to widen this research and bolster the programs which now might be underway in the various States.

The second bill to which I wish to address myself is the forest survey authorization.

This measure would increase from $1.5 to $2.5 million the amount authorized to be appropriated annually to keep the timber and forest products survey current. This survey has been undertaken annually since the Congress first initiated the program back in 1928. The data gathered in the survey is the only comprehensive source of basic information on this most important natural resource.

The Congress, from time to time, has increased these authorizations as the need has arisen. The present cost ceiling on this survey program was established in 1949 and costs since then have risen by more than 50 percent.

In addition there is an increasing need for more extensive inventories of our forest and timber resources. What with cuttings, fire losses, and so on, these resources are in a constant state of flux and it is imperative for the various policymaking public agencies to have up-to-date information regarding the production and uses of timber.

I would therefore urge enactment of the bill so that the survey could be effectively continued, with allowance for increases to be made as the demand arises. The production, manufacture, and use of timber products today generates an estimated $20 billion of gross national product annually.

The third bill—and I am happy to see so many forest bills on the floor in a single day, and believe me this is a rare pleasure—would amend the Cooperative Forest Management Act.

This measure would authorize an increase from $2.5 to $5 million in appropriations for Federal participation in the act. Under this program, technical assistance is made available to small forest and woodland owners, of which there are many in Idaho.

It is a fact, for example, that three-fourths of the 435 million acres of State and private forests in this country are held by nearly 4.5 million small woodland owners. An estimated 3.5 million of these are farmers with an average of 49 acres per farm. These small owners hold the "woodpile" of tomorrow in their hands. The technical assistance is needed in order to enrich these areas, which are often poorly managed and neglected, in order to bring them up to a more productive level.

This program is important because it is the only one of its kind. It is geared to help the owner of a small chunk of timberland. Added up, these small chunks are a sizable resource which the Nation will need in the years ahead.

State and private sources have been making increasing expenditures for these small timber farmers with each passing year. The bill officially recognizes that trend and then sets out to nourish the program with a small increase in Federal funds. These funds will be expended on a 50–50 matching basis with the States taking part in the program.

This, and the other two measures I have discussed, should be passed, for they are important to the people and the future of our country.

Mr. PIRNIE. Mr. Speaker, the dramatic advances in agricultural technology underscore the importance of Federal leadership in stimulating expanded research. The proposed bill would assure for forestry research comparable recognition and progress. The program would be administered on a cooperative basis with emphasis on the role of land-grant colleges which have constituted a major force in the scientific development of our land and forestry resources. Increasing demands upon wood products by our growing population require proper preservation and efficient utilization of our Nation's forests.

The concern of my State of New York in such matters spans the entire history of the conservation movement. The contribution of Theodore Roosevelt in this field is well known as well as the leadership of our great land-grant college, Cornell University at Ithaca, N.Y.

Especially commendable is the dedicated, capable leadership provided by our distinguished colleague, CLIFFORD G. MCINTIRE, whose close association I enjoyed while serving as a member of the House Committee on Agriculture. I wish to congratulate him for his untiring effort in behalf of this bill.

Mr. JOHNSON of California. Mr. Speaker, the Second Congressional District of California, which I am proud to represent, contains some 12½ million acres of national forest lands plus several other millions of acres of forest administered by the Bureau of Land Management and in private ownership. I, therefore, have had an excellent opportunity to see firsthand the great need for expanded research in the field of forestry. This legislation would authorize the appropriation of funds which can be made available to land-grant colleges or agricultural experiment stations and to other State-supported colleges and universities offering graduate training in the sciences basic to forestry and having a forestry school. The Federal contribution must be matched by other forestry research funds obtained from State and non-Federal sources. All of the various fields of forestry research are eligible for support, including timber management research, watershed management research, range and wildlife management research, forest recreation research, forest protection research, and research in forest products utilization and marketing.

This legislation has great significance to my State. Most of our water comes from forests and related rangelands. Many of our people are dependent upon the timber and range resources and all of us, as well as many visitors from other States, enjoy the wonderful opportunities for outdoor recreation that are to be found in our forested regions.

Our land-grant college is the University of California at Berkeley, one of the foremost universities in the world. Its school of forestry, its forest products laboratory, its wildlands research center and its other scientific schools and departments offer numerous and varied opportunities for research in the sciences basic to forestry. The capabilities and willingness to expand forestry research at the University of California are excellent. Such an expansion is needed and this bill will help to stimulate it.

Finally, I would like to mention the close working relationships in forestry research that have long existed between the University of California and the U.S. Forest Service. For some 25 years the Forest Service maintained an experiment station on the campus at Berkeley in quarters provided by the university. A few years ago, the Forest Service Experiment Station moved into its new laboratory-office building, two blocks away from the campus, but cooperative research relationships with the university are carried on as before. Some 50 different research projects are being carried on, or have been completed jointly by the Federal Forest Experiment Station and the university. Many university students, particularly graduate students training for careers in forestry research, find part-time and summer employment with the Forest Service Experiment Station. This bill will make this coordination even more effective, it will promote the training of more research scientists who are badly needed in forestry and it will benefit my entire State by expanding the fine program of forestry research at the University of California.

Mr. GRANT. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks in the RECORD on the bill now under consideration.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

The SPEAKER. The question is, Will the House suspend the rules and pass the bill H.R. 12688, as amended?

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

FOREST SURVEY AUTHORIZATION

Mr. GRANT. Mr. Speaker, I move to suspend the rules and pass the bill (S. 3064) to amend section 9 of the act of May 22, 1928, as amended, authorizing and directing a national survey of forest resources, as amended.

The Clerk read the bill, as follows:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the last sentence of section 9 of the Act of May 22, 1928, as amended (45 Stat. 669, 702; 16 U.S.C. 581h), is hereby amended by striking out "$1,500,000" and inserting in lieu thereof "$2,500,000".

The SPEAKER. Is a second demanded?

Mr. HOEVEN. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

Mr. HOEVEN. Mr. Speaker, will the gentleman from Alabama explain the purpose of this legislation?

Mr. GRANT. This is indeed a very short bill. It simply amends the present act, directing a national survey of forest resources. At the present time there is an authorization of appropriation of $1,500,000. The pending bill would increase that sum to $2,500,000.

There was no objection when the bill was reported out by the full committee. It has the approval of the Department of Agriculture and all the allied timber and forest industries.

The SPEAKER. The question is, Will the House suspend the rules and pass the bill, S. 3064, as amended?

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

AMENDING THE COOPERATIVE FOREST MANAGEMENT ACT

Mr. GRANT. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 9728) to amend the Cooperative Forest Management Act.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Cooperative Forest Management Act (64 Stat. 473; 16 U.S.C. 568c, 658d) is amended by striking out of the first sentence of section 2 thereof "$2,500,000" and inserting "$5,000,000".

The SPEAKER. Is a second demanded?

Mr. HOEVEN. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

Mr. HOEVEN. Mr. Speaker, I think it should be pointed out that this is a bill for the small forest and woodland owners. I think it is important to note that three-fourths of the 435 million acres of State and private forest lands in the United States are held by nearly 4.5 million small woodland owners. Of these, 3.5 million are farmers with an average of 49 acres per farm. One-half of all the privately owned commercial forest land is in private ownership. It is these small holdings which comprise the "woodpile" of tomorrow and where technical assistance is badly needed to make poorly managed areas more productive.

This is the only forestry program designed specifically to assist these small timberland ownerships on which the Nation must rely for an important part of its future timber products.

Mr. GRANT. Mr. Speaker, the gentleman from Iowa is correct. I think this is much-needed legislation.

Mr. Speaker, I yield such time as he may desire to the gentleman from Florida [Mr. SIKES].

Mr. SIKES. Mr. Speaker, I wish to congratulate the distinguished gentleman from Alabama [Mr. GRANT] and the Subcommittee on Forests of the Committee on Agriculture for their favorable report on the bill amending the Cooperative Forest Management Act. I have been interested in this farm forestry cooperation between our U.S. Forest Service and the State forest services since it began in 1937. And I am proud that I do not stand alone in this, one of our most popular forestry activities. In fact, many of us who have been in Congress more than a dozen years will remember that when this original legislation was broadened in 1949 and 1950 there was a great deal of bipartisan support. Congressman GRANT will remember, I am sure, because he and I and at least two dozen other Congressmen and Senators had bills which ultimately resulted in the Cooperative Forest Management Act. Furthermore, during the hearings in 1949 there were 27 personal appearances by Congressmen and Senators and 58 statements were recorded. There were no party lines involved, and now, 13 years later, we can be proud that the program has been a success. As a cosponsor of this bill, I strongly support it.

Never have the farm foresters caught up with the demand for their services to the small woodland owners. Each time a farm forester helps a woodland owner put his land under good management, he is helping to make sales which put money in the farmer's pockets. When this happens the neighboring woodland owners also call for the services of a farm forester. It is practical, down-to-earth benefit which makes the States willing to go ahead of us nationally and provide two to four times as much money as the Federal Government. Ten years ago in Florida we had 11 farm foresters; now we have 30 and still not nearly enough. In fiscal year 1961 Florida spent $205,517 for this program, while the Federal contribution was only $53,312. Our budget for the fiscal year just past, 1962, was $213,850 State and $100,000 Federal. Florida and other States would like to have this program on a 50-50 basis as intended in the original act; not to cut back on the program but to secure the needed expansion which additional Federal funds would provide for a valuable program. In order to work toward 50-50 matching, the first step is to amend the act from $2½ to $5 million. This our Subcommittee on Forestry has wisely done, and I sincerely hope that the entire Congress and the President will agree.

The SPEAKER. The question is, Will the House suspend the rules and pass the bill H.R. 9728?

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

THE SOBLEN CASE

Mr. WALTER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. WALTER. Mr. Speaker, I believe that American public opinion ought to be alerted to the fact that a strange combination of forces is in the process of succeeding to thwart American legal processes and prevent the incarceration of the convicted Soviet spy, Robert Soblen.

Every applicable law and proper procedure were applied in this country before Soblen was convicted and sentenced for the hideous crime he committed against the country which granted him asylum, a safe haven, and a very prosperous existence. After the Supreme Court of the United States rendered its final decision, someone in this country neglected to place Soblen under surveillance so as to prevent his escape. This neglect occurred notwithstanding the fact that some years ago, in a similar case, that of the Soviet agent Gerhard Eisler, a very similar flight from justice occurred.

As soon as Soblen succeeded in giving our law enforcement agencies "the slip," a strange series of events began to develop abroad, all pointing to the reluctance of some of our professed friends to recognize the decisions of the courts of the United States. Between the political dissertations and the legal niceties, one thing seems to emerge with most disturbing clarity—the desire not to return Soblen to the United States where he was sentenced to pay his debt to the American society.

I believe, Mr. Speaker, that any friendly country, or any agency of such a country, including a commercial enterprise controlled by the government of that country, must be immediately notified that they will be held responsible for preventing the decision of the U.S. courts to be carried out.

If the Israel El Al Airline, or any other airline, cooperates in the scheme to liberate this convicted spy, it must be notified that its landing privileges in the United States will be revoked instantly. The United States did this when it revoked the landing privileges of the Polish liner *Batory* after it took Eisler aboard in New York and to this day, fortunately, these privileges have not been restored.

An unfriendly act committed by a friend calls for a retaliation just as strong—or stronger—than that which is meted out a hostile government. I call upon the Secretary of State to cause that such notification of intended retaliation be forthwith served upon responsible officials of the El Al Airline.

DUKE DAM AND STEAMPLANT

Mr. DORN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN. Mr. Speaker, this Congress should authorize, without further delay, Duke Power Co. to build a retaining dam across the Savannah River at Middleton Shoals in my district so that Duke Power Co. can build the largest steamplant in the world in Anderson County.

This proposal by the dynamic, progressive, Duke Power Co. is in keeping with the administration's announced policy of getting the economy moving in the 1960's. The construction of this $280 million steamplant will not only focus the attention of the industrial world on South Carolina and Georgia, but will aid the unemployed coal miners of Virginia, West Virginia, Kentucky, Pennsylvania, and throughout the East. It will be a shot in the arm to our depressed railroads. Mr. Speaker, may I remind the House again that Duke's proposed steamplant when finally completed will use $26 million worth of coal annually—9,500 tons of coal daily, which must be brought in by rail.

Mr. Speaker, the only real solution to our lagging economy is for the Congress and our Federal Government agencies to give the green light at every opportunity to such free enterprise projects as the fantastic Duke proposal. Great fears have been expressed by many Members of the Congress and people throughout the country about milking the cow dry, about killing the goose that lays the golden egg, of taxing our industries and payrolls out of existence; now Mr. Speaker, here is an opportunity for the Congress to give the nod of approval to a taxpaying project, to approve more cheap power, to create more jobs and larger payrolls. Duke, upon completion of this steamplant, will pay approximately $10 million in taxes annually to the Federal Government. It will also pay annually to the State of South Carolina $7 million in taxes, and to Anderson County $1 million annually, all of this in addition to the increased revenue from larger payrolls and the related industries.

H.R. 6789 is a very simple bill which authorizes a retaining dam across the Savannah to furnish cooling water for Duke's gigantic steamplant. There is no opposition to H.R. 6789. I have not received one telephone call, nor one letter, nor one telegram from anyone in the United States opposing H.R. 6789. Duke has agreed to spend an additional $1,300,000 to raise the level of its dam in order to make its operation compatible with any further development of the Savannah River in the future.

This bill must be approved during this session of the Congress so that Duke can complete its planning, build or acquire railroad facilities in 1963 in order that construction may begin promptly in 1964. I trust and believe H.R. 6789 will be approved before adjournment.

THE POSTAL WORKERS OF THE CITY OF CHICAGO

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a letter.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, words carelessly spoken can destroy reputations that good men and women have built by years of dedication.

I know of no finer group of public servants and of God-fearing Americans, as a whole, than those who are employed as postal workers in the city of Chicago. I am much distressed by a story that I find carried nationwide in an Associated Press dispatch. This is to the effect that there is a possibility that thousands of drug addicts may be employed in the Chicago Post Office, and this statement is made on the authority of an unidentified party on what he says are statistics that indicate that 80 percent of Chicago's unprivileged population use some form of dope.

Mr. Speaker, I am sure that this unidentified party did not intend this insult to the postal workers of Chicago. But it is a statement that I cannot permit to go unchallenged. There are bad eggs in every group. No decent person condones wrongdoing, and surely there should be the greatest vigilance in exposing and prosecuting any person, regardless of the group to which he belongs, engaged in the vicious drug trade.

But to indict an entire group of fine, honest Americans because of the conduct of a few is reprehensible. This is not in the spirit of American fairplay. I absolve this unidentified person and the Asosciated Press from any such intent. But I do think that both this unidentified person and the Associated Press should make it crystal clear that the intent was not to cast reflection upon men and women whose reputation is beyond reproach and who are held high in the esteem and affection of the people of Chicago. Mr. Speaker, I am extending my remarks to include a letter from W. C. Doherty, president of the National Association of Letter Carriers:

NATIONAL ASSOCIATION OF
LETTER CARRIERS,
Washington, D.C., August 2, 1962.

Hon. BARRATT O'HARA,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN O'HARA: As a Congressman from Chicago and as an old and valued friend of the National Association of Letter Carriers, I feel that you will be gratified to know that there was not a single letter carrier involved in the dope ring which the Federal Narcotics Bureau recently uncovered in the Chicago Post Office.

The fact that a dope ring of any size or dimension whatsoever exists in a Federal post office is shameful, no matter what employees are participating. However, I deeply resent the implication carried in an Associated Press dispatch of July 28, and attributed to a Narcotics Bureau official, that "there may be thousands of addicts employed in the (Chicago) post office." This is a gross and insulting exaggeration. The Narcotics Bureau official bases his estimate on "statistics published in Washington which indicate that 80 percent of Chicago's underprivileged population use some form of dope." As a Representative from Chicago of many years' standing I know that you will agree that any such statistics, if they exist, are nothing more than vicious nonsense.

I feel that, in defense of the honor of the postal service and in defense of the honor of Chicago, the official making such a wild statement should be identified and the statistics he quotes should be investigated.

The Chicago Post Office (and its substations) employs 25,000 persons. In any such group one is going to find some vicious individuals and some weak characters. These must be rooted out effectively. But no conceivable good, and a great deal of harm, can come from slandering the entire employee force of the Chicago Post Office by making headline-grabbing and sensational statements such as those that have been made.

With warmest personal regards, I remain,
Yours cordially,
W. C. DOHERTY,
President, National Association of Letter Carriers.

IN MEMORY OF JOHN B. LITTLE

Mr. LANE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, some persons become widely known by name and face because of the prominent roles they play in the drama of life. History records the passing fame of most; and the enduring fame of a few.

For the multitude who serve as their public there are no cheers, no headlines, no titles of leadership. They are the anonymous ones who find humble satisfaction in helping others, seeking no credit for themselves. They find their sense of worth in doing the job well, in the happiness of family life, and the hobbies they cultivate in their spare time.

John B. Little was one of these self-effacing persons whose patient labor and unswerving faith make up the true strength of our free society. There were not many people outside the Capitol who knew John. Here he was listed as an assistant document clerk.

But John developed a special knowledge that was invaluable to the Members of the House. And as the word spread, more and more Members sought out Johnny for the answers that came from his well-documented memory.

His position was not influential, but he did inspire confidence. In so many small ways he was helpful to the Members that they came to regard him as a trusted friend to whom they could unburden themselves. He was the understanding listener—this humble man who enjoyed our well-placed trust.

Some years ago, Johnny's boy was a student at Sacred Heart Boarding School in Shawsheen Village, next door to my home city of Lawrence, in Massachusetts. On a number of occasions he visited his son and from these experiences he gained both knowledge and affection for the Bay State, its history, traditions, and its people. Johnny liked to exchange reminiscences with me about Massachusetts.

Life is not alone measured by the success of our personal ambitions, the surplus of achievement over failure, the number of eminent and powerful individuals whom we know on a first-name level, the accumulation of this world's goods, or the fulfillment we find in our homes and with our families. It is the little people whom we meet frequently in the course of our work, upon whom we depend so much without realizing it, who become a part of our own lives.

Johnny was one of these.

He called himself a civil servant of this House, but he was much more than that to us.

In the "busyness" of each day and the traffic of details that claim our attention, we have no time to speak from the heart until it is too late.

Friends suddenly depart and we mourn them with regrets for the things we meant to do and the words we meant to speak.

John B. Little is no longer with us. He has gone to his heavenly rest. Saddened by the loss of his presence, I think of the following prayer-poem by James

J. Metcalfe, which comforts me as I am sure it will comfort Johnny's survivors:

MY SYMPATHY

The grief of sudden tragedy
Is poignant as can be
And all that I can offer you
Is friendly sympathy.

But my condolence really comes
Directly from the heart,
Because I know how sad it is
When loved ones have to part.

I know you will be lonely
As the days and nights go by
And there will be a thousand tears
That you will want to cry.

And yet we must remember that
There is a will divine
And we may never question it
Or fathom God's design.

And so I grieve with you today
And say a fervent prayer
That God will bless and always keep
Your loved one in His care.

—*James J. Metcalfe.*

A SECOND CHANCE FOR VETERANS TO SIGN UP FOR NATIONAL SERVICE LIFE INSURANCE

Mr. LANE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, many men and women who served in the Armed Forces of the United States during World War II and the Korean war, did not realize the value of national service life insurance and did not avail themselves of the opportunity to secure this protection for their survivors. Others mistook the advice of the military to sign up for NSLI as a form of pressure; complied in order to conform; but let their policies lapse after they were discharged.

One of the most frequent regrets I have heard expressed by veterans in recent years is:

> The biggest mistake that I made was in passing up the bargain-rate Government insurance. A man needed his small service pay for other things. It was a time of war and a man lived from day to day, not thinking of the future. Now that I'm older and with increased responsibilities, I miss this protection for my survivors. Do you think the Government will ever give us a second chance to obtain this coverage?

Military service in war is more rugged than peacetime service, even for those who are never called upon for combat duty. Many a veteran dies before his time because of the demands made upon his physical health during his military service, and the consequences could not be foreseen.

Americans have become more insurance conscious than ever in the past 17 years.

H.R. 12333 does not provide direct financial benefits to a living veteran. It is distinct from disability compensation, or a pension. It recognizes the right to life insurance based upon military service that will provide some security for his survivors.

And it generously recognizes that those veterans who failed to take out such policies, or dropped them in civilian life, should not be deprived of such protection because of their indifference or neglect. Upon submission of evidence of good health satisfactory to the Administrator and payment of the required premiums, any person heretofore eligible to apply for national service life insurance after October 7, 1940, and before January 1, 1957, shall upon application in writing, be granted insurance under the same terms and conditions as are contained in standard policies of national service life insurance.

The Veterans' Affairs Committee has unanimously approved this bill as amended. It will include the service-connected totally disabled, but will not include those veterans of the two wars who still are in service during the 12-month period provided for the proposed reinstatements.

The records show that most men become aware of the need for insurance after the age of 35. However, the right of many veterans to take out national service life insurance ended before that age, when they had neither the earning ability nor the family responsibility that would move them to seek protection.

I find that the Government itself was lax in failing to explain to the veterans the advantages of securing and maintaining coverage under this program. In a sense, therefore, this bill will make amends for that oversight by reopening national service life insurance for a period of 1 year.

It is supported by the veterans' organizations and by the general public. As one of the Members who have sponsored similar or identical bills, I look forward to the enactment of H.R. 12333, as one of the most constructive accomplishments by the 2d session of the 87th Congress in the field of veterans' legislation.

FARM RESEARCH AS A FARMER SEES IT

Mr. KING of New York. Mr. Speaker, I ask unanimous consent that the gentleman from Iowa [Mr. SCHWENGEL] may extend his remarks at this point in the body of the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. SCHWENGEL. Mr. Speaker, the citizens of this great Nation are becoming increasingly aware of what a tremendous job our farmers are doing in providing food and fiber for a healthy percentage of the world's population. They do this in spite of Government interference and regulation. The rapid strides are possible because of the program of research which is carried out to improve quality and quantity, increase the uses for our farm products, and develop new uses.

The distinguished president of the Iowa Farm Bureau Federation, Mr. E. Howard Hill, recently appeared before the annual convention of the American Farm Research Association in Ames, Iowa, and pointed out in a wonderful speech what has been accomplished in his lifetime and what lies ahead.

Because these remarks may not have had too great a circulation beyond the convention publications, I feel that they should be brought to the attention, not only of my colleagues in the Congress who wrestle with farm legislation each session, but all readers of the CONGRESSIONAL RECORD. I request that Mr. Hill's speech, "Farm Research as a Farmer Sees It" appear at this point in the RECORD.

FARM RESEARCH AS A FARMER SEES IT

(By E. Howard Hill, president, Iowa Farm Bureau Federation)

Farm research ranks with space research as one of the great miracles of the 20th century. When E. O. Johnston told me last winter that Dr. Scarseth had requested me to speak at this banquet, I accepted primarily because of my great love and admiration for Dr. George. Since his passing, I have thought of him many times—of his philosophy, his love of America, his pioneering in ideas, his challenges to all of us. And so, the first thing I want to do in this talk is to pay tribute to a great leader—a great scientist—and a great American, whom we miss at this meeting and will miss down the years ahead in the field which he loved and to which he gave so much: Farm research.

We, in Iowa, want to welcome AFRA to our State. It is a real honor for us to have you here. You represent the leaders in farm research. We feel it is appropriate that we meet at Iowa State University, for we are proud of its role in the advance of agricultural science. Our president here has a genuine heartfelt interest in agriculture. He and Dean Andre have won a place of respect and affection in the hearts of Iowa farmers.

I want to take two approaches to my subject, "A Farmer Looks at Farm Research." First, I want to recall some of the changes in the past three decades. Then I want to do a little dreaming about the future, forecasting perhaps, some changes I see ahead. This will probably be the least technical presentation made at this conference.

I. CHANGES

In September of 1930, my wife and I moved to the farm where we now reside, and I started working for my father, for $75 a month. In March of 1931, he and I went into partnership, and I went into debt for my half of the inventory—which was $7,900. This included our horses, machinery, a few steers, and a few hogs. It took me about 8 years to pay off this debt.

We have fed cattle and raised hogs every year since 1931. I well remember when I sold my first batch of hogs. I had bought them at $6 on March 1, was offered $5.95 about April 1, and finally sold around May 15 at $4.75. Economic lesson No. 1. Cattle market predictions were made at Cattle Feeders' Day, August 1, in the early thirties, and we were advised to hold our cattle for $10. We took $4.75 in Chicago in January. Economic lesson No. 2.

For the first several years, we had no electricity, and no refrigeration (kept the milk down in the well pit). We had no tractors, no mechanized cornpickers and our water was pumped with a windmill.

Much of our corn was harvested as fodder. I hired men from Perry at 10 cents per shock—and a good man could cut and shock about 13 shocks per day. As you have already figured, I paid the men $1.30 per day—about what a common laborer makes today in many of the South American countries I visited this spring. Their agriculture down there is still pretty much in the hand labor stage.

Near Lima, Peru, where, incidentally, it hadn't rained since 1934, I saw 11 men involved in feeding an old Ghel cutter loose green corn, which was being blown into high-wheeled carts pushed by 3 to 5 men, and which would hold about half a ton. Another place I saw seven men involved in taking silage out of circular pit silos 30 feet deep with a rope and using a big oxhide as a basket. They were using forks. Human resources are cheap down there. They were pretty cheap here 30 years ago.

I remember we improved our operation in the thirties by putting in a 100-foot trench silo. All the fodder was fed by hand into a stationary cutter. We used two horses in the trench to pack the silage.

Our threshing was done with a 22-inch Red River special. A neighbor, Floyd Burkett, and I owned one jointly. He is still one of my closest friends, a friendship which started with this enterprise.

Sometimes I wonder whether—in all of our mechanization—we haven't lost something we had in doing things together, as we used to do years ago. Or has mechanization given us more time to work together in other areas—such as farm bureau and the various commodity organizations. But hand labor was slow and left little time for anything off the farm.

One of the most dramatic breakthroughs of the thirties was hybrid seed corn. Our yield jumped from about 40 to 50 bushels per acre. My father had been growing a few bushels purely on an experimental basis, that he had got from Henry Wallace at what was then Johnston Station. We were still picking most of our seed corn by hand, hanging it with strings from the corncrib rafters and hoping the mice wouldn't cut the strings during the winter.

We had plenty of barnyard manure to put on our corn ground, but we ran into a lot of difficulty which we thought was drought. The corn would fire along in July and August, and the yield would be hurt. Today, we know this was a lack of nitrogen.

There were two ways to handle weeds. In pastures, we could use a horsedrawn mower. Around the outside of the fields, we used a scythe, and, of course, every acre was gone through by hand to get rid of butterprint, cockleburs, shoofly, etc. We had quite an infestation of shoofly on the farm when we moved up there, and I remember my father offered me $100—which was a mint of money—if I would pull these by hand and clean them out. Fortunately, I passed up the offer. Today, with weed sprays, I wouldn't know where to take you to show you shoofly in any of our fields.

There were very few soybeans grown in those days. In fact, they were practically nonexistent. Their production has increased approximately ten-fold since 1940. Their development and use is a fantastic story in itself. Soybeans is one of our large commercial and profitable crops today. We have developed not only varieties, but machines to harvest them and uses for them as food for humans and livestock. In addition, they have many uses in industry, in plastics, paints, oils, etc.

The only fertilizer I can recall using was potash around the rims of our ponds, and a little superphosphate. The entire fertilizer industry in Iowa has developed during this period. This includes introduction of its use, soil tests, rates of application, forms of materials, time of application, etc.—until today, we've raised the yield per acre to new highs.

I remember 10 years ago Dr. Scarseth predicted we might be growing continuous corn. In fact, I believe I had done some of this experimentally. This was about the time I started using an area which has now been in corn continuously for 12 years. Through selection of hybrids and proper use of plant food, and other management practices, farmers have actually been able to increase yields with continuous corn.

Another breakthrough has been in the area of herbicides and insecticides. My father passed away in 1940, and if he were to return today he would have to acquire a whole new agricultural vocabulary. He had never heard of 2,4-D, D-D-T, Stilbestrol, Methoxochlor, Aldrin and many other chemicals in common use today.

Farm chemicals have really hit the field since World War II, and here again research has brought us many blessings in herbicides, insecticides, pesticides, preemergence herbicides, fungicides, grain fumigants and seed treatments.

When we used to plant corn, it was a very simple operation. It was a two-row planter, and the only thing we put on was corn. We did have the complication of a wire. Today, there are four operations involved in corn planting, corn, fertilizer, insecticide, and a herbicide. The cornplanter has become a complicated machine, and nearly as much time is spent in filling the boxes with the various ingredients as in actual planting.

All these developments have resulted in more than doubling our average yields of corn. Last year our 218 acres yielded 124 bushels per acre adjusted to 15 percent moisture. Our corn is processed as high moisture shelled corn, high moisture corn and cobmeal. Some of it is dried, and some of it goes in as silage.

Twenty years ago, it took nearly 5½ pounds of feed to produce a pound of poultry. Now, through breeding and feeding, a pound of poultry can be produced with slightly over 1½ pounds of feed.

The story of producing a dozen eggs through improved breeding and feeding is just as fantastic. On our way home from Des Moines one evening, Lorraine and I stopped and bought some chickens—at 23 cents per pound. Up near Spirit Lake, our daughter and her husband were given some partly raised chicks by a hatchery. They fed them out and kept track of their costs. When they were finished, they could have bought them cheaper, drawn and dressed, than what they had spent on feed for them.

The whole field of antibiotics, serums, vaccines and bacterins have been developed to prevent diseases, cure diseases, increase longevity, and improve efficiency. When hog cholera vaccination first was introduced, my father cooperated with the Department of Agriculture on some tests to prove that vaccination would prevent hog cholera. The number of livestock diseases he had to cope with (or was familiar with) have multiplied many times, and the treatments for diseases are multitudinous compared with those he knew.

Breeding and nutrition have increased the weight of pigs at birth and the size of litters farrowed.

In the dairy industry, artificial insemination has made it possible for the small and large dairy farmers to improve their herds and production through using the top breeding stock in the country.

The mechanization of feeding processes has made it possible for one man to care for hundreds of animals. Man-hours of labor for raising of hogs, beef, and poultry continue to decrease through the use of more mechanization.

Just as the space age has brought a revolution to modern science—so science and the men who have devoted their lives to research in chemicals useful to agriculture have revolutionized American agriculture in the past few years. The farmer himself has become a scientist, an inventor, an economist, and an accountant. The first piece of equipment bought by my son-in-law Ken Joslin was a calculator.

II. TURNING TO THE FUTURE

It is always risky to try to predict what will happen, but it's always rather interesting and entertaining. You see things you want to see—sometimes things you shouldn't see.

Some of you probably wouldn't want to go out on a limb and make predictions. You are scientists—with a great deal more scientific knowledge than I have. But that's what makes my position easier, you see. It's always easier to form opinions if you don't have all the facts. So—recognizing that it's impossible to schedule inventions or discoveries, I am willing to enjoy the luxury of dreaming a little about the future as I see it. There is a legend on the Archives Building in Washington which reads, "All That Is Past Is Prologue." A visitor to Washington asked his taxi driver what it meant. The driver answered, after a little thought, "You ain't seen nothin' yet." I wonder if that isn't true in the area of farm research. Yet I doubt that change or progress in agriculture will be as dynamic during the next 30 years as it has been during the last 3 decades. I do look for some great changes, though, in our thinking and in our techniques.

One thing I predict sounds almost like heresy. This is the disposition of barnyard manure. Already, we are using lagoons for the disposition of hog manure. However, almost every farmer is still hauling cattle manure to the fields. We have been doing some figuring at our place. It takes a very high-quality manure to be equal to 10-5-10, and by the time most of the manure can be moved it is probably equal to half of this, at least from the standpoint of nitrogen. This means that the average ton is probably worth $1 to $1.50. There are very few days in the spring of the year when this material can be hauled to the field without compacting the soil or when the average farmer shouldn't be plowing or preparing the ground. This soil compaction plus the cost of the labor involved raises a real question in our minds as to the economy of hauling manure. This year, we plan to get a bulldozer, clean off our lots, and push the material up into some huge piles as they do in the West and Southwest for the cattle to lie on in the winter. We will haul some manure this fall and winter where we have taken off corn silage.

At our farm, we cultivate the corn once and the soybeans twice. I predict that in the not too distant future we won't be cultivating corn at all. We have been experimenting with four or five preemergent sprays. One or two look pretty good. Undoubtedly, better and cheaper ones will be forthcoming as a result of research.

Ken Joslin is planting about 22,000 kernels per acre. I think we will see hybrid corn varieties adapted for much higher planting populations than this; varieties that will be adapted for wet corn storage, that will be disease resistant, and also resistant to certain insects. I believe that very soon 200 bushel yields will not be uncommon here in Iowa.

While we have had this overwhelming expansion in the production of corn, one of the jobs research has yet to conquer is the handling of hay. Farmers are going to have equipment and processes that involve less labor, less time, and less expense or they are going to go out of the hay business. We consider it one of our most unsatisfactory crops. By feeding 30,000 units of vitamin A per day per steer in our protein supplement, we have been able to get by with corn and cobmeal and about 2 pounds of hay per day to mature cattle. I question whether, with present equipment, we can justify the putting up of hay on the basis of the pure economics of the operation.

In the cattle-feeding area, I would guess that the discussion of quality grading is but the first step in a change in the grading of beef cattle. My guess is that lines will be selected genetically for their ability to produce lean, tender meat without the present excess of fat which the market demands for well-finished cattle.

I predict many more bulls will be fed. They gain faster than steers and produce leaner carcasses. There are times when bull carcasses actually sell at a premium. Europe is rapidly moving in this direction.

As producers we are going to have to realize that the housewife calls the shots. We will have to produce the type of product she wants to buy.

We have tried to mechanize our cattle-feeding operation. We have a 150-foot auger and bunk. We think it's a good investment not only from the standpoint of saving labor, but also saving feed. We have been happy with it, but of course, we never know how soon it will be obsolete.

As I indicated earlier, we have always raised hogs on our place. We will have about 150 litters this year. Here again we have tried to mechanize, converting our old horse barn into a 24-crate farrowing setup and converting our old dairy barn into a nursery. We have been very fortunate on disease, except for some staph infections which are very common, but which can play havoc with a fresh sow.

We are all familiar with the tremendous progress that has been made in feeding efficiency through better rations and the effort we are all trying to make in producing a meat-type hog. I predict one of the biggest developments in the swine area will be artificial insemination. Here, I think, lies the possibility of eliminating some disease and infection and a tremendous opportunity to improve quality. One top boar can sire half the pigs in an entire township under this program.

Another area, which is not really research, but is one of the things we will all have to work at, is to develop better marketing of our products. This is particularly true in the case of hogs, but it applies to all our farm products. I am sure there will be a continued growth of cooperatives both in the marketing and purchasing fields.

I am not a dairyman, but here again tremendous progress has been made and will be made in the years ahead. The dairyman, too, is going to have to produce what the housewife wants. He must encourage research into more uses for his products, if there is going to be a continued diminished market for butterfat.

In South America, I visited two dairy farms—one, in Lima, had 1,200 cows; the other, in Chile, 500 cows. All of these cows were milked by hand. One man milks 10 cows. This creates quite a labor force on the farms. The social security tax in Chile amounts to 50 percent of the wages—39 percent paid by employers, 11 percent by employees.

Over in Argentina, the national law requires a dairy farmer to pay his cowman 45 percent of the milk check. This cowman doesn't help with the crops. He has no investment. But he receives 45 percent of the milk check. So, you see the dairy farmers in those areas have difficulties, too.

I have referred to my trip to South America several times. Perhaps you would be interested in why I made it. The American Farm Bureau Federation was invited to send four representatives to the meeting of South American farm organizations, which was to be held in Santiago, Chile. President Charles Shuman, Vice President Walter Randolph, L. B. Martin, president of Idaho Farm Bureau, and I were appointed to attend the meeting. It was extremely interesting, and it afforded me the opportunity to return to some of the South American countries which I had visited back in 1940, and to see the progress they have made in their agriculture.

They, too, have made a lot of progress—but, of course, it cannot be compared to ours. Today, 80 percent of the corn in Argentina is picked by mechanical pickers. When I was there before, it was all done by hand. The quality of the cattle has improved. In Argentina, their prices were 7 to 8 cents per pound. There is no rural electrification program down there, and very few Delco-type plants. In Argentina, which is probably the most advanced, the interest rates on land are 12 percent. On operating loans, the interest is 24 percent. Not many can buy land or develop their operations at these rates.

Nevertheless, the extension-type of help which our Government has been providing has encouraged the farmers to make some changes. I visited several farms in company with Agricultural officials and educators who had received their training here at Iowa State University. So, the research done here is paying off for South America as well as for us—but to a limited degree.

South American countries have problems in the way of illiteracy, socialism, unstable currencies, unstable governments. Their farm organizations are responsible organizations. Some of them have long histories and traditions. The farm organization of Chile, for instance, was founded in 1838. But through long dependence on government direction, they are more willing to accept socialistic intervention than we would be.

I am no 10-day expert on South American affairs, but I came home with a renewed appreciation of the system we have here—of our right to make our own decisions on what we will grow and how we will grow it on our own farms.

I visited a large ranch in Argentina which has been owned for many years by two Italians who have never seen it. I visited another, near Lima, that has probably been in the same family since the days of the Spanish conquerors. I visited an irrigated valley in Chile, which owes its life to a tunnel 2 miles long, which was chiseled through the Andes mountains in the late 1800's to intercept a river and bring the water into the valley for irrigation. At one time one man owned the several thousand acres in this valley. Now, it is divided among about 30. One of these men has 17 grandchildren.

On the way to this farm we passed an area which the Government had taken over and broken up into small farms. These are now operated by German farmers, but they have not been successful because they were too small to be efficient and there was too much Government redtape.

I saw other farms which the Government had appropriated from large land owners and distributed to families selected by a Government bureau. I was told that most of these families, even though carefully selected, were ill equipped to handle the responsibilities of ownership, and within a few years the original owners could usually buy back their lands after the new owners had had sad experiences trying to operate them.

Here in the United States we have freedom—freedom to buy land, freedom to plant it, freedom to experiment, freedom to learn, freedom to decide what to do with that learning—these are basic to our way of life. And we take them all for granted.

From time to time we get kind of emotional—especially when the prices get low—and there are pleas to discontinue research which will mean greater production. It is said that research will just mean cheaper production, that the more we raise the less it will be worth, etc. I do not subscribe to this.

Perhaps it will mean fewer people on farms. Is this necessarily bad? In most countries of the world those on the farms are the worst off. Increased efficiency results in higher standards of living for the people in the towns—who, in the last analysis, are our customers. These are the people on whom we really depend.

That is why I feel so strongly about farm programs that would go the quota route—like the turkey referendum would have done—or the farm bill defeated recently. These programs are not conducive to a continuation of the kind of progress that has built the agriculture we have today—the agriculture which this land grant college has helped build, that AFRA has envisioned.

I am optimistic about the future of the efficient family-sized farm. We have an ever expanding market. The development of the European Common Market, our intelligent acceptance of freer trade, and the dramatic increase in population can all contribute to a prosperous agriculture. With the present birth rate of three babies per second being born into the world today, there are 90,000 more people in the world every day, 49 million more people every year. For every 18 deaths, there are 33 births. Every 4 months, the equivalent of the population of Australia is added to the world. We are told that the present world population of 2.8 billion is expected to soar to 6 or 7 billion by the end of this century, which is only a short 38 years from now. The U.S. Department of Commerce figures show that we now have a net population growth in the United States of 1 person every 12 seconds. From 1940 to 1950 the U.S. population was expected to increase 8 million, whereas in actuality it increased 19 million. In the 1950–60 decade, the net increase in U.S. population was 28 million. Since 1950 the population under age 21 in the United States has grown from 53.7 million to 74.4 million at the end of 1961, an increase of 39 percent.

There are many byproducts from living on a farm that have to be taken into consideration. It's a great place to rear a family. We have two little grandsons growing up on our farm. The oldest is already taking an interest in the livestock and the garden. As I watch these boys, I find myself hoping they will see a future in farming, too—and that there will always be an attraction and a challenge in American agriculture.

MANDATORY LIFE SENTENCE FOR ANY PERSON CONVICTED FOR FOURTH TIME OF A FELONY

Mr. KING of New York. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. BECKER] may extend his remarks at this point in the body of the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BECKER. Mr. Speaker, in line with previous statements I have made on the floor of the House, I have introduced today what is known as the "four-time-loser bill." The bill provides for a mandatory life sentence for any person convicted for the fourth time of a felony, in the District of Columbia.

Mr. Speaker, I do not believe for one moment that this is the cure-all for crime, nor do I believe that heavy punishment is the only deterrent for crime, but I do believe that it will stop a great deal and cause many others to hesitate long before committing a felony. When a person has been convicted of three major crimes, certainly, it is reasonable to assume that he is beyond rehabilitation and should be removed from society and preying on his fellowman. The American people are entitled to this protection from the habitual criminal.

Mr. Speaker, our whole system of law and order is deteriorating, not only in the

District of Columbia, but in most major cities throughout the country and unless we get tough and enforce discipline on these lawless elements, they will soon control society through fear. Does anyone have any doubt that people, and women particularly, living in the District and nearby, are not living in fear? The incidence of rape alone is so prevalent that fear has spread through the community. Some steps have to be taken, now, and then let studies and investigations be made to determine other methods and other approaches to these problems.

Mr. Speaker, I have also introduced today a resolution to have a congressional committee investigate every phase of the crime conditions in the District. It is my understanding that the Congressional District Committee did make an investigation in 1950 and did bring about a number of very fine advances in this field. I believe with an investigation at this time, further advances can be made.

Mr. Speaker, further legislation has to be prepared and introduced to help the police department in their investigative work. At present they are hampered by the Mallory decision and other recommendations and restrictions. I will cover this ground in a few days when I have bills prepared. I sincerely hope the two items introduced today will receive fast action of the committees of the House.

H.R. 8845—OBSTRUCTION OF INVESTIGATION

Mr. KING of New York. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. MEADER] may extend his remarks at this point in the body of the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. MEADER. Mr. Speaker, Wednesday, we are scheduled to take up H.R. 8845, the so-called obstruction of investigation bill.

I studied this proposed grant of power requested by the Attorney General, both as a member of the Antitrust Subcommittee and the full Judiciary Committee. I believe the bill is a bad bill and should not become law. I also believe if the Members understand the implications inherent in this grant of power, they will not support it.

Accordingly, I am sending today to each Member of the House the following letter and memorandum:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 6, 1962.

DEAR COLLEAGUE: Wednesday, August 8, 1962, we are scheduled to consider H.R. 8845, the so-called obstruction of investigation bill.

This extremely controversial measure was debated and amended extensively in the subcommittee and in the House Judiciary Committee, and there is substantial opposition to it among the members of the Judiciary Committee.

I think it is a bad bill and ought to be defeated. I have set forth my reasons in the attached memorandum which I hope you will have time to read before you vote.

Sincerely,

GEORGE MEADER.

MEMORANDUM BY HON. GEORGE MEADER RE H.R. 8845, OBSTRUCTION OF INVESTIGATION, AUGUST 6, 1962

H.R. 8845, the so-called obstruction of investigation bill, is listed first on the program for Wednesday, August 8, 1962.

A technical, Federal criminal matter, this bill and some of its vague and ambiguous phraseology will be difficult to explain in debate. For that reason, some of us who oppose the bill believe Members should be as fully advised as possible.

H.R. 8845 provides a $5,000 fine, 5 years in jail, or both, for interfering (in certain ways) with "authorized" (?) "investigations" (?)—whatever these words may mean—of the Federal Bureau of Investigation, the Narcotics Bureau, the Internal Revenue Service and the Secret Service (to be added by amendment on floor), into the following Federal crimes: (1) Murder, (2) kidnaping, (3) gambling, (4) narcotics, (5) liquor, (6) prostitution, (7) extortion, (8) bribery, (9) counterfeiting (to be added by amendment on floor), (10) national security.

On the surface this seems desirable. Everyone hates the criminal, particularly the organized, syndicated, interstate racketeer, and wants to do everything necessary to apprehend and punish him.

Looked at more closely, however, it becomes apparent that this bill would vest in Justice and Treasury investigators a weapon, the use of which would not be limited to a few thousand racketeers but would also be available to harass 185 million citizens of the United States.

This widespread effect would have been obviated and could have been restricted to organized, syndicated crime if we had adopted the approach of Representative CRAMER, of Florida, in his omnibus bill, H.R. 6909.

The United States, and many States, long have forbidden the bribery, intimidation, assaulting, threatening, forcing or suborning of witnesses, court officers, jurors and others to interfere with judicial, grand jury or congressional proceedings and to cause a miscarriage of justice.

But for the first time in history, in either State or Federal jurisdictions, a proposal now is seriously advanced to extend the sanctions protecting the integrity of formal court proceedings, these inhibitions on citizen behavior, to support, dignify and enhance the informal, sometimes clandestine, investigative activities of a sleuth.

The Justice Department has failed to show that this additional power in H.R. 8845 is needed. They have not met the burden of proof. The three instances they cited, *Scoratow* (false statement to FHA), *Appalachian* (conspiracy of underworld) and *Scuttles* (auto theft) were investigations of crimes other than those enumerated in H.R. 8845. If H.R. 8845 had been law at the time of these investigations, it would have been no help to the Justice Department.

This legislation has had a stormy history in this Congress. August 2, 1961, after amending S. 1665 (companion Senate bill), the House Judiciary Committee, by a vote of 16 to 10, refused to report it.

This year, in meeting after meeting, both of the subcommittee and the full Judiciary Committee, H.R. 8845 was debated and debated and amended and amended. Finally, on April 3, 1962, a wholly new version, not even printed, with only one typewritten copy being available, was substituted by a vote of 17 to 15, and that is the present H.R. 8845, reported on a voice vote.

This language not being satisfactory to the Justice Department, still further amendments are now in the process of being drafted to be presented during debate on the bill, without having been considered by the Judiciary Committee.

Since a rule was granted May 24, 1962, H.R. 8845 has appeared on the program three times (June 4, 18, 25) and has disappeared three times without explanation. Ordinarily three times is enough.

H.R. 8845 is but one of about a score of bills granting more power requested of this Congress by the Attorney General.

Eleven of these requests became law in the first session of this Congress:

1. Public Law 87-338, amending section 35 of title 18—conveying of false information concerning the doing of any act violating those chapters of title 18 dealing with aircraft, shipping, and railroads.
2. Public Law 87-368, amending section 1073 of title 18—flight to avoid prosecution or giving testimony.
3. Public Law 87-216, amending chapter 50 of title 18—transmission of bets, wagers, and related information.
4. Public Law 87-218, amending chapter 61 of title 18—providing means for the Federal Government to combat interstate crime and to assist the States in the enforcement of their criminal laws by prohibiting the interstate transportation of wagering paraphernalia.
5. Public Law 87-306, amending section 1362 of title 18—to further protect the internal security of the United States by providing penalties for malicious damage to communications lines, stations, and systems.
6. Public Law 87-228, amending chapter 95 of title 17—prohibiting travel or transportation in interstate commerce in aid of racketeering enterprises.
7. Public Law 87-371, amending chapter 713 of title 18—prohibiting transportation of fraudulent State tax stamps in interstate and foreign commerce.
8. Public Law 87-336, amending section 5021 of title 18—the Federal Youth Corrections Act.
9. Public Law 87-353, amending chapters 25, 31, and 47 of title 18—the forging, counterfeiting, embezzling or stealing of bonds and obligations of certain lending agencies, and the making of false statements thereof.
10. Public Law 87-197, amending chapter 20 of title 49—violations of Federal Aviation Act.
11. Public Law 87-221, creating chapter 31 of title 15—destruction of property moving in interstate commerce.

During this session of Congress, there has already been another item of criminal legislation enacted:

1. Public Law 87-486, amending section 2385 of title 18—defining the term "organize" as used in the chapter on "advocating the overthrow of Government."

The following four bills have passed the House and are awaiting action in the other body:

1. H.R. 6691, amending sections 871 and 3056 of title 18—providing penalties for threats against the successors to the Presidency and to authorize their protection by the Secret Service.
2. H.R. 8140, amending various chapters of title 18—to strengthen the criminal laws relating to bribery, graft, and conflicts of interest.
3. H.R. 7037, amending section 3238 of title 18—providing for offenses not committed in any district.
4. H.R. 8038, amending section 491 of title 18—prohibiting certain acts involving the use of tokens, slugs, disks, devices, papers, or other things which are similar in size and

shape to the lawful coins or other currency of the United States.

Two bills have passed the House and Senate and are now in conference:

1. S. 167, civil investigative demand (returned by the House July 18, 1962, by a vote of 202 to 200) with instructions to insist on the House limitations on the Attorney General's subpena power.

2. S. 1658, prohibition against interstate transportation of gambling devices containing immunity grants and authorizing the Attorney General to adopt regulations having the force of criminal laws.

And pending in the House Judiciary Committee are three important bills:

1. S. 1655, authorizing grant of immunity of witnesses in labor racketeering cases.

2. H.R. 10185, authorizing wire tapping, including the authority to tap wires, at the sole fiat of the Attorney General without court approval.

3. H.R. 2852, premerger notification.

In the last session, the Judiciary Committee reported and the House defeated (by a vote of 223 to 172) on August 29, 1961, H.R. 6242, a request of the Attorney General for power to fix salaries in his Department without regard to the Classification Act.

The manner in which powers granted for one purpose can be used in concerted action to accomplish a wholly different purpose than that for which the grant is made was demonstrated to the country in the calling of grand juries and the FBI agents knocking on doors before dawn in the steel dispute.

Further grants of power (however worded) should be withheld until confidence is established that such power—

1. Is necessary to maintain order;

2. Does not infringe the liberties of citizens more than is essential to accomplish a law enforcement objective for which existing authority is inadequate;

3. Will not be employed to accomplish ends other than that for which delegated.

H.R. 11496: A BILL TO EXTEND TO THE DISTRICT OF COLUMBIA THE ASSISTANCE PROGRAM FOR FEDERALLY IMPACTED SCHOOL AREAS

Mr. KING of New York. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland [Mr. MATHIAS] may extend his remarks in the body of the RECORD at this point and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. MATHIAS. Mr. Speaker, on July 31, 1962, I submitted a statement to the General Subcommittee on Education of the House Committee on Education and Labor in support of H.R. 11496 which would extend to the District of Columbia the assistance program for federally impacted school areas. This bill is vitally necessary to the educational system of the District of Columbia which is seriously handicapped for funds due to the extraordinary amount of Federal activity in Washington. The bill would allow the District to receive compensation from the Government for revenue lost from private sources due to this activity and would fulfill the pledge undertaken by Congress to education in 1950. The money would not be a mere windfall, but a compensation for services rendered by the city. The alternatives to this program are first, to decrease the educational facilities, which, as I point out below, is an unwise decision in this day and age; or second, to increase the taxes on the non-Federal segments of the District's population, a patently unfair solution to the problem.

H.R. 11496 is a most important bill for the educational system in the District of Columbia. It is designed to extend to the District of Columbia the provisions of 20 U.S.C. 244(8), entitled "An act to provide financial assistance for local educational agencies in areas affected by Federal activities."

By every standard, irrespective of whether the children reside on or off Federal real estate, the National Capital area, and especially the District of Columbia, is truly an impacted area. The activity of the Federal Government creates a strain on the local budget which is not present when the commensurate activities are carried on by taxpaying private enterprise.

Under the provisions of the act, the Government has an obligation to aid such impacted areas and the failure to enact this amendment would result in the failure of the Federal Government to fulfill its duty to the citizens of the Nation. We cannot in this day and age afford to cut back our educational facilities especially in the Nation's Capital. Therefore, it is most important that this legislation be enacted to enable the District of Columbia to have an educational system that will meet the needs of the city.

ADDITIONAL JUDGES FOR THE DISTRICT OF COLUMBIA JUVENILE COURT

Mr. MATHIAS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

Mr. MATHIAS. Mr. Speaker, from time to time I have commented on the backlog of cases pending in the Juvenile Court for the District of Columbia and on the failure of the administration to appoint judges to try these cases. I have noted that the delay in making these appointments has been extended throughout a period of nearly 5 months.

I am now glad to be able to comment on the fact that the President has appointed two judges of the court as provided by the Congress last winter. I extend to the new judges my personal best wishes. They will need the best wishes of all of us if they are successfully to overcome the initial handicap imposed upon them by the tremendous backlog of cases which faces them.

I should also like to say that it will be the continuing responsibility of the Congress to watch the operation of the court in the coming months. I intend to observe carefully how the expanded court is meeting its responsibilities to all the people of the District of Columbia. It may be that further legislation will be required, and, if it is, the Congress should be prepared to provide it without unnecessary delay.

FEDERAL AVIATION AGENCY

The SPEAKER. Under previous order of the House, the gentleman from Texas [Mr. GONZALEZ] is recognized for 25 minutes.

Mr. GONZALEZ. Mr. Speaker, last Tuesday I submitted to the CONGRESSIONAL RECORD an extension of my remarks made in connection with the debate on the Federal Aviation Agency's portion of the independent offices appropriation bill. In this submission I called attention to the fact that we have a "sick" situation within FAA that is in bad need of some doctoring.

I mentioned that this Agency operates under a cloud of concealment and for reasons of its own prefers not to be forthright with the public or this Congress. Indeed, it has developed a patronizing attitude toward Congressmen, as a number of you can testify. I am convinced that the Agency has acquired this attitude by simply adopting or reflecting the attitude of its Administrator, Mr. Najeeb Halaby.

It is Mr. Halaby, and Mr. Halaby alone, who must take the responsibility for having damaged employee morale and security to the dreadful extent to which this has been done in the Agency. I base this remark on my personal conversation with the air traffic control employees both within my district and from a variety of points outside it.

The damage to employee attitudes has now come to the point where it affects the interests of the flying public, and for this Halaby should answer.

In the extension of my remarks in last Tuesday's RECORD I called attention to the fact that FAA was sugar-coating the effectiveness of our air traffic control system. The effectiveness of that system is not fully told in the raw statistics of airplane crashes and passenger fatalities. I called your attention to the fact that Mr. Halaby has reported to you less than one-half the number of near-misses which are occurring in our airlanes. This fact has not yet been published, but I am confident that this will soon be generally known. It is well that it should, for there is no question but that the controllers and coordinators who operate our air route traffic control system should have more modern equipment and better working conditions than they now possess. I am for the Agency having these, and I also feel strongly that the Agency should have a management that inspires confidence and cooperation—something that is absent from the present picture.

Let me give you a timely example of the inadequacy and the dangers latent in the present system. Keep in mind that the Congress created FAA a few years ago giving it broad, unilateral powers greater than those possessed by most Federal agencies, and that it did this in the wake of a deadly and shocking air accident over the Grand Canyon. The disaster stirred this Nation and the conscience of the Congress produced the powers to prevent future disasters and has provided an ever-increasing budget that will soon approach a billion dollars a year. We must, of course, make allowances for the fact that this was being done at a time when there was lots of catching up to do, for the Nation's air traffic controls were geared to visual flights or the relatively slow-moving DC-3. With the jet age already here, there was much ground to cover in a hurry.

Now we are getting warnings, almost daily, that we have not been in enough of a hurry.

When I remarked on these things last Tuesday, I was dismayed to learn from a telephone call that very night that the Nation had almost been confronted with the worst air mishap of our history. This was another so-called near miss. Let me describe it for you:

Visualize two jet passenger planes, a TWA 880 jet going from St. Louis to Los Angeles and an American Airlines 707 jet bound from Los Angeles for St. Louis. These planes were probably each flying 600 miles an hour. They were approaching each other. Both planes on jet route 80 had been assigned the same 33,000 foot altitude by the FAA air traffic control and were in the same air corridor. They were set on a collision course with each other unbeknown to either pilot and they were approaching each other over Salinas, Kans., at a probable 1,200 miles per hour.

At 5 miles distance an approaching plane is but a tiny speck on the pilot's windshield. Yet, at such a speed, if the pilot sees the speck at all, he has but 15 seconds in which to get instructions from the ground to vector around, or to do it on his own motion. As it happens, the TWA pilot altered his course and missed the other plane by a reported several hundred feet. It was similar to the head-on collision hazard that occurred near Cleveland on March 19, and was reported on almost 3 months later on July 5.

But have you wondered how this incident over Kansas became known and found its way into the press? My information is that it came not from Mr. Halaby or by decision of the Agency. It came from a tip to a reporter who confronted an FAA public relations office with his queries and got confirmation.

But however it came, I say to this House that there are more facts to be related about this Agency and it is our duty to give them attention. We can be grateful that we know about the Kansas incident, if we will take it as a timely warning and a providential reminder that FAA needs and should receive our scrutiny and attention.

Tomorrow the Senate will take up hearings on this Agency's appropriations. I trust it will seize its opportunity to give us some of the answers and some of the facts that Mr. Halaby thinks are none of our business.

SOUTH AFRICA'S POSITION ON THE AFRICAN CONTINENT

The SPEAKER. Under previous order of the House, the gentleman from Mississippi [Mr. WILLIAMS] is recognized for 15 minutes.

Mr. WILLIAMS. Mr. Speaker, among the strange disharmonies in the conduct of the foreign relations of the United States over a period of many years are its contradictions, so well illustrated by our dealings with the Republic of South Africa, the only effective pro-Western nation on the African Continent.

Long recognized by our more far-visioned military and naval planners for its strategic importance in event of closure of the Suez Canal and for its logistical value, South Africa has a location with respect to ocean transportation that makes that country vital to Western security. In contrast with the realistic appraisals of our strategists, certain elements in our Department of State have engaged in reckless meddling in the internal affairs of this friendly power.

Unfortunately, the mass media of the United States and their publicists have generally failed to give our people a true picture of South Africa and its problems, thereby contributing toward bringing about serious misunderstandings and confusion that could impair the vital interests of our country and, indeed, of the entire free world.

It was, therefore, refreshing to read an illuminating paper on South Africa, delivered on March 12, 1962, by W. J. LeRoux of the South African Embassy before the distinguished membership of the Cosmos Club in Washington, D.C.

I insert Mr. LeRoux's remarks at this point in the RECORD:

SOUTH AFRICA'S POSITION ON THE AFRICAN CONTINENT

The story of the ever-changing political face of Africa during the last few years and the anticipations and prophesies of further changes to come in the future, reads more like a chapter in a storybook than in a book on international constitutional development. The years 1960 and 1961 were Africa's years and brought about an entirely new picture and vision of dark Africa as it was known up to recent times. It has also brought about a severe impact on world affairs and world philosophies, the full extent of which has not yet been filled. The African metamorphosis of this decade is still in the melting pot and only the foolish may dare to prophesy the influence of the African Continent and the African peoples on world affairs of tomorrow. It may, nevertheless, be said that this situation—the awakening of this continent from its centuries-old slumber—presented a vastly different outlook to world powers with their struggles for allies and alinements in the ever-continuing struggle of balance of power. Africa has, over a few years, forced itself on the attention of even the least observant person in the Western World and probably also in other parts of the globe. Let there be no doubt Africa, in its present stage of development, may be underdeveloped—may in certain places, be uncivilized—but it will, relatively speaking, play a more vital part in the affairs of man on this earth than any other continent. It stands as a buffer between two great ideologies from the East and the West, and the one who eventually conquers Africa could be the victor in world affairs.

This young giant is gradually awakening and at the moment its mood is one of anger and frustration—at times a blind and unrealistic anger. Nevertheless it should be taken into consideration whether this anger is of the masses of Africa or whether it is the anger of a few peoples and groups from this continent, the fact that Africa has emerged, some may think prematurely, to international stature and the fact that it has become an important factor between East and West are the direct results of the actions of the world powers themselves. It is only the foolish who may still argue that Africa, with its recently achieved freedoms, has not become involved in the cold war. It is in the middle of the cold war and it will, in the near future, play an even more important part in the world struggle. With it came a new phenomenon of appeasements and accommodation which is covering up the real problems of Africa—which will not bring about a solution. It is unrealistic and is based on the concept of bargaining with both sides, playing the lowest bidder against the highest and becoming more and more demanding, and less loyal.

For the world, however, the efforts of the white man—who has really developed Africa up to now and who has done most for the development of black Africa's underdeveloped masses, these white men are pushed to the background for the price of African appeasement. The number of independent countries in Africa grew from a few not many years ago to 29 at the present time, and to this number more will have to be added during 1962 and 1963. In the United Nations, whose main objective is the preservation of peace, this new bloc of independent African countries has already claimed for itself an important role—a factor to be reckoned with in the lobbies and voting chambers of this world organization. At times its angers and frustrations, and also its ambitions and inhibitions, are apt to be shortsighted when it comes to the inherent rights of other peoples who have lived on the African Continent for centuries and who can claim to be as much African as the black peoples from that continent.

South Africa is a charter member of the old League of Nations and the United Nations. It has been an independent state long before many of the new African leaders were even born. It has always realized that sooner or later the peoples of Africa will be growing and developing toward nationhood and that the stage would come where the new emerging states of Africa will take their stand, side by side, with other world nations. South Africa has however at all times stressed the important fact that independence should not be granted prematurely and that it should be based on the inherent abilities of these new African nations to rule themselves without outside interference.

Outside assistance should not became more important and more vital than the peoples' own abilities to rule and to govern themselves. This sober attitude has, in postwar years, not always been adhered to and as may have been anticipated brought about scores of basic problems, not only for these new African nations themselves, but also for the world powers, world blocs and the United Nations as such. It is still South Africa's belief that no people worthy of their existence can be oppressed indefinitely but it would, at the same time, be a greater sin to give or to grant independence to such people before they have developed to the extent that they can rule and govern themselves. That has always been our policy and still is and we sincerely hope to be able to continue to act in a sober and healthy attitude toward the future independence of the African peoples within South Africa's own borders. It is my intention to give you later on a picture of South Africa's efforts toward development of her own African nations, but at the moment please allow me to give you a little background of present-day South Africa—how it has developed to become a bastion of Western civilization, and the strongest fort against communism on the African Continent.

I am addressing you today as an African, a white African—as much an African as any other human being from that continent can claim to be.

What makes an African?

What makes an American?

I am as much an African as you are Americans. At least six generations of my family were born in South Africa. They came to my fatherland centuries ago.

The histories of both our countries go back to about three and a half centuries. The vanguard of our European ancestors of three and a half centuries ago—seeking new continents to discover and new horizons to explore—spread from Europe over the western and southern seas. At about the same time pioneers from the same origins migrated to North America, while others braved the southern oceans. When the Dutch West India Co. sailed to the Americas, the Dutch East India Co. went southward and in 1652 established a halfway station at the Cape of Good Hope and built the Fort of Good Hope—the same time that your Fort Amsterdam was built, which later became New York.

In the same way as peoples from Europe came to the United States of America to form a new nation here, so peoples of different nations and groups came to South Africa to form a nation on African soil.

With the peoples from Europe came their great ideals, values, aspirations, religion and culture which eventually formed the basis of the American nation. In the same way "Europe" with everything it stood for in its great eras of civilization, came to South Africa and with those same values, the new South African nation emerged. As in the case with America, where English Puritans came here first, the first Dutch settlement in South Africa was later strengthened by arrivals from France, Germany, the Scandinavian countries, England, Scotland, and Ireland—thus the new nation was born on African soil.

In the United States of America one language, namely English, survived—in South Africa we today have two languages, English and Afrikaans, with the latter the youngest and one of the most dynamic of Western languages.

The same Atlantic Ocean that brought the greatest civilization the world has ever seen, the civilization of Western Europe, to North America, also brought the civilization to the African Continent—to South Africa, where the Atlantic meets with another great ocean, the Indian Ocean. Here on the southern tip of Africa, where oceans and civilizations meet, the roots of the Western civilization of the Atlantic Ocean, thrived on the soil of a vastly strange continent.

So Europe grew in Africa and with it a new frontier of Western culture was established.

But the parallel goes on.

In the United States the people went west over the prairies until they reached the seas, taking along with them development and civilization. In South Africa the pioneers went north over the plains of southern Africa and with them they also took along their great values, religion, and culture.

Moving through the uninhabited areas of South Africa, the white pioneers encountered many remnants of tribes fleeing from other stronger tribes. Unless attacked themselves these pioneers moving further north into South Africa never destroyed these underdeveloped tribes. They were protectors and gave guidance.

It is essential for the purpose of perspective that we should examine what men of European origin have achieved in South Africa.

Their numbers were, and still are, small, but they have left an unmistakable impression on this part of Africa.

Under the leadership of the white man, his know-how and enterprise, South Africa has been developed to (1) the only industrial giant on the African Continent; (2) the country where the per capita income is 50 percent higher than that of the next African country and three times as high as the average in the rest of Africa; (3) the country which produces three times as much steel (always a criteria of development) than the rest of the African States combined; (4) the country with electrical power generating double that of the rest of Africa; (5) a country which produces 87 percent of the coal in Africa; (6) a country which takes more than one-third of all U.S. exports to Africa; (7) the country which has more U.S. capital invested than any country in the African Continent; (8) the country with railway freight traffic more than half of the total in Africa with the largest network of electric railroads outside Europe and the United States; (9) the country which possesses 41 percent of the motor vehicles in Africa and about 50 percent of its telephones; (10) the country which produces 60 percent of the world's gold annually; (11) the country with the largest oil from coal plant in the world; and (12) the country with political stability without precedent on the African Continent.

Who are the people who developed this industrial giant, this Western civilization and fortress against communism in Africa?

They are (1) 3 million whites; (2) about 10 million Bantu, i.e., blacks, divided into at least seven basic ethnic groups speaking amongst themselves dozens of languages and scores of dialects; (3) about 1½ million coloreds; and (4) about half a million people of Asiatic origin—the descendants of indentured laborers who were brought by the English to South Africa between 1860 and 1910 to work in the sugarcane fields of the then English colony of Natal. The great problem facing South Africa is how to work out a system, a way to live, a modus vivendi, for these different peoples to live in harmony together, taking into consideration (1) the different levels of development and civilization which vary from the very, very primitive to the highest form of Western civilization; (2) the different cultures, with the different backgrounds and languages spoken by all these people—Western, African, and Oriental in outlook; and (3) the different areas in which these peoples have lived for centuries and which could be called their traditional homelands.

In view of all these factors what do we suggest?

Firstly, we reject integration which must mean the eventual submergence of the numerically smaller white nation and his cultures.

We reject a multiracial country because history has shown that it has never worked in the past with majorities and minorities within the same state. Instead of a multiracial society which must lead to the swamping of the developed minority by the underdeveloped majority we suggest a permanent "live and let live" program—a white state setting an example to and adding well-founded, orderly development to neighboring black states within South Africa. Each group, white and black, having full rights and privileges to live the lives to which they are entitled and have developed over the centuries in their own fashion, without the danger of one being destroyed by the other and without the fear of one being subservient to the other.

Secondly, we believe that the development to full nationhood of the Bantu should proceed systematically, in pace with his capabilities.

Unlike other authorities in Africa we did not start at the top—we reversed the process of starting with a small group of the finished product. Instead, we are carefully preparing our Bantu masses for an ever-growing share of responsibility.

Thirdly, we believe in upliftment through self-help and self-rule, leading to truly independent states with truly independent state of minds of the people, contrasting with independence in name only. Independence demands responsibility. The Bantu are being trained to become cognizant of what these responsibilities entail.

Whether a state may stand independently depends entirely on whether its citizenry is capable of handling, and ready for, that responsibility. Spoon feeding has never, in the history of man, created a new nation. Nationhood must come from within the soul of a group or nation, it must come from the inherent or attained abilities of a group of people brought together by the same ideals, the same culture and the same way of life. This must apply not only to political development but also to cultural and economic development. It does not mean that such a new nation should do everything itself—surely it should be aided in its desires—but it must, at all times, be within their capabilities and scope.

Before coming to the present-day developments in South Africa toward nationhood for her black peoples so that white and black can live together in peace, without the one being a danger to the other—I would like to point out a few of the foundation stones on which these structures of nationhood for our black peoples have been built.

The basis of Western society is family life. The same applies to the Bantu peoples. But proper family life is not possible without proper housing.

That was target No. 1 in the upliftment and development not only of individuals but also of families and, eventually, nations. A housing program without parallel on the African continent and one of the most ambitious ever tackled in the world, was started in South Africa about a decade ago. It has advanced to the stage where within 2 years South Africa will have no slums left in the urban areas. More than 150,000 houses were erected in the major cities of South Africa for her Bantu peoples. Thousands of houses in entirely new townships of the Bantu homelands are now being built—more than 89,000.

Target No. 2: An important cornerstone in helping people to help themselves is education. South Africa was not so much interested in the training of a few of the Bantu peoples. It realized that success would lie in the education of the masses. From 1930 to 1960 the number of Bantu pupils increased five times, to 1,500,000. Expenditure on education increased 16 times. It was realized too, that once education had reached this scale, it would be most unfair not to provide education up to the highest levels, and apart from over 6,000 schools for the Bantu and 46 industrial schools there are, at the moment, 2,500 Bantu students enrolled at the various universities, including three universities established during recent years solely for Bantu students in their own future states, for their own people. We have also provided amply in the fields of medical care and amongst the many hospitals—the Baragwanath Hospital for the Bantu, with 2,500 beds, stands out as the biggest on the whole African Continent and Southern Hemisphere. As far as a specialized institution is concerned, it is one of the leading hospitals in the world. We provide free medical and hospital care for those who require it.

But here again we try to stress the importance of self-help and, apart from more than 200 Bantu medical doctors in South Africa, we also provide for the training of Bantu nurses. At Durban we are training nonwhite doctors and at the various hospitals there are already a few thousand Bantu nurses and trainees.

I can also touch on our efforts as far as social welfare and other services are concerned, including pensions for the aged, but I want to come to one of the most crucial questions and problems of developing the Bantu people of South Africa on a broad basis toward full nationhood.

Having looked after the interests and having provided development for our black people on all these different levels and in these different spheres we are now ready to hand over to some of those capable of handling them, the first responsibilities which will lead to eventual independence.

About a month ago our Prime Minister, Dr. H. F. Verwoerd, announced the first steps toward self-rule and self-government of the peoples of the Transkei territory.

The self-government announcement for the Transkei by the Prime Minister is the natural outcome and follow-through of our policy of separate development. Perhaps we have been misunderstood by many and we have also suffered attacks which quite clearly spring from selfish interests and objectives of countries and individuals with Communists and fellow travelers who have only one goal in mind, and that is to create as much chaos as possible in the most stable country on the African Continent. Destruction of present-day South Africa, the only reliable independent African friend of the West and one of the very few anti-Communist bastions on that continent, will make the conquest of this strategically situated continent much easier for the enemies of the West.

Statements are often made which indicate to an incorrect appreciation of the position of South Africa, as well as the true aims of the Government's policy. For example it is said that it is Government policy to oppress its nonwhite peoples; to insure everlasting domination by the white; to perpetuate a system which denies fundamental human and political rights to nonwhites; and that it will never allow them any form of franchise.

I would like to answer these accusations with documentary evidence of what is being done by showing you a film at the end of my address.

To insure human rights for the Bantu and to make it possible for them not only to participate fully in the affairs of their countries but to be able to achieve absolute authority in their traditional homelands, at present within the borders of South Africa, the South African Government has evolved the policy of separate development.

The situation perhaps becomes clear when one realizes that in the southern portion of Africa, a large, practically uninhabitated area was settled almost simultaneously by the whites from the south and the Bantu from the north, the greater part by white people and a variety of smaller parts of the land by black people from central Africa and further northward.

Fundamentally, white rule, first by the British Government and later by the South African Government, was generally recognized as right until the Second World War when, for reasons well known, the movement for granting separate statehood to national units which were formerly governed by others, grew.

In most cases this did not mean the creation of multiracial states. When minorities of great racial divergence were linked, it soon appeared that they had very little chance of surviving, and certainly none of them retained control even though they may have had experience and a great degree of development.

South Africa wished to fall in line with the new trend of granting separate statehood to national units formerly governed by others. Its problem was how to achieve justice with regard to political rights for each different group, including their right of survival.

The South African Government has, in the light of all this, chosen the only alternative to integration, it has chosen the self-realization, to the utmost extent possible, for each group.

This means that it is willing to grant to the Bantu nations of South Africa the opportunity to work out their own destinies as this was desired by, and granted to, new states in other parts of Africa. Against this background the Prime Minister recently announced details relating to the granting of self-government to the Transkei, the first Bantu homeland. In accordance with the principles of self-determination the Government of the Republic is complying with the request cf this Bantu homeland by aiding it, in every possible way, on the road to independence.

The Government is prepared to grant the Transkei a new constitution which will create a parliament and a cabinet of ministers for that territory, based on the principles of Western democracy, and also based on historical political development of this Bantu people, with philosophies at times strange to our Western way of life.

In consultation with the leaders of the Transkei, the details of the constitution is being worked out. It will be a wholly Bantu parliament and cabinet since white South African inhabitants of that area will have no political rights there but will exercise their votes within the Republic of South Africa. In the same way, the Transkei Bantu in the Republic will exercise their votes in the Transkei parliament. A separate Transkei citizenship for the Bantu will be granted. The powers now being entrusted to this new Bantu parliament will be substantial and will increase as the organization becomes capable of undertaking the remaining duties. It is hoped that the new system of self-rule which must lead to political independence, can become operative early in 1963.

Political development must naturally be accompanied by economic development on a substantial scale. Various plans, including a 5-year program for development in the economic sphere of the Transkei, amounting to well over $100 million, were announced. The South African Government will give assistance, too, in the building up of a proper civil service for this new state and others that may follow. White officials will be placed at the disposal of the government of the Transkei in order to train and consult with Bantu civil servants, who will eventually fill all the posts in this new state.

What has been announced for the Transkei is an example of how the South African Government will fully implement its policy of separate development for each of the Bantu nations as soon as they feel capable of taking the same step.

An enormous program for the development and political self-realization of each national group is therefore being entered upon. This must destroy the fallacy that white extremists hold sway in South Africa. The cooperation already being obtained for these programs give lie to the misconception that there is an ever-widening chasm between whites and nonwhites in South Africa. Although external and some internal forces, as well as agitation, have succeeded in creating ill feeling, the white people, with few exceptions, practice great tolerance and are genuinely trying to fulfill their commitments. Provocation from outside South Africa and provocation and criticisms of a small body of nonwhites in the country often inspired by a still smaller body of South African whites, with some very strong leftish leanings—the product of continual incitement and subversion from abroad—have not diminished the Government's determination to solve this unique racial problem calmly and with sincerity. There can be no doubt whatsoever that the stability and even tranquillity which are still characteristic of South Africa in contrast to the conditions of chaos and turbulence in some other parts of Africa, as well as in certain parts of the world, could not have been possible had it not been for the cooperation and the good feeling which exists between most whites and blacks in the country.

This new era in South Africa which is being envisaged by the measures announced holds in it great promise for the building of friendship and cooperation between the races, and gives them all the assurance of the retention of their own identities. We ask of you but understanding and the acceptance of our sincerity.

POLISH MILLENNIUM

The SPEAKER. Under previous order of the House, the gentleman from Nebraska, Mr. CUNNINGHAM, is recognized for 10 minutes.

Mr. CUNNINGHAM. Mr. Speaker, in a short time worldwide celebrations will mark the 1,000th anniversary of Poland as a Christian nation.

This Polish millennium marks the beginning years of Poland's conversion from a pagan state to a Christian state. It was in the early 960's that this change occurred, and so it is that 1,000 years later there will be local, State, and national celebrations to mark the millennium.

This fall, a dignified and impressive service is planned in Omaha, Nebr., to mark this millennium. At the close of my remarks, I will include details of these services as they are described by an article in True Voice, official newspaper of the Omaha archdiocese.

Mr. Speaker, the people of Poland who have come to this country have made great contributions to America. They have joined the melting pot which has brought to all Americans their greatest gift—freedom of thought and action. The list of accomplishments by Polish Americans is endless.

Throughout history it has been the Polish tradition to defend other nations in distress and to take the side of the weak and oppressed. This long tradition in Poland makes us in America feel close to the Polish people, for these are things for which America is also known.

The fierce desire of the Polish people for freedom and their desire to uphold the highest ideals led to the death of many of these patriotic people before and during the onslaught from east and west during World War II. Still today there is the foreign control ever present from the Soviet Communists. A small measure of freedom was restored to the people of Poland following the uprisings of several years ago, yet we know that the hope of real freedom and independence is still nurtured and remains steadfast in the hearts of the people of Poland.

To commemorate this ideal of freedom which has burned in the hearts of its people for 1,000 years, Polish-American groups are marking this millennium. In Nebraska, the Polish-American Congress of Nebraska is preparing to observe the millennium with public thanksgiving to God and with reflections on Poland's noble and brave past, its present plight as a captive nation, and its future.

These activities will culminate in a series of events which are detailed in the True Voice article which follows:

Poles To Observe Millennium

Omaha.—Local observance of the Polish millennium—the 1,000th anniversary of Poland as a nation and its conversion to Christianity—will be launched here September 16 with a pontifical Mass at 4 p.m. in Immaculate Conception Church. The Most Reverend Gerald T. Bergan, archbishop of Omaha, will be celebrant.

Nationwide, the celebration is continuing over a 4-year period (1962–66) culminating in the blessing and dedication of the new chapel of Our Lady of Czestochowa, patroness of Poland, in the National Shrine of the Immaculate Conception, Washington, D.C.

In Omaha, a 6:30 p.m. banquet in the ICC auditorium will be held after the pontifical Mass. Toastmaster for the banquet will be Theodore L. Kowalski with the principal speaker to be named later. Tickets will cost $3, including entertainment.

Officials handling the local observance are Dr. B. J. Koszewski, president and honorary chairman; Dr. E. A. Novak, general chairman; Allan V. Kula, vice chairman, and Father Edmund Placek, chairman of religious affairs.

Similar observances will be held in various U.S. cities, including a mammoth affair scheduled for Chicago to be attended by high church and government officials from around the Nation.

Recently Richard Cardinal Cushing, speaking at services honoring Our Lady of Czestochowa, lauded Poland as "the most religious country in the world" despite efforts of its Communist overlords and its scarcity of priests.

Cardinal Cushing urged Americans to participate in a 9-year novena begun in 1957 by Stefan Cardinal Wyszynsky, primate of Poland.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. Sikes for 30 minutes tomorrow, August 7, 1962.

Mr. Williams (at the request of Mr. Albert) for 15 minutes today and to revise and extend his remarks and include therein extraneous matter.

Mr. Gonzalez (at the request of Mr. Albert) for 25 minutes today and to revise and extend his remarks.

Mr. Cunningham (at the request of Mr. King of New York) for 10 minutes today.

Mr. Quie (at the request of Mr. King of New York) for 1 hour on Wednesday, August 8.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the Congressional Record, or to revise and extend remarks, was granted to:

Mrs. Sullivan and to include extraneous matter.

Mr. Johnson of Wisconsin.

(The following Members (at the request of Mr. King of New York) and to include extraneous matter:)

Mr. Fino.

Mr. Alger.

(The following Members (at the request of Mr. Albert) and to include extraneous matter:)

Mr. Celler.

Mr. Rosenthal.

Mr. Powell.

SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 3340. An act to repeal a portion of the Second Supplemental National Defense Appropriation Act, 1943, as approved October 26, 1942 (56 Stat. 990, 999), as amended, and for other purposes; to the Committee on Public Works; and

S. 3544. An act authorizing modification of the project for Gloucester Harbor, Mass., to the Committee on Public Works.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 3822. An act for the relief of Ahsabet Oyunciyan; and

H.R. 10904. An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1963, and for other purposes.

SENATE ENROLLED BILL AND JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled bill and joint resolution of the Senate of the following titles:

S. 405. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Mann Creek Federal reclamation project, Idaho, and for other purposes; and

S.J. Res. 91. Joint resolution to establish the St. Augustine Quadricentennial Commission, and for other purposes.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on August 2, 1962, present to the President, for his approval, bills of the House of the following titles:

H.R. 10526. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies for the fiscal year ending June 30, 1963, and for other purposes;

H.R. 10786. An act to establish standards for hours of work and overtime pay of laborers and mechanics employed on work done under contract for, or with the financial aid of, the United States, for any territory, or for the District of Columbia, and for other purposes;

H.R. 10802. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1963, and for other purposes;

H.R. 11289. An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1963, and for other purposes; and

H.R. 11737. An act to authorize appropriations to the National Aeronautics and Space Administration for research, development, and operation; construction of facilities; and other purposes.

ADJOURNMENT

Mr. ALBERT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 39 minutes p.m.) the House adjourned until tomorrow, Tuesday, August 7, 1962, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2370. A letter from the Acting Administrator, General Services Administration, transmitting a notice of a proposed disposition of approximately 12,245 long tons of chestnut tannin extract now held in the national stockpile, pursuant to 50 U.S.C. 98b(e); to the Committee on Armed Services.

2371. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of a proposed bill entitled "A bill to authorize the Commissioners of the District of Columbia to sell a right-of-way across a portion of the District Training School grounds at Laurel, Md., and for other purposes"; to the Committee on the District of Columbia.

2372. A letter from the Acting Administrator, General Services Administration, transmitting the report of the Archivist of the United States on records proposed for disposal under the law; to the Committee on House Administration.

2373. A letter from the Director, Office of Emergency Planning, Executive Office of the President, transmitting a report of a claim paid by the Office of Emergency Planning during fiscal year 1962, pursuant to the Federal Tort Claims Act of 1946; to the Committee on the Judiciary.

2374. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated June 11, 1962, submitting a report, together with accompanying papers and illustrations on a review of the report on the Kanawha River at and in the vicinity of Charleston, South Charleston, and Dunbar, W. Va., requested by resolutions of the Committees on Public Works, U.S. Senate and House of Representatives, adopted May 24, 1958, July 10, 1958, and July 1, 1958; to the Committee on Public Works.

2375. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated June 1, 1962, submitting a report, together with accompanying papers and illustrations on a feasibility report on the Big Sioux River at Sioux Falls, S. Dak.; to the Committee on Public Works.

2376. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated June 22, 1962, submitting a report, together with accompanying papers and an illustration on a review of the report on Bayou Bonfouca, La., requested by resolutions of the Committees on Public Works, U.S. Senate and House of Representatives, adopted January 20, 1959 and June 3, 1959; to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SISK: Committee on Rules. House Resolution 745. Resolution for consideration of H.R. 3460, a bill to amend section 9(a) of the Trading With the Enemy Act, as amended; without amendment (Rept. No. 2138). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 746. Resolution for consideration of H.R. 7283, a bill to amend the War Claims Act of 1948, as amended, to provide compensation for certain World War II losses; without amendment (Rept. No. 2139). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 747. Resolution for consideration of S. 2135, an act to authorize the Securities and Exchange Commission to delegate certain functions; without amendment (Rept. No. 2140). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BARING:

H.R. 12769. A bill to amend the Trading With the Enemy Act, as amended; to the Committee on Interstate and Foreign Commerce.

By Mr. BECKER:

H.R. 12770. A bill to provide, under the laws of the District of Columbia, for the life imprisonment of any person convicted of four felonies; to the Committee on the District of Columbia.

By Mr. BYRNES of Wisconsin:

H.R. 12771. A bill to amend the Internal Revenue Code of 1954 to provide a 20-percent credit against the individual income tax for certain educational expenses incurred at an institution of higher education; to the Committee on Ways and Means.

By Mr. COHELAN:

H.R. 12772. A bill to amend the Internal Revenue Code of 1954 to provide that amounts received as certain awards under the Japanese-American Evacuation Claims Act of 1948, as amended, shall not be included in gross income; to the Committee on Ways and Means.

By Mr. DONOHUE:

H.R. 12773. A bill to amend title 35 of the United States Code to permit a written declaration to be accepted in lieu of an oath, and for other purposes; to the Committee on the Judiciary.

By Mr. KEOGH:

H.R. 12774. A bill to amend the Internal Revenue Code of 1954 to provide carrybacks and carryovers for losses arising from restorations of substantial amounts held under claims of right; to the Committee on Ways and means.

By Mr. MACDONALD:

H.R. 12775. A bill to protect the public health by amending the Federal Food, Drug, and Cosmetic Act to assure the safety, efficacy, and reliability of drugs, authorize standardization of drug names, establish special controls for barbiturate and stimulant drugs, and clarify and strengthen existing inspection authority with respect to any articles subject to the act; and to amend related laws; to the Committee on Interstate and Foreign Commerce.

By Mr. MULTER:

H.R. 12776. A bill to revise the District of Columbia Alcoholic Beverage Control Act; to the Committee on the District of Columbia.

By Mr. OSMERS:

H.R. 12777. A bill to amend the Uniform Code of Military Justice; to the Committee on Armed Services.

H.R. 12778. A bill to amend the Internal Revenue Code of 1954 to provide for personal and corporate income tax reductions, to encourage the establishment of voluntary pension plans by self-employed individuals, to liberalize certain deductions and provide deductions for certain additional expenditures, to provide additional personal income tax exemptions for handicapped taxpayers, spouses, and dependents, to repeal certain excise taxes, and for other purposes; to the Committee on Ways and Means.

By Mr. ROSENTHAL:

H.R. 12779. A bill to authorize the payment of certain claims for structural or other major defects in homes covered by Federal Housing Administration insured mortgages, and to require indemnification bonds in the case of certain new construction under Federal Housing Administration insured mortgages; to the Committee on Banking and Currency.

By Mr. SCRANTON:

H.R. 12780. A bill to prevent the use of stopwatches, work-measurement programs or other performance standards operations as measuring devices in the postal service; to the Committee on Post Office and Civil Service.

By Mr. STEPHENS:

H.R. 12781. A bill to amend the Internal Revenue Code of 1954 to provide that an election to be treated as a subchapter S corporation may be valid for subsequent years although not initially effective; to the Committee on Ways and Means.

By Mr. VINSON:

H. Con. Res. 509. Concurrent resolution providing the express approval of the Congress, pursuant to section 3(e) of the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98b(e)), for the disposition of certain materials from the national stockpile; to the Committee on Armed Services.

By Mr. BECKER:

H. Res. 744. Resolution to authorize the Committee on the District of Columbia to conduct an investigation and study of crimes in the District of Columbia; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CLANCY:

H.R. 12782. A bill for the relief of Robert Wilkes; to the Committee on the Judiciary.

By Mr. FEIGHAN:

H.R. 12783. A bill for the relief of the children of Mrs. Elizabeth A. Dombrowski; to the Committee on the Judiciary.

By Mr. HEALEY:

H.R. 12784. A bill for the relief of Salomon Darauche; to the Committee on the Judiciary.

By Mr. MAILLIARD:

H.R. 12785. A bill for the relief of Patricia Ruth Woolverton; to the Committee on the Judiciary.

By Mr. ROONEY:

H.R. 12786. A bill for the relief of Mrs. Shoshana Baruchov; to the Committee on the Judiciary.

By Mr. ROSENTHAL:

H.R. 12787. A bill for the relief of Irina Semenovna Novikova; to the Committee on the Judiciary.

By Mr. SCHWENGEL:

H.R. 12788. A bill for the relief of Mrs. Susan C. O'Connor; to the Committee on the Judiciary.

SENATE

Monday, August 6, 1962

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Lord of all being, we would join the undaunted pilgrims of the ages whose God is our salvation. We would claim kinship with the innumerable company who, in darkness drear, hath found in Thee the one true light.

In the dusty caravan of another day's journey across trackless sands, we would pause at this altar our fathers builded, and where from the birth of our liberty there has burned the sacred fire, that we may keep the bright torch of truth and faith aflame amid the encircling gloom that shuts us in.

May that truth make us free from the prejudices which so often blind our eyes to the things which are excellent, and thus raise false barriers of misunderstanding. May that faith lead us on, as a pillar of cloud and of fire, to the shining city of human brotherhood, whose ways are peace, whose citizenship rests only on character, and whose laws rest on human good.

We ask it in the Redeemer's name. Amen.

THE JOURNAL

On request of Mr. Mansfield, and by unanimous consent, the reading of the Journal of the proceedings of Friday, August 3, 1962, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE—ENROLLED BILLS AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolution, and they were signed by the President pro tempore:

S. 405. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Mann Creek Federal reclamation project, Idaho, and for other purposes;

H.R. 3822. An act for the relief of Ahsabet Oyunciyan;

H.R. 10904. An act making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1963, and for other purposes; and

S.J. Res. 91. Joint resolution to establish the St. Augustine Quadricentennial Commission, and for other purposes.

CALL OF THE CALENDAR DISPENSED WITH

On request of Mr. MANSFIELD, and by unanimous consent, the call of the Legislative Calendar was dispensed with.

LIMITATION OF DEBATE DURING MORNING HOUR

On request of Mr. MANSFIELD, and by unanimous consent, statements during the morning hour were ordered limited to 3 minutes.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting several nominations, which were referred to the Committee on the Judiciary.

(For nominations this day received, see the end of Senate proceedings.)

The PRESIDENT pro tempore. If there be no reports of committees, the nominations on the Executive Calendar will be stated.

COMMISSIONER OF NARCOTICS

The Chief Clerk read the nomination of Henry L. Giordano, of Maryland, to be the Commissioner of Narcotics.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

TAX COURT OF THE UNITED STATES

The Chief Clerk proceeded to read sundry nominations to the Tax Court of the United States.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

COLLECTOR OF CUSTOMS

The Chief Clerk read the nomination of Raymond F. Hufft, of Louisiana, to be collector of customs for customs collection district No. 20, with headquarters at New Orleans, La.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

REPORT ON NORTH LOUP DIVISION, MISSOURI RIVER BASIN PROJECT, NEBRASKA

The PRESIDENT pro tempore laid before the Senate a letter from the Secretary of the Interior, transmitting, pursuant to law, a report on the North Loup division, Missouri River Basin project, Nebraska, which, with the accompanying report, was referred to the Committee on Interior and Insular Affairs.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JACKSON, from the Committee on Government Operations, without amendment:

H.R. 6984. An act to provide for a method of payment of indirect costs of research and development contracted by the Federal Government at universities, colleges, and other educational institutions (Rept. No. 1826).

By Mr. McCLELLAN, from the Committee on Government Operations, without amendment:

H.R. 8100. An act to amend section 109 of the Federal Property and Administrative Services Act of 1949, as amended, relative to the General Supply Fund (Rept. No. 1827).

By Mr. CHURCH, from the Committee on Interior and Insular Affairs, without amendment:

S. 2369. A bill to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve (Rept. No. 1829).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 3507. An act to provide for the withdrawal and reservation for the Departments of the Air Force and the Navy of certain public lands of the United States at Luke-Williams Air Force Range, Yuma, Ariz., for defense purposes (Rept. No. 1830).

By Mr. ALLOTT, from the Committee on Interior and Insular Affairs, with amendments:

S. 3100. A bill to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Georgetown, Colo., to Frank W. Whitenack (Rept. No. 1847).

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 3071. A bill for the relief of Hidayet Danish Nakashidze (Rept. No. 1832);

H.R. 2139. An act for the relief of Suraj Din (Rept. No. 1834);

H.R. 2176. An act for the relief of Salvatore Mortelliti (Rept. No. 1835);

H.R. 3127. An act for the relief of Amrik S. Warich (Rept. No. 1836);

H.R. 7549. An act for the relief of Lewis Invisible Stitch Machine Co., Inc., now known as Lewis Sewing Machine Co. (Rept. No. 1837); and

H.R. 10308. An act for the relief of Elizabeth A. Johnson (Rept. No. 1838).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 689. A bill for the relief of Karl Heinz Agar (Rept. No. 1831); and

S. 3090. A bill for the relief of Antonio da Costa (Rept. No. 1833).

By Mr. DIRKSEN, from the Committee on the Judiciary, without amendment:

S. 3380. A bill to designate the second Monday in October as National Teachers' Day (Rept. No. 1840).

By Mr. DIRKSEN, from the Committee on the Judiciary, with amendments:

S. 3338. A bill to incorporate the American Symphony Orchestra League (Rept. No. 1841); and

S.J. Res. 179. Joint resolution authorizing and requesting the President to designate May 1, 1962, as a day for observance of the courage displayed by the uprising in the Warsaw ghetto against the Nazis (Rept. No. 1839).

By Mr. BYRD of Virginia, from the Committee on Finance, with an amendment:

H.R. 852. An act to amend chapter 3 of title 38, United States Code, to authorize the Administrator of Veterans' Affairs to establish medical advisory panels to resolve conflicts of evidence in questions involving service connection of disabilities or deaths (Rept. No. 1844); and

H.R. 5234. An act to amend title 38, United States Code, to provide for the restoration of certain widows and children to the rolls upon annulment of their marriages or remarriages, and for other purposes (Rept. No. 1842).

By Mr. BYRD of Virginia, from the Committee on Finance, with amendments:

H.R. 857. An act to amend section 4005 of title 38, United States Code, to provide that cases appealed to the Board of Veterans' Appeals shall contain a brief statement of the facts of the case appealed, with a citation and application of the law, together with the recommendations of the office appealed from, and for other purposes (Rept. No. 1843); and

H.R. 3728. An act to amend title 38, United States Code, so as to authorize the Administrator to assign a total rating for compensation to a veteran granted service-connection for blindness of one eye who subsequent to separation from active duty incurs blindness in the remaining eye (Rept. No. 1845).

ESTABLISHMENT OF A COMMISSION ON SCIENCE AND TECHNOLOGY—REPORT OF A COMMITTEE (S. REPT. NO. 1828)

Mr. McCLELLAN. Mr. President, from the Committee on Government Operations, I report favorably, with amendments, the bill (S. 2771) for the establishment of a Commission on Science and Technology, and I submit a report thereon.

Mr. President, this proposed legislation is the result of 5 years of study by the committee and its subcommittees in an effort to strengthen Federal programs in the fields of science and technology, and to eliminate unnecessary duplication and overlapping between Government departments and agencies engaged in scientific and technological research.

There have been three separate hearings before the committee, beginning in 1958. In 1959 a somewhat similar bill was reported to the Senate. Further hearings were held on May 10 and July 24 of this year. These hearings have reflected that there is a steady and relentless increase in the cost of research and development programs of the Federal departments and agencies, amounting to $9 billion in each of the 2 past fiscal years, and now will exceed $12 billion in the present fiscal year, or more than the entire expenditures of the Federal Government prior to World War II.

Mr. President, this bill provides for the establishment of a Hoover-type commission composed of representatives from the legislative and executive branches of the Government and of persons from private life who are eminent in one or more fields of science or engineering, or who are qualified and experienced in policy determination and administration of industrial scientific research and technological activities.

The objectives of the proposed Commission, which are set forth in detail in the report, provide for a study of all of the programs, methods, and procedures of the Federal departments and agencies which are operating, conducting, and financing scientific programs, with the purpose of bringing about more economy and efficiency in the performance of these essential activities and functions. Deficiencies in some of these programs and the problems relating thereto have been outlined on numerous occasions before the Committee on Government Operations and other committees of the Congress by informed authorities, who have stressed the urgent need for improvement in effecting necessary reorganizations and better coordination of existing programs. Emphasis has also been directed toward the need for developing a program for the elimination of duplication in science efforts, where one agency of Government works on programs which are underway in other agencies, or where research is being done on problems which have already been solved by other scientists. There is reason to believe that this occurs extensively, due primarily to serious deficiencies in the science information retrieval programs of the Federal Government.

The Commission, if established, would be specifically directed to study and recommend ways and means of meeting our scientific manpower needs, which President Kennedy described as one of the most critical problems facing our Nation. There are probably many other critical needs which will require study and exploration, even beyond those included in the objectives of the proposed legislation.

In undertaking its studies the Commission would be vested with authority to set up a Science Advisory Panel of outstanding science, engineering, and technological authorities from all sections of the Nation to assist it in the performance of the functions outlined in the bill. The Commission is further directed to conduct a study of Federal scientific and technical activities, such as the deficiencies in scientific, engineering, and technical information programs, including acquisition, processing, documentation, storage, retrieval, and distribution of scientific information; the urgency for accelerating scientific, engineering, and technical progress in a number of Federal agencies which perform some functions in these areas; and to recommend necessary reorganizations of scientific and technological activities of the Federal Government to improve their operations and to better coordinate their activities.

One of the basic objectives of the bill is to provide a medium through which individual Members and committees of the Congress can obtain information which is not now available to enable them to take appropriate legislative action to establish definite Federal policies in the field of science and technology. The reports and recommendations of the Commission will also provide a basis for an evaluation of programs which are presently in operation as well as those which are being proposed.

Evidence was submitted at the hearings on S. 2771 which indicated that the Bureau of the Budget has found that a detailed evaluation of existing science and technological operations of the numerous agencies operating in these fields has been found to be too difficult. The result has been that the agencies interested in procuring appropriated funds are not required to submit an evaluation of achievement under existing programs, but merely attempt to justify further appropriations of funds. Under this procedure, it was pointed out that Congress is required to appropriate funds on faith alone, since the appropriate committees and individual Members of Congress have no information which would permit them to evaluate the programs or to take the necessary action to eliminate excessive duplication and waste.

Should the Congress enact the bill into law, it will be provided with a means of obtaining information upon which it can develop facts, thus enabling it to perform its normal constitutional functions. The committee is firmly convinced that there is a real need for a bipartisan Commission to study all of the science and technological programs of the Federal Government as proposed by this bill. It is further convinced that its enactment will insure maximum utilization of the resources of private industry and nonprofit research organizations, including universities and other educational or technological institutions, in the formulation of a properly coordinated program with the maximum utilization of the resources of private industry, nonprofit and other technological institutions at a reduced cost.

The committee in recommending this legislation considers it to be an essential first step in achieving these objectives so that the Congress and the President may have the benefit of the recommendation of qualified experts in the fields of science, engineering, and technology upon which appropriate legislative action may be taken to promote more efficiency in the operation of these programs and to effect economies that are essential in conserving Federal funds and technological manpower.

The continued safety and growth of our Nation is the prime concern of the committee in reporting S. 2771. This bill is being reported with the sincere hope that it will be enacted into law in the present Congress so that improved programs in science and technology may be developed which will assist us, as a nation, in meeting the challenge of world communism.

The PRESIDENT pro tempore. The report will be received and printed, and the bill be placed on the calendar.

TEMPORARY SUSPENSION OF THE JONES ACT—REPORT OF A COMMITTEE (S. REPT. NO. 1846)

Mr. MAGNUSON, from the Committee on Commerce, reported an original bill (S. 3614) to authorize the temporary suspension of the Jones Act (46 U.S.C. 883) upon certain findings by the Secretary of Commerce, and submitted a report thereon; which report was order to be printed, and the bill was read twice by its title and ordered to be placed on the calendar.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DOUGLAS:

S. 3612. A bill to provide that it shall be unlawful to use improperly for certain purposes the key, insignia, or name of the Phi Beta Kappa Society; to the Committee on the Judiciary.

By Mr. BEALL:

S. 3613. A bill to provide that participation by members of the National Guard in the reenactment of the Battle of Antietam shall be held and considered to be full-time training duty under section 503 of title 32, United States Code, and for other purposes; to the Committee on Armed Services.

By Mr. MAGNUSON:

S. 3614. A bill to authorize the temporary suspension of the Jones Act (46 U.S.C. 883) upon certain findings by the Secretary of Commerce; placed on the calendar.

(See the reference to the above bill, which appears under the heading "Reports of Committees.")

RESOLUTION

INVESTIGATION OF COSTS OF CONDUCTING RESEARCH BY GRANTS OR OTHERWISE THAT SHOULD BE PAID BY THE FEDERAL GOVERNMENT

Mr. KEATING (for himself, Mr. BENNETT, Mr. CASE, Mr. JAVITS, Mr. KUCHEL, Mr. MCCARTHY, and Mr. SALTONSTALL) submitted a resolution (S. Res. 371) to investigate the costs of conducting research by grants or otherwise that should be paid by the Federal Government, which was referred to the Committee on Government Operations.

(See the above resolution printed in full when submitted by Mr. KEATING, which appears under a separate heading.)

COST STUDY ON FEDERAL RESEARCH GRANTS

Mr. KEATING. Mr. President, on behalf of myself, the Senator from Utah [Mr. BENNETT], my colleague from New York [Mr. JAVITS], the Senator from New Jersey [Mr. CASE], the Senator from California [Mr. KUCHEL], the Senator from Minnesota [Mr. MCCARTHY], and the Senator from Massachusetts [Mr. SAL-

TONSTALL], I submit a resolution to provide for a congressional study of indirect costs of Government research projects borne by colleges and universities, and ask that it be appropriately referred.

In the discussion on the Defense Department appropriations bill, considerable dissatisfaction was expressed over the action of the conferees in setting a 20-percent ceiling on the indirect costs of Government research performed by universities. The dissatisfaction, let me make perfectly clear, was not with the Senate conferees, who did the very best they could under the circumstances.

Nevertheless, I am dissatisfied with the manner in which ceilings on indirect costs are dealt with on an agency-by-agency basis, rather than with a consistent policy for the entire Government. For instance, on the Defense bill, the other body placed a 15-percent ceiling, having on a floor vote rejected a 30-percent limit. A few days ago the House acted on the independent agencies appropriation and, again by a floor vote, set a ceiling of 25 percent. What this means is that research grants by the Defense Department will have a 20-percent ceiling, those by NASA may have a 25-percent ceiling.

What is clearly needed is a careful congressional study, preferably by a neutral committee such as the Government Operations Committee with access to information from all Government agencies. In this way guidelines may be laid down not only for the various appropriation subcommittees, but for all such problems on the part of all agencies and universities. These indirect costs, which included administration, space, heat, lighting, library facilities, and which vary very greatly depending on the nature of the study, can be a serious additional burden on university finances.

The Bureau of the Budget, first under President Eisenhower and again under this administration has opposed an arbitrary ceiling and has provided a number of recommendations as to which indirect costs should be included and which should not. Percentages can be misleading, because each university computes them in a different manner, but a full study by the Government Operations Committee would be an excellent guide and clarification for the Senate in this matter. Perhaps the other body might wish to cooperate or conduct a similar study so that common congressional policies can be worked out.

This is a matter of real concern to a number of universities, not only in New York, but throughout the Nation. In my State the Universities of Rochester and Cornell have been particularly affected, but others involved include Harvard, Princeton, and many of the large State universities. We owe it to these institutions to review the situation thoroughly and determine whether a limit is desirable, and if so what that limit should be.

Mr. President, I am pleased to have as cosponsors of the resolution the Senators I have named.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred.

The resolution (S. Res. 371) to investigate the costs of conducting research by grants or otherwise that should be paid by the Federal Government, was referred to the Committee on Government Operations, as follows:

Resolved, That the Committee on Government Operations, or any duly authorized subcommittee thereof, is authorized under sections 134(a) and 136 of the Legislative Reorganization Act of 1946, as amended, and in accordance with its jurisdiction specified in rule XXV of the Standing Rules of the Senate to make a full and complete investigation and study of indirect costs involved in conducting research, by grants or otherwise, for Government departments and agencies for the purpose of determining what part, if any, of such costs should be paid by the Government.

SEC. 2. For the purposes of this resolution the committee is authorized through January 31, 1963, (1) to make such expenditures as it deems advisable; (2) to employ upon a temporary basis technical, clerical, and other assistants and consultants; and (3) with the prior consent of the heads of the departments or agencies concerned, and the Committee on Rules and Administration, to utilize the reimbursable services, information, facilities, and personnel of any of the departments or agencies of the Government.

SEC. 3. The committee shall report its finding, together with its recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date.

SEC. 4. The expenses of the committee under this resolution, from the date of its agreement through January 31, 1963, shall not exceed $——— and shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

GUARANTEE TO ELECTRIC CONSUMERS IN PACIFIC NORTHWEST—AMENDMENTS

Mr. MUNDT submitted amendments, intended to be proposed by him, to the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes, which were ordered to lie on the table and to be printed.

REIMBURSEMENT OF CERTAIN VESSEL CONSTRUCTION EXPENSES—AMENDMENT

Mr. WILLIAMS of Delaware submitted an amendment, intended to be proposed by him, to the bill (H.R. 11586) to amend section 502 of the Merchant Marine Act, 1936, as amended, which was ordered to lie on the table and to be printed.

NOTICE OF HEARING ON S. 3118 BY COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. JACKSON. Mr. President, I should like to announce that the Interior and Insular Affairs Committee will hold a hearing on Tuesday, August 14, at 10 a.m., on Senate bill 3118, the conservation fund bill submitted to Congress by the President, to implement the report of the Outdoor Recreation Resources Review Commission. The annual tax or fee on pleasure boats originally proposed in the legislation has been withdrawn, so testimony on this provision will not be heard.

The bill still contains a provision to divert 2 cents a gallon of the tax collected on fuel used in motorboats to the conservation fund, for recreation land acquisition. It is the intention of the Interior Committee to refer this matter to the Finance Committee before the measure finally reaches the floor.

ENROLLED BILL AND JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on today, August 6, 1962, he presented to the President of the United States the following enrolled bill and joint resolution:

S. 405. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Mann Creek Federal reclamation project, Idaho, and for other purposes; and

S.J. Res. 91. Joint resolution to establish the St. Augustine Quadricentennial Commission, and for other purposes.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. WILEY:

Excerpts from address prepared by him for delivery at Mukwonago, Wis., picnic on August 5, 1962.

OHIO'S FISHING INDUSTRY

Mr. YOUNG of Ohio. Mr. President, after many years as the world's second largest producer of fish, the United States now finds itself in fifth place, behind Japan, Russia, Red China, and Peru. The decline has been reflected in Ohio's fishing industry. From 1932 to date the population in Ohio has grown from 6 million to nearly 10 million. Contrasting with this population growth has been the decline of Ohio's fishing industry from 28.5 million pounds of fish in 1932 to 18 million pounds in 1960.

This condition in an important industry is serious. What are its causes? A primary reason for our Nation's decline in its fishing industry lies in obsolete vessels and fishing gear and processing equipment. In contrast, the Soviet fishing fleet uses a combination of radar, modern netting techniques, and floating processing factories to outfish the older and obsolete American fleets. Another difficulty, especially on the Great Lakes, is a decline in the number of available fish. This is due mainly to water pollution and invasion of the lamprey. As a result, fishermen on the Great Lakes who formerly caught pike, whitefish, trout, and other fine species, are now reduced to trying to market smelt, carp, and lesser value fish.

The remedies for this condition are many and complex. Tax relief and incentives for the industry—both in Ohio and throughout the Nation—when companies modernize their fishing vessels and processing equipment, and Federal and State Government efforts in increasing the number of available fish, are needed. In addition, a direct increase in the market for fish could easily be achieved by a review of the Food and Drug Administration's ruling that fish protein, for esthetic reasons, cannot be sold in the United States for human consumption.

Mr. President, it is a fact that fish protein concentrate is a cheap food that meets a pressing human need in our country as well as in poorer nations. We should help our limping fish industry. Incidentally, the consuming public would benefit with more good fresh fish available at modest prices if and when we in Congress take action to protect, encourage, and expand our fishing industry.

Mr. President, last Friday three of our colleagues, the senior Senator from Washington [Mr. MAGNUSON], the senior Senator from Alaska [Mr. BARTLETT], and the junior Senator from Massachusetts [Mr. SMITH], introduced two bills—S. 3610 and S. 3611—which if passed will go far toward reversing the shocking decline of our fishing industry. This legislation would greatly strengthen the American fishing fleet and enable our fishermen to keep our share of the world's markets and to compete effectively with the fishermen of other nations. Furthermore, it provides for research to test advanced fishing methods. We cannot afford to let our fishing industry die. In our early years as a nation it was one of our major industries. Today it is still a billion dollar industry employing nearly half a million people.

Our colleagues are to be commended on this legislation. They have performed a great public service for the benefit of all Americans. I fervently hope that these bills will be enacted into law before this session of the Congress adjourns.

WARNING SIGNALS ON TRADE LEGISLATION

Mr. BUSH. Mr. President, warning signals to "stop, look, and listen" before rushing into a drastic revision of trade legislation have been hoisted.

This morning's Washington Post carries a dispatch from Brussels, Belgium, under the headline, "Bitter British-French Rift Broke Up Market Talks." The dispatch reports a breakdown in negotiations on the United Kingdom's entry into the European Common Market, and postponement of further discussions for a period of 2 months.

House bill 11970, the proposed Trade Expansion Act of 1962, is based largely upon the assumption that the United Kingdom will join the Common Market. For example, the provisions of the bill permitting the President to eliminate duties on commodities in which the United States and the Common Market jointly control 80 percent of the free world trade are predicated upon that assumption, for unless the United Kingdom joins the Common Market, few commodities will reach the 80 percent bench mark.

The deadlock in the negotiations at Brussels suggests that it may be the course of wisdom for the Senate to set aside House bill 11970 until it is known what the future of the Common Market will be, and whether Great Britain and the Commonwealth nations will be associated with it.

Mr. President, this morning, before the Senate Finance Committee, Prof. Patrick M. Boarman, of Bucknell University, representing the Economists' National Committee on Foreign Trade Policy, outlined dangers which would threaten the domestic economy if House bill 11970 were to be enacted in its present form and if internal economic reforms were not simultaneously undertaken.

Professor Boarman's testimony, coupled with the news from Brussels, emphasizes the desirability of a simple extension of the present Trade Agreements Act until both the international situation and the future of our domestic economy can be more clearly foreseen. Should the Senate decide otherwise, it is essential, in my judgment, that the amendments to House bill 11970 which I submitted, for myself and other Senators, last Thursday, August 2, be adopted.

Mr. President, I ask unanimous consent that Professor Boarman's summary statement and the full declaration of principles by the economists' committee which he represents may be printed in the RECORD following these remarks, together with the article from the Washington Post to which I have referred, and another article from the same newspaper.

There being no objection, the statement, declaration, and articles were ordered to be printed in the RECORD, as follows:

SUMMARY STATEMENT—DECLARATION OF PRINCIPLES BY THE ECONOMISTS' NATIONAL COMMITTEE ON FOREIGN TRADE POLICY, PRESENTED TO THE SENATE COMMITTEE ON FINANCE ON AUGUST 6, 1962, BY PATRICK M. BOARMAN

My name is Patrick Boarman. I am associate professor of economics at Bucknell University. I am representing here the Economists' National Committee on Foreign Trade Policy which is opposed to the trade liberalization and expansion bill known as H.R. 11970.

It is our belief that unless there are substantial changes in the proposed legislation and unless it is accompanied simultaneously by thoroughgoing internal reforms (which we shall specify), its net effect will be to harm the Nation's domestic economy and worsen its already weak international posture.

Let it be said at the outset that all of us as economists subscribe to free trade, the law of comparative advantage, and all that these terms imply. We oppose protectionism in principle. This much said, however, it behooves us to inquire into the conditions under which the gross gain to the world from free trade will be fairly shared by the participating countries. Free trade was never supposed to operate in a vacuum, but only within the context of certain conditions. There is much loose talk about the invigorating and dynamic impact of foreign competition on the domestic economy. We are told in effect that since the reduction or abolition of tariffs will increase competition, and since competition is per se good, tariffs ought to be abolished whenever and wherever possible. This seemingly unexceptionable economic truism nevertheless holds within it a logical pitfall of the gravest import to the United States.

There is a world of difference between the competition which originates within a country and competition which comes from without via imports. The consumer will admittedly be the beneficiary of increased competition regardless of whence it comes. But to the consumer in his ultimate role as jobholder and as sharer in the general health or sickness of the national economy, the domestic or foreign guise which competition may assume cannot be a matter of indifference. The intensification of competition from within as the result of increased vigilance in the prevention of industrial concentration and more effective legislation to maintain competition both in the labor and in the product markets will normally have the effect of increasing the flexibility and vitality of the system; sales at home and abroad will tend to be stimulated, foreign capital attracted, and job opportunities multiplied.

Competition which takes the form of increased imports, on the other hand, while it may in the short run prove to be a boon to the consumer and subject domestic monopolistic excesses to effective restraint comes at a cost: The dislocation and disemployment of domestic factors of production, stagnation of the domestic economy, excess capacity, outflow of capital in search of the more profitable factor combinations available abroad, and—as a result of all these movements—a worsening of the balance-of-payments situation, increased outflows of gold, and a decline of international confidence in the currency of the affected country.

Let there be no misunderstanding: we believe that competition from abroad is good, provided that it does not continue indefinitely to be the dominant form of competition. The latter will tend to be the case, however, where a nation's domestic economic policies inhibit confidence, risk-taking, and growth, and where its lack of homegrown competition generates a vacuum which is persistently filled by competition from the outside.

To ask for tariff reduction or tariff abolition on the grounds that such action will increase competition and at the same time to refuse to correct the basic maladjustments which make the domestic economy internationally noncompetitive is to ask for the administering of a medicine which, while it may banish the symptoms of disease (in this case, reduce domestic manifestations of monopoly), may simultaneously cripple or perhaps even kill the patient.

It should be added that a most important assumption of a genuinely free trade world is that the participating countries are all following roughly the same fiscal and monetary policies. The postwar period has provided us with some egregious examples of the problems which result where this is not the case.

The notorious chronic export surpluses of West Germany in the 1950's were due primarily to the fact that Germany, remembering her disastrous inflations, was pursuing a determinedly anti-inflationary policy, whereas Britain, France, and the Scandinavian countries, remembering the great depression, were pursuing policies of monetary ease, tolerating inflation for the sake of promoting full employment and the objectives of the welfare state. Equally notorious and annoying, in consequence, were the chronic balance-of-payments deficits registered by these countries. Indeed, so acute did intra-European imbalance become in the middle 1950's, so scarce the D-mark, that the painfully reerected system of partial multilateralism in Europe was on the point of collapse. It was only when the British in 1957 abandoned the long-dominant cheap money policy (the Bank of England raised its rediscount rate in that year to an all-time high of 7 percent) that a semblance of equilibrium was restored.

More particularly, it was because France, at the end of 1958, put a stop to inflation and devalued the franc, coupling these acts with certain drastic reforms of the domestic economy, that the Common Market became possible. In effect, the Common Market countries all adjusted their internal policies to those of the most disciplined member, West Germany. Had France, the deficit member, not so adjusted its internal price and income levels, the opening of the Common Market on January 1, 1959, would have bankrupted that nation in very short order.

Events proved that the French economy needed only the right policies in order to come alive and realize its full potential; following closely on the heels of the drastic reforms of 1958, the French balance of payments turned from deep deficit to substantial surplus. It was not the establishment of the Common Market which made the Common Market countries economically strong. On the contrary, it was the return to monetary and economic discipline of these countries which made possible the Common Market and the associated benefits of tariff cutting and expanded trade. The Common Market experiment has demonstrated that free trade (or freer trade) and the tariff reductions which it implies, are but pleasant byproducts of prior monetary and fiscal integration and harmonization.

It is now the United States which has moved into the deficit position in the international economy. The dollar shortage—which so mesmerized the attention of economists until a very short while ago—has been converted into a dollar glut. And, if the chronic dollar shortages of the early postwar period were due chiefly to the refusal of some deficit countries to remove excess demand from their economies by appropriate monetary and fiscal policies, the dollar glut must be attributed in great part to the persistent failure of the United States to make the internal adjustments, in particular the stopping of inflation, and the reduction or restraint of labor union monopoly, necessary to maintain balance with the changed world surroundings of the fifties and sixties.

The real issue confronting the United States today in its international economic relationships is not, therefore, whether we should have tariff reform or no tariff reform. It is whether we should have tariff reform with, or tariff reform without simultaneous (or, better still, prior) internal fiscal, monetary, and economic reforms. But, concern for such reforms is conspicuously absent from H.R. 11970.

Free trade is being urged as the answer to almost all our problems, domestic and international. It is important to note that there is a very large assumption on which this expectation is based. The assumption is that the proposed legislation will not only cause exports to increase to an extent equal to the expected increase in imports, but that it will yield a net increase in exports over imports. Only if exports increase faster than imports will it be possible to increase domestic employment, step up the national growth rate, and maintain our present rate of expenditure abroad for national defense and foreign aid without further aggravation of our existing and cumulative balance-of-payments deficits.

There is, however, no guarantee whatsoever that unilateral tariff reduction by the United States, no matter how sweeping, will yield the expected net increase in exports. The reasons for this (which are spelled out in detail in our full statement) are, first, the improbability of the proposed drastic tariff reductions being matched by our neighbors abroad, in particular by the Common Market countries, and, secondly, the slowdown of exports and increases in imports which persistent stagnation-with-inflation in the United States relative to other countries will bring about.

We object especially to the sweeping powers granted to the President to reduce or eliminate at his sole discretion any or all remaining tariffs on U.S. imports, without review or supervision by Congress. It is of significance that the President is also authorized in the proposed legislation "to proclaim such increases in or imposition of, any duty or other import restriction" as he wishes. In short, the incumbent President or some future President could raise tariffs as well as lower them, could use his new powers for protectionism as well as for free trade. In the area of tariff manipulation, the consequences of any given action are not easy to predict and to estimate; if mistakes are made, the damage to the Nation could be considerable and irreparable. Hence, we strongly urge that any legislation which is enacted provide for adequate review by Congress of the President's actions in this field. The grant of powers should be in any case limited to 2 rather than 5 years. This will provide each new Congress with a chance to examine the record and to determine if changes in the program are indicated.

Our committee is disturbed at the structural dislocations in our economy—the unemployment and the underutilization of industrial capacity—which the radical changes in tariffs proposed in H.R. 11970 might cause. It is not at all certain that our economy will be able to handle these dislocations without cyclical upset, especially if the tariff reductions are to be accomplished in as large amounts and within as short a period of time as the proposed legislation implies. But our deepest concern is with the short-run balance-of-payments effects of the anticipated increases in imports. Clearly, increases in imports at this time, where not accompanied by rises in exports (and such rises are based on pure hypothesis) can only enlarge our already alarming payments deficit, aggravate the outflow of gold, and increase the pressures leading to a devaluation of the dollar. There can be little doubt that the latter occurrence would be a catastrophe for the free world and might very well trigger an international liquidity crisis of the kind which ushered in the great depression in 1929.

We believe that the overriding task of the present hour is for our Government and all citizens to do whatever is necessary to activate the full and unquestionably enormous economic potential of the United States. It is a "grand illusion" to believe that, by knocking down a few already low tariffs, we are going to solve all the problems of the U.S. economy at home and abroad.

Other more powerful and elemental forces are at work in the world than the law of comparative advantage, valuable though this principle be. It is the anti-inflationary and anticollectivist free enterprise systems which have emerged in various parts of the free world which are challenging our long dominance of the international economy. If these forces are to be met successfully, they must be met on their own terms, viz., in the area of internal policy, not by engaging all our energies in the tariff issue.

To sound the trumpets on tariff reform, as is now being done, appears courageous on the surface. And it is very popular. Who wants to be called a protectionist? In fact, it is taking the line of least resistance, politically and economically. For such action, and the spirit of righteousness with which it can be undertaken, becomes a substitute for facing up to the real issues: the need to undertake internal reforms, to end domestic inflation, to put a stop to wage and price increases which make our commodities increasingly noncompetitive in world markets, to apply equal energy to the restraint of both business monopoly and labor union monopoly, and to establish strict priorities in Federal spending to the end that deficits of the Federal budget shall be avoided.

DECLARATION OF PRINCIPLES BY THE ECONOMISTS' NATIONAL COMMITTEE ON FOREIGN TRADE POLICY PRESENTED TO THE SENATE COMMITTEE ON FINANCE ON AUGUST 6, 1962

Chairman, Dr. O. Glenn Saxon; cochairman, Dr. James Washington Bell; vice chairman, Prof. Patrick M. Boarman.

THE ECONOMISTS' NATIONAL COMMITTEE ON FOREIGN TRADE POLICY

Chairman, O. Glenn Saxon, professor emeritus, Yale University, New Haven, Conn.; cochairman, James Washington Bell, professor emeritus, Northwestern University, Evanston, Ill., presently secretary, American Economic Association; vice chairman, Prof. Patrick M. Boarman, Bucknell University, Lewisburg, Pa.; Herman H. Beneke, professor emeritus, Miami University, Oxford, Ohio; Prof. Frederick A. Bradford, Lehigh University, Bethlehem, Pa.; Prof. Lewis E. Davids, University of Missouri, Columbia, Mo.; Prof. L. E. Dobriansky, Georgetown University, Washington, D.C.; Prof. Roy L. Garis, University of Southern California, Los Angeles, Calif.; Prof. Harold Hughes, West Virginia Wesleyan College, Buckhannon, W. Va.; J. H. Kelleghan, economic consultant, Chicago, Ill.; Prof. Donald M. Kemmerer, University of Illinois, Urbana, Ill.; Prof. Russell M. Nolen, University of Illinois, Urbana, Ill.; Prof. Clyde W. Phelps, University of Southern California, Los Angeles, Calif.; Prof. Arthur Sharron, C. W. Post College, Long Island University, Brookville, N.Y.; Charles S. Tippetts, professor emeritus, University of Pittsburgh; Prof. J. B. Trant, Louisiana State University (vice president, Guaranty Life Insurance Co.), Baton Rouge, La.; Edward J. Webster, professor emeritus, American International College, Springfield, Mass.; Prof. G. Carl Wiegand, Southern Illinois University, Carbondale, Ill.; Prof. Ivan Wright, University of New York City, New York, N.Y.; and Hudson B. Hastings, professor emeritus, Yale University, New Haven, Conn.

U.S. FOREIGN TRADE POLICY

(A declaration of principles by the Economists' National Committee on Foreign Trade Policy presented to the Senate Finance Committee August 6, 1962, by Patrick M. Boarman, associate professor of economics, Bucknell University.)

I

The committee of economists whom I have the privilege to represent (their names are prefixed to this statement) is not concerned with the special interest of any particular group or entity—firm, industry, occupation or geographical region. Our concern is rather with the interest of the Nation as a whole as we judge this interest to be affected by the proposed tariff reform legislation known as H.R. 11970.

It is our belief that unless there are substantial changes in the proposed legislation and unless it is accompanied simultaneously by thoroughgoing internal reforms (which we shall presently specify), its effect will be to harm the Nation's domestic economy and worsen its already weak international posture.

Let it be said at the outset that all of us as economists support the ideal of universal free trade and all that it implies. All of us will agree with Adam Smith that "it is the maxim of every prudent master of a family never to attempt to make at home what it will cost him more to make than to buy" and that "what is prudence in the conduct of every private family can scarce be folly in that of a great kingdom."

We favor free trade (or freer trade) and the measures which will promote such trade for reasons which are derived directly from the first principles of economics. Free trade increases economic welfare for all the participating countries. It expands consumers' choices, giving them the possibility of acquiring goods which cannot be had at home, or which can be had at home only at higher prices. Free trade makes it possible for each country to specialize in those lines of economic endeavor in which it is most efficient, thus maximizing the gross gain to the world from the world's resources.

This much said, however, it behooves us to inquire into the conditions under which this gross gain to the world from free trade will be fairly shared by the participating countries. Free trade was never supposed to operate in a vacuum, but only within the context of certain conditions. These are, first, that there will be no quantitative restrictions of trade (quotas) imposed by the trading countries. Reductions of tariffs on specified items will be meaningless where there are limitations on the quantity of the commodity which may be imported.

Secondly, it is assumed that full and complete convertibility of currencies prevails, i.e., that the free trade area in question constitutes, in effect, one homogeneous payment community. Were this not to be the case, reductions in tariffs, whether undertaken unilaterally or multilaterally, could be deprived of any real significance. Of what use would it be to have the tariff reduced on a given import if one cannot freely acquire the foreign exchange needed to buy the import in the first place?

Thirdly, for free trade not to result in unfavorable advantage being taken by one country of another, it is assumed that no special advantages are reserved to one country by virtue of its tax structure, the subsidies it pays to domestic producers, or the domestic monopolies and cartels its laws may permit to exist.

Fourth, while it is not necessary for wages in a multilateral system to be the same in every country—indeed, the existence of trade is to a large extent predicated upon such differences—it is necessary that the ratio of money wage increases to productivity increases be approximately uniform in the free trade area. It is easy to see what the consequence would be if this condition were not met. If the general level of wages in country A is increasing faster in relation to the increases in its productivity than wages are increasing relative to productivity elsewhere, A will find that its cost of production in respect to labor will place it at an increasing disadvantage in the world's markets, leading to a relative fall in its exports. Moreover, where the unfavorable wages-to-productivity ratio is maintained, a general rise in imports will ensue as A's industries lose out to foreign producers even in their own home markets.

These issues are of particular concern to the United States at the present time since the wage-productivity relationship has become increasingly unfavorable for us. The statistics cited by Emile Benoit in his study "Europe at Sixes and Sevens"[1] show that while wages in manufacturing rose 31 percent in the United States between 1953 and 1960, they rose 34 percent in France, 45 percent in Italy, 49 percent in Japan, 60 percent in Great Britain, and 69 percent in West Germany. However, the apparent modest increase in the level of U.S. wages was more than offset by the relative stagnation of U.S. productivity in the same period. Thus, U.S. productivity in manufacturing rose only 15 percent as compared with a rise of 53 percent in Germany, 54 percent in France, 58 percent in Italy, and 71 percent in Japan. Even Great Britain, where productivity growth has lagged, registered an increase of 29 percent, a rate almost twice that of the United States.

It may be argued that in the long run these developments will cease to be a matter of concern as the law of comparative advantage will cause the structure of production to adjust to the new international wage-productivity relationships. Specifically, the United States will be forced ultimately to shift resources into activities where it is most productive and in which its high general level of wages is justified. This is correct but two vital considerations impose themselves in this case.

The first is the extent and the duration of the transitional process involved in the reallocation of the factors of production. A sudden displacement of factors from present employments, where there are no immediate prospects of reemployment, is a situation attended always by the danger of cyclical upset. The larger the quantity of factors involved and the longer the time needed to reabsorb them into other lines of activity, the greater is the likelihood of a domestic collapse of confidence, leading, via the multiplier effect, to the perverse dynamics of a recession. Moreover, the fewer are the alternative uses to which the factors can be put, the more likely it is that factor displacement due to imports will be chronic (for example, sheet-glass factories can be used only to produce sheet glass; there is no other use to which they can be put should imports make domestic sheet-glass production unprofitable). Widespread and chronic underuse of labor and other factors, and the economic stagnation which accompanies unemployment of this kind, must be regarded as a heavy price to pay for the gains of free trade. Indeed, the gains of free trade will in this case accrue only to one segment of the population, namely, those who are still employed and who have incomes available to expend on goods and services, whether of domestic or foreign origin.

The second consideration is that it is at least theoretically conceivable that a wage-to-productivity ratio could become so unfavorable for a given country (in this case, the United States) that there would be continuous shrinkage of domestic employment to industries of the highest productivity. The more unfavorable the overall wage-productivity ratio becomes, the smaller will be the volume of domestic employment that it can support. In an extreme case, 50 percent of our labor force could conceivably be put out of work with the employed 50 percent earning the exceptionally high wages that it is possible to pay in the remaining most productive industries.

A fifth, and most important, basic assumption of a free trade world is that the participating countries are all following roughly parallel fiscal and monetary policies. The postwar period has provided us with some egregious examples of the problems which result where this is not the case. If country A follows a persistently inflationary course whereas country B follows a strictly anti-inflationary course, the resulting relative excess demand in A will tend to consume exportable resources, thus slowing exports to B, and to suck in imports, often regardless of price. Conversely, the relatively restrained level of demand in B will free resources for export to A while simultaneously slowing B's consumption of imports. The combined effects of these movements will be to cause A to have a chronic deficit and B a chronic surplus in its balance of payments. To the extent that tariffs and other barriers to trade are lowered, these imbalances will tend to become even more pronounced.

Other characteristics of a free trade world would be the absence of barriers to the free flow of labor and capital across national borders and security for capital investments against nationalization without just compensation. These and all of the preceding conditions which have been mentioned are indispensable to the operation of a free trade system which is not to result in the exploitation of one country by another or in chronic international disequilibrium, or both. But it is patent that today not one of the conditions mentioned is fulfilled, at least as far as the trade between the United States and the rest of the world is concerned. In particular, there is a glaring lack of parallelism in the monetary and fiscal policies of the United States and other countries. It is this circumstance which will undoubtedly give us the most trouble as we embark upon any program of trade liberalization.

II

Among the most dramatic recent examples of what happens where there is sharp divergence in internal monetary and fiscal policies amongst the members of a trading system is provided within the European complex itself. The notorious chronic export surpluses of West Germany in the 1950's were due primarily to the fact that Germany, remembering her disastrous inflations, was pursuing a determinedly anti-inflationary policy whereas Great Britain, France, and the Scandinavian countries, remembering the great depression, were pursuing policies of monetary ease, tolerating inflation for the sake of promoting full employment and the objectives of the welfare state.

Equally notorious and annoying, in consequence, were the chronic balance of payments deficits registered by these countries. Indeed, so acute did intra-European imbalance become in the middle 1950's, so scarce the deutsche mark, that the painfully re-erected system of partial multilateralism in Europe was on the point of collapse. It was only when the British in 1957, under the leadership of Macmillan, the "great deflationist," abandoned the long-dominant cheap money philosophy (the Bank of England raised its rediscount rate in that year to an all-time high of 7 percent) that a semblance of equilibrium was restored.

More particularly, it was because France at the end of 1958 put a stop to inflation and devalued the franc, coupling these acts with certain drastic reforms of the domestic economy, that the Common Market became possible. In effect, the Common Market countries all adjusted their internal policies to those of the most disciplined member, West Germany. Had France not so adjusted its internal price and income levels, the opening of the Common Market on January 1, 1959, even with the relatively modest tariff reductions which then occurred, would have bankrupted that nation in very short order. Frenchmen, with their inflated incomes and prices, would have rushed to buy German goods, whereas Germans, with their relatively lower incomes and lower prices, would have had no particular urge to purchase French commodities in spite of lower French tariffs.

The point is that France in the pre-Common Market era did not suffer from progressively larger deficits because she was poor—she was and is potentially one of the richest nations of Europe. And Germany did not enjoy progressively larger export surpluses because she was rich. Two things—wrote Wilhelm Roepke[2] apropos of the French difficulties of 1957—must be kept distinct.

---

[1] Emile Benoit, "Europe at Sixes and Sevens" (New York: Columbia University Press, 1961).

"* * * on the one hand, the economic potential of a country or what may be called the foundations of its wealth and, on the other, its economic-monetary order upon which depends the degree to which this potential is activated. * * * Attention must be directed to the undeniable fact that the economic potential of France is in spite of everything greater than that of Germany by a not inconsiderable margin. * * * Against this, however, Germany was more fortunate in the activation of its economic potential than France * * * the former country succeeded by means of a clearly conceived and for the most part effectively executed economic policy in solving the economic problem No. 1 of every economic system, viz, the problem of economic order.

"This is the secret of everything which has occurred since the reform of summer 1948 under the rubric of the Germany 'economic miracle.' * * * The principle which requires that one not confuse economic potential with economic order, nor superiority of economic condition with economic equilibrium was especially pertinent in the case of German balance-of-payments surpluses and recent French balance-of-payments deficits. The differences in economic condition between France and Germany—differences which are in France's favor—remained in spite of the disturbance to the balance of payments. * * * But it was precisely the perverse effect of the disturbance to balance-of-payments equilibrium between France and Germany and of the associated differences in inflationary pressure between them that the poorer country was forced to become the creditor of the richer country."[3]

It is perhaps unnecessary to add that Professor Reopke's analysis and his prophecy that the French economy needed only the right policies in order to come alive and realize its full potential were fully vindicated in the turnabout in the French balance of payments from deep deficit to substantial surplus. What is of significance here is that it was not the establishment of the Common Market or the lowering of tariffs as such which made the Common Market countries economically strong. On the contrary, it was the return to monetary and economic discipline of these countries and their individual efforts to adjust their internal policies to a common international standard which made possible the Common Market and the associated benefits of tariff-cutting and expanded trade. The Common Market experiment has demonstrated that free trade (or freer trade) and the tariff reductions which it implies are but pleasant byproducts of prior to monetary and fiscal integration and harmonization.[4]

III

It is now the United States which has moved into the deficit position in the international economy once held by certain of our European neighbors. The dollar shortage—which so mesmerized the attention of economists until a very short while ago—has been converted to a dollar glut. And if the chronic dollar shortages (and D-mark shortages) of the early postwar period were due chiefly to the refusal of some nondollar (and non-D-mark) countries to remove excess demand from their economies by appropriate monetary and fiscal policies, the dollar glut must be attributed in great part to the persistent failure of the United States to make the internal adjustments, in particular, the stopping of inflation, necessary to maintain balance with the changed world surroundings of the 50's and 60's.

The real issue confronting the United States today in its international economic relationships is not, therefore, whether we should have tariff reform or no tariff reform. It is whether we should have tariff reform with, or tariff reform without simultaneous (or better still prior) internal fiscal, monetary, and economic reforms. But concern for such reforms is conspicuously absent in H.R. 11970.

If the appropriate conditions under which free trade can work to our advantage in the present world situation seem to us to have been unduly neglected in the proposed legislation, it is nevertheless clear that what the proponents of this legislation have in mind is something far more than the simple economic gains to consumers here and abroad which more free trade will bring. The trade expansion program is supposed to achieve in one fell swoop nothing less than the following ambitious goals:

1. Increase in consumer welfare;
2. Increase in employment;
3. Accelerated growth of the U.S. economy;
4. Maintenance of U.S. economic leadership of the free world;
5. Aid to the developing nations;
6. Overcoming of U.S. balance-of-payments deficits and ending of the drain on U.S. gold reserves. (This has been implied by spokesmen for H.R. 11970; there is no specific mention of this objective in the bill itself.)

Free trade, in fact, is being urged as the answer to almost all our problems, domestic and international. It is important to note that there is a very large assumption on which these expectations are based. The assumption is that the proposed legislation will not only cause exports to increase to an extent equal to the expected increase in imports, but that it will yield a net increase in exports over imports. Obviously, if exports increase only at the same rate as imports, none of the stated objectives, except perhaps increased consumer welfare, can be attained. Only if exports increase faster than imports will it be possible to maintain our present rate of expenditure abroad for national defense and foreign aid without further aggravation of the existing and cumulative balance-of-payments deficits. And only if there is a net increase in exports can employment be increased and growth rates accelerated.

There is, however, no guarantee whatsoever that unilateral tariff reform by the United States, no matter how sweeping, will yield the expected net increase in exports. This is evident if we consider, first, the improbability of the proposed drastic tariff reductions being matched by our neighbors abroad, in particular, by the Common Market countries, and secondly, the slowdown of exports and increases in imports which persistent inflation in the United States relative to other countries will bring about.

U.S. tariffs are already at exceptionally low levels as compared both with U.S. tariffs in earlier periods and with the tariffs of other industrial countries now. Using the (admittedly imprecise) gage found in the ratio of total duties collected to dutiable imports, it would appear that the present U.S. tariff level is only one-fifth of what it was in the unlamented days of Smoot-Hawley. And from the Joint Economic Committee of the Congress has come a set of figures which shows the averages of posted tariff rates imposed on industrial goods by various key countries, including the Common Market and the United States taken as a unit. The pertinent rates are shown in the accompanying table:

Industrial tariffs (weighted averages)

	Percent
Japan	19
Austria	19
United Kingdom	17
New Zealand	17
Italy	16
Canada	16
France	15
EEC	14
Australia	12
United States	11
Norway	11
Benelux	11
West Germany	9
Sweden	8
Switzerland	8
Denmark	6

Source: Joint Economic Committee.

The table indicates that only four countries, including one member of the Common Market (Germany), have a lower average tariff than the United States. This being the case, it may be asked why the many benefits (in particular, the expected tariff concessions by other countries) which are alleged to follow a program to reduce tariffs have not as yet become apparent?

At the same time, however, it is needful to emphasize that the low average U.S. tariff is an average, i.e., the resultant of the addition of high tariffs, medium tariffs, and low tariffs. The average figures thus conceal the highly selective nature of many tariffs, the total elimination of which—on those categories of goods covered by the so-called 80 percent rule—could cause havoc in the affected industries. Nor can the psychological reverberations of unfavorable developments in these industries on other industries and, through the multiplier mechanism, on the whole economy, be lost sight of. If factors of production disemployed by imports could be as readily reabsorbed as the theory of international trade has traditionally argued, there would be no cause for concern. But the chronic stagnation of the U.S. economy clearly attests that we have not even succeeded in reabsorbing factors disemployed due to purely domestic shifts in demand and supply functions. What will it benefit the country to deliberately add to the present overall condition of excess capacity as the proposed legislation, consciously or unconsciously, will tend to do?

It is to be noted, nonetheless, that the existing low level of U.S. tariffs on a wide variety of imported commodities gives our negotiators relatively little leeway in making future concessions for the purpose of getting other countries' tariffs against the U.S. reduced. A representative example of the difficulty which confronts us here is the tariff on automobiles. Our import dues on foreign automobiles were reduced recently from 8.5 percent to 6.5 percent in exchange for a much-touted reduction by the EEC group of automobile duties from a proposed high of 29 percent to 22 percent. The actual duty paid by U.S. automobile exporters to Germany and to the Benelux countries, to which the bulk of our automobile exports go, has been 18 percent but will be increased to 22 percent under the new common external tariff of the EEC. Is it likely that reduction of our tariff from 6.5 percent to zero, for example, will bring a reduction of the EEC tariffs from 22 percent to zero?

---

[2] Wilhelm Roepke, professor at the University of Geneva, is an internationally respected authority on European trade problems.

[3] Wilhelm Roepke, "Zahlungsbilanz and Nationalireichtum," in Gegen die Brandung (Erlenbach-Zurich: Eugen Rentsch Verlag, 1960), pp. 306–312.

[4] The Belgian economist, Alexander Lamfalussy, has shown convincingly that recent European progress cannot be ascribed to reductions of tariffs within the Common Market; in fact, the postwar record levels of output, employment, exports, and general economic growth of the Continental economies commenced years before the opening of the Common Market on January 1, 1959. See Alexander Lamfalussy, "Europe's Progress: Due to Common Market?" Lloyds Bank Review (Oct. 1961) pp. 1–16.

It would be naive to expect such more-than-proportionate reciprocity from the Common Market group. This being so, the implications of lowered U.S. automobile tariffs are disturbing in the extreme. Demand by Americans for European vehicles is already relatively intense as compared with European demand for American vehicles which is slack. Further lowering of our tariffs on foreign automobiles will bring these close to zero and increase the already significant U.S. demand for such imports. A proportionate lowering of European duties would still leave exports of U.S. vehicles handicapped by a substantial tariff obstacle, not to mention the discriminatory use taxes and horsepower taxes imported on American vehicles in European markets.[5]

But there is no guarantee that even proportionate reciprocity will be forthcoming from the Common Market. It is certainly no secret that the lowering of duties amongst the Common Market countries and the simultaneous raising of external tariffs against outsiders is aimed at creating a mass market in which the economies of scale of mass production—heretofore a U.S. monopoly—will become possible. Moreover, this economic unification and consolidation is viewed only as a way station on the road to the more substantial goal of political unification.

It is thoroughly unrealistic and unreasonable to suppose that the Common Market countries, out of their sheer love for the United States and a desire to help us retain our economic primacy, will veer away from their stated economic and political objectives. It is not to be expected, in short, that our friends abroad will be willing to pull American balance-of-payments chestnuts out of the fire. George Washington's wise words are worth recalling in this connection: "There can be no greater error than to expect or calculate upon real favors from nation to nation. It is an illusion, which experience must cure, which a just pride ought to discard."—Farewell Address.

The truth is that the Common Market has a good thing going and will undoubtedly strive to keep it going. This is an uncomfortable prospect in some ways, so uncomfortable that many of us will wish we had not been so precipitate in encouraging and supporting the closed economic bloc (as contrasted with the original more broadly conceived free trade area) which is now emerging. But it is a prospect which realism requires us to entertain. One of the strangest and most paradoxical omissions in H.R. 11970, in the judgment of our committee, is its almost total failure to make provision for genuine trade reciprocity. This omission is naive and it is dangerous.

IV

Even if these guarantees of full reciprocity in tariff reductions by other countries are obtained; even, to use an extreme case, if other countries were to reduce their tariffs to zero, are there other factors involved which would hold back U.S. export growth? The truth of the matter is that it is not primarily foreign tariffs which are keeping our goods out of foreign markets. Large categories of American goods are noncompetitive in the world's markets even where they have no tariffs or other trade barriers to hurdle. In the production of these commodities, other countries simply have lower unit costs that we do, primarily due to their substantially lower wage costs. And in those commodity areas where superior American capital endowment and productivity still gives us an edge in spite of our wage scales, the trends indicate that the U.S. advantage is diminishing; that is, European capital endowments in these areas are increasing substantially. The resulting cost reductions which will be realized will be intensified to the degree that increasing economies of scale are achieved, as will certainly be the case in the European Common Market.

The hope that foreign wage levels will rise and thus make U.S. goods more competitive is at once unrealistic and cynical. It is unrealistic because wages in Germany, for example, are already at inflationary levels, causing great concern to the authorities there, and because the amount of increase in German wages (which are now about 27 percent of average earnings in U.S. industry) needed to bring about equality would be enormous and completely unacceptable to the Germans. Thus, last year, German labor costs increased about 10 percent while U.S. costs increased only 5 percent. But a 10-percent increase of a 75-cent wage is only 7½ cents an hour while a 5-percent increase of a $3 wage is 15 cents an hour. This gap may be closed over a period of years; it certainly will not be closed in the near future. The hope placed in foreign wage-rate increases is cynical because the assumption is that other countries should have inflation merely because we have not had the fortitude or the determination to put an end to it.

It is worth remembering that the unusual political stability of West Germany and her resulting very substantial contribution to the stability and strength of the whole free world is due in no small measure to the singleminded and largely successful German fight against inflation in all its forms. Does our rescue from the consequences of our own homemade inflation require that one of the most dependable of our allies permit the erosion of the monetary foundations of its economic and social order?

What must be recognized is that inflation in the United States, and its continued toleration, will tend to cancel out any increased advantages our goods may enjoy in foreign markets due to reduced foreign tariffs (assuming our tariff reductions are fully matched abroad). Where U.S. inflationary pressures are greater than those abroad, as they are in respect to the Common Market countries and Japan, U.S. producers will tend to concentrate their selling efforts in the domestic rather than in the foreign market. They will do so because, given the relatively high level of domestic costs and the associated relatively high level of domestic incomes, sales in the home market yield more profit than sales abroad. Pep talks to American businessmen to interest themselves in the "vast opportunities" abroad cannot substitute for the fundamental economic incentives for enterprise, whether at home or in foreign markets.

But domestic inflation dampens these incentives. Exports fall off in this situation because the interest in foreign markets diminishes and other countries are increasingly able to undersell and outsell us in third markets. In addition, otherwise exportable resources are diverted to American home consumption because of the inflationary expansion of domestic demand. Conversely, imports tend to rise in a context of inflation, both because they may be more competitive costwise than comparable domestic product and because, apart from price-level differences, they serve to fill "the inflationary gap" (which occurs when the total monetary claims on a nation's resources exceed what is available to satisfy them).

Occasionally, it is asserted that inflation can hardly be the cause of our present international economic difficulties since the U.S. cost of living (the most commonly used barometer of the inflation) has not moved up significantly faster than this same index in the countries now drawing off our gold, e.g., West Germany and France. The answer is that the movement of the cost-of-living index (or of other similar indices) only very imperfectly and partially reveals the extent of domestic inflation. Indeed, it is perfectly possible for severe inflation to coexist with prices stability. For inflation need not, though it often does, take the form of rising prices.

Inflationary pressures emerge in the first instances, where the economy's liquidity i.e., the total monetary claims on its resources, is increasing disproportionately to the rate of increase of real, i.e., physical product. For such over-liquidity (or latent excess demand) two principal escape valves, apart from increased saving, are available: (1) a rise in prices, which offsets or absorbs the increased liquidity and/or (2) an increase of imports over exports, which has the same effect. It is precisely our foreign deficits—the excess of imports over exports[6] which, together with whatever price rises have occurred, reveal the full measure of our home-made inflation. Price stability, in short, is no proof by itself that inflation has been halted.

V

H.R. 11970 is concerned with increasing exports, but it makes no attempt to come to grips with a major and continuing cause of the U.S. balance of payments deficit, viz., the outflow of private capital. It is necessary, however, that the cause of this large and rapid outflow of funds from the United States be analyzed and acted upon if the deficit is to be brought under control. The outflow of private capital is, like the relative diminishment of our export surplus, not unrelated to the domestic inflation of costs, prices, and incomes. Entrepreneurs everywhere seek to invest their capital in projects which will yield the highest return. But returns will tend to be higher—other things being equal—where costs, especially wages, are lower.

While there is in principle no reason to be concerned at the outflow of private capital from a country so plentifully endowed with it as the United States, the close dependence of employment upon capital—the instruments of production—cannot be overlooked. Capital outflow, where it occurs in sufficiently large amounts and rapidly enough to depress opportunities for employment of domestic labor, is something about which one has a right to be alarmed, particularly where the outflow is occurring because inflation makes it uneconomic to invest in the home country.

It is ironic that the same persons who lament the "slack" in the domestic economy tend to favor precisely that course of action—the toleration of inflation for the sake of alleged "growth"—which is creating the slack by forcing domestic capital into foreign enterprises. This is not intended to imply that we should raise artificial barriers to the export of American capital or in any other way interfere with freedom of investors to place their money wherever they choose.

---

[5] The diminished international competitiveness of the American automobile industry for reasons other than tariffs is reflected in the fact that in 1951, when tariffs and other foreign obstacles to all classes of American goods were relatively high, U.S. firms produced 72 percent of the world's total output of passenger vehicles. In 1950, despite the intervening substantial reductions of barriers to American exports, the U.S. share of the world auto market was only 48 percent. (Source: George Romney, "Customer Sharing and the Nation's Economy" (verbatim transcript of New York press conference), American Motors Corp., Dec. 15, 1960.)

[6] Exports are defined here as all transactions which give rise to U.S. claims against other countries; imports are defined as all transactions which give rise to foreign claims against the United States.

In this light, it is our contention that to impose a discriminatory tax on undistributed earnings from foreign investments would be a mistake. It would not stop the outflow as such for the bulk of this capital is not going abroad for tax advantages. It is going abroad because costs of production abroad are substantialy lower than in the United States.

If American firms withdrew from foreign production operations, the repatriated capital would not necessarily be used to expand American production of the commodities in question. Rather, foreign firms would move in to fill the vacuum left by the departed American concerns. The competition of American subsidiaries abroad, that is to say, is not with U.S. producers of the same commodities. It is with other foreign producers. A punitive tax on U.S. earnings abroad would place U.S.-owned firms at a tax disadvantage with their real competitors abroad.

What is important is that conditions within the domestic American economy which are giving rise to what may be an unhealthily large capital outflow should be corrected. It is hard to see how our international accounts can be brought into better balance until these issues and the need for internal reforms which they imply are faced and effectively dealt with; it is, however, even more difficult to see how drastic reductions in tariffs will enable us to deal with them.

VI

In sum, U.S. inflationary pressures coupled with a probably lack of full reciprocity by other countries in tariff reductions make it likely that the Nation will experience an increase not of exports, but of imports. Two important consequences may be expected from such a net increase in imports: (1) the disemployment of domestic labor and other factors; (2) the aggravation of the U.S. balance of payments deficit.

There can be no question but that with a significant portion of the labor force already unemployed and with the existing substantial amounts of unused industrial capacity, a further deliberate disemployment of domestic factors would be a reckless course of action. For this would slow down our already low rate of economic growth, demoralize the labor force, and reduce the output of the economy precisely at a time when the fullest possible mobilization of our potential is required.

The "adjustment assistance" portion of H.R. 11970, which is intended to deal with expected dislocations, represents in our judgment a vast and ill-considered scheme to substitute bureaucratic government administration of business for the private-enterprise system. If the adventures of the U.S. Government in agricultural "adjustment and assistance" are any criterion of what may be expected in this field, the prospect of having such a system applied even more extensively throughout the economy must arouse deep misgivings. Our committee strongly urges the most serious consideration of the ultimate implications—in terms of cost, efficiency, and of survival of the free-enterprise system—of a nationwide "dole system" such as the proposed legislation envisages.

Even if exports were to increase pari passu with imports, the problems created by the need to transfer resources disemployed by imports to export industries could be severe. Indeed, not all resources now employed in producing for home consumption are so transferable. Certain tools, certain machines, certain factories, certain workers are suited to do one thing only. No amount of "adjustment assistance" will avoid the losses, possibly substantial, that would be suffered here.

It is in any case clear that too sudden disemployment of domestic factors of production, such as would ensue from large and extensive tariff reductions accomplished in a short period, would cause a catastrophic disruption of existing patterns of consumption, production, and employment. It is on this account that our committee strongly urges that the staging requirements of the present bill be strengthened; reduction in duties should be limited in amount to a reasonable figure, say 5 percent a year. This would allow at least some time for a cushioning of the impact on the economy of the inevitable structural dislocations of reduced tariffs.

VII

What is of deepest concern to our committee is not alone that long-run structural consequences of the radical change in our tariffs proposed in H.R. 11970, but the short-run balance of payments effects of the anticipated increases in imports. It is these effects, as we are all aware, which demand attention as never before. Clearly, increases in imports at this time, where not accompanied by rises in exports (and such rises, as we have seen, are based on pure hypothesis) can only enlarge our already alarming payments deficit and aggravate the outflow of gold.

In the first 6 months of this year alone, the United States experienced net gold losses of $420 million, bringing the total gold stock of the Nation to a new low of $16.4 billion. For its part, Western Europe increased its monetary gold reserves (excluding dollar assets) to more than $18 billion, thereby clearly displacing the United States as No. 1 in monetary strength. Moreover, European gold stocks are mostly free of short-term liabilities; the U.S. stock, however, is doubly mortgaged, both by the statutory 25 percent gold cover requirement of over $11 billion and by foreign short-term claims in excess of $21 billion.

The crucial question is: how much larger can the cumulative deficit become and how much more gold can flow out before international confidence in the dollar, already on very shaky foundations, collapses, and the pressures leading to a devaluation of the dollar become irresistible? The latter occurrence, it seems fair to assume, would be both a national and an international catastrophe. If our reasoning is correct, the proposed legislation, far from helping to cure the ills of the dollar, may have short-run consequences—an inrush of imports—which could precipitate a flight from the dollar and thereby wreck the monetary foundations of the free world. The alleged gains from the proposed tariff reform legislation are too small and too uncertain by far to justify the assumption of risks of such magnitude.

VIII

To sound the trumpets of tariff reform, as is now being done, appears courageous on the surface. And it is very popular. Who wants to be called a protectionist? In fact, it is taking the line of least resistance, politically and economically. For such action, and the spirit of righteousness with which it can be undertaken, becomes a substitute for facing up to the real issues: the need to undertake internal reforms, to end domestic inflation, to put a stop to wage and price increases which make our commodities increasingly noncompetitive in world markets, and to establish strict priorities in Federal spending to the end that deficits of the Federal budget shall be avoided.

There is much loose talk about the invigorating and dynamic impact of foreign competition on the domestic economy. We are told in effect that since the abolition of tariffs will increase competition, and since competition is per se good, tariffs ought to be abolished whenever and wherever possible. This seemingly unexceptionable economic truism nevertheless conceals a logical pitfall of the gravest import to the United States. There is a world of difference between the competition which originates within a country and competition which comes from without via imports. The consumer will admittedly be the beneficiary of increased competition regardless of whence it comes. But to the consumer in his ultimate role as a jobholder and as sharer in the general health or sickness of the national economy, the domestic or foreign guise which competition may assume cannot be a matter of indifference.

The intensification of competition from within as the result of increased vigilance in the prevention of concentration and more effective legislation to maintain competition both in the labor and in the product markets will normally have the effect of increasing the flexibility and vitality of the system: sales at home and abroad will tend to be stimulated, foreign capital attracted, and job opportunities multiplied. Competition which takes the form of increased imports, on the other hand, while it may in the short run prove to be a boon to the consumer and subject domestic monopolistic excesses to effective restraint comes at a cost: the dislocation and disemployment of domestic factors of production, stagnation of the domestic economy, excess capacity, outflow of capital in search of the more profitable factor combinations available abroad, and—as a result of all these movements—a worsening of the balance of payments situation, increased outflows of gold, and a decline of international confidence in the currency of the affected country.

Let there be no misunderstanding: competition from abroad is good, provided that it does not continue indefinitely to be the dominant form of competition. The latter will be the case, however, where a nation's domestic economic policies inhibit confidence, risktaking, and growth, and where its lack of homegrown competition generates a vacuum which is persistently filled by competition from the outside. To ask for tariff reduction on the grounds that such action will increase competition and at the same time to refuse to correct the basic maladjustments which make the domestic economy internationally noncompetitive is to ask for the administering of a medicine which, while it may banish the symptoms of disease (in this case, reduce domestic manifestations of monopoly) may simultaneously cripple or perhaps even kill the patient.

Since there is no formally stated intention to accompany tariff reforms with the vital internal reforms mentioned above, we believe the passage of H.R. 11970 in its present unamended form to be fraught with severe economic risk to the Nation.

We object especially to the sweeping powers granted to the President to reduce or eliminate at his sole discretion any or all remaining tariffs on U.S. imports, without review or supervision by Congress. The effect of this would be to substitute arbitrary Executive discretion for rule of law in what is a critical area of national life. The President is also authorized in the proposed legislation "to proclaim such increases in or imposition of, any duty or other import restriction" as he wishes. This means that the incumbent President or some future President could raise tariffs as well as lower them, or impose new tariffs, or subject imports to any kind of other restriction or control he deemed necessary. As someone has remarked, this section of H.R. 11970 is the granddaddy of all escape clauses. By granting such drastic powers to the President, which he could use either for protectionism or free trade, the Congress in effect would be abandoning its sovereignty in matters upon which in the present conjuncture, a very large part of the national welfare is dependent. In the area of tariff reduction, the consequences of any given action are not easy to predict and to estimate; if mistakes are made, the damage to the Nation could be considerable and irreparable. Hence, we strongly urge that any legislation which is enacted provide for adequate review by Congress of the President's actions in this field.

One consideration which has been consistently overlooked in the euphoric glow which has surrounded the discussion of tariff reduction is the possibility that U.S. tariff concessions which are not fully matched by the Common Market countries will result in a diversion of third countries' exports to the United States. It is the part of prudence therefore to amend the present bill in such a way that beneficiaries of U.S. tariff concessions be required to admit goods from Asia, Latin America, and Africa on terms (whether these involve tariffs, quotas, or licensing) equal to those accorded by the United States to these areas. European countries will in this way not be able to continue to exchange low-cost goods from the underdeveloped countries with resulting diversion of such goods exclusive into the U.S. market.

It is important in the above connection to note a similar difficulty which could arise as a result of the so-called 80-percent rule. According to this rule, U.S. tariffs will be abolished on all commodities, 80 percent of the world export of which is accounted for by the combined trade of the United States and the Common Market countries. The intent of this section (sec. 211) of the bill is ostensibly that with respect to certain categories of commodities the United States and the Common Market countries are each principal suppliers, so that elimination of duties as between these two suppliers would not benefit third countries primarily.

But the present bill would allow for the reduction of U.S. tariffs to zero even on commodities in which the trade of the United States accounted for only a small fraction of the 80 percent. However, where the United States is not a significant supplier of commodities falling in the 80-percent category (e.g., in cases where the United States supplies 5 percent and the Common Market countries 75 percent), the reason may be that the United States is not competitive in these product categories with the Common Market countries. Hence, the elimination of duties on such product categories would not benefit U.S. exports. On the contrary, reduction of duties in such case might have the effect of worsening our trade balance in such commodities by making it substantially easier for important third-country suppliers to enter U.S. markets. At the very least, the proposed legislation should be amended to require that at least one-quarter of the 80-percent figure be accounted for by trade of the United States.

On the same reasoning, it is essential to eliminate from the estimate of export value for the purposes of the 80-percent rule, agricultural surplus crops donated or exchanged for counterpart funds. These exports, which are not a true measure of U.S. export competitiveness, should not be included in data used to determine those categories of commodities for which all tariff protection may be eliminated. Rather, the domestic policies (parity programs) which make such "dumping" necessary should be drastically revised or abolished. Here as elsewhere, what is required for the internal and external health of the U.S. economy is an internal adjustment of basic economic, monetary, and fiscal policies, not an external gimmick such as is represented by tariff manipulation.

We urge, finally, that the grant of powers be in any case limited to 2 rather than 5 years. This will provide each new Congress a chance to examine the record and to determine if changes in the program are indicated.

Our recommendations

1. The Federal budget should be balanced (by economies in nondefense spending) with the purpose of ending debt monetization and inflation; for inflation raises prices, stimulates imports, reduces exports and employment, and reduces our gold reserves.

2. Our tax structure should be thoroughly overhauled to provide adequate incentives for the modernization of American plant and equipment. The tax burden should be shifted as far as possible from the producers of income and wealth to the consumption and trade sector of the economy. In West Germany's economy, to take that one outstanding example of rapid and steady growth and full employment, more than three-quarters of total tax revenues are derived from consumption taxes and business turnover taxes, less than one-quarter from direct taxes on income and wealth. In the United States, the tax burden is distributed in an exactly opposite ratio, with three-quarters of the tax revenue derived from direct taxes on income and wealth and only one-quarter from consumption and use taxes. We have enjoyed a high-consumption economy as a result, but by the same token we have seriously dampened the incentives that make for growth and prosperity in a free society. We must gain a new appreciation of the truth, long since learned by heart by our European competitors, that it is more important to increase the size of the national cake than to quarrel about the more equal distribution of any smaller cake.

3. Foreign aid funds should be expended in the United States to the maximum extent practical; they will naturally tend to be spent in the United States if domestic inflation is stopped and our goods and services are made otherwise competitive with those elsewhere.

4. Annual productivity gains of U.S. industries should be used primarily to reduce prices, thereby stimulating consumption and employment, encouraging exports, and increasing the real wages and incomes of all Americans.

5. The President should have the authority, with congressional review made mandatory, to negotiate elimination of all trade barriers (not merely tariffs) in amounts and at a rate which will not jeopardize our own economic development and the maintenance of an adequate Defense Establishment.

We believe that the overriding task of the present hour is for our Government and all citizens to do what is necessary to activate the full and unquestionably enormous potential of the United States. In doing this, we must abandon the techniques and the catchwords which were designed especially for the depression phase of our economic history and which have dominated policymaking in the United States in the postwar era.

We must adopt a radically new approach, such as was adopted originally in West Germany, and is now being applied in the other Common Market countries and in Japan, and the results of which are visible to all. It is a "grand illusion" to believe that by knocking down a few already low tariffs we are going to solve all the problems of the U.S. economy at home and abroad. The benefits of H.R. 11970 have been extravagantly overadvertised, in our opinion. Free trade is fine but it cannot save the world. Free trade did not save Europe from the cataclysm of World War I, nor did it insure the economic dominance of Great Britain, the first trade nation. Other more powerful and elemental forces are at work in the world than the law of comparative advantage, valuable though this be. It is the anti-inflationary and anticollectivist free-enterprise systems which have emerged in various parts of the free world which are challenging our long dominance of the international economy. If these forces are to be met successfully, they must be met on their own terms, viz., by adjustments of our internal economic and monetary policies, not by engaging all our energies in the tariff issue.

Tariff reductions coupled with the internal reforms we have specified and within the context of the new approach we have mentioned could go far toward restoring to the United States the economic leadership of the free world of which it is undoubtedly capable. Tariff reductions of the sort envisaged in H.R. 11970, applied without the needed internal reforms, could spell disaster both internally and internationally.

BITTER BRITISH-FRENCH RIFT BROKE UP MARKET TALKS

(By Gaston Coblentz)

BRUSSELS, August 5.—A bitter clash between Britain and France emerged as the direct cause of this morning's abrupt 2-month postponement of further negotiations on Britain's entry into the European Common Market.

The result was new uncertainty over the ultimate success or failure of the negotiations, in which great stakes are involved. The interruption of the talks occurred in unusual circumstances at 7:15 a.m. after an all-night session between Britain and the six Common Market nations, during which Luxembourg Foreign Minister Eugene Schaus, the chairman, became ill with fatigue and had to be replaced in the chair.

It was a night of violently seesawing expectations. At about 2 a.m. the talks appeared to be so close to success that correspondents started filing hold-for-release dispatches on the imminent conclusion of a momentous accord that would have marked a turning point in European and world history.

DISAGREEMENT REVEALED

However, as dawn began to rise, the bad news trickled out. The trouble began after Britain and the six seemed to have gone a long way toward solving the most controversial issue of the nogotiations—the problem of offering reasonable markets in Europe for the vast food exports of Australia, Canada and New Zealand. These are the three members of the British Commonwealth with which London has the strongest economic and sentimental ties.

However, at this point France's Foreign Minister Maurice Couve de Murville presented Britain with an allegedly new document on another extremely intricate aspect of the Common Market's agricultural arrangements—the massive common fund to be derived from agrarian levies.

Lord Privy Seal Edward Heath, Britain's chief delegate, replied that he was stunned at being confronted with a document of such complex ramifications at 3:10 a.m. He said he was not prepared to sign anything of the sort without extensive legal advice.

The French replied that the agrarian fund issue, potentially a pool of money involving hundreds of millions of dollars, was so closely linked to the issue of Commonwealth farm produce that it was impossible for France to agree to the latter without a simultaneous accord on the former.

NEGOTIATIONS FOUNDER

This caused the negotiations to founder in an embittered atmosphere.

France has insisted that every obstacle which its tough negotiating position has created for the British has been based on scrupulous observance of the terms of the Common Market treaties.

The French argument has been presented with such logic and skill that it has compelled acquiescence by the other Common Market members most of the time.

[From the Washington Post, Aug. 6, 1962]

FRENCH INTERNAL FACTORS PLAYED ROLE AT BRUSSELS

(By Waverley Root)

PARIS, August 5.—An exhausted Foreign Minister returned to Paris today after winning an obstacle race to keep Great Britain out of the Common Market—if one assumes France wants to keep her out, as some observers here do.

Maurice Couve de Murville's obstacle race turned into a marathon last night which kept the weary delegations of the six Common Market countries plus Britain at the conference table until 7:15 this morning.

The reason for this punishing session was the realization that failure to agree now might mean that Britain's entry into the Common Market would be blocked for years if not forever. Yet the conferees failed to reach agreement.

Britain needed the issue settled before the vacation lull of August in order to present a success to the meeting of Commonwealth Prime Ministers scheduled for September 10 in London.

This is a serious situation for a government which has more or less staked its existence on entry into the Common Market.

CONCESSIONS DIFFICULT

From the French point of view, concessions were politically difficult, but in addition there is here a discernible opposition to the British entry.

Official French statements have always expressed willingness to welcome Britain into the Common Market, but always with reservations. If you take the words of welcome for the essential part of these statements, then Couve de Murville did not win a victory because France did not want to put impediments in Britain's way. But if you consider, as many do, that the meat of the French utterances is to be found in the reservations—then the French have won a victory.

The theory that France does not really want Britain in the Common Market rests on a view of Gen. Charles de Gaulle's long-range policy for European organization as based on an initial solid construction of the Six, directed primarily by France through the France-Germany partnership. At this stage, it is held, De Gaulle does not want a rival power in on the organizing. Once he has shaped Europe to his mold, and laid down the laws which any future member must observe, then perhaps he might be pleased to see Britain come in.

ATTITUDE TOWARD BRITAIN

Even this is hardly certain, since De Gaulle is reported to have said in private conversation that "Britain is an island. She never has been and never will be European."

There are strong reasons for the French position. The logical reason is the objection on principle to allowing Britain now to amend the Rome Treaty, signed March 15, 1957, after long and difficult negotiations during which every comma of the document was subjected to minute scrutiny.

There are also practical reasons why France, which, like Britain, is limited as to the concessions it can make by the domestic political situation, is obliged to stick obstinately to its positions. It may not therefore have been entirely fair of Belgian Foreign Minister Paul-Henri Spaak to upbraid Couve de Murville last night—while the British representatives were out of the room—for making insufficient concessions. In any case, before the British returned the French had won their point and the Six presented a united front against the British proposals.

ARGUE OVER AGRICULTURE

The subject of last night's argument was agricultural imports from the "White Commonwealth"—Canada, Australia, and New Zealand. It is precisely on the agricultural front that France is now experiencing difficulties at home which certainly would not lessen if concessions to Great Britain were made in this field. There is already a vaguely anti-Common Market element in the French peasant movement, where competition from the six present members has already resulted in misgivings.

In the recent Breton disorders, a poultry farm whose chickens were slaughtered and a hog-raising establishment whose pigs were let loose to run over the countryside had both been set up with Belgian capital, which the French farmers resented.

To admit wheat from the British Commonwealth duty free would level a particular threat at French agriculture. An exporter of wheat, France counts on the other Common Market countries to absorb her surplus. This will become even more vital for her in the next few years.

VIEWS ON MEAT IMPORTS

Commonwealth meat imports would also affect France, particularly beef. France is the only Common Market country which breeds beef cattle. The others slaughter cows for beef. France also has the problem of disposing of the cheaper cuts of beef, which French eating habits make a drug on the French market, despite governmental attempts to popularize them. She counts on such Common Market countries as Germany and Holland, where stews are popular, to absorb some of her surplus meat. Accordingly she does not relish the prospect that low-priced Commonwealth imports might compete in this market.

Whatever they may think it expedient to say in public, it seems probable that some French ministers are far from dismayed at last night's failure to agree in Brussels. Their opposition is not likely to disappear even if Prime Minister Harold Macmillan succeeds in mollifying his Commonwealth ministers in September. Seen from here, the prospects do not seem good for British entry into the Common Market this year. Some observers doubt that the British will ever make it.

UNITED STATES URGED TO RESIST PROTECTED PRODUCE

The National Planning Association urged yesterday strong U.S. efforts to persuade Western Europe against embarking on trade policies which would set up a protected agriculture.

Such efforts, it said, should be linked with those of Great Britain.

In a policy statement by its agriculture committee, the association said trade decisions made in the near future by the European Common Market area could have disastrous effects on exports of American farm products to the area. The Common Market area consists of France, West Germany, Italy, Luxembourg, Belgium, and the Netherlands.

Great Britain is negotiating for membership in the market area, but it has been urging the adoption of policies which would lower tariffs and trade restrictions on farm products produced outside the area.

The association describes itself as a nonprofit, nonpolitical organization interested in planning by Americans in agriculture, business, labor, and the professions.

MOUNTAIN SHEEP DAM

Mrs. NEUBERGER. Mr. President, proper development of the middle Snake River section of the Columbia Basin has been involved in controversy for many years. Recently, Secretary of the Interior Stewart L. Udall suggested to the Federal Power Commission that the matter be decided by Congress by determining whether the Federal Government should authorize construction of a high dam at the Mountain Sheep site.

In the July 13, 1962, issue of the Oregon Labor Press, an editorial had favorable comment on Secretary Udall's proposal. I ask unanimous consent to include the editorial along with my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Labor Press, July 13, 1962]

FOR FISH AND POWER

Secretary of the Interior Stewart Udall's recommendation for a Federal High Mountain Sheep dam makes good sense.

It is not surprising that the Pacific Northwest Power Co., a group of four private utilities that want the High Mountain Sheep site on the middle Snake River, should oppose it. Private power companies have always sought, for profit motives, the best hydroelectric sites on our river systems.

They have done so (as they did in the case of Hells Canyon) even when these sites are obviously better suited for Federal multipurpose development. It is too much to hope that the private companies would put the interests of their region and their own customers ahead of profits for their investors.

It is a little surprising, however, and highly ironical that the Washington Public Power Supply System (WPPSS) and other public power spokesmen should be hollering just as loudly as the private utilities over the Udall recommendation.

WPPSS, a group of 16 public utility districts, filed for permission to build a dam on the Nez Perce site (an alternative to High Mountain Sheep), in order to keep this stretch of the Snake River open to public development.

Later they filed for the High Mountain Sheep site, too. But they seem to have forgotten their reason for filing in the first place. If Secretary Udall's recommendation is implemented, and a Federal dam is built, these PUD's will have won their fight for public development. The entire Northwest will owe them a debt of gratitude, and the entire region will profit from lower cost power.

The PUD group should take another look at its hole card. It should consider the damage its opposition may be doing to the Federal power program that has sustained the PUD's and the consumer electric co-ops from their beginnings.

The WPPSS should also consider the fact that if the Federal Power Commission does recommend to Congress a Federal High Mountain Sheep dam, and if Congress rejects such a recommendation, WPPSS will be left as the logical "compromise" choice for licensing by the Federal Power Commission.

(Secretary Udall did not recommend that the pending applications be finally and completely dismissed. WPPSS is still in the ball game.)

Finally, the commercial and sport fisheries interest of the Northwest should take heart from Secretary Udall's recommendation. There is no question that the fisheries resources of our region can best be protected through Federal development of this stretch of the Snake River.

Here is one issue where the public power and fisheries people of the Northwest should stand together for full multipurpose Federal development. With their combined support, the Federal High Mountain Sheep project can win the necessary congressional approval.

And when that happens, the Federal comprehensive river development program that has helped build the Northwest will be back on the track.

FORD FOUNDATION REPORT

Mrs. **NEUBERGER**. Mr. President, the report of the board of trustees of the Ford Foundation reviews the purpose of that great organization, and itemizes the program upon which it is embarked. Close reading of the program impressed me with the stress that this report makes regarding education. The itemized list of tenets is prefaced by this remark:

> The reflections on the foundation's future course have also been influenced by some of the profound changes that have taken place in the past decade, or that are now clearly foreshadowed.

This simple sentence takes into account the rapid changes that are going on about us and which we may not be in touch with as we become embedded in following traditional patterns of government, economy, and social welfare. I hope that the Congress of the United States can at least be in the race with equal footing with the Ford Foundation as it looks at:

> 1. The growing demands of American society on an educational system that requires major adjustment, conceptually and physically;
> 2. The need for greater concern regarding the quality, content, and moral fiber of life in our society;
> 3. The growing concentration of American population in and around great cities and the resulting implications for the content of American life;
> 4. The impact of modern weapons, space exploration, and science and technology generally on domestic as well as international relations; and
> 5. The growing role of the Federal Government in such fields as basic research, foreign assistance, education, health, and possibly the arts.

A few other points in the program follow this line; and they include such things as the problems brought about by the rapid growth of population, growth of the Soviet power, development of a united Europe, and, finally, "the explosion of knowledge."

The entire report is a mere 16 pages and contains much food for thought for those of us in the legislative process. I only call attention to a few items which develop the program points on which I have just commented. One of these had a subtitle which especially appealed to me, "Educational Innovations." Here the foundation expresses its interest in developing new learning and teaching techniques. What does this mean? It means that the old classroom method that was good for our fathers and grandfathers, and even for us, may not suit the need of the sixties. How can we use our teachers more effectively? Can there be greater flexibility in scheduling classes and variety in choice of curriculum? I presume such research and experimentation may even result in a report as to the year-round use of school buildings, rather than having these million-dollar structures idle for 3 months each year. Furthermore, the innovations will experiment with the use of television for educational purposes, and suggest ways of incorporating the results of their studies into existing school systems.

In the area of international training and research I was particularly interested in the emphasis on the assistance that will be given to improving the teaching of foreign languages. Those of us who have traveled abroad, and who are so uneducated as not to speak a second language, are aware of our shortcomings, individually and as a nation, in this area of linguistics. No better use could be made of some of our school funds than to include a foreign language as an integral part of the curriculum, running parallel with the study of English. This project should be one of the simplest ones for the foundation to develop, as it merely has to look at any of the public school systems in eastern Europe where the dual language system has been a matter of course for years and years.

Every item in the report suggests that the Ford Foundation has embarked upon a program of objectivity in many areas, and has the opportunity to make a great contribution to our Nation.

BIG GOVERNMENT AND OUR PRICELESS HERITAGE OF FREEDOM

Mr. **LAUSCHE**. Mr. President, in a letter addressed to me and signed by Mr. J. B. Johnson, of Grafton, Ohio, my attention has been called to a statement made by the Honorable Benjamin Harvey Hill, U.S. Senator from Georgia, in this Chamber on March 22, 1878.

Mr. President, many miles have been traveled since the warnings of Senator Hill were made and, regrettably, in the direction that the esteemed and learned Senator feared.

Mr. President, I ask unanimous consent that Mr. Johnson's letter to the Chronical-Telegram of Elyria, Ohio, containing excerpts from Senator Benjamin Hill's speech of 1878 be inserted in the body of the Record as part of my remarks.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Chronicle-Telegram:

I am including in this letter an editorial from the Augusta, Ga., Courier of January 21, 1952. It has reposed in one of my correspondence files for many years and only recently came to light in a research for material on another, but related subject.

It seemed so apropos as relating to current history that it might well be called to the notice of your readers; if "big" government ever prevails over the freedoms we have so long enjoyed the responsibility for the loss will rest squarely upon each and every American who has taken our priceless heritage of freedoms for granted and relinquished all personal responsibility to keep them intact.

It would seem that Senator Hill's warning on March 27, 1878, has long been forgotten but now the "storm warnings" are up and are plainly to be seen. Will they also go unheeded until our priceless freedoms are but a memory of what we used to have but have no more?

BEN HILL'S PROPHECY

Benjamin Harvey Hill was a U.S. Senator from Georgia. In some ways he was wise beyond his times. On one occasion he displayed the powers of perception beyond that of most men. He was able to see down through the years and recognize the dangers inherent in the power of the Federal Government. Speaking before the Senate on March 27, 1878, he said:

"But sir, I have said I do not dread these corporations as instruments of power to destroy this country, because there are a thousand agencies which can regulate, restrain, and control them; but there is a corporation we may all well dread. That corporation is the Federal Government. From the aggressions of this corporation there can be no safety, if it is allowed to go beyond the well defined limits of its power. I dread nothing so much as the exercise of ungranted and doubtful powers by this Government. It is in my opinion the danger of dangers to the future of this country. Let us be sure we keep it always within its limits. If this great, ambitious, ever-growing corporation become oppressive, who shall check it? If it becomes wayward, who shall control it? If it becomes unjust, who shall trust it? As sentinels on the country's watchtower, Senators, I beseech you—watch and guard with sleepless dread that corporation which can make all property and rights, all States and people, and all liberty and hope its plaything in an hour, and its victims forever."

Respectfully submitted.

J. B. Johnson.

The **PRESIDING OFFICER** (Mr. Young of Ohio in the chair). Is there further morning business? If not, morning business is closed.

FRYINGPAN-ARKANSAS PROJECT, COLORADO

Mr. **MANSFIELD**. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate and be made the pending business.

There being no objection, the Senate resumed consideration of the bill (S. 284) to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado.

Mr. **MANSFIELD**. Mr. President, I suggest the absence of a quorum.

The **PRESIDING OFFICER**. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. **MANSFIELD**. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The **PRESIDING OFFICER**. Without objection, it is so ordered.

DEATH OF FORMER AMBASSADOR WHITING WILLAUER

Mr. **DIRKSEN**. Mr. President, it is with some distress that I inform the Senate of the death this morning, of a heart attack, on Nantucket Island, of former Ambassador Whiting Willauer. Many of us knew and admired him.

Ambassador Willauer served with distinction in Honduras, from 1954 to 1958, and in Costa Rica from 1958 into 1961. He was one of those who from the start insisted that Castro was a Communist and should be dealt with as such.

Ambassador Willauer spent the latter years of his life combating communism, which he knew and understood. Before becoming an ambassador, he was chairman of the board of General Claire Chennault's Civil Air Transport in China, and previous to that in charge of the Far East branch of the Foreign Economic Administration and of China Defense Supplies, Inc., during the war.

Ambassador Willauer graduated cum laude from Princeton in 1928, and obtained his law degree from Harvard in 1931.

He was a distinguished admiralty lawyer, and at one time served as special assistant to the U.S. Attorney General, dealing with criminal matters.

We have lost a strong fighter against communism.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. I wish to join the distinguished minority leader in his remarks about the passing of our mutual friend, former Ambassador Whiting Willauer. I had known Ambassador Willauer for about 20 years. He was a good public servant, and contributed much to the welfare of the Government and the country, and to the future of our foreign relations in Latin America and the Far East. I regret his passing. I was shocked at the news. I express to Mrs. Willauer and his family our deepest sympathy.

Mr. ELLENDER. Mr. President, I wish to join the minority leader and the majority leader in their tribute to former Ambassador Willauer.

I had occasion to visit each of the nations of Central America at least twice during the past 10 years, and as a consequence was able to watch Ambassador Willauer at work in the field. I found no better man than our Ambassador. He was very much interested in the work he was doing, and, as my good friend from Illinois has said, he was a great fighter against communism.

I also wish to add, Mr. President, that the Ambassador was instrumental in finding ways and means of constructing the very important Inter-American Highway which will ultimately connect the United States with the Panama Canal. I often discussed with the Ambassador the advisability of creating a commission which would supervise maintenance of work on the Inter-American Highway. He took the position that it would be folly for us to spend millions of dollars in building one road in Costa Rica and another, let us say, in Guatemala, unless we could get those countries to maintain the road from one end to the other.

Mr. Willauer was one of the leaders in his advocacy of creating a commission, to be composed of members from the various countries, to see that this road would always be kept in top condition.

If I may, I would like to read from the report I filed with the Senate Appropriations Committee following my inspection trip of U.S. Government operations in Latin America in 1958.

This portion deals with Ambassador Willauer's advocacy of the creation of this type commission:

> It is my judgment that ways and means should be devised now to maintain the road after its construction. The actual building of the Inter-American Highway will mean nothing at all to the economies of all of Central America and North America if it is not properly maintained.
>
> The old saying that a chain is as strong as its weakest link can also be applied to the Inter-American Highway.
>
> Should one country fail to properly maintain its one section of the highway then the value of the entire highway will be seriously affected.
>
> In my judgment some type of authority, composed of representatives of all the countries through which the road passes, should be created and made responsible for keeping the entire highway in good repair. In order that the authority would have enough money to make sure that the highway is in proper condition at all times, each country should be assessed a proportionate share of the overall amount needed to provide proper maintenance for the road. Ambassador Willauer of Costa Rica is a strong advocate of such a plan. As far as I know he is the originator of such a plan.
>
> The authority should be empowered to use these funds as it might see fit to insure that the road remains in proper condition for travel at all times.
>
> As a talking point to the individual countries through which the road passes, they should be reminded that each will benefit greatly, particularly by such things as increased values alongside the highway.
>
> With this in mind, the individual countries could assess commercial establishments which use the highway within their respective boundaries, with the proceeds turned over to the Inter-American Highway Authority. On the other hand, an equitable gas tax could be imposed by all countries and the proceeds set aside for maintenance.
>
> However this problem may eventually be handled, planning should begin now.

Mr. President, during my visits to Latin America, I also had the pleasure of meeting Mrs. Willauer, whom I found to be a charming, lovely woman. In this moment of grief, I extend to her my deepest sympathies. We are all poorer by his passing.

INDUSTRIAL CAPACITY HEARINGS VITAL TO INTELLIGENT DECISION ON TAX CUT

Mr. PROXMIRE. Mr. President, in view of the importance of the issues surrounding such proposals as the investment tax credit and the general tax revision, as a member of the Statistics Subcommittee of the Joint Economic Committee, of which subcommittee I am chairman, I call to the attention of the Senate a timely report on the measures of productive capacity. I believe that the report can make a very important contribution to the current discussion in Congress about the merits of the pending tax measures, as well as other suggestions for altering the Nation's fiscal and monetary policy.

I am sure that Senators share my own concern that frequently the information used for important decisions leaves much to be desired in terms of relevance, consistency, and validity. Last December's hearings on unemployment statistics covered one source of information which satisfied most of these necessary characteristics.

Incidentally, during the course of our hearings on plant capacity, it was alleged—and I think generally supported by economists—that the status of our capacity utilization statistics is in about the same position as was true with respect to unemployment statistics more than 40 years ago. Of course, capacity utilization statistics are essential when it comes to making an intelligent conclusion with respect to such measures as investment tax credit, because the level of capacity utilization is the most crucial factor in determining whether or not the country is likely to have an investment boom or bust.

The large array of varying statistics on capacity utilization revealed by the recent hearings is another useful mine of such information. However, statistics in this area are still seriously inadequate. That should continue to command the attention of the committee until further improvement comes about.

The report makes useful suggestions for the improvement of utilization statistics. It is my hope that the publication of this report will provoke and hasten fundamental improvements in the gathering and processing of statistics in this important area.

I feel so strongly about the report that I ask unanimous consent to have a brief excerpt from the report—the "recommendations," on pages 4 and 5; and the "summary of testimony," on page 6—printed in the RECORD at this point.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Wisconsin?

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

RECOMMENDATIONS

> Because of the importance and usefulness of statistics on capacity and its rate of utilization, and the unsatisfactory state of present data and of programs to produce such data, the subcommittee makes the following recommendations:
>
> I. The Office of Statistical Standards of the Bureau of the Budget should take the lead in organizing a cooperative effort, involving both public and private agencies and individual experts, directed toward early development of generally acceptable standards covering the definition of capacity, and setting forth conventions to be generally followed in the construction of standardized measurements of capacity and its utilization. Such standards might well cover also any new standards or conventions which may be necessary for the measurement of inputs into capacity measures, such as the stock of plant and equipment, labor force, materials inputs, etc. It is clear that this is the first and most essential task if substantial improvement is to be achieved in the foreseeable future. Evidence presented in the subcommittee hearings suggests that this can now be done expeditiously, at least on an interim basis, subject to later refinement as experience dictates.
>
> II. The Federal Government should devote increased attention and resources toward the

development of adequate measures of the stock of capital along the lines which already are being pursued and which were outlined at the hearings by the Director of the Office of Statistical Standards, Raymond T. Bowman. The work outlined in the field of measuring capital stocks by the perpetual inventory method appears to deserve aggressive exploitation.

Reliable benchmarks for this work of measuring capital stock by the perpetual inventory method requires an inventory of the Nation's capital whenever the technical problems can be solved. Efforts, therefore, should be made through both public and private channels to solve the problems involved in taking a census of the Nation's wealth, or capital assets, at the earliest date that would be practicable—which, on the basis of the testimony of Mr. Bowman, would appear to be toward the end of the present decade. In connection with this census of national wealth, consideration should be given to the development not merely of data covering the asset side of the national balance sheets but also of data covering the claims or liability side.

III. The Federal Government, under the stimulation and guidance of the Office of Statistical Standards, should devote increasing resources to the exploration and testing of the feasibility of obtaining additional data on capacity through census procedures in connection with the Census Bureau's regular surveys of the American economy. The method now being explored by the Census, as explained by Mr. Bowman at the hearings, certainly deserves attention. We would also urge that study be given to the techniques suggested by Mr. Norton and possibly to an adaptation of the McGraw-Hill technique of direct measurement. It appears an exploration of this latter technique would offer an excellent opportunity for a joint public-private project in which McGraw-Hill, the pioneer in this technique, might work in cooperation with a suitable Government agency.

IV. Both public and private efforts could be usefully devoted to increased research into the analysis of the significance of capacity utilization data for the analysis of public and private economic policies, particularly those in such fields as inventories, prices and costs, monetary policies, and tax policies. Public and private policies influence both the rate at which capacity is expanded and the rate at which demand expands to call into use this capacity. The development of a balance between the consequences of various public and private policies in these two directions is essential to the survival of a system of individual freedom, and, as the Employment Act states among its objectives, "of a system of free private and competitive enterprise."

V. We recommend that the committee continue to probe this field of economic information and analysis, not only through this subcommittee's future work but also in connection with other committee investigations.

MIDWEST TAKES IT ON CHIN AGAIN IN MAN-TO-MOON PROJECT

Mr. PROXMIRE. Mr. President, on Saturday the New York Times concluded its superb series of articles analyzing Project Apollo, the man-to-the-moon space program of the Federal Government. I am deeply concerned about the cost of this program, as are many other Senators, I am sure.

This analysis of the program shows its effect on our entire economy. Those of us who live in the Midwest have expressed for a long time our deep concern over the concentration of research and development contracts on the west coast and also, to a certain extent, on the east coast, ignoring the Midwest.

This fine analysis by the New York Times of Project Apollo shows that the space program, with regard to construction and hardware, is being concentrated in the southern part of our country, resulting also in ignoring the Midwestern part of our country.

I ask unanimous consent, Mr. President, that the last of the series of articles may be printed in the Record at this point; together with an article written by Richard Witkin, entitled "Pace of Program Stirs Opposition."

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the New York Times, Aug. 4, 1962]

Apollo: Economic and Social Impact

(By David Binder)

For a thousand miles along the southern crescent of the United States, from Florida's palmetto thickets to the Texas ranchlands below Houston, the Nation's space industry has become a catalyst.

With huge launching pads and rocket vehicle factories. With battalions of scientist-technicians and regiments of construction workers, the space program is causing profound changes on this part of the earth.

One of the major space programs is Project Apollo, by which the United States hopes to land men on the moon, 239,000 miles away, by 1970.

The focal points for the Federal space effort are Cape Canaveral, New Orleans, and Houston.

But the space industry is also altering the economic structure of broad areas on the Florida mainland and in southern Mississippi. All along the crescent it is changing the patterns of living and labor.

"This is foreverland," said a lieutenant colonel at Patrick Air Force Base on Cocoa Beach, just south of the Canaveral launching complexes. "It may be hard to accept, but this loud beach is going to be a piece of Americana for the next five hundred years."

In some areas, like the Florida counties around the cape, the impact will be sharp on housing, schools, hospitals, and roads. The reasons include the peculiar geography of the coast with its small, independent cities strung along the shores for 70 miles.

Already, rocket activity at Canaveral has made the 8-mile, two-lane causeway from Cocoa, on the mainland, to Cocoa Beach a miniature version of the Long Island Expressway. Commuters complain of 50-minute drives to their nearby homes.

In the New Orleans area the space impact will be partly absorbed by the Louisiana metropolis and partly by the vast timber and bayou hinterlands across the State line in Mississippi. These are the places where the Advanced Saturn launching vehicles will be manufactured and tested.

In southeastern Texas the space industry is piling on top of a half dozen booms that have already made Houston the sixth largest city in the country—cotton and cattle, timber and oil, shipping and petrochemical plants.

The space industry will be more an accelerator than a prime mover in the Houston economy—at least for the time being.

However, Texas boosters are quick to point out that the location of the Manned Spacecraft Center 20 miles south of downtown Houston is sure to be a magnet for the next generation of space industries.

Officials of the National Aeronautics and Space Administration try hard to play down the boom talk along the southern crescent. Their policy is caution.

They make population forecasts and community development studies with care and precision in an attempt to dampen enthusiasm with hard facts.

MISSILE CITIES

Nothing the space agency says or does can halt communities like Titusville, Fla., or Picayune, Miss., or Houston from laying claim to titles like "Missile City," "Gateway to the NASA Test Site," and "Spaceport, U.S.A."

Nor can the agency deny that it expects to spend more in a year—one budget forecast is $2 billion a year for the next 20 years—than the entire Federal investment in the Tennessee Valley Administration. The total expenditure on TVA was $1,200 million.

To be sure, a large portion of the space budget will be spent at west coast and Middle West rocket plants and on electronics hardware made in Minnesota, Massachusetts, New York, and Maine.

But the major share to be spent on new space installations will be in the southern crescent.

This, in turn, has engaged the Government space people in a wide range of physical and social endeavors.

They will be digging a new 4-mile channel for the Intracoastal Waterway above the cape, building a private access causeway to the moon launching areas on the Florida coast and participating in a Federal wildlife conservation project to guard 60 varieties of ducks that live on Merritt Island, just inland from the moon launching pads.

RESIDENTS MOVED OUT

In Mississippi, the space people, aided by the Army Corps of Engineers, are engaged in moving 2,695 residents out of a 142,000-acre area that will be the static testing site for Advanced Saturn rocket stages.

They are drawing plans to straighten some sharp bends in the placid Pearl River. This runs through the site and will be used to barge the heavy rockets to the firing line.

Some of the impact is easy to gage in terms of dollars, acreage and population. Some is not.

For example, the Canaveral projects are using large amounts of construction sand from Ocala, Fla., 100 miles away, and steel from Alabama mills, more than 200 miles distant. Demand is growing and suppliers are benefiting accordingly.

More than 50 percent of the employees working on space projects in the New Orleans area are local residents. And the space agency has announced a policy of ordering as much equipment as possible from manufacturers in the immediate area. The same goes for Houston.

Thus, the dollars spent and the dollars generated—for haircuts, medical attention, and groceries—are affecting large areas around the space program sites.

By the same token, some of the human dislocations are relatively simple to measure. Others are sociological problems that defy precise analysis.

The space agency has a good idea of how many people it will be moving in and out of the cape, New Orleans, and Houston areas. But it is not at all sure what is going to happen to the new arrivals or the old residents.

Along the Florida coast, for instance, the space developments have given impetus to the demands of Brevard County's 10,000 Negroes for equal rights in housing, employment, and schools. Resistance to these demands is also mounting. Both Florida whites and Florida Negroes predict violence.

Add to this population an increment of thousands of engineers and technicians—a large number coming from the North—and what happens? The answer is unknown.

Or, take the serene Mississippi and Louisiana communities of Hancock County and St. Tammany Parish, draped in Spanish moss and aglow with brilliant crepe myrtle—crimson, purple, and pink.

What happens to the people in these towns around the new test site or to the evacuees who have spent their lives in antebellum homes along the Pearl River?

What happens to those dwellers in the slash pine forests to the west who divided their carefree days between angling for green trout and tending cornmash stills, locally reputed to be among "the finest in the country"?

Or what happens to the little theater in Bay St. Louis, the recreation program in Picayune and the school system in Slidell when the space operations people begin settling in the next few months?

Will the program quicken the stately quadrille of business activity in New Orleans? Will it change Rice and Houston Universities in Texas?

Space agency authorities are deeply concerned with most of these questions. And they have answers to a few of them. So do a number of communities that have prepared for the bold changes in the impact areas.

As to the overall effects on communities and regions in the southern crescent, there are already guidelines to be found at Cape Canaveral and Huntsville, Ala., where the space business has been expanding for the last decade.

Here is a closeup of the southern crescent:

CAPE CANAVERAL

To a first-time visitor the cape presents a visual shock with its billboards and gaudy motel facades accentuated in the southern sunlight.

There is a gold rush air of hard work and hard play in the saloons and honky tonks that line the beach strip. And despite the engineers and scientists that live here, the hard-hat society of the construction workers seems to prevail.

A European industrial designer who makes frequent trips to the cape recently termed it a "cultural desert." He added that the highly trained and educated newcomers had arrived with "little or no cultural baggage."

The designer, Jaap Penraat of the Netherlands, concluded: "It is as though we were launching a man to the moon from a billion dollar junk heap."

Yet in Cocoa Beach, the Surfside Players claim sellout audiences for their amateur theatrical productions. The local library has a booming circulation and an amateur artists' group is also active.

Strangely, the dramatic rocket launches have drawn no poets and no novelists to sing the songs of space.

The cape atmosphere is a combination of teamwork and transience. "There is a sense of identity here," said a Cocoa Beach physician who arrived 7 years ago. "Everyone feels they are part of the space team—I love it." Yet the turnover of team members is high. Contract crews move in and out.

One keynote is youth. In Brevard County, the heart of the cape impact area, the median age is 26 years. A long-time resident remarked that Ponce de Leon had passed by Canaveral in 1513 during his search for the fountain of youth and added, "He was 450 years too early."

In the decade from 1950 to 1960, Brevard, home of the Air Force Missile Test Center, grew in population from 23,000 to 111,000. The present population is over 140,000.

Part of this increase could be attributed to the general growth of Florida's coastal counties, which added about 35 percent to their population in the same decade.

But Brevard's growth was more than 200 percent. This was due mainly to the influx of more than 20,000 space program employees who worked at the 17,000-acre Air Force launching area on the cape.

Now, the space agency is enlarging the launching area by 88,000 acres above and inland from the cape for the man-in-the-moon shots.

According to estimates by the Air Force Operations Analysis Office, the new facilities will raise the launching site work force from 24,451 at present to 38,162 permanent employees in 1967. Counting family members, this will add more than 50,000 to the area's population.

During the same period the cape payroll will rise from $150 to $200 million.

FACILITIES WERE STRAINED

The initial space impact severely strained Brevard County's community facilities. Thanks to generous injections of Federal and State aid, it has largely been absorbed.

It would see that the cape area is better prepared for the Apollo impact. Last year Brevard joined with five adjoining counties—Indian River, Volusia, Orange, Osceola, and Seminole—to form the Joint Community Impact Coordinating Committee. Later there will be a regional planning council.

The impact has manifested itself in hundreds of places, not the least in real estate values. Beach property was going at $20 a front foot at the end of World War II. Now some owners are asking $1,000 a front foot—or more in Cocoa Beach.

NEW ORLEANS

In Washington and in other parts of the country, legislators have asked why the Space Administration is concentrating its prime operations along the southern crescent.

The most obvious reply is that ice-free water transportation routes were available here—a must for barging heavy rocket hardware.

But anyone who has had a chance to view the enormous Michoud plant in New Orleans, where Saturn first-stage boosters are to be built, or the future test site across the State line in Mississippi, gains dramatic proof of the fortuitous nature of these locales.

The first windfall was the Michoud plant, an Army Ordnance factory that has nearly 2 million square feet of manufacturing space. Until now it had been a white elephant.

Located 15 miles northeast of downtown New Orleans, the 844-acre site has its own airstrip, access to a barge canal, broad parking areas, a nearby powerplant—just about everything the space agency could desire.

The plant is tooling up for construction of the Saturn boosters under a contract with the Chrysler Corp. Soon the Boeing Co. will take up work on Advanced Saturn stages in the western half of the plant.

Current employment at Michoud is about 1,200, with an annual payroll of $14 million. Peak employment, in the summer of 1963, is expected to be 7,000 with a payroll of $69 million.

Space agency officials are reckoning on a $175 million expenditure on Apollo hardware at Michoud.

Thirty-five miles northeast across Lake Ponchartrain and the five estuary branches of the Pearl River is the space agency test site. Centered in Hancock County, it will take in small corners of Pearl River County to the north and St. Tammany Parish in Louisiana to the west.

Here was another windfall, a sparsely settled area easily reachable from Michoud by water, rail, and road. On the edge, in Slidell, La., was another white elephant, a $2 million, brandnew Federal Aviation Agency computer center being abandoned in favor of a Houston facility. The space agency gratefully took it over.

PROPERTY IS APPRAISED

Already, many of the 195 families in the center of the test site area have cleared out, their property having been paid for following elaborate appraisals by the Army Corps of Engineers. The majority have moved to Picayune, a handsome industrial town of 10,000 on the northern rim of the site.

The rest expect to leave in the next few weeks. They have accepted the change, but few of the citizens of on-site towns like Gainesville are pleased with their prospects.

"They're gypping us," said John Furey, 19 years old. "Where we're going the fishing is no good."

Cora Davis, who is in her nineties and is known locally as Miss Blue, gazed out her window with moist eyes and said to a visitor, "See that oak tree out there—I've watched it grow for 75 years—if I could take it with me I wouldn't mind."

A space agency community specialist, Marion Kent, who has traveled up and down Hancock County, knows exactly how many churches, cemeteries, egg farms, taverns, garages, and schools are being moved out of the test site.

The Mississippi test site will cost about $93 million. It will require a peak of 6,000 construction workers in 1964 and between 1,500 and 2,000 technicians and engineers will be needed to operate it.

Some construction personnel will be drawn from nearby towns, and the bulk of the operations people are expected to settle in neighboring towns of Bay St. Louis and Pass Christian on the gulf coast and Picayune and Slidell farther inland.

These cities appear well prepared for the impact. New schools and hospitals are already established in Bay St. Louis, Picayune, and Slidell. Reasonably priced housing developments are going up.

The only sour note seems to have been struck by the Mississippi State government. In Hancock County, community leaders told a visitor that the officials in Jackson had not lifted a finger to help them prepare for the space impact or to aid in resettling the test site families.

Instead, the Mississippi leaders have busied themselves trying to lure private industries to locate in the southern part of the State.

Over in New Orleans, the space program has drawn an enthusiastic response from city officials, particularly Mayor Victor H. Schiro. Shortly after the site selection, Mr. Schiro appointed a special coordinating committee to deal with impact problems.

The committee, which has more than a hundred members, including three Negro community leaders, is working closely with the space agency.

A New Orleans member of the National Association for the Advancement of Colored People told a visitor that Negroes were satisfied with their share in the program so far.

A visitor leaves the New Orleans-Mississippi area with the feeling that both the urban and rural areas will absorb the space impact without sacrificing either their charm or their culture.

HOUSTON

Ever since Houston was picked as the site of the Manned Spacecraft Center last September there has been talk of pork barrel tactics in Washington and other quarters.

Critics pointed accusing fingers at Vice President JOHNSON, a loyal Texan who is also Chairman of the National Aeronautics and Space Council, and at Texas Representative ALBERT THOMAS, Democrat of Houston, who is chairman of the House Subcommittee on Independent Offices Appropriations which deals with the Nation's space expenditures.

Yet an official who was a member of the site selection team last year said that Houston ran a close second following a location in California for the proposed Spacecraft Center. The selection team also agreed that Houston's water-route proximity to New Orleans and Canaveral made it particularly desirable.

Another prime requisite filled by the Texas locale was the presence of two universities, Houston and Rice.

Both institutions have been asked to provide graduate training facilities and to make available technical publications for engineers and scientists at the Spacecraft Center.

Houston's share of the pie-in-the-sky is also supposed to include the $30 million Mission Control Center for the lunar landing program.

Both facilities will be on a 1,600-acre site next to Clear Lake, which has a channel opening into Galveston Bay on the gulf coast. Eventually this area will be annexed by Houston, according to local officials.

At present, 575 construction workers are engaged on the project, most of them from the Houston area. The work force is expected to increase to 2,500 within a year as the second and third phases of construction are undertaken. The total budget: about $123 million.

Thus the major portion of Houston's official space industry will be concentrated in a relatively small area and will employ a relatively small number of workers.

But Houston is counting on a large space impact from private industry. Robert Brewer of the chamber of commerce said that five electronics concerns planned to build factories.

The space industry has catalyzed Houston's real estate market. Land prices near Clear Lake have risen from $3,000 an acre to more than $50,000 an acre, according to Mr. Brewer.

QUESTION FOR COMPUTER: WHERE WILL MOON BE?

Calculating where the moon will be when our men get there will not be easy. The moon's orbital movement is simple in gross terms, but extremely complicated in precise terms.

It is affected by such factors as the lopsided shape of both the earth and moon, as well as the constantly changing relative positions of earth, sun, moon, and planets.

Another difficulty, in long-term prediction, is that the moon itself causes time on earth, as we usually define it, to slow down. This is because the tides generated on earth by the moon cause friction, slowing down both the earth's speed of rotation (our "day") and the moon's orbital speed (the traditional "month").

PACE OF PROGRAM STIRS OPPOSITION

(By Richard Witkin)

The wisdom of spending $20 billion this decade to land American astronauts on the moon is questioned by some respected scientists and public figures.

They ask whether it is necessary to move so far so fast.

They express concern that the greatly accelerated effort on manned space flight will hurt other vital programs—scientific, industrial, educational, and military—by absorbing an excessive portion of the available scientific manpower and of the national budget.

A significant part of the general public has felt similar uneasiness about the wisdom of rushing to the moon.

The answer most frequently offered the doubters is that the United States must race the Soviet Union into space because of requirements of prestige, scientific and technical knowledge and, perhaps most important, military advantage.

At the moment, opposition to the accelerated space program is relatively subdued.

This is proved by the fact that authorization of a huge increase in appropriations for the National Aeronautics and Space Administration for the current fiscal year was approved unanimously in both Houses of Congress.

There are two main lines of thought about whether congressional support can be maintained in the future.

Some predict that Congress will be in a much less generous mood as further large increases are sought and as the flush of enthusiasm generated by the first manned Mercury space flights wears off.

QUESTIONS PROGRAM'S PACE

Others, while recognizing this possibility, are looking for new Russian achievements in space. They believe these will help insure congressional approval of more funds for the space program.

In the current Congress, it has been Senator WILLIAM PROXMIRE, Wisconsin Democrat, who has reflected most clearly and insistently the doubts felt about the space program.

In addressing the House Committee on Science and Astronautics at his own request, he said:

"I do not object to our effort to land men on the moon. * * * The significant question is * * * at what rate such a program is carried on and what specific goals are set for it."

Senator PROXMIRE urged the committee to request the space agency to make alternate proposals to show how a slower expansion of funds would affect the timetable for reaching the moon and for other agency programs.

The Senator quoted Dr. James R. Killian, Jr., chairman of the Massachusetts Institute of Technology corporation and science adviser to former President Dwight D. Eisenhower, as saying:

"The Nation must seek to determine whether it is now proceeding too rapidly in this area and whether it can manage the present man-in-space program without weakening other important national programs, including defense."

Another scientist who has expressed doubts about the pace of the program is Dr. James A. Van Allen, whose research led to discovery of the earth-circling radiation belts that bear his name.

He said last fall that the Nation's ambitions in space exploration had greatly outrun its basic scientific competency in space.

CONGRESS THROWAWAY: EXCESSIVE HEW APPROPRIATIONS

Mr. PROXMIRE. Mr. President, there was also published in the New York Times this morning a thought-provoking article discussing the serious problem which Mr. Celebrezze faces as the new Secretary of Health, Education, and Welfare, stating what a nightmare the administration of that Department is, partly resulting from the fault of the Congress in forcing more appropriations on the Department than it can spend efficiently.

Dr. Luther Terry is reported to feel that this has been a serious and very important problem for the Department of Health, Education and Welfare.

Mr. President, I ask unanimous consent that the article may be printed in the RECORD, along with an excellent editorial from the Wall Street Journal on the same subject.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

MANY TASKS FACING CELEBREZZE IN A "DEPARTMENT OF HEADACHES"

WASHINGTON, August 4.—The Department of Health, Education, and Welfare—sometimes called the Department of Headaches for short—got its fifth Secretary in a little more than 9 years this week.

He is Anthony J. Celebrezze, former mayor of Cleveland, who was sworn in at ceremonies Tuesday. He succeeds Abraham A. Ribicoff, former Governor of Connecticut, who resigned 2 weeks ago to run for the Senate.

Good auguries have surrounded Mr. Celebrezze's appearance on the national scene. His nomination went through the Senate without opposition. Last week, Congress passed a welfare reform bill sponsored by his predecessor that the experts acclaim as the most significant legislative advance in the field in 20 years. And a generous appropriation that may go a few million above the $4,985,100,000 that the Department sought is expected to be voted almost any day.

However, experienced hands here have warned the new Secretary not to be misled by these portents. Whether Congress blows hot or cold, they have said, the Department remains the Department of Headaches in all temperatures, and is one of the toughest major agencies to run with administrative efficiency and political skill.

As most of his predecessors have done, Mr. Celebrezze will discover in time that there are three stubborn and fundamental reasons for this.

First, the Department is the inevitable vehicle for many highly controversial programs. This year alone it has borne the brunt of two of the most damaging political battles the Kennedy administration has fought: aid to education and medical care for the aged. Both were lost.

Second, the Department is less a unified administrative command than a loose confederation of bureaucracies that cling stubbornly to their separate identities. This has blunted the efforts of Secretaries before Mr. Celebrezze.

And third, influential Members of Congress have carved much of the Department up into small, highly personal fiefdoms over which they assert a control equal to, and sometimes surpassing, that of the Secretary.

The Department was born under a cloud of suspicion and distrust, and the shadow has followed it into maturity.

The constitutional injunction upon the Government "to promote the general welfare" has always been viewed with skepticism by some, and by political conservatives of the middle decades of this century, in particular. The injunction was, however, observed grudgingly and piecemeal over the years—a children's bureau, vocational education, social security—by the pressures of political necessity. But the effort to put the pieces together into an administrative whole was blocked through four Presidential administrations—from 1933 through 1952—by cries of "dogoodism," "socialism" and States rights.

It took the first Republican President in 30 years, Dwight D. Eisenhower, to persuade these objectors that a single department to handle the Government's welfare obligations would not result in a headlong plunge to a "welfare state." The Department was voted into being as the 10th Cabinet Department April 1, 1953. But there are stalwarts of the middle and right in and out of Congress who still wonder today if it wasn't all a mistake.

The depot is the fifth largest in manpower—73,000—and about midway of the list in expenditure of appropriated funds—$4,605 million in the last fiscal year. But it almost certainly touches more people in their more sensitive nerve endings than any agency.

In any given month, the beneficiaries of its largess—old-age pensioners, dependent mothers and children, college students on scholarships, research scientists in their laboratories, poor families in public health clinics—run into the many millions. And numbered among them, too, are most Governors, mayors, and public officials with their hands out for Federal grants for a host of welfare and educational programs.

The Department is responsible for administering 112 programs, sometimes in fields that seem unrelated. There are allocated among these five major divisions.

PUBLIC HEALTH SERVICE

Its two major functions are the operation of one of the world's largest and most diversified medical research programs through the National Institutes of Health, and assisting the States in carrying on their own health services. It has 30,000 employees and in the last fiscal year it was budgeted at $1,391,083,000.

SOCIAL SECURITY ADMINISTRATION

This includes such major operations as old-age and survivors insurance (61 million persons are covered); grants to the States for a variety of public welfare programs ($2,167 million last year), and the Children's Bureau, which is principally an advisory service on child welfare.

OFFICE OF EDUCATION

This dates from 1867, helps to formulate broad educational policies and administers Federal grants-in-aid to the States under the National Defense Education Act of 1958. These grants totaled $436 million in 1961.

OFFICE OF VOCATIONAL REHABILITATION

This provides grants to the States ($55 million last year) and technical guidance in the training of handicapped persons for useful employment.

FOOD AND DRUG ADMINISTRATION

Established in 1906, this unit is the Government's chief enforcement agency to insure the purity of foods, drugs, and cosmetics. With a relatively small staff of 2,260 and a budget last year of $26,323,000, it is frequently embroiled with the powerful industrial groups it is supposed to regulate.

Political controversy is inherent in nearly every area of the Department's responsibility. The conservative-liberal dialog is more easily triggered by the question of the citizen's reliance on Government—paternalism, "creeping socialism," States rights versus centralization, etc.—than by any other topic. And the Department is the "big brother" of Government benevolence.

Mr. Celebrezze's predecessors have fought many memorable battles with Congress, with "the interests" and with public opinion, and this issue has been at or near the heart of each one. To recall a few: compulsory health insurance, extension of social security coverage, the contaminated cranberry episode of 1959, aid to education and, of recent vintage, medical care for the aged.

In the nature of things, he will face similar battles himself.

A former high department official said in an interview recently:

"A Secretary of HEW is never sure his flanks are safe when he goes out to battle. He can be sure of his troops' competence, but he can't always be sure of their loyalty."

His allusion was to the laminated structure of the agency; its composition as a confederation of small, highly professional, ingrown bureaucracies preoccupied with their individual traditions, loyalties and objectives. Dominating the top policy levels of each division and bureau are careerists of long tenure and fixed professional viewpoints. They know their fields, and they have seen Secretaries come and go. In many subtle ways they can frustrate a Secretary's broad objectives when they happened not to agree with them.

It is significant that in the page-and-one-half roster of top Department officials in the current U.S. Government Manual, only seven can be identified as political appointees of Secretary Ribicoff's own choice. Custom dictates that the top policy and executive slots be filled from the career or professional ranks.

The committees of Congress, their chairmen and subchairmen, have an inordinate influence on Department operations. As one old hand in the agency described it:

"This place is chopped up like the map of Africa, the way all the congressional duchies and fiefdoms are staked out.

"And from where they (the chairmen) sit, they can make things run about the way they want them to run."

This is evident in many aspects of operations, but nowhere is it more conspicuous than in the affairs of the Public Health Service and its medical research programs.

Year after year Senator LISTER HILL, Democrat, of Alabama, chairman of the Committee on Labor and Public Welfare, and Representative JOHN E. FOGARTY, Democrat, of Rhode Island, chairman of the Appropriations Subcommittee on HEW, to mention two outstanding examples, have forced unwanted millions of research money on the NIH.

In 1961 the agency asked $400 million; Congress gave it $560 million. Last year it asked $583 million; Congress gave it $738 million. For the current year, it asked $780 million; to date the House has voted for $840,800,000, and the Senate for $900,800,000, with the final sum to be worked out in conference.

So much generosity has come close to gagging some of the research specialists at NIH. They complain privately that they are being forced to waste money. It has created problems, too, for Surgeon General Luther L. Terry, the NIH chief. He confessed recently to the chairman of another congressional committee that the poor administrative record of his agency was largely owing to its continued and unasked for affluence.

The Department is not only prey to a multiplicity of lobbies—the field of welfare nourishes a host of popular crusades—but it is also prey to a multiplicity of congressional interests.

Most executive departments are the "territory" of a single legislative committee; Foreign Affairs for the State Department, for example. But Secretary Celebrezze will have to deal, in the House alone, with Ways and Means, Education and Labor, Public Works, Interstate and Foreign Commerce, and most importantly of all, Appropriations, to keep his varied programs afloat.

Mr. Ribicoff thought that a good way to solve the problems of HEW was to break it up in smaller, more manageable pieces. Mr. Celebrezze may be ready for even more drastic measures when he has had a chance to look over his domain.

POOR MR. RIBICOFF

A tale with significance for every head of a Government agency lies behind passage by Congress of the bill providing funds to run the Health, Education, and Welfare Department in fiscal 1963.

The story begins last fall when Abraham Ribicoff, then Welfare Secretary, heeded a Presidential directive on frugality. Addressing all Federal agency chiefs, the President said Congress had made it clear on many occasions that "appropriations are only a ceiling, not a mandate to spend." And he added firmly: "Agency heads are not required to spend every dollar appropriated."

With this exhortation ringing in his ears, Mr. Ribicoff went back to his office and, looking for a place to economize, ordered more than $76 million whacked from his agency's Public Health Service fiscal 1962 spending program.

Now the scene changes to the Senate Appropriations Committee, weighing agency fund requests for fiscal 1963. When they came to Health, Education, and Welfare, the Senators tumbled to the fact that, thanks to Mr. Ribicoff, this agency had failed to spend millions of dollars previously appropriated.

Greatly disturbed, the Senators said it was "impossible to assess what damage had been done" by Mr. Ribicoff's "arbitrary restraint." And with that they voted the Welfare Department's health unit a fat $182 million more than it had even asked for. Both Houses subsequently went along with the boost.

Mr. Ribicoff, now resigned to enter another political arena, perhaps can shrug off this slap at his good intentions with a wry smile. But its implications certainly won't be lost on any incumbent administrator with a passing inclination to save money.

GRUENING'S EXTRAORDINARY SPEECH ON LATIN AMERICAN MILITARY AID

Mr. PROXMIRE. Mr. President, the outstanding speech by the Senator from Alaska [Mr. GRUENING] opposing our military assistance program to South America, which was one of the finest speeches delivered in the Senate this year, has won editorial comment all over the country and there has been a great deal of discussion all over the United States concerning it. It is one of the rare speeches which is likely to change the policy of the U.S. Government—and I think to improve the policy substantially.

One of the most recent and thought-provoking editorials was published in the Washington Post and Times Herald on Saturday, and I ask unanimous consent that the editorial may be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GUNS WITHOUT BUTTER

In a thoughtful speech excerpted elsewhere on this page, Senator ERNEST GRUENING raises some trenchant objections to our military-aid program in Latin America. The program is only a decade old, yet in that brief period has climbed spectacularly from a $200,000 appropriation in fiscal 1952 to $91.6 million in fiscal 1961. Doubtless some useful purposes have been achieved through the half-billion dollars spent over a decade—but have the benefits outweighed the harm?

Mr. GRUENING thinks not; he draws attention to the lamentable symbolism in Peru, where a U.S.-supplied Sherman tank captained by a U.S.-trained Peruvian officer rammed through the presidential palace in a military coup. Clearly this is not the purpose for which military aid was designed. But this episode of itself could be minimized if the overall program contributed in a meaningful way to hemisphere security.

Where the Senator draws the most blood is in his devastating account of how the military-aid program has fanned an arms race among countries that lack the resources to meet minimum public needs. Country after country has acquired flashy jet planes and costly naval aircraft which were obsolete when purchased, which have been poorly maintained and which have contributed only distantly to a system of hemisphere defense. In addition to receiving $4.9 million in military assistance from Washington, Argentina, for example, has been obtaining planes from Britain, Italy, Canada and Germany. And at the same time Argentina is desperately appealing for U.S. loans to bail the country out of a fiscal crisis.

One does not have to go down the line with Senator GRUENING in urging that the program be completely dropped. But there is surely room for a reappraisal, not only here but also in Latin America. Several years ago, President Alessandri of Chile proposed a hemisphere conference on arms limitation in order to halt a meaningless competition for prestige weapons. The suggestion unfortunately came to nothing, as did a similar proposal made by Costa Rica in the Organization of American States.

In the wake of the Peruvian coup, the proposal might be appropriately reconsidered. The three countries in Latin America that have smallest proportionate military budgets are Mexico, Costa Rica and Uruguay—three of the most progressive and stable republics in the hemisphere. It may be that countries now spending too much on weaponry cannot be persuaded that the hemisphere could be better defended by spending more on economic development. But this does not mean that U.S. policy should abet a wasteful competition for costly status symbols. As Mr. GRUENING remarks:

"If the Latin American governments feel they must sacrifice their precious, meager resources for the maintenance of oversized and obsolete military establishments, I say—let them. But let us not contribute to their folly from our own hard-pressed Treasury, and our mounting debt and our unfavorable balance of payments."

ANTI-SEMITISM IN THE SOVIET UNION

Mr. KEATING. Mr. President, reports of anti-Semitism in the Soviet Union are growing louder as an increased crackdown on so-called black marketeers is taking place. The Communists are seizing this great opportunity to blame the members of the Jewish religion for the failure of their own economic system. Mr. President, it is becoming increasingly clear that the persecutions of the Jews in the Soviet Union are a deliberate act on the part of the Communist central government to find scapegoats for an economic system that is full of flaws and inefficient.

What the Soviet Union is trying to do is to put all the blame on a small minority, when the failure of Communist planning, Communist management, and indeed the very ability of the Communist economic system to meet modern industrial needs is involved. In many areas communism has been a failure. The food industries, and the consumer industries are wholly inadequate to meet the needs of the Soviet people. The heavy industry and manufacturing interests which have received such tender nurture under communism are still incapable of the technical skill and flexibility of Western industry. True, the Soviets can get results, in some areas, such as space work and missilry, but it is at the cost of many other sacrifices throughout the whole structure.

Today, Mr. President, I surmise that the Soviet people, who incidentally have not even been informed by their government that it has set off large scale nuclear explosion in the atmosphere, are beginning to get impatient with hardship and scarcity. Years ago, Khrushchev promised they could catch up with the United States. The average Russian is still waiting, and he is getting more and more anxious to enjoy the fruits of his own labors.

How to distract the Russian people from their lacks, and above all, how to find a scapegoat for the inadequacy of Communist economics are the real reasons behind the new outbreak of anti-Semitism in the Soviet Union. This is an area where the United Nations Human Rights Commission could very profitably conduct a thorough hearing and investigation, to bring to light the depths of deceit and persecution to which the rulers of the Kremlin have stooped to cover their own failure. It would be useful not only as proof of the complete scorn of human rights in the U.S.S.R., but also as strong evidence of the economic failure of communism.

Mr. President, in this respect there is little difference between the Communist regime and the old czarist Russia. Neither dares face the fact of its own inadequacy. Both turn upon the Jewish people as an outlet for government mistakes. In this matter, the Soviet Union is certainly one of the most backward and barbaric nations in the modern world. Its present actions deserve the condemnation of all civilized peoples and nations.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, an article on the subject from the Washington Post by Edward Crankshaw.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JEWS CHIEF TARGET IN SOVIET DRIVE

(By Edward Crankshaw)

LONDON, August 4.—Rather more than half those executed in the Soviet Union for embezzlement and currency offenses between May 1961 and July of this year were Jews.

At the mass trial in Frunze, the capital of Khirgizia, which ended a fortnight ago, something like 60 percent of the accused were Jews. So far there has been no detailed report of the sentences. At least nine were shot, but the Central Press gave only four of their names, two of them being Jewish.

At many other trials which have taken place throughout the Soviet Union during the past year, the evidence has been so arranged as to emphasize the Jewish blood of the chief accused when this was not evidenced from their names.

Because of this some Western observers have come to the conclusion that the decree of May 6, 1961, which extended the death penalty to those convicted of large-scale embezzlement and persistent speculation in foreign currency, was conceived as part of an anti-Jewish campaign. The Soviet man-in-the-street, above all in White Russia and the Ukraine where anti-Semitism is better and endemic, is inclined to believe this too. The word has gone round that "they are shooting the Jews," regardless of the fact that nearly half of those shot have in fact been gentiles, some of them in fairly high places.

NOT DISCOURAGED

The Soviet Government has done nothing to discourage this sort of talk; it may even be said to have fostered it. But it is almost certainly an oversimplification and an exaggeration to think of the new attitude toward gross racketeering as a manifestation of a calculated drive against the Jews.

(The Associated Press reported from Moscow today that two Jews, convicted of masterminding a currency speculation ring, have been sentenced to death by shooting in the Ukraine. Four others, all with Jewish names, were sentenced to prison terms.)

The continued shortages of goods of all kinds in the Soviet Union, the absence of an effective distribution system outside a handful of great cities, the centralized control of all production with its proliferation of redtape, all inevitably lead to widespread corruption and to irregularities of every kind. The Soviet Government knows perfectly well that if everyone in trade and industry obeyed the letter of the law the economy would soon break down; it has to turn a blind eye on all sorts of infringements, and it will continue to do so.

But organized swindling in the grand manner is another story. In past years the state has been robbed of huge sums by determined and ingenious racketeers exploiting to their own advantage, and with extreme boldness, the tolerated weaknesses of the system.

SERIOUS CRACKDOWN

Khrushchev showed his outraged awareness of this, somewhat belatedly, early in 1961. The decree of May 1961 was, on the face of it, the first serious attempt by any Russian Government in any age to differentiate between permitted graft and corruption and wholesale racketeering.

Russia's return to capital punishment should be seen not as a reversion to terror but, rather, as a characteristically melodramatic attempt to bring stern measures to bear against violent crime and excessive corruption.

So far there is no sign of any concerted violence against the Jews. Certainly, for familiar historical reasons, one would expect to find a disproportionately large number of Jews among those engaged in financial and commercial pursuits. No less certainly the proportion reflected in the Soviet death sentences is too high; there are at most 3 million Jews in the Soviet Union today. They are clearly being picked on.

FRYINGPAN-ARKANSAS PROJECT, COLORADO

The Senate resumed the consideration of the bill (S. 284) to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado.

Mr. CARROLL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CARROLL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CARROLL. Mr. President, a parliamentary inquiry. What is the pending business before the Senate?

The PRESIDING OFFICER. S. 284, the so-called Fryingpan bill.

Mr. CARROLL. Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc, and that the bill as amended be considered as original text for purpose of amendment.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendments, agreed to en bloc, are as follows:

On page 3, line 1, after the word "on", to insert "Castle Creek, a tributary of"; on page 5, line 17, after the word "Numbered", to insert "130"; on page 8, line 4, after the word "reclamation", to strike out "laws, and" and insert "laws"; on page 11, line 7, after the word "or", where it appears the second time, to strike out "otherwise, and any person or entity whose rights may be affected, impaired, or infringed upon by reason, or as a result, of such noncompliance may maintain an action, suit, or proceeding in the United States District Court in and for the District of Colorado seeking appropriate relief, and consent is hereby given to the joinder of the United States, the Secretary of the Interior, and his subordinate officials, employees, and agents as a party or parties to such action, suit, or proceeding, as a defendant or"; on page 12, line 4, after the word "years", to strike out "thereafter" and insert "thereafter, the expense of said studies to be no part of the financial obligation of the Fryingpan-Arkansas project"; and in line 9, after "$170,000,000", to insert "(June 1961 prices)"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purposes of supplying water for irrigation, municipal, domestic, and industrial uses, generating and transmitting hydroelectric power and energy, and controlling floods, and for other useful and beneficial purposes incidental thereto, including recreation and the conservation and development of fish and wildlife, the Secretary of the Interior is authorized to construct, operate, and maintain the Fryingpan-Arkansas project, Colorado, in substantial accordance with the engineering plans therefor set forth in House Document Numbered 187, Eighty-third Congress, modified as proposed in the September 1959 report of the Bureau of Reclamation entitled "Ruedi Dam and Reservoir, Colorado", with such minor modifications of, omissions from, or additions to the works described in those reports as he may find necessary or proper for accomplishing the objectives of the project. Such modifications or additions as may be required in connection therewith shall not, however, extend to or contemplate the so-called Gunnison-Arkansas project; and nothing in this Act shall constitute a commitment, real or implied, to exportations of water from the Colorado River system in Colorado beyond those required for projects heretofore or herein authorized. In constructing, operating, and maintaining the Fryingpan-Arkansas project, the Secretary shall be governed by the Federal reclamation laws (Act of June 17, 1902; 32 Stat. 388, and Acts amendatory thereof or supplementary thereto).

(b) A reservoir at the Ruedi site on the Fryingpan River with an active capacity of approximately one hundred thousand acre-feet shall be constructed in lieu of the reservoir on the Roaring Fork River at the Aspen site contemplated in House Document Numbered 187, Eighty-third Congress. The Secretary shall investigate and prepare a report on the feasibility of a replacement reservoir at or near the Ashcroft site on Castle Creek, a tributary of the Roaring Fork River above its confluence with the Fryingpan River with a capacity of approximately five thousand acre-feet, but construction thereof shall not be commenced unless said report, which shall be submitted to the President and the Congress, demonstrates the feasibility of said reservoir and is approved by the Congress. The Secretary shall expedite completion of his planning report on the Basalt project, Colorado, as a participating project under the Act of April 11, 1956 (70 Stat. 105), and said report shall have the priority status of the reports to which reference is made in section 2 of said Act.

(c) No part of the single purpose municipal and industrial water supply works involved in the Fryingpan-Arkansas project shall be constructed by the Secretary in the absence of evidence satisfactory to him that it would be infeasible for the communities involved to construct the works themselves, singly or jointly. In the event it is determined that these works, or any of them, are to be constructed by the Secretary, a contract providing, among other things, for payment of the actual cost thereof, with interest as hereinafter provided, as rapidly as is consistent with the contracting parties' ability to pay, but in any event, within fifty years from the time the works are first available for the delivery of water, and for assumption by the contracting parties of the care, operation, maintenance, and replacement of the works shall be a condition precedent to construction thereof.

SEC. 2. (a) Contracts to repay the portion of the cost of the Fryingpan-Arkansas project allocated to irrigation and assigned to be repaid by irrigation water users (exclusive of such portion of said cost as may be derived from temporary water supply contracts or from other sources) which are entered into pursuant to subsection (d), section 9, of the Reclamation Project Act of 1939 (53 Stat. 1187), as amended, shall provide for a basic repayment period of not more than fifty years after completion of construction and shall not provide for any development period. Such contracts shall be entered into only with organizations which have the capacity to levy assessments upon all taxable real property located within their boundaries.

(b) Rates charged for commercial power and for water for municipal, domestic, or industrial use or for the use of facilities for the storage and/or delivery of such water shall be designed to return to the United States, within not more than fifty years from the completion of each unit of the project which serves those purposes, those costs of constructing, operating, and maintaining that unit which are allocated to said purposes and interest on the unamortized balance of said construction allocation and, in addition, within the period fixed by subsection (a) of this section, so much of the irrigation allocation as is beyond the ability of the water users and their organizations to repay.

(c) The interest rate on the unamortized balance of the commercial power and municipal, domestic, and industrial water supply allocations shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction is initiated, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due or callable for redemption for fifteen years from the date of issue.

SEC. 3. (a) The Fryingpan-Arkansas project shall be operated under the direction of the Secretary in accordance with the operating principles adopted by the State of Colorado on December 9, 1960, and reproduced in House Document Numbered 130, Eighty-seventh Congress.

(b) The Secretary may appoint the two representatives of the United States to the Commission referred to in paragraph 19 of said principles and may, upon unanimous recommendation of the parties signatory to the operating principles, adopt such modifications therein as are not inconsistent with the provisions of this Act.

(c) Any and all benefits and rights of western Colorado water users in and to water stored in the Green Mountain Reservoir, Colorado-Big Thompson project, as described, set forth and defined in Senate Document Numbered 80, Seventy-fifth Congress, shall not be impaired, prejudiced, abrogated, nullified, or diminished in any manner whatever by reason of the authorization, construction, operation, and maintenance of the Fryingpan-Arkansas project.

(d) Except for such rights as are appurtenant to lands which are acquired for project purposes, no valid right to the storage or use of water within the natural basin of the Colorado River in the State of Colorado shall be acquired by the Secretary of the Interior through eminent domain proceedings for the purpose of storing or using outside of said basin the water embraced within that right, and no water, the right to the storage or use of which is so acquired by anyone other than the Secretary, shall be transported through or by means of any works of the Fryingpan-Arkansas project from the Colorado River Basin to the Arkansas River Basin.

SEC. 4. (a) The Secretary is authorized and directed (1) to investigate, plan, construct, operate, and maintain public recreational facilities on lands withdrawn or acquired for the development of said project, (2) to conserve the scenery, the natural, historic, and archeologic objects, and the wildlife on said lands, (3) to provide for public use and enjoyment of the same and of the water areas created by this project by such means as are consistent with the purposes of said project, and (4) to investigate, plan, construct, operate, and maintain facilities for the conservation and development of fish and wildlife resources. The Secretary is authorized to acquire lands and to withdraw public lands from entry or other disposition under the public land laws necessary for the construction, operation, and maintenance of the facilities herein provided, and to dispose of them to Federal, State, and local governmental agencies by lease, transfer, exchange, or conveyance upon such terms and conditions as will best promote their development and operation in the public interest: *Provided,* That all lands within the exterior boundaries of a national forest acquired for recreational or other project purposes which are not determined by the Secretary of the Interior to be needed for actual use in connection with the reclamation works shall become national forest lands: *Provided further,* That the Secretary of the Interior shall make his determination hereunder within five years after approval of this Act or, in the case of individual tracts of land, within five years after their acquisition by the United States: *And provided further,* That the authority contained in this section shall not be exercised by the Secretary of the Interior with respect to national forest lands without the concurrence of the Secretary of Agriculture.

(b) The costs, including the operation and maintenance costs, of the undertakings described in subsection (a) of this section shall be nonreimbursable and nonreturnable under the reclamation laws. The funds appropriated for carrying out the authorization contained in section 1 of this Act shall, without prejudice to the availability of other appropriated moneys for the same purpose, also be available for carrying out the investigations and programs authorized in this section.

SEC. 5. (a) The use of water diverted from the Colorado River system to the Arkansas River Basin through works constructed under authority of this Act shall be subject to and controlled by the Colorado River compact, the Upper Colorado River Basin compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act, the Colorado River Storage Project Act, and the Mexican Water Treaty (Treaty Series 994), and shall be included within and shall in no way increase the total quantity of water to the use of which the State of Colorado is entitled and limited under said compacts, statutes, and treaty, and every contract entered into under this Act for the storage, use, and delivery of such water shall so recite.

(b) All works constructed under authority of this Act, and all officers, employees, permittees, licensees, and contractees of the United States and of the State of Colorado acting pursuant thereto, and all users and appropriators of water of the Colorado River system diverted or delivered through the works constructed under authority of this Act and any enlargements or additions thereto shall observe and be subject to said compacts, statutes, and treaty, as hereinbefore provided, in the diversion, delivery, and use of water of the Colorado River system, and such condition and covenant shall attach as a matter of law whether or not set out or referred to in the instrument evidencing such permit, license, or contract and shall be deemed to be for the benefit of and be available to the States of Arizona, California, Colorado, Nevada, New Mexico, Utah, and Wyoming and the users of water therein or thereunder by way of suit, defense, or otherwise in any litigation respecting the waters of the Colorado River system.

(c) None of the waters of the Colorado River system shall be exported from the natural basin of that system by means of works constructed under authority of this Act, or extensions and enlargements of such works, to the Arkansas River Basin for consumptive use outside of the State of Colorado, and no such waters shall be made available for consumptive use in any State not a party to the Colorado River compact by exchange or substitution; nor shall the obligations of the State of Colorado under the provisions of the Arkansas River compact (63 Stat. 145) be altered by any operations of the Fryingpan-Arkansas project.

(d) No right or claim of right to the use of the waters of the Colorado River system shall be aided or prejudiced by this Act, and the Congress does not, by its enactment, construe or interpret any provision of the Colorado River compact, the Upper Colorado River Basin compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act, the Colorado River Storage Project Act, or the Mexican Water Treaty or subject the United States to, or approve or disapprove any interpretation of, said compacts, statutes, or treaty, anything in this Act to the contrary notwithstanding.

(e) In the operation and maintenance of all facilities under the jurisdiction and supervision of the Secretary of the Interior authorized by this Act, the Secretary of the Interior is directed to comply with the applicable provisions of the Colorado River compact, the Upper Colorado River Basin compact, the Boulder Canyon Project Act, the Boulder Canyon Project Adjustment Act, the Colorado River Storage Project Act (and any contract lawfully entered into by the United States under any of said Acts), the treaty with the United Mexican States, and the operating principles, and to comply with the laws of the State of Colorado relating to the control, appropriation, use, and distribution of water therein. In the event of the failure of the Secretary of the Interior to so comply, any State of the Colorado River Basin may maintain an action in the Supreme Court of the United States to enforce the provisions of this section and consent is given to the joinder of the United States as a party in such suit or suits, as a defendant or otherwise.

SEC. 6. The Secretary of the Interior is directed to continue his studies of the quality of water of the Colorado River system, to appraise its suitability for municipal, domestic, and industrial use and for irrigation in the various areas in the United States in which it is used or proposed to be used, to estimate the effect of additional developments involving its storage and use (whether heretofore authorized or contemplated for authorization) on the remaining water available for use in the United States, to study all possible means of improving the quality of such water and of alleviating the ill effects thereof, and to report the results of his studies and estimates to the Congress on January 3, 1963, and every two years thereafter, the expense of said studies to be no part of the financial obligation of the Fryingpan-Arkansas project.

SEC. 7. There is hereby authorized to be appropriated for construction of the Fryingpan-Arkansas project, the sum of $170,000,000 (June 1961 prices), plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering cost indexes applicable to the types of construction involved herein. There are also authorized to be appropriated such additional sums as may be required for operation and maintenance of the project and for future costs incurred under section 4 of this Act.

Mr. CARROLL. Mr. President, the committee report states:

> The Fryingpan-Arkansas project has been under study and consideration for over 30 years. It has been ready for authorization for 8 years. However, it was not until recently that all interested parties in the State of Colorado were able to agree on the development.
>
> During the prolonged effort on the part of the State of Colorado and the people of the Arkansas Valley to secure authorization of this project they have expended over $700,000 of their own funds preparing project studies and doing the additional groundwork necessary in getting the conservancy district organized. The greatest portion of this sum came from the people of the Arkansas Valley. In 1958, they organized themselves into the largest water conservancy district in the history of Colorado, in terms both of population and assessed valuation. By doing so, they have demonstrated their willingness to raise from ad valorem taxes approximately $420,000 annually, based on present assessed values, to assist in project repayment and operation.

Legislation to authorize the Fryingpan-Arkansas project passed the Senate in the 83d, 84th, and 85th Congresses.

Mr. President, S. 284 would authorize the Secretary of the Interior to construct, operate, and maintain the Fryingpan-Arkansas project in the State of Colorado.

Fry-Ark is a multiple-purpose development of Colorado's water and land resources which will provide supplemental irrigation water and municipal and industrial water, flood protection for the Arkansas Valley, electric power and energy, fish and wildlife resources, and recreation opportunities.

The Senate Select Committee on National Water Resources has stated:

> If bold programs for the construction of storage reservoirs, reclamation projects, flood control facilities, and other works which have been conceived by the agencies involved are carried out, and if new techniques for desalting, evaporation control, and waste disposal now developed or being developed are applied, adequate water, both in quality and quantity, will be available. If we add to these programs the possibility that underground aquifers may be used for additional storage and that necessary interbasin transfers can be worked out, it will be seen that vigorous all-out water resource development will enable the water-short areas to play their full part in the future development of the national economy.

Mr. President, in the terms of the Senate Select Committee on Water Resources, the Fryingpan-Arkansas is a bold program. It is a vigorous, all-out development. It incorporates every facet recommended in the magnificent report from which I have just quoted.

The Senate has passed this project on three previous occasions. The proposal before us today is vastly improved over the ones we have previously considered.

PEOPLE OF ARKANSAS VALLEY WILL PAY FOR PROJECT

This project has vigorous support from the people of the Arkansas Valley.

Such support is evidenced by the fact that the people of the valley have pledged themselves to raise, by ad valorem taxes, about $500,000 a year to help repay the cost of this project. As I have stated, they have already spent over $700,000 in planning the development of the project.

SUPPLEMENTAL CROP WATER

This project will provide about six-tenths of an acre-foot of water per year to 280,000 acres of presently irrigated land. This will allow for two late season irrigations which will provide the vital water necessary to make a crop mature. The crops now have a water deficiency of about 30 percent, which means that as late summer approaches the farmers begin to lose a whole year's income from crops.

All irrigation water will go to presently irrigated lands.

Mr. President, I wish to emphasize this point. All irrigation water will go to presently irrigated lands.

No new lands will be irrigated. I repeat, Mr. President: No new lands will be irrigated.

The surplus crop problem will not be aggravated.

With a firm supply of water, a greater percentage of garden and vegetable crops will be grown, crops not in the surplus category. What are those crops? They are cantaloups, tomatoes, onions, potatoes, sugarbeets, and cucumbers. The Arkansas Valley is well known throughout the Nation for the wonderful crops which are grown there. In effect, this project will be a rescue operation to provide a firm supply of water to a chronic water-short area.

One of the prime purposes of the project is to furnish water to people for domestic use. Twenty thousand five hundred acre-feet of water will be distributed to cities from Colorado Springs and Pueblo to the Kansas line. Colorado Springs alone—and I wish to emphasize this—with its vital defense installations, such as North American Air Defense Command, Fort Carson, Ent Air Force Base, and the Air Force Academy, will get about 10,000 acre-feet of municipal water.

Water for industrial use will become available on the western side of the Continental Divide through the Ruedi Reservoir. It is hoped that this water will help to develop a great oil shale industry in western Colorado.

WATER QUALITY

Now I shall take a moment to discuss the quality of water. The project water going to Arkansas Valley cities will help to improve the quality of their drinking water. The quality of the drinking water of some cities in the valley has been criticized by the U.S. Public Health Service because of its mineral content which is excessively high. Actually, in some places the mineral content is so high that the water is approaching a level where it will be unfit for human consumption. Some of the people of that area realize this and are taking steps to correct the condition. The water coming from the Fryingpan-Arkansas project will dilute the salinity and mineral content of that water and will provide a water supply having an acceptable mineral content level.

Recently the Committee on Interior and Insular Affairs held hearings on the salinity of Colorado River water delivered to Mexico. This is a subject of serious international dispute. It is under conference today between the Mexican Government and the United States Government. Why? Because the Mexican Government says that the water which is going into Mexico has a high salinity content.

I point out that the drinking water in some Arkansas River Valley cities has a higher saline content than the irrigation water about which Mexico is complaining; but Mexico is talking about irrigation water, while we are talking about water for human consumption.

BENEFIT-TO-COST RATIO

The benefit-cost ratio on the project is higher than most reclamation projects in recent years.

Under the now outmoded Budget Bureau Circular A-47 the benefit-cost ratio is 1.64 to 1.

However, under the newly announced criteria the ratio for Fryingpan-Arkansas is 1.87 to 1.

This is a highly feasible project.

PROJECT REPAYMENT

Of the $169 million to be loaned to the people of Colorado to build this project, all but $19 million will be repayed.

About $75 million will be repaid with interest at a rate of 2.632 percent.

Eleven percent of the project cost is allocated for flood control, fish and wildlife, and recreation purposes, and is nonreimbursable.

Sixty-six million dollars, or 38.9 percent, is allocated to irrigation. As is always the case with such projects since the beginning of this program, when the money is loaned for irrigation purposes, the money is repayable with interest.

Twenty-two million two hundred thousand dollars, or 13 percent, is allocated to municipal and industrial water supply, and it also is repayable with interest. When I talk about industrial and municipal water supply, I am speaking about the military establishment in Colorado Springs; I am talking about the great CFI plant in Pueblo, which will receive this water for industrial purposes; I am talking about water to be used by the people of Pueblo; and also drinking water for the people in the Arkansas Valley.

To summarize, 89 percent of the authorized amount will be repaid. I do not know of another project which repays such a high percentage.

PROJECT POWER

The House and Senate hearings contain clear expressions of support from both private and public power interests. With both public and investor-owned electric utilities enthusiastically supporting the project, there can be no power issue. Not one person appeared before the Senate Committee on Interior and Insular Affairs in opposition to the bill. I remind the Senate that although the bill has passed the Senate three times in the course of many years, for the first time, and only a short time ago, the House of Representatives passed the bill with an overwhelming vote, for which we from Colorado are delighted, because, as I previously said, this project has been the dream of Colorado for 30 years. I myself have spoken for this measure ever since 1954. So after 12 years we have reached the point where the bill can become law. Thus we have before us a bill which has had full committee hearings, at which no adverse testimony was given.

This proposal was supported by President Eisenhower. It is a part of the reclamation program of the present administration. All Secretaries of the Interior with whom I have had any contact have favored the project. Reclamation engineers, scientists, and technicians have favored it. Now, in a relatively new administration, we find a new Secretary of the Interior, a new Director of the Bureau of the Budget, and a new President giving full support to this important proposal.

The Bureau of Reclamation is given full authority in the bill to build the necessary backbone transmission lines, and there is no controversy over this phase of the project.

The operating criteria, now formalized as House Document No. 130, together with provision for the construction of the Ruedi Reservoir in lieu of the Aspen Reservoir have resolved the questions and needs of the people of the Western Slope of Colorado. Now the entire State is unified and is 100 percent behind this project.

The former fears of the State of California were largely satisfied by negotiations resulting in protective provisions which are incorporated in the bill before the Senate today.

Mr. President, I express the hope of the people of Colorado that this project will be approved. In Colorado, this is not a partisan issue. Republicans, Democrats, and independents on both sides of the Continental Divide have given their full approval to the bill. The House of Representatives has passed the bill. Shortly, the distinguished senior Senator from Colorado [Mr. ALLOTT] will speak on the bill, and I am sure he will bear out what I have said.

This is not a political issue in our State. It is vital to the economy of southeastern Colorado, not only because it provides irrigation water, but also because it makes water available for municipal and industrial purposes. This water is essential to meet the population increase needs of our State with its expanding industry. Our State is growing. The population increase during recent years is phenomenal. I hope the Senate will pass this bill. This is a project of utmost importance to the people of Colorado.

Mr. PROXMIRE. Mr. President, will the Senator from Colorado yield for a question?

Mr. CARROLL. I am happy to yield.

Mr. PROXMIRE. First, I wish to say that I think the junior Senator from Colorado is a very eloquent and a very effective champion of his State in connection with many issues, and I know how dear to his heart this particular measure is. So it is with great hesitation that I indicate any opposition.

But I wish to obtain some answers; and I am sure the Senator from Colorado can give them, if anyone can.

PROJECT WILL BOOST CROPS ALREADY SURPLUS

It is my understanding that if the project is undertaken, the yield of alfalfa, feed grains, and other agricultural commodities will be substantially increased.

It is estimated that the production of alfalfa will increase by 115,000 tons—from 400,000 tons to 515,000 tons; and that the increase in the production of feed grains will be in the order of 2 million bushels. Of course this project will lead to the production of more agricultural commodities than those produced there now.

I am sure the Senator from Colorado is well aware of the fact that the taxpayers are being burdened by programs to take land out of production. In Colorado alone, 1,299,000 acres are in the Soil Bank, and over 4,700 farms have been taken out of production; and the total national cost of this reduction in production to the taxpayers is over $330 million.

Perhaps the Senator from Colorado will concede that this raises serious questions for Senators who represent other States, particularly States such as Wisconsin. In Wisconsin we now have a serious problem, and we are confronted with the possibility of having a limitation placed on our production of feed grains. What answer can I give to the farmers and the taxpayers in Wisconsin when they wonder about having the Federal Government spend $170 million on a project which will increase agricultural production; and when they will be confronted with a much greater cost than that in the future in paying for the storage and the cost of this additional agricultural production?

Mr. CARROLL. The Senator from Wisconsin can tell the farmers of his State that the increases in the production of wheat, corn, and sorghums will be only a drop in the bucket, because very little will be produced in this area. In the whole valley wheat is produced on only 30,000 acres. In the conservancy district we are talking about—which has pledged itself to repay the irrigation cost of the project—the figure is only 15,000 acres for wheat; and that is only a drop in the bucket for the entire national wheat program. Furthermore, we expect the farmers, once they get irrigation water, to substitute other crops for the wheat. These will be nonsurplus crops.

The corn in this district—which has pledged itself to pay for the water—amounts to only about 30,000 acres. The sorghum amounts to only 35,000 acres.

I wish to say to the Senator from Wisconsin that part of this area was known as the dust bowl in the days of Franklin D. Roosevelt. It is a very difficult area for farmers to live in. Some of the land in the valley is dry land, not irrigated land. The wheat is grown on dry land. The project water will go as supplemental water to land now under irrigation.

The farmers in the Arkansas Valley need water, because their income comes largely from what are called truck garden crops—cantaloups, onions, tomatoes, cucumbers, sugarbeets—although production of sugarbeets is being reduced. These are the crops this valley is noted for. No water will be put on new land. Instead, we are attempting to supplement the water now available there. In the late season, when the farmers need it, there is a deficiency of water; and because of that lack of water, the farmers' income for the entire year may be destroyed.

I refer to page 9 of the House committee report:

> Five crops constitute the bulk of farm commodities under loan or in the inventories of the Commodity Credit Corporation. * * * Of these, only corn and sorghums are produced to any extent on irrigated land in the Arkansas Valley. Wheat is not an irrigated crop in the valley, and only about 25 percent of the sorghums are irrigated. There are about 33,000 acres of irrigated corn in the Arkansas Valley. However, the records show—

And I think this is important—

> that there has been no CCC loan on corn in the Arkansas Valley in the last 2 years that has not been redeemed by the farmer. This is also true of an estimated 45,000 acres of irrigated sorghums in the Arkansas Valley. In other words, the Arkansas Valley uses its corn and sorghums for feeding operations where it is grown. The other crops produced and used in the valley for feeding—

And the Senator from Wisconsin mentioned alfalfa—

> are alfalfa and hay, silage, barley, oats, rye, and the byproducts from sugarbeets.

What will this mean? I will tell the able Senator from Wisconsin, and he can tell the farmers in Wisconsin. I repeat a quotation from a letter written by the Secretary of Agriculture Orville Freeman to the chairman of the Senate Interior Committee:

> We recognize that most of the farm products coming from irrigated land are not those for which there are serious overproduction problems. The provision of additional water to supplement present inadequate water supplies, as is proposed by the Fryingpan-Arkansas project, helps enable project farmers to adjust their production plans so they can respond to variations in production needs.

This is really why the farmers want this water; but this is not the sole purpose of this program.

Mr. PROXMIRE. I understand. But in regard to this particular subject, let me ask what will happen to the alfalfa and the hay. Obviously, eventually, it will be fed to cows and beef cattle and sold—through the milk pail and through the beef cattle that are slaughtered.

Mr. CARROLL. Let us say they will be consumed in the area.

Mr. PROXMIRE. They may be consumed in the area to a great extent, but that does not alter the economic impact.

Mr. CARROLL. They will be consumed in cattle feeding.

Mr. PROXMIRE. But to provide for this additional production seems to me to be illogical, in view of the fact that more than 4,700 farms in Colorado, I repeat, in Colorado itself, are now in the soil bank, and the owners of those farms are receiving payments from the Federal Government because they have taken their land out of production. Incidentally, I understand that those farmers are under contract not to graze their land or to cut hay on it.

So this situation seems to me to be a very clear case of the Government's paying money to the owners of the 4,700 farms not to produce crops on their land, and then turning around and paying an additional amount—which amounts, directly, to more than $230 an acre—to other farmers, so they can produce more crops. Though no additional acres will be brought into production by this project, the farmers who now are producing on the 280,000 acres will be able to obtain a greater yield from the acres they are now using. So these farmers will produce more; other farmers will produce less; and the result will be a very great drain on the taxpayers. It is hard for me to make much sense out of that.

Mr. CARROLL. The Senator from Wisconsin does not understand the geography of the Arkansas Valley. What he suggests would be true if we were to assume the premise the Senator from Wisconsin assumes. In that case, there would be some logic to what he says. But that has no application to this case. This valley is deficient in grains. It has to bring in grains to feed the livestock.

Mr. PROXMIRE. Exactly, and where do those grains come from?

Mr. CARROLL. Additional grain must be brought in—some from Kansas or from New Mexico.

Mr. PROXMIRE. Or from other parts of Colorado.

Mr. CARROLL. Let us assume that. But that is a very small part of what we are talking about. The great productive crops in this area are onions, tomatoes, and Rocky Ford cantaloups, about which I assume everybody has heard. Those crops are shipped all over the Nation. The water is needed for those kinds of crops. The other crops the Senator from Wisconsin is talking about are insignificant. Their production is not substantial in this area.

Mr. PROXMIRE. Certainly a 2-million-bushel increase in production is a substantial increase.

Mr. CARROLL. The Senator uses the figure 2-million-bushel increase in production. How does he arrive at it?

Mr. PROXMIRE. On page 26 of the House report there is a table which reveals that the yield for grains without the additional irrigation is 4,900,000 bushels, and the yield with it will be 6,900,000-plus bushels. The difference is over 2 million bushels a year.

Mr. CARROLL. The Senator is reading from the minority views.

Mr. PROXMIRE. I know that.

Mr. CARROLL. There has been some very vigorous opposition in the House, for reasons that do not pertain to crops at all.

Mr. PROXMIRE. Regardless of who is behind it, this table has been printed in the House report. If the table is not accurate, I would like to know. Is it or is it not accurate?

Mr. CARROLL. If it is, I will tell the Senator later. I will consult with persons who know about it. Any time anyone reads a minority report, he can find reasons for opposition.

This project has been a hotly contested reclamation program for 10 years. There was division even in our own State, because this is a transmountain diversion, and people in the western part of Colorado were concerned about water going out of their area and into the Arkansas River Valley.

The State of California had some qualms about the project, too. It has taken all these years to get this transmountain water diversion program. To do what? Some water will help the farmers, of course. But this water is also for municipal purposes in Colorado Springs. This is water for Pueblo. This is drinking water for people who are now drinking low quality, high mineral content water. As a matter of fact some of this domestic water is so bad the Office of Saline Water in the Department of Interior is looking into the possibility of small saline water pilot plants in the area.

I appreciate the concern of the Senator from Wisconsin about going home and telling his own farmers about this. I can remember when we brought up Colorado-Big Thompson 25 years ago. We had the same arguments against that project then, except in those days they said we were on the road to socialism. The private utilities fought the project. Now that wonderful transmountain project—and this is not Republican or Democratic propaganda—has brought $1 billion of wealth to the land and made the countryside prosperous. It has given us a great power grid. A part of the purpose of the Fryingpan-Arkansas project is to give us a great power grid which will help the farmers as we have helped them since the days of Franklin Roosevelt. The REA's and municipals will receive some of this power. The private utilities will participate by wheeling some of this power on their lines.

I appreciate the sincerity of the Senator from Wisconsin. There may be a small crop increase in the categories he has mentioned, but they are insignificant, believe me. The real purpose of the water will be to firm up the vegetable production of farmers where the water comes late in the season. The farmers in the State of the Senator from Wisconsin understand that if farmers do not get the water when they need it, their whole year's income is gone. To meet the farmers' needs is the basic purpose of the bill.

Assuming there will be some increase in the categories mentioned by the Senator from Wisconsin, it will be insignificant and incidental. We cannot have a perfect bill. We cannot shut off water from use by the people who will be drawn into the district. But the great percentage of the benefits will go to people who are not growing crops in surplus.

Mr. PROXMIRE. But of the total cost of $170 million, the portion allocated to irrigation is about $66 million.

Mr. CARROLL. That is true.

Mr. PROXMIRE. That is a tremendous amount of money. It is a high proportion. It is not insignificant. It is substantial and significant.

Furthermore, I understand the $66 million investment will bear no interest.

So it is interest-free. Therefore, there is a direct interest subsidy involved, in addition.

Furthermore, the fact remains, as the Senator has so well said, that without additional irrigation, feed grains have to be imported, perhaps from Kansas and other States, or from elsewhere in Colorado. But right now thousands of Colorado farmers are in the soil bank. They are in the soil bank and are getting a direct subsidy from the Federal Government for taking land, feed grain producing land, out of production. At the same time, we are asked to provide for a project that will permit other Colorado farmers to produce more, so they will not have to buy feed products from the outside.

POLICY IS CONTRADICTORY

I consider this a contradictory policy, although I have the greatest admiration and respect for the Senator from Colorado. I think he makes the best case possible out of the situation. It is difficult for me to see how he can justify the expenses under those circumstances.

If there were a shortage of production of feed grains or alfalfa, or any of these commodities, I could see where there would be some merit in the program; but when there are heavy surpluses, which are the heart of our whole farm problem, it is difficult for me to see how we can, in good conscience, vote for a $170 million project, $66 million of which will be for irrigation to bring more food production into operation.

Mr. CARROLL. I appreciate the Senator's remarks. I am only going to add for the Record this statement: We are talking about 280,000 acres. Of those 280,000 acres, about 80,000 are in the category about which the Senator from Wisconsin has commented. The Senator from Wisconsin can go home and tell his farmers this: We are talking about today's surpluses which may not be with us 8 years from now. This series of eastern slope Fry-Ark dams will not be completed for 8 years. As a matter of fact, under the operating criteria, we first have to build the Ruedi Reservoir which is on the western slope of the divide. It is a reservoir to gather water for future use in western Colorado and in no way effects the flow of the river to California. In effect it protects the interstate compact of 1922.

So it is going to take us years.

This is not an appropriation bill. It is an authorization. What we are trying to do is to set this program up so we may get it moving. Thousands of people are coming into our State each month. There is a great growth in the population of America, an increase of 3 million a year.

Mr. PROXMIRE. The Secretary of Agriculture has said that 20 years from now we will need less land than is used now. Because of dramatic improvements in soil chemistry and animal husbandry, we can produce more crops on less land. With a far larger population we are using less land now than we did 20 years ago.

Mr. CARROLL. That is not true of the Arkansas Valley. I have great respect for the Secretary of Agriculture. He is talking about an entirely different type of land.

Mr. PROXMIRE. I am sure it is not true of the Arkansas Valley, but the fact is that, if production is increased in the Arkansas Valley, that is going to contribute to the increased food production throughout Colorado, and therefore the rest of the country.

Mr. CARROLL. I thank the Senator. I have watched him month after month and year after year. He is one of the great fighters to save the taxpayers' money. The people of Wisconsin ought to know he is probing, as he has a right to do. But, after having probed here, I hope he can go home and explain to his farmers why the farmers of Colorado need help to put water on their crops.

Mr. AIKEN. Mr. President, will the Senator yield to me so that I may ask a question?

Mr. CARROLL. I yield to the Senator from Vermont.

Mr. AIKEN. Reference has been made to the Colorado River compact. Can the Senator advise me what States are signatories to the Colorado River compact?

Mr. CARROLL. There are the upper basin States and the lower basin States.

What we are seeking to do in this project, as I understand by the Ruedi Reservoir, is to provide a method of gathering water for western slope industrial, municipal, and irrigation use.

The water would be released as needed and would not effect the flow of the river.

Mr. AIKEN. Would this be operated under a commission?

Mr. CARROLL. Yes.

Mr. AIKEN. Would each State have a member on the commission?

Mr. CARROLL. The Upper Colorado River Basin Commission; that is correct.

Mr. AIKEN. How many members of the commission would the Federal Government have?

Mr. CARROLL. I will be frank with the Senator in saying that I do not know offhand, but I shall provide the answer for the Record.

Mr. AIKEN. Does the Senator know whether the Government will have any?

Mr. CARROLL. I shall find out in just a moment.

Mr. ALLOTT. Mr. President, will the Senator yield to me?

Mr. CARROLL. I understand the Government has one.

Mr. ALLOTT. Only one.

Mr. AIKEN. The Government has one?

Mr. CARROLL. I understand the Government has one; yes.

Mr. AIKEN. That would be because there are large areas of public domain involved?

Mr. CARROLL. I do not know the reason for it.

Mr. AIKEN. Or because of the involvement of the Department of the Interior?

Mr. CARROLL. I would suspect so.

Mr. AIKEN. Is the Federal member to be in an advisory capacity, or is he to be a voting member? Perhaps the senior Senator from Colorado could answer.

Mr. ALLOTT. My recollection, subject to correction, is that the Federal member is to be the chairman and to vote in case of a tie vote.

Mr. AIKEN. That would be a membership resulting from the Federal development involved?

Mr. ALLOTT. I say to the distinguished Senator that actually there are two main compacts. The first is the Colorado River compact of 1922; of which California, Arizona, New Mexico, Nevada, Utah, Colorado, and Wyoming are signatories. Then there is the Upper Colorado River compact; which is among Utah, Wyoming, Colorado, and New Mexico.

Each of the compacts has a separate commission. One is called the Colorado River Compact Commission and the other is called the Upper Colorado River Compact Commission. I presume the commissions were organized along these lines for the same reason that there was a compact commission between Kansas and Colorado. A Government representative serves on that commission.

There are areas of bureau lands involved. Of course, there has been a certain amount of Federal development of the river.

Mr. AIKEN. Because the Federal reclamation projects enter the picture, because the Federal lands come into the picture, and because the Federal Government really is heavily involved in the area, there is a Federal member?

Mr. ALLOTT. The Senator is correct.

Mr. AIKEN. That would be a reason for having a Federal representative on the commission.

Mr. ALLOTT. The Senator is correct.

Mr. AIKEN. I am asking these questions because a proposal has been made for a New England compact with six members representing the six New England States, and seven Federal members, which is a long way from my idea of an interstate compact. I wondered if the people of the Upper Colorado River Basin were quite as foolish or clever as some of my friends in New England appear to be.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. AIKEN. I was merely seeking information.

Mr. ALLOTT. If the Senator will permit me to answer, I would agree with the tenor of the Senator's remarks entirely.

Mr. AIKEN. I thank the Senator.

Mr. CARROLL. Mr. President, I wish to say to the able Senator from Vermont that the reason why I brought up the Colorado River compact of 1922 was to show the great fight it was necessary to make to draw the people together. There was some worry at one time about the people of California and the people of western Colorado.

The Ruedi Reservoir in western Colorado will be the first feature to be constructed. This will represent a storage of water for future development. This will take care of the needs of some of the irrigation needs of our western slope farmers.

Mr. AIKEN. Yes.

Mr. CARROLL. I was merely attempting to show the difficulties we encountered with respect to getting the whole project together, including the uniting of our own people in Colorado.

Mr. AIKEN. I think the States of the Colorado River Basin took a perfectly logical step in organizing the two compacts which now exist in that basin. That is a good way to bring about interstate cooperation and to settle interstate disputes.

Mr. CARROLL. I thank the able Senator from Vermont.

Mr. AIKEN. I would have no objection whatever to seeing similar compacts created in different parts of the country, in which similar problems exist.

Mr. CARROLL. I am inclined to agree with the Senator from Vermont. I do not know why there should be a predominant Federal group on such compacts.

Mr. AIKEN. There should not be.

Mr. CARROLL. Mr. President, I yield the floor.

Mr. WILLIAMS of Delaware. Mr. President, one of the main purposes of the bill before the Senate is to bring additional water to some 280,000 acres of agricultural crop-producing land at a time when the farmers in the United States already are producing more crops than we know how to use or take care of.

I recognize that there might be some good to the project if there were a need for the increased productive capacity of agriculture. Certainly at this particular time I see no need whatsoever in that regard.

Furthermore, the total cost involved under the bill, as listed in the report, is $170 million, but I doubt that even the sponsors of the proposal think the cost will stop anywhere near that figure. The best evidence of that is that the authorization carries some $170 million plus or minus such amounts, as may be justified at a later date. It would be an open-end authorization for an appropriation. It would be almost unlimited in amount.

With respect to the irrigation project alone, the cost of putting additional water on the 280,000 acres of land would average $236 per acre or a total of nearly $70 million. As the Senator from Wisconsin has pointed out, why should we pay $236 per acre to increase the productive capacity of 280,000 acres of agricultural land when at the same time in the same State the Federal Government is paying $40 or $50 an acre to farmers to take some 2 million acres out of production? It seems to me that the two programs cannot be reconciled.

Why pay $236 per acre to bring land into production only to have another Government agency pay $40 per acre annually to take the same type of land out of production?

I disagree completely with the argument that the crops to be raised are not crops which are in surplus. Of the 280,000 acres of irrigated land, 113,000 acres are for feed grains. Last year the Federal Government spent a total of approximately $700 million to retire 20 million acres of feed grain acreage from production. Now we are asked to spend some $60 million to bring in another 280,000 acres of cropland of which 113,000 acres will be for feed grain production. I suppose, after that has been brought into production we will be asked to pay the same farmers so much per acre in order to take it out of production.

Certainly this additional water will increase the annual yield of feed grains by several million bushels. This increased production would have to be supported by the Department of Agriculture.

The project would increase the annual production of alfalfa by 115,000 tons. There would be increased production of livestock, which would then be in competition with livestock of other areas.

I see no justification at all for this increased production at this particular time.

It is interesting to note that most of the witnesses who testified this year in favor of the bill, in preceding years had disagreed with the argument that the project was economically feasible or that it could be paid off.

This year these same agencies reversed their testimony without producing any basic reason.

As a result of rearranging some of the figures, allocating more of the cost to some other phase of the program, it has now been possible for the proponents to come up with an answer which, they say, proves the project economically feasible. In so doing, the argument is made that all of the cost of this irrigation project will be repaid. The $70 million cost is to be repaid how? It is to be repaid over a period of 50 years with no interest.

If Senators will consider the interest on $67 million over a period of years they will note that the interest cost in itself represents a substantial subsidy by the American taxpayers.

I have great respect for my two friends from Colorado. I can appreciate that in the area of which we speak, as is true of many other areas of the West, water is all important. If this were a time when we really needed an increase in acreage and an increase in agricultural production I would be wholeheartedly in support of the project. I could then see merit to the proposal. However, I do not see any merit to a proposal that under present conditions we spend $67 million to increase the productive capacity of 280,000 acres of cropland. This will only result in the increased production being put into Government warehouses.

In my opinion the bill as it is written and is now before the Senate should be defeated.

Mr. ALLOTT. Mr. President, it is with both great pleasure and firm conviction that I rise to speak in favor of S. 284, the bill which is presently before the Senate for consideration. This bill, sponsored by me and my junior colleague, would authorize the construction, operation, and maintenance of the Fryingpan-Arkansas Federal reclamation project in Colorado. This is a multipurpose project which would produce significant benefits not only for a large and populous area along the Arkansas River Valley, in Colorado, but also for the entire State and Nation.

The Arkansas Valley in Colorado was developed many years ago as one of the early irrigated areas in this Nation. It has become well known over the years for the irrigated specialty crops which it produces, such as vegetables, fruits, seed crops, berries, and famous Rocky Ford melons. As a lifelong resident in this valley, I have become intimately acquainted with the area's needs and problems, particularly with respect to the importance of irrigation to the economy, having practiced water law there for many years.

THE NEEDS OF THE AREA

There are in this valley several thousand miles of irrigation canals and ditches, almost all of which were constructed with private funds over a period of several decades. However, over the years the existing irrigation water supplies have proved to be inadequate and have amounted to less than 70 percent of the actual needs. As a result crop failures have occurred all too frequently.

Basically, the problem confronting farmers in the Arkansas Valley is a shortage of water at the critical moment in the growing season. On an overall basis, the area produces high-value specialty crops which are irrigated adequately during the forepart of the season by the spring runoffs. However, during July and August, at a time when these crops require moisture to see them through, water is not always available. From year to year, availability of water in July and August has spelled the difference between harvesting or not harvesting a good crop. Production records for the Arkansas Valley indicate this fluctuation very clearly and, translated into graph form, would show the highs and lows depending upon the presence or absence of water. The Fryingpan-Arkansas project would have a very salutary effect upon this situation. The supplemental water furnished by the project would fill the void and bring a greater measure of consistency to crop production.

In addition to these critical water shortages for lands presently under irrigation, there has been an extremely rapid growth of population in the municipalties in the area, including Pueblo, Colorado Springs, and other valley cities and towns. Additional water supplies for these cities will be necessary if these cities are to continue to grow. The only source of new water supplies adequate to meet these growing demands lies on the other side of the Continental Divide, unless the already short agricultural water supply is diverted to municipal use, thus further disrupting the agricultural economy of the area. The Fryingpan-Arkansas project, by means of transmountain diversion, will provide substantial quantities of additional water to help meet the increasing municipal demands.

Further needs in the Arkansas River Valley are for more effective flood-control protection and water-pollution abatement. Floods in the upper reaches of this river annually threaten the loss of property and discourage investment. The Fryingpan-Arkansas project would prevent a large part of the flood damages that occur with regularity. The project would also help materially in improving water quality.

These are the principle needs in the important Arkansas Valley of Colorado, needs which would be largely fulfilled by the Fryingpan-Arkansas project. There are in addition other functions which would be served by the project, and some of these are described in the report on the bill.

PREVIOUS CONSIDERATION OF PROJECT

Leaders of the area and of the State of Colorado have long recognized these needs and have been working long and hard to arrive at a solution. The Fryingpan-Arkansas project has been under study and consideration for more than 30 years, and the project has been ready for authorization for 8 years.

During all this period of time, the project has had the full support and unqualified endorsement of the administration, both under President Eisenhower and President Kennedy. The Senate has consistently recognized the great need for this project during this period by passing bills to authorize the project in the 83d, 84th and again in the 85th Congress. In each instance attempts to get authorization were stalemated in the other body because of expressions of concern that adequate protection was not contained in the project plan for users of water in the basin of the Colorado River from which water would be diverted to the basin of the Arkansas River.

The concern has now been laid at rest by the present bill, S. 284, which would incorporate revised operating principles and provide for increased storage capacity on the western side of the Continental Divide and contains other language designed to afford added protection to water users in the Colorado River Basin. The project is now envisioned by S. 284 has the firm support and endorsement of all principal water agencies in the State of Colorado, including the Colorado Water Conservation Board, and all State officials. This wide basis of support for the present bill is demonstrated by the fact that this year, for the first time in hearings on this project before the Irrigation and Reclamation Subcommittee of the Senate Interior Committee, no witnesses appeared in opposition to the bill.

DESCRIPTION OF PROJECT

I would like to turn now to a description of main physical features of this project and point out how the project will help meet the needs of the area which I have mentioned earlier.

One of the principal features of the project is a water collection system at high elevations on the western side of the Continental Divide. The water thus collected would then be carried through a 6-mile tunnel to the eastern slope of the mountains where it would be emptied into tributaries of the Arkansas River. I might say at this point that there is nothing new or novel about this type of transmountain diversion of water from one river basin to another. There are numerous examples of transmountain water diversions all over the West, some of them involving tunnels of far greater length. The amount of water that would be diverted through this tunnel would amount to an average of less than 70,000 acre-feet annually.

On the eastern side of the mountains, this new water would be stored along with other waters of the upper Arkansas River Basin in two reservoirs which will be enlarged from their present small capacities and a third reservoir to be constructed on the Arkansas River west of Pueblo. These enlarged reservoirs would be the Sugar Loaf Reservoir with a capacity of 117,000 acre-feet, the Twin Lakes Reservoir with a capacity of 260,000 acre-feet, and the Pueblo Reservoir with a capacity of 400,000 acre-feet. These reservoirs would serve important functions of river regulation, flood control, and water storage for irrigation and municipal use.

The project would also include hydroelectric power facilities consisting of seven powerplants having a combined installed capacity of 123,900 kilowatts, together with canals, switchyards, substations, and transmission lines. These power facilities will help meet the ever-increasing demands for electric power and energy in the project area and will produce revenues which will repay a major portion of the construction cost to the Federal Government.

There is included within the project plans for specific municipal water delivery facilities for furnishing additional muncipal water to Colorado Springs and several Arkansas Valley towns; however, these delivery facilities would be constructed by the United States only if construction by the communities themselves prove infeasible.

An important feature of the project which differs from plans contemplated by the proposed legislation in earlier Congresses is the construction of Reudi Dam and Reservoir on the western side of the Continental Divide. Reudi Dam and Reservoir, with a storage capacity of 100,000 acre-feet, would provide replacement storage to protect existing water users in the Colorado River Basin and would provide storage capacity to serve future multiple purposes in western Colorado. This unit would be a substitute for a smaller Aspen Dam and Reservoir proposed in earlier bills.

FINANCIAL ASPECT OF PROJECT

A study of the financial features of this project will reveal that this not only is a good project, it is not only a project that is completely sound from a financial standpoint, but it is in many respects one of the best reclamation projects that has come before the Senate for a long time. Some of the outstanding features of the project are the following:

First. Of the total cost of the project, estimated to be $169,905,000, approximately $151 million—or 89 percent—is reimbursable to the Federal Government. I want to point out that 89 percent is an unusually high percentage to be reimbursed. The Senate has considered and approved other reclamation projects during this Congress in which as little as 66 percent of the cost was reimbursable to the Federal Government, the remainder of such cost being allocated to flood control, fish and wildlife, or recreation purposes.

Second. Another important feature is that most of this money, actually 56 percent of it, will be reimbursed to the Federal Government, with interest. Under many projects coming before Congress a far smaller percentage of the reimbursable cost will be repaid with interest.

Third. A third outstanding financial feature of the project is that of the portion of the cost allocated to irrigation, and which under standard reclamation policies is to be reimbursed without interest, over 70 percent will be repaid by water users.

Recently a project was reported from the Senate Committee on Interior and Insular Affairs with respect to which 6 percent of the irrigation costs were to be paid by the water users.

This repayment will start immediately upon completion of construction, without awaiting the usual 5 or 10 years development period provided in many projects. This is a definite constrast to the typical reclamation project under which 70, 80, and even 90 percent of the interest-free irrigation allocation is to be repaid through assistance from power revenues which may not be available for such purposes for another 25, 50, or even 75 years. Because 70 percent of the irrigation allocation is to be repaid in this project by the water users and local conservancy district tax revenues, a substantial interest saving to the Federal Government will be realized. I believe this project calls for one of the highest rates of return by the water users of any project that has been before Congress for many years.

These financial features of the Fryingpan-Arkansas project combine to make this an outstanding example of sound multipurpose reclamation development.

IRRIGATION

Because all of us in the Senate are justifiably concerned about the problems of agricultural surpluses, I want to say to my colleagues that the irrigation features of this project would not add to the surplus problems. The irrigation water provided by this project would be used solely as a supplemental water supply to help eliminate the present irrigation water shortages on 280,000 acres of lands which are and have been irrigated for many, many years. This will make the difference between crop failures and successful farming in the area, and it will stabilize the agricultural economy. I wish to reemphasize that not 1 acre of new land will be brought under irrigation by this project.

With assurances of adequate irrigation water supplies from the Fryingpan-Arkansas project, farmers will turn ever more to the high-value specialty crops, and thus the project will help correct the problem of farm surpluses to some extent rather than contribute to it.

CONCLUSION

In conclusion, I wish to emphasize that there are critical needs in this area for the many and diverse benefits which this project will provide. This bill, S. 284, is the culmination of many years of study and planning—of give and take among the varied interests involved. In its present form it will amply fill these needs. It has the full support and endorsement of all major groups who have been involved in the study and planning for the future of this area and the State of Colorado.

Because of these factors and the sound financial aspects of the project, I am happy and proud to recommend the bill to my colleagues in the Senate. I hope the Senate will see fit to act promptly and favorably upon this important legislation.

Mr. President, for the sake of the record I have procured various figures which I think we should place in the RECORD at this point.

First, the bill provides not an open-end appropriation, but provides, on page 12, line 9 "plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering cost indexes applicable to the types of construction involved herein. There are also authorized to be appropriated such additional sums as may be required for operation and maintenance of the project and for future costs incurred under section 4 of this Act"—all of which is in accord with the reclamation laws of the United States.

I should like to discuss for a moment the grain problem. In the area there are approximately 30,000 acres of corn, 35,000 acres of sorghum, and 15,000 acres of wheat. That is in the irrigated section of the Arkansas Valley. It amounts to about 80,000 acres altogether. As my colleague said awhile ago, the area is a feed grain importing area. In the Arkansas Valley, where I have lived all my life, we import feed grains because of the feeding operations.

When we are provided with a supplemental supply of water, the water which is devoted to the raising of crops will go into the specialty high-production crops—not wheat, not corn, and not feed grains. No man in his right mind would be raising those crops when he could raise specialty crops, such as onions, tomatoes, vegetables, and produce of that sort. In that respect I think we must keep in mind an overall picture of the project.

First, it is now contemplated that 20 percent of the water would go to supply municipal needs. In my opinion, before the project is completed, at least 50 percent of the water will go to municipalities and the rest will go to make a supplemental water supply. Distributing approximately 35,000 acre-feet to more than 280,000 acres could not possibly contribute to overproduction.

We are talking about two types of crops. First, we are talking about crops which are surplus. The supplemental water would help to diminish the amount rather than increase it.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield to the distinguished Senator from North Dakota.

Mr. YOUNG of North Dakota. I commend the distinguished Senator from Colorado for making a strong case for the project. The arguments against projects of this kind are usually based on the question of food surpluses. If we waited to start irrigation projects in the United States until the time had arrived when we did not have food surpluses, we would not have started an irrigation project in the last 100 years. Ever since the beginning of our Nation we have had surplus food. If it had not been for the great irrigation projects in the West, we would not have been able to provide opportunity for tens of millions of people in the great empire of the western part of the United States.

Mr. ALLOTT. I thank the distinguished Senator from North Dakota. He is entirely correct. As he knows, we are able to produce wheat and feed grain on our dry land with much better facility than it can be done on irrigated acres, particularly so far as the economics of the operation are concerned. I am sure that the Senate from North Dakota is well aware of that fact.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield to the distinguished Senator from Arizona.

Mr. GOLDWATER. I wish also to commend the senior Senator from Colorado for so eloquently explaining the purposes of the project. I am very happy to support him in his effort, for I come from a portion of the country that would be desert if it were not for reclamation.

I point out that in listening to the debate this morning, I observed what I believe to be a misunderstanding on the part of Senators who do not live in reclamation areas. The argument is that we would bring substantial amounts of new land into production. While some new land would be involved, what we would really do is merely to firm up the supply of water we must have in that particular portion of the West to guarantee that producing acres will continue to produce.

It is natural that in doing so we expect some additional acres to be put into production. But I point out, in agreement with what my distinguished friend from North Dakota has just mentioned, that our country has always been a surplus producer of agriculture. Those of us who complain about surpluses in agriculture today are complaining about tremendous surpluses. We could not operate an agricultural economy such as ours without some surplus. We have always had a surplus. The surplus has been America's great contribution to the world and to world trade. If it were not for the surplus condition that has existed in American agriculture ever since our country began to produce, many areas of the world today would be faced with famine.

We, with our ability to produce all that we need in agriculture, and with only 8 percent of our people engaged in agriculture—and probably only half of that 8 percent engaged in the actual production—are showing the world what can be done.

Reclamation, I might say, has been the great producer.

In closing this part of the argument for the project in Colorado, I might mention that even though we produce surpluses today in about 30 percent of our agricultural production, to the extent that we feel are overbearing, every acre that we have in production now will have to produce six times as much as is now being produced within 20 years, or we will have to find new land. I believe that in the land effort that is being made throughout the West, where we can substantiate the projects by feasibility and logic, lies the answer.

I thank my friend from Colorado for having pursued this matter assiduously and carefully through the Interior Committee in the years that he has been in the Senate. His contribution to his own State of Colorado and to the entire West has been immeasurable. I thank him.

Mr. ALLOTT. Mr. President, I thank my good friend from Arizona, particularly for his kind remarks.

As a part of my remarks, and in substantiation of what the distinguished Senator from Arizona has stated, I ask unanimous consent to have placed in the RECORD at this point the tables shown at pages 18 and 19 of the hearings; also a letter from the Secretary of Agriculture to the Honorable WAYNE N. ASPINALL, chairman of the House Committee on Interior and Insular Affairs.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TABLE I.—*Assessed property value, total property tax revenue, and total sales tax revenue for counties influenced by Colorado-Big Thompson project, 1950 and 1961*

DEPARTMENT OF AGRICULTURE,
Washington, D.C., June 8, 1962.

Hon. WAYNE N. ASPINALL,
Chairman, Committee on Interior and Insular Affairs, House of Representatives.

DEAR MR. ASPINALL: This is in reply to your letter of June 2, 1962, about the relationship between the proposed Fryingpan-Arkansas reclamation project in Colorado and the projected need for land to meet future national agriculture production requirements.

As is indicated in your letter, we understand the project would not bring new lands into production but would involve the reorganization of existing irrigation facilities and the supplying of supplemental water to make possible increased efficiency in the management of existing irrigated farms in the project area and minimization of waste that comes from losses in years of short water supply.

This is consistent with a major objective of this Department to provide appropriate and needed services for improvement of the family farm pattern and of farm and rural living. It is in keeping with the provision of technical assistance to individual farmers and ranchers, taking into account present national production needs, to help develop efficient use of soil and water resources, and to protect productive agricultural land to meet future national needs.

To attempt to balance agricultural production with market needs by eliminating sound reclamation and irrigation projects would, a I have publicly stated, be tantamount to deliberately promoting inefficient use of agricultural resources.

We feel that reclamation and irrigation have a highly necessary role to play in the wise present and future use of national land and water resources for the economic growth of the Nation.

We recognize that most of the farm products coming from irrigated land are not those for which there are serious overproduction problems. The provision of additional water to supplement present inadequate water supplies, as is proposed by the Fryingpan-Arkansas project, helps enable project farmers to adjust their production plans so they can respond to variations in production needs.

We consider that sound reclamation and irrigation projects and the land use adjustment proposals of the food and agriculture program for the 1960's to be compatible with each other.

Sincerely yours,

ORVILLE L. FREEMAN.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. WILLIAMS of Delaware. I understood both Senators from Colorado to say that in their opinion this was not an open-end appropriation and that they thought the $170 million represented a realistic estimate of the approximate cost of the project. I therefore wonder if the Senators would agree to an amendment so as to strike out on page 12, line 9 of the bill all after "$170,000,000."

This would have the effect of putting a ceiling on the cost.

In other words, the amendment would strike out the remainder of the language which authorizes additional appropriations without the necessity of coming back to Congress.

Mr. ALLOTT. I will have to say to my distinguished friend from Delaware that he must realize that at the moment we are in a rather delicate situation so far as Congress is concerned, and, regretfully, I could not agree to any such amendment. I understand the Senator's concern, namely, that there is a little something left open, based upon construction costs. However, it is my interpretation that it is meant to be limited in the way described in the last section of the bill; namely, that the only modification can be on ordinary fluctuations in construction costs, as indicated by the engineering cost indexes.

Mr. PROXMIRE. Mr. President, will the Senator yield on that point?

Mr. CARROLL. I should like to have the Senator from Delaware conclude his questioning first. Then I shall yield to the Senator from Wisconsin.

Mr. WILLIAMS of Delaware. The Senator knows that the ultimate cost of some of these projects ofttimes double the original estimate. I have heard some estimates that the additional costs of this project will ultimately be increased by another $100 million. Some think that this project might ultimately cost $270 million instead of $170 million.

Both Senators from Colorado have stated that they feel that $170 million is a reasonable figure. If it is, then let us strike out the remainder of the language on page 12, which gives additional authority.

Mr. ALLOTT. There is no additional estimate of that kind in the bill. I do not believe anyone could put that interpretation on the language in the bill. In the second place, I should like to call to the attention of my friend from Delaware what appears in the hearings before the subcommittee in the House of Representatives, at page 10:

> The total estimated cost of the project of $169,905,000, based upon October 1958 prices, has not been indexed nor changed. Review of reclamation cost indexes from October 1958 to October 1960 shows that the composite construction cost index declined slightly during the 2-year period from 1.26 to 1.25 (1949–1951=1). Application of component indexes to the major types of features in the Fryingpan-Arkansas project indicated an overall decline of about 1 percent of the total project cost. The insignificant downtrend does not warrant a detailed estimate revision at this time; therefore, the previous project estimate of $169,905,000 has been retained for this evaluation.

As I said, personally I would not object to any minor amendment like this, except my good friend from Delaware knows, as I do, that I am not in a position to accept the amendment, because to accept an amendment at this time would mean that we would have to go to conference with the House, and this would, in effect, lose us the bill.

Mr. WILLIAMS of Delaware. I most respectfully suggest to my good friend from Colorado that there are several amendments in the bill already, and therefore it will be necessary to go to conference with it anyway. This would merely be one more amendment.

In replying to my argument supporting the limiting of the amount to $170 million the Senator from Colorado has agreed that the original estimate was adequate in that the prices have declined over the years; therefore, why not accept the amendment if this amount is more than adequate? To accept the amendment would solve the problem; it would eliminate the possibility of the cost of the project being raised without coming back to Congress.

Mr. ALLOTT. I will not accept any amendment. The Senator has an interpretation of the last section of the bill entirely different from mine.

Mr. WILLIAMS of Delaware. I shall offer the amendment. While I appreciate that the Senator may not be able to accept it on behalf of the committee, I hope that he will remain silent and not oppose it. Both he and his colleague made an excellent argument in favor of the amendment when they said that the cost will not exceed the $270 million figure anyway. If so, why not accept the amendment?

Mr. ALLOTT. If the Senator thinks I have made a speech in favor of his amendment, he is certainly laboring under a misapprehension. He has an entirely different interpretation of that language from mine.

Mr. PROXMIRE. Mr. President, will the Senator yield for a question?

Mr. ALLOTT. I yield.

Mr. PROXMIRE. Would not the Senator from Colorado agree that the amendment offered by the Senator from Delaware makes good sense, in limiting the authorization, in view of the similar experience that was had with the Colorado-Big Thompson project? I read from the minority views in the committee in the House of Representatives:

> Under similar conditions on the Colorado-Big Thompson project in Colorado a few miles to the north, the Bureau of Reclamation found it necessary to substitute tunnels and covered conduits for the open canals originally proposed. This change in plans has been stated to be one of the major reasons why the construction cost of that project to date has nearly quadrupled over the estimates offered to Congress.
>
> The former Secretary of the Interior has reported that if covered conduits are found to be required, the total construction cost of the Fryingpan-Arkansas project would be increased about $64 million and that such an increase would render the project infeasible.

In view of that possibility, as shown by those who vigorously protested this possible increased cost in the House committee, and who felt that it seemed to them to be a real possibility, the amendment of the Senator from Delaware would be good protection against higher costs.

Mr. ALLOTT. I may have a hard time explaining this point to my friend, unless he has seen reclamation projects and irrigation projects operating under these circumstances. The Department of the Interior and numerous witnesses—in fact all of the technical witnesses as well—have said that covered conduits or enclosed conduits are not necessary for the operation of this project. What they do when they operate them in the winter is to run in the water, the ice freezes over, and then they run water under the ice.

This may sound extremely simple, but it is an operation which is used all the time in all the irrigated areas of our country. It is true that the cost of the Big Thompson increased, but it is also true, as the figures which I have just placed in the RECORD will show, that far beyond that amount was recovered in income taxes from this one area alone. In addition, I hope the Senator from Wisconsin will give us the benefit of the fact that the period between the time when the Big Thompson was first authorized and the year it was finally completed was one of the fastest inflationary periods this country has ever seen.

Mr. PROXMIRE. If it happened that conduits which had not been expected were needed for the Big Thompson, why could not the same situation also happen with respect to this project?

Mr. ALLOTT. They are entirely different types of operation. The Fryingpan operation consists only of gathering water. It is a collection system on the western side of the mountain, on the Fryingpan. It is slightly over into the Roaring Fork. The water would then be conducted by a tunnel through the Continental Divide, from which, because of the fall, it can be conducted through open ditches. There is no reason in the world why that cannot be done. This sort of thing is being done all the time in Colorado and in other places. There is no reason to believe that the law of physics may suddenly be reversed.

Mr. PROXMIRE. Once again, if the Senator from Colorado is correct, and there will not be a problem of covered conduits which will result in increasing costs, I can see no harm in the amendment proposed to be offered by the Senator from Delaware [Mr. WILLIAMS]. It makes sense.

Mr. ALLOTT. It does not make sense, in this respect. Regardless of whether there are closed conduits, we do not have control of the cost of construction index. As I understand the bill, anything such as the Senator from Wisconsin has in mind could not be done.

Mr. PROXMIRE. The Bureau of Reclamation project and planning report in 1950 designated the Fryingpan project as the initial development of the potential Gunnison-Arkansas project.

Mr. ALLOTT. Who made that statement?

Mr. PROXMIRE. The Bureau of Reclamation project and planning report in 1950.

Mr. ALLOTT. That is correct.

Mr. PROXMIRE. It designated the Fryingpan project as the initial development of a potential Gunnison-Arkansas project. The Gunnison-Arkansas project would, I believe, involve a construction cost, according to the minority, of $1 billion. It would involve 900,000 acre-feet annually from the Colorado River Basin, or almost 10 times the amount of water proposed for diversion by this bill. If we leave a loophole that allows for additional construction, I want to have it clear in the record that the Senator from Colorado is assuring the Senate that this particular authorization bill could not be applied to an expansion of the Fryingpan-Arkansas project into the Gunnison-Arkansas project.

Mr. ALLOTT. I am very happy to give the Senator from Wisconsin such assurance. I call his attention particularly to page 2 of the bill, between line 8 and the end of that paragraph, which specifically provides:

> Such modifications or additions as may be required in connection therewith shall not, however, extend to or contemplate the so-called Gunnison-Arkansas project; and nothing in this Act shall constitute a commitment, real or implied, to exportations of water from the Colorado River system in Colorado beyond those required for projects heretofore or herein authorized.

Does that answer the Senator's question clearly and unequivocally?

Mr. PROXMIRE. I thank the Senator from Colorado.

Mr. CARROLL. I have only a few other remarks to make concerning the bill. I wish to quote from the foreword of Report No. 29 of the Senate Select Committee on National Water Resources:

> An ample supply of good quality water is essential to the continued welfare of modern civilization. If the economy of the United States is to continue to grow and prosper there must be adequate supplies of water available for our population, our agriculture, and our industry.

Mr. President, the Fryingpan-Arkansas project will be a living example of the wisdom contained in the foregoing quotation. This project makes water available for all of our population through the wonderful recreation facilities which will be provided by its construction. It will furnish irrigation water for the farmers in the Arkansas Valley and will alleviate the chronic shortages experienced in this area, thus permitting the agricultural economy to move forward and help to stimulate the economic growth of this Nation, which is so vital toward maintaining our leadership in the free world. The quantity and quality of water necessary to maintain industrial progress in this valley will also be enhanced. The dispersion of necessary industrial development, so vital to our defense effort, will be one of the intangible benefits to be derived from this undertaking.

As Senators know, a project similar in nature to the one which we are considering today has been approved by the U.S. Senate on three different occasions. Previously the House of Representatives has not seen fit to concur in the action of the Senate. This lack of concurrence was brought about by the fact that unanimity of support had not been achieved in the State of Colorado. Some of the States of the lower basin of the Colorado River were fearful of the effects this project might have on their future development. This made it necessary for the proponents of this project to improve the project plan to a point where it would be acceptable to the objectors. In many respects the lack of favorable action by the House of Representatives has been a blessing in disguise. The project we have before us today is vastly improved over those previously considered and by the promulgation of operating principles and changes in the authorizing legislation we have before us now an undertaking which has the unanimous support of the State of Colorado and which has answered practically all of the previous objections of the States of the lower basin of the Colorado River system.

The vigorous support in the Arkansas Valley has never wavered. The seed for this project was developed over 30 years ago. The careful, continuous nurturing of this seed by the people of the Arkansas Valley has permitted it to germinate and with favorable action by this body today the seed can ripen into a harvest of bounty which will go on far beyond the expected life span of any of us here today. These people, together with the State of Colorado, have invested over $700,000 in the study, design, and development of this project. The citizens of the Arkansas Valley have a good realization of the indirect benefits which they will receive from this development. The Southeastern Colorado Water Conservancy District, which will be the contracting entity for repayment of the reimbursable costs of this project, encompasses an area of approximately 350,000 acres. Included in this area are the second and third largest cities in the State of Colorado. Although only 280,000 acres of this area will receive water from the operation of this project, the entire conservancy district has pledged themselves to raise, by ad valorem taxes, about $500,000 a year to help repay the cost of this project. Their total contribution will exceed that of the United States Government during the life of the project. The stimulus to the overall economy of this Nation will provide benefits many times the nonreimbursable items contained in the project repayment report.

Now let us examine, on a use-by-use basis, what this project will do.

First let us consider the irrigation use, which is the dominant purpose. The people of this valley are plagued by a chronic shortage of late season irrigation water. This makes it necessary for the farmers to plant corps which will mature early and thus avoid the risk of crop failure due to the lack of late season water. This has, historically, forced many of these farmers to the production of crops which are now classified in the surplus category. The provision of late season water will increase the variety of crops which can be grown and will undoubtedly result in a greater percentage of specialty crops such as common vegetable and garden crops which are not in the surplus category. This then could be classed as a rescue operation not only as regards the economy of the Arkansas Valley but also includes the agricultural surplus problem. I submit to you that the increased diversity of agricultural operations, which the late season water will permit, will ultimately result in the dimunition of the very, very small percentage of surplus crops now produced in the Arkansas Valley. The operation of this project will provide about six-tenths of an acre-foot of water a year to 280,000 acres of presently irrigated land. For you who are not familiar with irrigation procedures let me say that this will allow for two late season irrigations which will extend the effective growing season in this area from 15 to 30 days. Thus, the water necessary for maturing later season crops, which generally provide a higher cash return, will be available. These good citizens are not amateurs in the field of farm economics. They will raise the crops which will provide them with the highest return per acre.

What does this project do in the field of municipal and industrial water uses? An annual increase in the municipal and industrial water supply in the amount of 20,500 acre-feet will be made possible. The water from this project will have a quality which will be a vast improvement over the water supplies generally used by the municipal and industrial complexes in the Arkansas Valley. This will be a firm supply which will permit continued growth and development of municipal and industrial operations in the valley.

As you may recall, early last fall the Government of the Republic of Mexico protested vigorously to the Government of the United States with respect to the quality of water which was then being delivered to the Republic of Mexico in the limitrophe section of the Colorado River. The deliveries of the Colorado River water to Mexico were primarily for the irrigation of winter crops in the Mexicali Valley in Baja California. The Mexicans were complaining about water which had a total salinity of approximately 2,500 parts per million.

Recent publications of water supply papers, by the U.S. Geological Survey, relating to the quality of water in the Arkansas Valley revealed that some of the cities and towns in the Arkansas Valley were forced to use water with a total salinity of up to 3,300 parts per million. I think it would be shocking for the U.S. Government to spend time and money to assist in alleviating a problem in the Republic of Mexico without giving equal concern to a problem far more distressing, which is faced by the citizens of our own great Nation. The enhancement of the quality of water for the citizens of the Arkansas Valley will not be in the nature of an aid program.

Under existing laws and policy every dime advanced for the development of municipal and industrial water supply will be repaid together with the interest cost to the Government. This is in no sense a grant-in-aid but is a loan. This loan will enable our people to pull themselves up by their own bootstraps to a place where they may receive domestic water at least equal in quality to the irrigation water presently delivered to our sister Republic to the south.

Now as to flood control—the city of Pueblo is perennially plagued by flash floods in the Arkansas River. These floods historically have resulted in substantial damage to property and in loss of life. It is essential that the city of Pueblo be provided protection from these devastating floods. The flood control portion of the Pueblo Reservoir will result in alleviating flood damage, estimated by the Corps of Engineers to amount to an average of $720,000 per year. The incorporation of reservoir capacity for controlling floods into this project will result in controlling the flow of the river so that additional uses will be possible in addition to the alleviation of damages resulting from flooding. The high sediment load carried by these flash floods and later deposited in the form of sandbars, etc., in the lower reaches of the river raise havoc with headgates, bridges, waste disposal outflows, and other necessary channel uses. The sediments which will be trapped in the sediment storage capacity incorporated into the Pueblo Reservoir will benefit the valley to the extent of $141,000 per year, as estimated by the Corps of Engineers.

Fish and wildlife benefits will be provided not only in that portion of the Arkansas Valley affected by the project but also in the reach of the Fryingpan River at and below the Ruedi Reservoir site. The Fish and Wildlife Service has estimated these benefits to amount to $172,000 per year. In addition to the fish and wildlife benefits the National Park Service has estimated recreation benefits amounting to $80,000 per year in the reaches of the streams affected, on both sides of the Continental Divide.

Now let us examine the power potential of this project. The water from the Fryingpan River, carried by tunnel through the Continental Divide, emerges in the Arkansas drainage at a high elevation. This water, mingled with the waters of the Arkansas River drainage also originating at high elevations, must fall thousands of feet before it reaches the area of use. This quantity of water falling through the rocky, precipitous gorges of the Arkansas River contains tremendous amounts of energy. It would be uneconomic, from a national standpoint, to waste this energy. Therefore, powerplants have been provided in the project plan to extract the energy from this falling water and convert it to electric energy for the use of all citizens within economic transmission distance of the powerplants. A ready market exists for all of the energy which can be generated by this project at prices which will be attractive to the potential users. It is estimated that power benefits amounting to $3,600,000 per year will be realized by converting the falling water energy to electric energy for use by people.

My purpose in citing the annual benefits attributable to the various uses of water is to let you see more clearly the tremendous benefit to cost ratio realized in this understaking. The benefit to cost ratio, estimated under the provisions of the now outmoded Circular A-47, is established at 1.64 to 1. If we were to analyze the benefit-cost ratio under the newly announced policy for determination of this factor, the ratio would increase to 1.87 to 1. The ratio of benefits to cost on this fine project have, however, never been at issue. This is one of the most feasible projects we have had the good fortune to consider in many years.

Now let me briefly describe the project plan of development. A system of canals and tunnels would be constructed on the upper tributaries of the Fryingpan and Roaring Fork Rivers in western Colorado for collecting an average of about 69,000 acre-feet of water annually which would be diverted to the Arkansas River Valley through the 5.3 mile Fryingpan-Arkansas tunnel. On the eastern slope the water would be stored initially in the Sugarloaf Reservoir, which is to be enlarged under the project plan from its present capacity of 17,000 acre-feet to 117,000 acre-feet. From there the regulated water would flow through the Elbert Canal and powerplant into the Twin Lakes Reservoir which would be enlarged from its present active capacity of 56,000 acre-feet to 260,000 acre-feet. In addition to the imported water, water from the Arkansas River would be diverted into the Twin Lakes Reservoir by construction of the Snowden Diversion Dam and Canal. The enlargement of the Twin Lakes Reservoir would also permit the Twin Lakes Canal Co. to export an additional 14,000 acre-feet of water annually. From the Twin Lakes Reservoir the water would be diverted through five additional powerplants before reaching the Arkansas Valley service area.

The principal storage facility on the Arkansas River would be the 400,000 acre-foot Pueblo Reservoir where the flows would be regulated for irrigation, for municipal use, and for flood control. An additional powerplant would be constructed at the outlet of the Pueblo Reservoir.

The entire power system, consisting of seven powerplants and related facilities, would have an installed capacity of 123,900 kilowatts. These powerplants would generate approximately 503 million kilowatt-hours per year. Specific municipal water facilities for conveying water to the city of Colorado Springs and other Arkansas Valley towns would be constructed by the United States only if construction by the communities themselves proved unfeasible.

In western Colorado the Ruedi Dam and Reservoir would be constructed on the Fryingpan River, about 14 miles above the town of Basalt, Colo. The Ruedi Dam and Reservoir with a capacity of about 100,000 acre-feet, would provide the replacement water for the water diverted to the Arkansas Basin and would also provide additional regulatory storage capacity to serve future multiple uses in western Colorado. Only about 28,000 acre-feet of capacity is needed in connection with the diversion to the Arkansas Basin. It is this feature of the project which provides for development and use of water in both eastern and western Colorado. The legislation also requires the Secretary of the Interior to investigate and report on the need for an additional reservoir of about 5,000 acre-feet capacity on the Roaring Fork River above its confluence with the Fryingpan River. The purpose of such an additional reservoir would be to offset any adverse streamflow conditions on the Roaring Fork River in the vicinity of Aspen, Colo., which might occur as a result of the Fryingpan-Arkansas project operations. The entire cost of the Ruedi Dam and Reservoir is included in the cost of the Fryingpan-Arkansas project for repayment purposes even though three-quarters of the storage capacity will be available to serve future needs in western Colorado.

The Salida powerplant, named for the nearby town of Salida, Colo., will be the largest plant of the group of seven to be constructed. This powerplant will be the key to the power generating facilities and is located immediately adjacent to the proposed extra-high-voltage transmission system scheduled for construction in connection with the Colorado River storage project.

Utilizing the capacity in this transmission line, together with capacities in transmission facilities made available by the Southern Colorado Power Co. and the Public Service Co. of Colorado, both investor-owned utilities, will make possible the distribution of project energy to REA cooperatives in the area who will purchase most of the power and energy generated. These include the Southeast Colorado Power Association at La Junta, the San Isabel Electric Association at Pueblo, and the Sangre de Cristo Electric Association at Salida. These REA associations serve more than 35,000 rural people living in 17 counties in southeastern Colorado, comprising approximately one-fourth of the State's total area. The investor-owned utilities have also offered to purchase all of the power and energy not required by the aforementioned preference customers.

The Fryingpan-Arkansas project which you are considering today is designed as a completely self-contained unit. Its approval by the Congress implies no commitment for any future transmountain diversion project from the Colorado River Basin to the Arkansas River Basin, and there are no plans for any such project.

Eighty-nine percent of the cost of this project will be repaid to the Federal Government. Of this 89 percent to be repaid more than half will be repaid with interest. Nineteen million dollars or 11 percent of the project cost is allocated for flood control, fish and wildlife, and recreation purposes—these are nonreimbursable items under existing policy; $66 million or 38.9 percent is allocated to irrigation, repayable within 50 years without interest; $66,700,000 or 36.8 percent is allocated to power production, repayable within 50 years with interest; $22 million or 13.1 percent is allocated to municipal and industrial uses, repayable with interest within 50 years. You can readily see, therefore, that the $170 million, the estimated construction cost of the project, is, with the exception of the 11 percent nonreimbursable item, a loan to these people in the Arkansas Valley which will enable them to take their proper place in the economic structure of the State of Colorado and these great United States.

The bill before us today is noncontroversial. The operating principles formalized as House Document No. 130, together with the construction and operation of the Ruedi Dam and Reservoir, provide protection to interests on the western slope of Colorado who have previously opposed the authorization of this project. The construction of the Ruedi Dam and Reservoir will provide substantial benefits to these people on the western slope of the Continental Divide in Colorado which would be extremely difficult, if not impossible, for them to provide with their own resources. The combination of the protection afforded by House Document No. 130 and the benefits from the Ruedi Dam and Reservoir have resulted in support, rather than opposition, to the proposed project now under consideration. The operating principles and the proposal for the Ruedi Dam and Reservoir are the result of a long series of negotiating sessions conducted under the able leadership of Felix L. Sparks, director of the Colorado Water Conservation Board. It is my firm conviction that without the able leadership of Mr. Sparks the support of the western slope of Colorado would never have been attained for this worthwhile project. The State of California has been, in the past, fearful of the effects that potential and expansion of this project would have upon the uses, by California, of Colorado River water in the southern part of California. Again, under Mr. Sparks' able leadership, protective language has been incorporated into this bill which has satisfied practically all of the objections previously voiced by southern California interests who are dependent upon the Colorado River for their existence. The best evidence of this is contained in a document entitled "California's Stake in the Colorado River," published by the Colorado River Board of California, which I understand is the official agency for the State of California in Colorado River affairs, and which states at page 27 of the fifth revision, 1961, 11th printing:

> Fryingpan-Arkansas project bills were passed by the Senate in several different Congresses, but failed of passage in the House, primarily because of the criticism voiced by California and western Colorado interests. Following a series of conferences, representatives of the two States reached substantial agreement in 1960 on amendments proposed by California which are deemed essential to the protection of California's interest in the Colorado River, including a restriction of the annual use of water by the project to a relatively small amount (90,000 acre-feet). Such amendments were incorporated into the project bills introduced in the 87th Congress, 1961. Thus the things about which the California interests were most fearful have been corrected in this legislation.

Mr. President, in the files of the Committee on Interior and Insular Affairs of the U.S. Senate is a letter from the Public Service Co. of Colorado indicating their wholehearted support of this project. The committee files are also replete with expressions of support from public power groups representing both State and national interests. With both public and investor-owned electric utilities enthusiastically supporting this project there can be no power issue involved. In fact, there has never been an issue concerning the power features of this project.

I am compelled to point out the fact that during the hearings on this bill, held in July of this year, there was no testimony presented in opposition to the bill. This has not been the case in previous bills to authorize this project. In my estimation this is ample evidence that the negotiations, so ably conducted by Mr. Sparks of the Colorado Water Conservation Board, have resulted in correcting alleged deficiencies in the previous bills. I submit to you once more that this bill is so vastly improved over bills previously considered that objections thereto have been answered and we will be privileged, at long last, to vote on a measure to which there is no record objection in the Senate of the United States.

Mr. President, my colleague from Colorado [Mr. ALLOTT] and I have been emphasizing that the Fryingpan-Arkansas project is not the usual type of reclamation program. True, it is a program for water on land, but not on new land. It is a program to provide people with drinking water. It will provide water for cities and for industry. It is not really a farm program. In the true sense, it is a water-for-people program. I hope the project will be understood in that light.

As I have said before, I am compelled to point out that during the hearings on the bill in July of this year, no testimony was presented in opposition to the project. This has not been true with respect to previous bills to authorize this project. There was bitter opposition to previous bills, not only from the people on the western side of Colorado but from California people, as well. In my estimation, this is ample evidence that the negotiations which have been so ably conducted by the director of water conservation, Mr. Felix L. Sparks, who, in a sense, is the architect of this project, are the result of his excellent work in correcting the deficiencies in previous bills.

I submit that the bill now before the Senate is so vastly improved from bills previously considered, and previously passed three times by this body, that it is the finest bill that has ever been considered for this project by the Senate, as it now comes up for the fourth time. There has never been any real opposition to the bill on the floor of the Senate. Some questions have been asked, and I think the questions asked today were most intelligent questions. I believe the objections have been answered. I now hope we may have the privilege, at long last, to vote on this measure to which there is no objection of record in the Senate.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Colorado yield?

Mr. CARROLL. I yield.

Mr. WILLIAMS of Delaware. Does the Senator from Colorado believe that the authorization of $170 million in the bill would be adequate to finance the construction cost of the project?

Mr. CARROLL. I believe the able senior Senator from Colorado [Mr. ALLOTT] has made that so crystal clear that there could be no objection. Again, drawing on experience going back 25 years, I remember when the Colorado-Big Thompson project was started. I know the price was low then; but many changes expanded the cost. In addition, World War II intervened. I was a member of the House Committee on Public Lands when the project was stopped at one time. The Committee on Appropriations cut the amount from $14 million to $4 million. At least, the project progressed through the years. It is true that it cost that amount. The bill was passed in 1936 or 1937, but the project was not completed, according to my recollection, until the fifties.

In any event, to answer the Senator's question specifically, I think the able senior Senator from Colorado has answered the Senator from Delaware. It is my belief that $170 million should take care of the situation.

Mr. WILLIAMS of Delaware. I thank the Senator from Colorado for his frankness in answering my question.

Mr. President, with that statement in mind I ask that my amendment be read.

Mr. CARROLL. Mr. President, I have the floor, if the Senator please.

Mr. WILLIAMS of Delaware. Very well. I thought the Senator from Colorado had finished. I will offer the amendment later.

Mr. CARROLL. Here is what I propose to do. The Senate is now considering S. 284. If the able Senator from Delaware wishes to kill the bill, all he has to do is to amend it, and it will be dead—I think. We are going to try to keep him from amending it, if possible.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Colorado yield?

Mr. CARROLL. I yield.

Mr. WILLIAMS of Delaware. The Senator's own committee has amended the bill on page 12, lines 4 and 5, and also line 9.

Mr. CARROLL. If the Senator from Delaware will be patient, I shall try to clarify the parliamentary situation. This is how I intend to do it.

Madam President, I ask unanimous consent that the Committee on Interior and Insular Affairs be discharged from the further consideration of H.R. 2206, and that the Senate proceed to the consideration of that bill now.

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). Is there objection to the request of the Senator from Colorado?

There being no objection, the Senate proceeded to consider the bill (H.R. 2206) to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado.

The PRESIDING OFFICER. The bill is open to amendment.

Mr. WILLIAMS of Delaware. Madam President, I have at the desk an amendment which I ask to have stated.

The PRESIDING OFFICER. The amendment submitted by the Senator from Delaware will be stated.

The LEGISLATIVE CLERK. On page 11, beginning in line 22, after the figure "$170,000,000", it is proposed to insert a period, and to strike out the rest of the language on that page, through line 25, and lines 1 through 4 on page 12.

Mr. WILLIAMS of Delaware. Madam President, this amendment, if adopted, will merely restrict the total authorization under this bill to $170 million—the amount which both the Senators from Colorado have said will be adequate. If the amendment is not adopted, this measure will contain an open-end authorization. There is no ceiling on the amount authorized without this amendment. The bill now authorizes appropriations of $170 million "plus or minus." Without this amendment there will be no ceiling at the $170 million level.

In light of our experience with some earlier projects, some of which have cost two or three times the original estimates, I believe it would be most unwise not to adopt this amendment.

I do not question the sincerity of either of the Senators from Colorado, but if the $170 million is adequate, why make it possible to have much more than that amount spent on the project?

In this connection, I read from page 30 of the minority views of the House Committee on Interior and Insular Affairs:

> The costs disclosed by this bill are not all that would be necessary.

So there is some question of whether the project will cost another $100 million or $150 million.

We can solve that problem very easily by accepting the amendment which limits the cost to the figure which sponsors of the bill have stated will be adequate—in other words, by striking out the language following the figure "$170,000,000" on page 11 and all of page 12, thus keeping the limitation at $170 million.

The junior Senator from Colorado has indicated that there was no opposition to this bill. However, I call attention to the fact that seven members of the House Committee on Interior and Insular Affairs joined in submitting the minority views, and in their minority views they questioned the wisdom of enacting the bill.

Madam President, I ask unanimous consent that those minority views, which raise some very valid objections to the enactment of the bill at this time, be printed at this point in the RECORD.

There being on objection, the excerpt from the report (No. 694, House of Representatives, 87th Cong., 1st sess.) was ordered to be printed in the RECORD, as follows:

MINORITY VIEWS

The following summary of views, in opposition to the enactment of this bill, is submitted as a minority report:

1. The project is the forerunner of the huge Gunnison-Arkansas project. The Bureau of Reclamation's project planning report (1950) designated the Fryingpan project as the "initial development of the potential Gunnison-Arkansas project." The Gunnison-Arkansas project would probably involve a construction cost approaching $1 billion. Although it is stated that the Fryingpan project would stand by itself, and the bill indicates that the Gunnison-Arkansas project is not contemplated, it seems probable the people of the Arkansas Valley will not and cannot be satisfied with the very small amount of irrigation water furnished by the project (one-half acre-foot per acre or less than the area to be served) and will demand the Gunnison-Arkansas project which, according to previous Bureau reports, would divert upward of 900,000 acre-feet annually from the Colorado River Basin or about 10 times the amount of water proposed for diversion by the Fryingpan-Arkansas project.

2. The project is substantially the same proposal that has been previously rejected for consideration by the House of Representatives. Consideration of this legislation to authorize this development started in the 82d Congress with the introduction of a bill upon which a Department report was requested but not received and no hearings were held. In the 83d Congress, on a bill covering this project, the Subcommittee on Irrigation and Reclamation held 5 days of hearings and ordered the bill reported to the full committee. The bill was reported to the House and a rule granted. The House refused to consider the rule and on July 28, 1954, by a vote of 195 to 188, defeated the rule.

In the 84th Congress, a similar bill, after 9 days of hearings by the Subcommittee on Irrigation and Reclamation, was reported by the Committee on Interior and Insular Affairs to the House of Representatives. A rule was granted and the House, on July 26, 1956, by a vote of 194 to 179, again refused to consider this legislation. In the 85th Congress, the Subcommitte on Irrigation and Reclamation held 8 full days of hearings and also field hearings, reported the bill to the full committee, and the full committee reported the bill to the House. A rule was granted on August 15, 1958, but no action was taken before adjournment. In the 86th Congress, substantially the same bill was again introduced. The subcommittee held 2 days of hearings, but no further action was taken by the Committee on Interior and Insular Affairs. H.R. 2206, in the words of its author, has "* * * very little new to be brought into the hearings * * *." While the changes are an attempt to bring the bill into line with reclamation law, the basic defects which have caused Congress to refuse to consider this bill still remain. This statement is substantiated by the testimony offered by the Department witnesses because the substitution of the Ruedi Dam and Reservoir in lieu of the Aspen Dam and Reservoir makes no changes whatsoever. Either of these facilities would furnish regulation of replacement water for the Colorado River Basin uses. The water supply aspects of the project are unchanged. The hydropower generation remains unchanged and the irrigation benefits remain unchanged. It is remarkable that the same Bureau witnesses who appeared in prior years and stated that it was impossible to bring this project within the existing reclamation law now state that by a mere shifting of a few figures and a slight increase in the cost of energy to preference and nonpreference customers, which heretofore the same witnesses said could not be justified, the project is feasible.

The project is of questionable engineering feasibility, is financially unsound and lacks economic justification.

(a) The excessive cost of the transmountain diversion feature of the proposed project—$63 million to develop an annual supply of 69,000 acre-feet of water for irrigation and municipal use—is unwarranted and without economic justification.

The cost to the Federal Government would be about $23 per acre-foot or 4.5 times the estimated project revenue for irrigation water. The supply for irrigation furnished by the transmountain diversion would be only about 2 inches or one-sixth of an acre-foot per acre. The large cost of such a small supply would far outweigh its value.

(b) The $62.7 million power development features of the project are of highly questionable financial feasibility. The cost of power from five of the seven plants would be materially greater than the assumed price of 6.5 mills per kilowatt-hour. The estimated power output and power revenues from the plants are unsupported and appear exaggerated. Furthermore, there is no assurance that the power could be sold at the required rate of 6.5 mills or more per kilowatt-hour over the protracted repayment period of about 50 years, considering the availability of other competing sources of power and possible obsolescence of hydroplants.

(c) There is grave doubt as to the engineering feasibility of the Arkansas power canal—one of the major features of the proposed hydroelectric development. The project plans propose to construct and operate this unit as an open canal (actually a series of open canals aggregating 60 miles in length) to convey water to a series of six powerplants between the vicinity of Leadville and Salida, located along the canyon of the Arkansas River at elevations of over 7,000 to nearly 10,000 feet above sea level in a rugged mountain region where, for several months of winter, severe ice and snow conditions prevail. The practicability of operating an open canal under such conditions is highly questionable. Under similar conditions on the Colorado-Big Thompson project in Colorado a few miles to the north, the Bureau of Reclamation found it necessary to substitute tunnels and covered conduits for the open canals originally proposed. This change in plans has been stated to be one of the major reasons why the construction cost of that project to date has nearly quadrupled over the estimates offered to Congress.

The former Secretary of the Interior has reported that if covered conduits are found to be required, the total construction cost of the Fryingpan-Arkansas project would be increased about $64 million and that such an increase would render the project unfeasible. An additional cost of $64 million for the power development would raise the total project cost to $234 million or more—an increase of about 40 percent over the Bureau's estimate.

It is interesting to note that no Bureau witness contradicted testimony offered in prior hearings of the increased cost of construction if covered conduits are found to be required.

In view of the foregoing, the economic justification and financial feasibility of the power development as proposed for the project is highly questionable, which casts doubt on the feasibility of the entire project.

(d) The high cost of the irrigation features of the project—now $236 per acre construction cost for a supplemental water supply of 0.6 acre-foot per acre, which is equivalent to $1,156 per acre for a full water supply—present a serious question as to the justification for the project as a Federal reclamation undertaking. As compared to this cost, the average value of irrigated farmland in the area does not exceed $225 per acre. If, as indicated by testimony of Bureau of Reclamation witnesses, the service area were reduced from the originally proposed 322,000 acres to 280,000 acres or less, the cost per acre would be increased proportionately by 10 percent or more.

There is no assurance that the irrigators could or would pay the proposed rate of $5.40 per acre-foot for project water. (The project planning report found that the irrigators would be able to pay only $3.60 per acre-foot.) Moreover, estimated repayments from conservancy district taxes appear to be over-optimistic and not fully assured. It appears improbable, therefore, that irrigation revenues as estimated could or would be realized.

(e) The economic justification of the project is claimed on the basis of an unrealistic evaluation of benefits and costs with benefits estimated over a period of 100 years, which is highly speculative. Large indirect benefits are included.

One of the most startling features of the testimony offered to the Congress this year is the report from the Bureau of Reclamation that the benefit-cost ratio of the irrigation features of the project based on estimated direct benefits are in excess of 1 to 1 ratio. This is the same project on which the same witnesses have appeared before prior Congresses and stated that the benefit-cost ratio of the irrigation features of the project, based on estimated direct benefits on the basis of a 50-year payout period, to be substantially less than 1 to 1. This complete change of testimony by the same people on the figuring of cost-benefit ratio is further evidence of the fact that their economic justification is based on an unrealistic evaluation of benefit costs.

3. The Arkansas River development features of the project appear to be a feasible reclamation undertaking which could be authorized as a separate unit, excluding the costly and uneconomic transmountain diversion and power features of the project.

It appears from the report of the Bureau of Reclamation (H. Doc. 187, 83d Cong.) that the Arkansas River development features of the Fryingpan-Arkansas project could be carried out independently of the proposed transmountain diversion features as a financially feasible undertaking under existing reclamation law. A capital cost of $50 million would cover the entire cost of such a development, including the cost of municipal water-supply delivery systems. The reimbursable cost of the water supply itself aggregating 92,000 acre-feet a year would be only $19,699,000.

The Bureau's report indicates that the Arkansas River development by itself would have substantial benefits. A large benefit would be realized from the flood control provided by the Pueblo Reservoir. In addition, the project could provide municipal water in the same amount as estimated for the proposed project (namely, 20,500 acre-feet) as well as 71,500 acre-feet for supplemental irrigation, which would materially relieve present shortages in supply.

The remainder of the project as proposed, including the transmountain diversion features and the power system and involving a cost of about $110 million, should be deferred for further consideration of questions of feasibility and economic justification. Such a procedure would be in line with the recommendations originally made by both the Budget Bureau and the Department of Agriculture in reporting on the project.

4. Testimony before the committee during extended hearings last year as well as this year indicates beyond refute that this project is not in the best interest of either our national economy or the agricultural problem that confronts the entire Nation. This was substantiated by facts and figures presented to the subcommittee in prepared statements and in response to questions raised during the course of the testimony.

The following utilization of the 280,000 acres was submitted by the Bureau of Reclamation:

Crops, acreages, yields, and returns to farmers, Southeastern Colorado Conservancy District, Fryingpan-Arkansas project, Colorado

Crop	Acreage—		Yield—		Unit
	Without	With	Without	With	
	Thousands	*Thousands*	*Thousands*	*Thousands*	
Alfalfa	126.9	119.8	400	515	Ton.
Forage	5.0	5.0			
Grains	109.1	113.6	4,907	6,964	Bushel.
Sugarbeets	15.9	22.6	203	355	Ton.
Beans	4.8	5.4	4,924	7,149	Pound.
Fruit-vegetables	11.5	9.9	1,204	1,594	Hundredweight.
Seed crops	3.4	1.0	1,005	355	Pound.
Popcorn	4.0	3.3	7,618	8,744	Do.
Total	280.6	280.6			

It was further stated by Mr. Young, president of the Southeastern Water Conservancy District that the Arkansas Valley presently produces approximately 80,000 head of cattle, 140,000 lambs, 850,000 turkeys and chickens, and 14,500 milk cows each year. In response to questioning he indicated that there would be substantial increases in the production of each of these livestock categories were the project to become a reality.

Without further details relative to each of these specific products, let us examine briefly the degree to which the present agricultural surplus problem would be aggravated by the increased production of these agricultural commodities.

First, we note that there would be in addition to the anticipated increase in livestock production, an annual increase of 115,000 tons of alfalfa hay, 2 million bushels of small grains, 152,000 tons of sugarbeets, and 2.2 million pounds of beans. These increases would come about in direct conflict to actions that have been taken by the Congress during recent months as well as all of the years in which the Congress has legislatively tried to reduce agricultural surpluses.

There are presently in the soil bank in the State of Colorado 1,299,881 acres while throughout the entire Nation there are under similar contracts roughly 22 million acres. A very high percentage of these acres have been seeded to alfalfa and other hay crops, and farmers who have contracts for these acres are not permitted to either cut hay or graze this land. In other words, it has been necessary to take 4,767 farms in Colorado and 303,413 farms throughout the Nation out of production at a total cost to the taxpayer of $337,986,884. This is the amount of money that is paid to participating farmers for not harvesting any agricultural commodity or cutting hay (alfalfa) on these acres. It is rather obvious that the authorization of this project costing $170 million in order to increase the production of hay is in direct conflict with the soil bank contract expenditures.

Figures indicate an increased production of over 2 million bushels of small grains per year. Here, again, we see the same kind of direct conflict. Figures released by the Department of Agriculture on June 1, 1961, indicate that the State of Colorado had a signup to comply with the newly enacted feed-grain program which would divert 313,000 acres at an immediate cost of over $2 million to the taxpayer. For the entire Nation the diverted acreage amounts to over 24 million acres at a cost of over $312 million. Again, we see a direct conflict and a doubling up of expenditures.

The production of sugarbeets would be increased by 152,000 tons annually at the taxpayers' expense, while as recently as May 17 and 18, the Agriculture Committee held hearings, and heard testimony for 2 days from farmers who expressed a desire to raise sugarbeets at no cost to the taxpayer if legislation could be enacted which would only permit them to do so. As yet there has been no response to these requests which have been prevalent for more than 20 years. In fact, these farmers have been denied this desire for all of these years because of existing limitations in the production of sugarbeets.

Let us look briefly at the livestock situation, and it is of interest to note that the project will substantially increase the production of sheep and lambs. According to a release by the Department of Agriculture on June 1, 1961, it has been necessary for the Department to purchase 11,928,000 pounds of lamb at a cost to the taxpayer of $4,333,000 in order to improve lamb prices to producers. This cost represents purchases during the short period of time from the 27th of February 1961 to June 1, 1961.

In addition, the Department of Agriculture indicates as of June 21, 1961, that for the 1960 marketing year, in order to bring the average wool price up to previously announced levels, it has been necessary for them to make payments which amount to 47.6 percent of the returns that each producer received from the sale of wool during this year. The total cost of this program for the 1959 marketing year was $53,888,000. There have been like expenditures in other categories of livestock production, most notably in the production of turkeys and chickens.

These figures surely exemplify most explicitly the degree to which the American taxpayer by the approval of this project will be called upon to furnish dollars that will only aggravate and cause additional expenditures in other areas where we are trying to reduce surpluses. Just as significant is the fact that if we have any hopes of effecting an improvement in our agricultural problem or even holding our own, it will be necessary for farm families in other areas to make comparable reductions in the production of alfalfa hay, small grains, sugarbeets, and livestock. This they will be called upon to do at great sacrifice to their individual farm operation and at expense to the taxpayer. It seems not only unfair but discriminatory that on the one hand we ask farm families to make substantial sacrifices in order to alleviate a surplus problem and in other instances we provide large expenditures of public funds so as to permit others to expand their production capacities. Such a program surely does not leave any indication of either fiscal responsibility or equity among farm families throughout the Nation.

While this program calls for an initial appropriation of $170 million, this is only a small part of what the actual cost of this project will be to the Nation during the years ahead. For it will be necessary to expend additional large sums in order to pay for the storage of surplus commodities produced by virtue of this project or to make payments to other farm families for reductions in their production that may be comparable to these increases.

This project indicates the degree to which the Department of the Interior, Bureau of Reclamation, in recommending this project, is in direct conflict with all recommendations and suggestions to improve the agricultural situation made by the Department of Agriculture. While this project proposes increases in production of agricultural commodities, the Department of Agriculture is very vigorously proposing programs that place restrictions and controls on segments of agriculture to produce less.

Therefore, it is our opinion that this project is not in compliance with either the agricultural or the economic needs of the Nation, now or in the foreseeable future.

5. From evidence which has been submitted over the years from a number of persons and organizations on the western slope of Colorado, from where the water involved would be diverted, strong objections to the entire project have been registered. The changes in the present bill from prior bills have not eliminated the adverse testimony. The people on the western slope of Colorado feel that the economy of the western slope will be damaged by the taking of water from the Colorado River Basin, where the supply is already short, and placing it in the Arkansas River Basin, where the present supply has not been fully used. They, as well as some of the members of

the Committee on Interior and Insular Affairs, have no confidence in the operating principles in the bill in connection with uses of water on both the eastern and western slopes of Colorado. Residents of the western slope are fearful that this and future transmountain diversions will stunt the economic development of an area which holds enormous industrial potential assuming there is water to serve it.

It is rather interesting to note that while the Colorado Water Board appeared and testified in favor of this project, the same board for years questioned the advisability of transmountain diversion in the San Juan-Chama project heretofore considered by the Committee on Interior and Insular Affairs, pointing out that if the San Juan-Chama diversion were authorized it might adversely affect the development of a portion of the western slope of Colorado.

6. This bill for the first time puts the Secretary of the Interior and the Bureau of Reclamation in the business of subsidizing public schools in the district served by the Fryingpan-Arkansas project.

Despite its adverse report on this provision by both the Department of the Interior and the Bureau of the Budget, the committee has continued to keep this provision in the bill.

7. In prior bills no attempt was made to protect existing water rights. In an effort to show that these rights were now being protected the committee went far beyond protection and now has made this bill a vehicle for institution of a multiplicity of suits under any and all circumstances and by any and all persons.

Section 6(e) of the bill, beginning on line 10 through the end of the section on page 12 contains the following language:

"Any person or entity whose rights may be affected, impaired, or infringed upon by reason, or as a result, of such noncompliance may maintain an action, suit, or proceeding in the U.S. District Court, in and for the District of Colorado seeking appropriate relief, and consent is hereby given to the joinder of the United States, the Secretary of the Interior, and his subordinate officials, employees, and agents as a party or parties to such action, suit, or proceeding, as a defendant or otherwise."

This language constitutes an open invitation to unnecessarily burden the operation of this project, intended for the benefit of all the people, with a multiplicity of individual suits with diverse claims for relief, which could well involve the actual operation of the project in the injunctive processes of the courts.

Despite the request of the Department of the Interior to delete this language it was retained by the committee.

8. The changes in the present bill from former bills by substituting the Ruedi Reservoir for the Aspen Reservoir will work an undue hardship on the Aspen area for a number of reasons:

(a) It leaves the Aspen area without any replacement storage, while at the same time containing the same collection system which can only help those downstream from the Basalt project.

(b) The bill directs the additional diversion above Aspen of 14,000 acre-feet through the Twin Lakes diversion.

9. The original development plan and a water right decree of June 20, 1958, for the basalt project provided for full use of the waters of the Fryingpan River in western Colorado. The supplemental consent decree, approved by the district court of Garfield County, Colo., August 3, 1959, established an equal priority date of July 29, 1957, for the use of the Fryingpan River water for serving both projects.

Obviously, in reaching this consent agreement it was necessary that a part of the water previously decreed to the basalt project for maximum development under the project be surrendered to make possible a decree of equal date for Fryingpan River water needed for the Fryingpan-Arkansas project.

On the basis of testimony submitted to the committee in prior Congresses, this decree in and of itself makes the water supply uncertain. The Bureau of Reclamation gave testimony that they only had records over a 34-year period. To be workable, the project required all of the waters collected from the collection system on the Fryingpan and the Aspen Reservoir on Hunter Creek to make the necessary diversions. The consent decree clearly shows that the necessary water for this project is therefore unavailable.

10. The costs disclosed by this bill are not all that would be necessary because the bill authorizes a study of a reservoir to be built at a later date on Castle Creek.

For the foregoing reasons, as well as many others reflected in the material which was presented to the committee, this legislation, which involves an expenditure of $169,905,000 together with an additional $64 million if covered conduits are found to be required, should not be approved until there is a real economic justification which to date has not been presented.

Mr. WILLIAMS of Delaware. Madam President, I also ask unanimous consent to have printed at this point in the Record, in connection with my remarks, an editorial recently published in the Washington Daily News.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Misleading the Taxpayer

The House in Washington has almost certainly put something over on the taxpayers by authorizing $170 million for construction of a reclamation project in Colorado. Even before any appropriation is added, it is admitted that this figure is at least $100 million below the final cost.

There is a precedent for skepticism about the whole project. This would bring water from the upper Colorado River through the Continental Divide to the basin of the Arkansas River in southeastern Colorado, where it would be used for power and irrigation. The need for more irrigated land in a time of gigantic surpluses may also be questioned, though some farsighted observers think it may be needed within 15 years.

The precedent which causes doubts is the Colorado-Big Thompson project, northwest of Denver. Here the same legislative tactics were used. The Colorado River is dammed at Granby, the water is pumped into a huge reservoir and flows by gravity through the divide to irrigate the eastern slope.

This started, too, as a somewhat modest project, but more and more money was added in succeeding years. By the time the tunnel was driven and water was flowing, the operation's cost had mounted to close to a billion dollars.

The so-called Fryingpan-Arkansas undertaking looks like a case of "here we go again."

Mr. WILLIAMS of Delaware. Madam President, I hope the Senators who are advocating the passage of this bill will at least accept this amendment. Then we will know that the project will not cost more than the $170 million, the amount which has been presented to the Senate.

Mr. CARROLL. Madam President, I rise to a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Colorado will state it.

Mr. CARROLL. The Senator from Delaware has submitted an amendment. To what bill is the amendment submitted?

Mr. WILLIAMS of Delaware. Madam President, the amendment is submitted to House bill 2206, which we have now taken up in lieu of Senate bill 284. I understand that House bill 2206 is now before the Senate. Is that correct?

The PRESIDING OFFICER. That is correct. The amendment is submitted to page 11, beginning in line 22, and page 12 of House bill 2206.

Mr. CARROLL. That is what I understood, Madam President. So we now have this amendment, which has been submitted to House bill 2206.

I have tried to make clear the parliamentary situation in the other body. If this amendment were adopted, with the result that this bill would have to go to conference, that would be a good way to kill the bill. So I hope the Senator from Delaware will withdraw his amendment.

Now, in regard to the cost of reclamation projects, let me describe the history of some of the recent projects under the Upper Colorado River Storage Project Act: Contracts for the Glen Canyon, Flaming Gorge, the Navajo, and participating projects today are $50 million below the estimated costs—below the estimated authorizations. It is my hope and belief that in connection with this project—which has been studied and restudied—we can keep well below the $170 million. I do not know whether that will be possible; but I think it is not good business sense to impose such a limitation. Suppose, after years of construction and after the Government had invested $170 million in the project, a point were reached where it was found that a small additional amount would be needed if the project were to be efficiently completed. This amendment would then make it impossible for the project to be finished. That almost happened with the Colorado-Big Thompson project, which now is way ahead of schedule, and has brought great revenues to the U.S. Treasury.

I say to the able Senator from Delaware and to the able Senator from Wisconsin that I appreciate the fact that they are great fighters in the interest of economy and in the interest of the taxpayers, and I commend both of them for it. But I say this amendment is not the proper way to proceed.

This bill should be voted either up or down, on its merits; but we should not kill the bill by adopting an amendment of this sort—and it could happen that the bill would thus be killed, because adoption of the amendment would require a conference with the House. We now have the House bill before us; and we should vote it either up or down, on its merits.

My able colleague [Mr. Allott] is a member of the Appropriations Committee, and that committee can watch these expenditures.

By the same token, if the point were reached where only a few additional million dollars were needed, it would be senseless to strangle the project and lose the investment, in view of the fact that the project is so vital to the West.

We know how difficult is the parliamentary situation in the other body; and I hope that situation will be considered by all Senators.

Mr. WILLIAMS of Delaware. Madam President, I do not think the Senator from Colorado intended to give the impression that from now on the Senate should not attempt to amend any House bill for fear of the necessity for holding a conference with the House.

Why cannot there be a conference with the House on this bill? What is there in the bill which would result in its death in a conference?

One of the major points made by the House committee members who filed the minority views was that the bill did not disclose the true costs of the project; they feared that the project would cost substantially more than $170 million.

Now the junior Senator from Colorado says their fears are unfounded. If so, we should adopt the amendment and thus allay their fears. Perhaps then they would look more favorably upon the bill.

I do not see why there should be any objection to the amendment, unless, as those seven members of the House committee have said, the project will cost substantially more than $170 million.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

Mr. DOUGLAS. Madam President, is the vote now to be taken on agreeing to the amendment or on the passage of the bill?

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware. [Putting the question.]

Mr. WILLIAMS of Delaware. Madam President, on this question I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were not ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

The amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. DOUGLAS. Madam President, when I came to the Chamber this afternoon, I expected to vote against this bill. For a long time I have felt we were spending excessive amounts of money for irrigation in high-altitude regions of the Mountain States. When I first came to this body I opposed a big irrigation project for Idaho where the costs were, in my judgment, very excessive. I opposed the irrigation features of the Upper Colorado project, where the expenditures per acre in some cases ran over $1,000, and where, with interest, in many cases, the costs were even more than that.

I feel that in the past the political power of the Mountain States Senators has been thrown around in an excessive fashion. The eight Mountain States, with their 16 Senators, have tremendous bargaining power on the floor of this body. And, as a result, in the past they have been able to get appropriations for irrigation projects to bring more land into cultivation and to grow more wheat and feed grains, at a time when we in the Middle West are being compelled to retire grain land. They have caused us to help finance direct injuries to us.

Furthermore, the cost of most of these irrigation projects, as we get away from the low altitudes and get into altitudes where the growing season is short, run extremely high.

While the principal of Government expenditures for reclamation is returned over a long period of time, no interest is returned, and the money which is returned then goes into a pool which is used for more reclamation. There is therefore a very heavy subsidy which the taxpayers have to meet.

All this is done at a time when the Middle West is compelled to suffer from low farm prices and lack of supports because, for some reason or another, we do not seem to make much of an impression on the administration in power or on Senators from the Mountain States. And so I have felt that both the interests of my section and the interests of my country dictated opposition to these reclamation projects.

In the last hour or two I have had the opportunity to study the statement of the junior Senator from Colorado [Mr. CARROLL] and to read his colloquy with the Senator from Wisconsin [Mr. PROXMIRE]. I have reached a tentative conclusion to support this bill, for certain reasons.

In the first place, while I do not think the Senator from Colorado stressed this fact particularly, though he mentioned it, a large portion of the expenditures will be to provide added water for the great air center at Colorado Springs. I do not think the air center should have been located in Colorado, but it is located there, and it is highly important that it should have adequate water.

The city of Colorado Springs, hitherto a pleasure and vacation resort, is obviously going to be a very large city; and, in the national interest, as the junior Senator from Colorado stressed, it is important that it be furnished with adequate water.

I have also believed that the Mountain States and the Pacific coast should have steel plants, and the historic steel plant at Pueblo needs water.

Furthermore, as the junior Senator from Colorado has pointed out that no new land is going to be brought under cultivation. I think perhaps that has been the decisive factor entering my mind. We should not bring new land into cultivation through these irrigation projects. But I can well understand how farmers on land now cultivated, many of whom went through the Dust Bowl experience of the 1930's, should have some degree of protection, and I think the addition of about five-eighths of an acre-foot for 280,000 acres will help to stabilize their production and give them a chance to survive.

The junior Senator from Colorado has been very persuasive in getting me to change my position.

Let me say that I have been pained, however, by the attitude of other Senators from the Mountain States who have turned a deaf ear to the plight of Middle West agriculture and to the problems of our cities, and, in a sense, I am trying to return good for evil. This is not a criticism of the junior Senator from Colorado, because he has always supported these measures from a broad national point of view, but this has not been universally true.

But I do want to serve notice that this vote of mine is an exception. I am not converted to the general principle of spending more money to bring into cultivation additional land not now needed.

If we should ever reach the point where we do need the land, I am ready to consider it; but it is certainly an insane policy to retire land on the one hand at the same time we are bringing additional land into cultivation on the other.

So, somewhat reluctantly, but persuaded by the arguments of the junior Senator from Colorado, I shall vote "yea" on the bill, and I hope that the willingness of the Middle West to cooperate with the Mountain States may cause some change in the attitude of certain other Senators from the Mountain States.

Mr. PROXMIRE. Madam President, the Senator from Wisconsin intends to vote "Nay." I shall do so notwithstanding that I have great admiration and respect for the Senator from Colorado [Mr. CARROLL], who has made an eloquent and extremely persuasive statement for the bill. It is difficult for me to vote against a project so eloquently and sincerely supported by him.

There are a number of reasons why I shall vote against the bill. I hope the fine fight the Senator from Delaware has made against this kind of proposal serves notice that when the Gunnison-Arkansas project, which would expand this project and make it almost 10 times as expensive and 10 times as abundant in water, comes up for consideration, we will resist it at every step.

Congress is fooling itself if it feels that projects of this sort are self-liquidating and self-supporting in a financial sense. It is true that the irrigating farmers will return about $46 million of the cost of the irrigation features of this project, while the power users will return the other $20 million of the total $66 million cost of the irrigation. But the use of this money is interest free. The rest of the Nation is giving a subsidy to these farmers, above and beyond the subsidies they are already getting, in order to grow more surpluses such as sugarbeets.

The amount of this interest subsidy has been estimated to be at least $50 to $60 million over the 50-year repayment period. It would be more than this if the recent increases in the Government borrowing rate were taken into account.

It is very difficult for this Senator to understand—and we have asked the Agriculture Department how it can justify it—how they can use 2.5 percent as a discount factor in order to calculate the benefit-cost ratio, when the risks, the alternative return available, and the cost of the long-term borrowing to the Federal Government are all higher. Yet the benefits which were placed in the benefit-cost ratio of this project are very high as the result of using this low discount rate which has the effect of inflating the amount of benefits discounting for the difference in time.

It is also strange that in the cases where the beneficiaries are required to reimburse the Treasury for the use of the Federal funds, unlike the case of the irrigation beneficiaries, they are required only to pay interest calculated at 2.6 percent a year. Again, the fact that the Government has not been able to borrow long-term funds at this rate since the forties, suggests that those who allegedly are to repay all the costs of the project should be required to pay the full costs of borrowing the money which the Federal Government itself has been forced to pay.

Some of these calculations are included in a study by Otto Eckstein, entitled "Water Resource Development."

In the course of his discussion of irrigation, Dr. Eckstein says this is referring to devices which are used to justify these projects:

> All of these devices interfere with sound formation of public policy. They mislead the public and the Congress into thinking that the projects as a whole are self-supporting. By their technical obscurity they hide both the size and the source of the subsidy. They make it impossible for the public and the Congress to see the financial issues clearly, and they prevent a judgment on the question whether irrigation projects are worth the subsidies which they entail.
>
> It would be desirable to change irrigation law to correspond to the actual conditions of project finance. Congress might appropriate funds to build a project, to indicate what share of the cost is to be repaid by irrigators, what share is to be financed out of power revenues, and finally, what share is to be a subsidy out of general revenues. If the present laws are accepted to be beyond change, the issue could still be made to emerge in its true proportions if the financial analysis of each project report would include figures which indicate the size and the source of the various studies.

Madam President, I ask unanimous consent that the portion of Mr. Eckstein's book devoted to "Financial Analysis," pages 226 through 236, may be printed in the RECORD at this point.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

B. FINANCIAL ANALYSIS

9. Subsidies in irrigation

Federal irrigation projects are usually only authorized if it can be shown that the total revenues which can be collected exceed the total costs except for the costs allocated to navigation, flood control, or other nonreimbursable purposes.[1] The requirement does not mean that each reimbursable purpose must be financed out of funds received in payment for that purpose; it applies only to the sum of revenues versus total reimbursable costs. Irrigation revenues must be collected in 40 annual payments which need not start till a development period of 10 years has passed.[2]

There are a number of reasons which make it impossible for irrigation revenues to be sufficient to meet the cost of irrigation on most Federal projects of recent years. At first glance one might expect that if the benefits exceeded the costs, it should be possible to raise revenues equal to costs, but it is quite obvious that the collection of revenue from those who reap public or indirect benefits would require a form of collection other than the contractual payments of water users. Even direct benefits, which measure the increase in income of the settlers, do not provide a measure of revenue potential since it is impossible to charge a price for water which would leave the incomes of irrigators unchanged. Since one of the main objectives of the program is the creation of new family-farm opportunities and of a new life for relatively poor farmers, payments for irrigation water must be sufficiently low to leave them significantly better off. In accordance with these objectives, the irrigation benefits are spread over many families, each of whom is to enjoy an increase in its standard of living. If we suppose that a typical family's income is raised from $1,000 to $4,000 before water charges, payments of more than $2,000 are hardly possible, which would produce revenues equal to only two-thirds of direct benefit.

The Bureau of Reclamation computes the repayment capacity of a project by subtracting a family living allowance for every family from the net income of the project. This allowance, which varies from project to project, but which has frequently been set equal to $2,250, is based on the cost of a certain standard of living. In the example of table 38, direct benefits of $426,000 produce a repayment capacity of $277,500, 65 percent of direct benefits.

With the somewhat contradictory objectives of full repayment and of raising living standards for the people on the project, a number of devices have been invented which make it possible to justify projects despite these obstacles. All of these devices are some form of subsidy to irrigation and reduce the amount of repayment which the settlers have to meet.

The original Reclamation Act of 1902 embodied provision for the most important of the subsidies now in use.[3] It called for the repayment of all costs, but did not consider interest to be a cost. This means that the total of the repayments is equal to the money cost, or one-fortieth of the total a year.

In fact, there is an interest cost to the country of course—at the least equal to the government bond rate and probably equal to twice that figure, as we saw in chapter IV. On a typical irrigation project, with a development period of 10 years and repayment in 40 annual installments, the resultant subsidy can easily be estimated. The actual payment under present procedures will be 2½ percent of the investment, which will total 100 percent after 40 years. If the project were to pay its own interest cost at a rate of 2½ percent, including interest during the development period and on the unamortized balance, it would have to pay a total of 5.1 percent for interest and amortization. Thus the payments of the settlers for the investment in the project would double. In terms of present values, if the 40 actual payments of 2½ percent were discounted to the period of construction, they would be worth 49 percent of the actual construction cost. Thus this one element alone leads to a subsidy of half the cost, paid by the Nation's taxpayers for the benefit of the irrigation settlers, even if they meet their repayment schedules, and assuming only a minimal interest rate.

But the subsidy from the taxpayer is often much larger, though the form is more obscure and misleading. There is a group of subsidies to irrigation, which, at first glance, appears to be paid by the beneficiaries of other purposes, but which in fact is still paid by the taxpayer. Until 1952, these subsidies took the following form: The price of power was set on the basis of cost, including the cost of interest at 3 percent plus repayment over 50 years; but the interest component of the resultant revenues was considered to be helping to repay the construction cost of irrigation. This practice was considered justified by interpreting the provisions of the Reclamation Act of 1902, which freed irrigation projects from interest payments, in such a way that the power features were also part of the irrigation project. The resultant subsidy is quite large; on a typical project, with power investment equal to the irrigation investment, the interest component of the charge for the investment is 49 percent of the total charge for capital; and if all of it is applied to aid in repayment of an irrigation investment that is not charged interest, it is almost adequate to repay the entire irrigation investment. In fact, power was never assigned more of the irrigation cost than the excess above computed repayment capacity; but for the 16 projects which include both power and irrigation, $512 million out of the expected power revenues of $1,032 million were assigned to the repayment of irrigation costs as of January 1, 1947, which is 50 percent of all power revenues.[4] The formula suggests that it is power revenues which help repay the irrigation cost. In fact, power users pay rates which are designed to do no more than return the power investment with interest; the rates do not include any charge for irrigation repayment. By crediting irrigation with the interest component of power revenues, the total revenues to be received by the Treasury are diminished and this portion of the cost of irrigation is shifted to the general taxpayer.

In 1952, the "interest component formula" was replaced by a new device which appears to answer some of the objections raised against its predecessor, though it is essentially very similar. It was first applied to the

[2] Many projects have been granted much longer periods of payment, up to 200 years in some cases. See Moley, "What Price Federal Reclamation?" p. 38; and U.S. Congress, House Committee on Interior and Insular Affairs, "Construction Costs and Repayment on Federal Reclamation Projects," committee print, September 1952, p. 18.

[3] For a historical account of repayment requirements and subsidies see Commission on Organization of the Executive Branch of the Government, "Task Force Report on Water Resources and Power," vol. II, "Report of the Task Group on Reclamation and Water Supply" (June 1955), especially pp. 669–671. Also see "Application of the Interest Component of Power Revenue from Reclamation Projects Under the Solicitor's Opinion and the Collbran Formula," by C. D. Curran, in "Task Force Report on Water Resources and Power," vol. III, pp. 1205–1214. For an enonomic analysis of the pricing principles implicit in the present system of charges based on repayment capacity, see J. Margolis, "Welfare Criteria, Pricing and Decentralization of a Public Service," Quarterly Journal of Economics (August 1957), pp. 448–463.

[4] U.S. Bureau of Reclamation, "How Reclamation Pays" (1947), p. 111.

Collbran, Colo., project[5] and is known as the Collbran formula. It provides for repayment of all power costs including interest at 3 percent and of the costs of industrial and municipal water supply with interest at the prevailing long-term Government bond rate. After these purposes have completed their own repayment, the further revenues that they will produce will be applied toward repaying that part of irrigation cost which is beyond the repayment ability of the settlers. The formula limits the repayment period of water supply to 50 years, the same as the usual practice for power. Thus, for the first 50 years of the project's life, no payments are made for irrigation above those of which the settlers are capable. From the sixth decade on, power and water supply will turn over all their revenues, except for small operating expenses, to repay irrigation.

Once again, the impression is created that power will aid irrigation, and that the project as a whole is self-financing. In fact, it is still the taxpayer who can be expected to pay most of the subsidy, the magnitude of which will be little changed. The reasons are not far to seek; in the first place, the size of the total subsidy to irrigation will remain the same since the irrigation payments are still determined by repayment capacity, and nothing else. Second, the subsidy from the failure to charge interest on the irrigation investment is much compounded. If part of the irrigation cost is not repaid for 50 to 100 years, the interest charge which has been shifted to the taxpayer becomes very large. For every dollar sunk into irrigation which is repaid without interest after 75 years, the taxpayer must make interest payments of 2½ cents a year for 75 years.

The present worth of these payments is 84 cents, leaving only 16 cents which could be shifted to other purposes. Whether it will be shifted cannot be discovered for 50 years, but there is good reason to doubt it, for it presupposes that it will be possible to set power rates and rates on water supply in the remote future which will be adequate for this purpose. In the case of power, the rapid rate of technological progress which is driving down the costs of power from alternative sources, which is bringing atomic energy toward competitive levels, and which may make solar energy an economic source, makes lower rates probable. A period of 50 years, which is the basis for repayment of the power investment, is already a very optimistic assumption about the competitive position of hydroelectric power based on current design; to stretch the assumption to apply for 80 or 100 years is absurd. If it turns out to be impossible to charge the necessary power rates in the first and second decades of the 21st century, the Government will surely lower the rates toward operating costs, and if that proves impossible, it will abandon the power installations altogether. As for municipal water supply, technological progress which would present cheap alternative sources is not as clearly in sight, though controlled rainmaking would be a step in this direction. The revenues from this source are of a smaller order of magnitude than of power, and it could shoulder no more than a small part of the remaining irrigation cost, even if the users, who are largely municipalities, do not balk at the payments when the time comes. Thus, there will be little choice but to write off any unamortized irrigation investment as a Government loss, unless the contracts with the water users are changed to incorporate a provision extending the period of payments. And even this possibility involves some strong assumptions about the technological progress in agriculture.

TABLE 43.—*Summary of cost and repayment of irrigation investment, Fryingpan-Arkansas project, using interest component formula (ignoring interest)*

Allocated cost	$59,930,000
Repayment by water users, 40 years	10,881,600
From power revenue, 40 years	35,478,000
From municipal water revenue, 40 years	13,570,400
Total	59,930,000

Source: "Report on Fryingpan-Arkansas Project," pp. 13, 34.

Let us contrast the effect of the two formulas. The "interest component formula" results in payment of all irrigation cost above repayment capacity by the taxpayer. The "Collbran formula" results in payment of at least 80 percent of the excess above repayment capacity by the taxpayer, with the remainder paid by power and water supply in the unlikely event that technological progress has not precluded sufficiently high power and water rates for the first decades of the next century.

The effect of the two formulas can be seen from a study of the financial features of the project discussed earlier, the Fryingpan-Arkansas project, which was first planned with the old formula but was revised to conform to the "Collbran formula" by the Republican administration. Table 43 summarizes the repayment plan as outlined in 1951.

To show the actual costs, table 44 gives the division of the burden on the assumption that the Treasury pays interest of 2½ percent and that this cost should be included. The table gives the present values of the series of future payments to be made by the irrigators, and the present value of the extra one-half percent above average Treasury borrowing cost to be paid by the power users. The table does not include the rest of the interest component on power nor any of the 2-percent interest component collected on municipal water supply, since these revenues must be set aside for the payment of interest on the investments for those purposes.

TABLE 44.—*Cost, present value of revenues to be collected to repay irrigation investment, and Federal subsidy on irrigation features of Fryingpan-Arkansas project*[1]

[Interest component formula]

	Amount	Percent
Construction cost	$59,930,000	
Payments of irrigators ($272,040 annually for 40 years)	6,838,057	11.4
Interest premium on power revenues (estimated to be $150,000 a year for 40 years)	4,254,300	7.1
Federal subsidy through absence of interest charge on irrigation and diversion of interest component on power and municipal water supply	48,837,643	81.5
Total	59,930,000	100.0

[1] The table is computed by discounting the series of payments at 2½ percent to the present. The estimate for the annual value of the extra ½ percent on the power investment is derived by assuming that all of the power facilities are amortized over 50 years and by calculating the difference in the annual interest and amortization charge at the 2 rates. The Federal subsidy is the remainder of the irrigation construction cost.

The repayment provisions under the Collbran formula, as proposed by the Department of Interior in 1953, are summarized in table 45. There is still no interest charge on the irrigation investment; irrigators are expected to pay $622,000 a year for 69 years. All the net power revenues from the 53d to the 69th year are applied to irrigation, as well as the revenue from water supply in the 62d to the 69th year. The rates on the latter two purposes are based on full repayment including interest of 2½ percent in 53 years for power and in 63 years for water supply.

TABLE 45.—*Summary of cost and repayment of irrigation Fryingpan-Arkansas project, using Colbran formula (ignoring interest)*

Construction cost, irrigation	$75,128,000
Repayment by water users in 69 years	42,918,000
By power revenues in years 53–69	25,472,000
By water supply revenues in years 63–68	6,738,000
Total	75,128,000

Source: "Report on Fryingpan-Arkansas Project," p. 8.

TABLE 46.—*Cost, present value of revenue to be collected to repay irrigation investment, and Federal subsidy to irrigation features of Fryingpan–Arkansas project*[1]

[Collbran formula]

	Amount	Percent
Construction cost (including interest during construction)	$78,271,000	
Payment by irrigators	20,352,028	26.0
Payments from power revenues	5,678,351	7.3
Payments from water supply revenues	1,311,627	1.7
Federal subsidy through failure to charge interest	50,928,994	65.0
Total	78,271,000	100.0

[1] The table has been computed by discounting at 2¼ percent the set of payments stated in the project report, "Report on Frying Pan-Arkansas Project," p. 8.

Table 46 shows the actual distribution of the cost, including interest at 2½ percent, discounting all payments to the present. It can be seen from the table that the Federal subsidy will be between 65 and 74 percent, depending on the fulfillment of the revenue expectations on power and water supply in the sixth and seventh decade of the project. This contrasts with a Federal subsidy of 81 percent under the interest component formula. But the small reduction in the subsidy was purchased at the price of extending the repayment period by 30 years.

The Federal subsidy to irrigation under the two formulas is little influenced by the use of power revenues because the basic rates for power are unaffected at least during the first 50 years of the project. The President's Advisory Committee on Water Resources Policy recommends that excess power revenues be used to repay irrigation if the power is sold within the same area.[6] The Committee sees such excess revenues as a method of taxing indirect beneficiaries. This intention is carried out if power rates are set above power costs from the beginning. In the case of the Upper Colorado River storage project, authorized in 1956, power rates were set in this manner and so one can legitimately speak of power revenues helping to repay irrigation costs. Table 47 summarizes the repayment analysis and recomputes it, including an interest cost charged at 2½ percent. It can be seen that irrigators will pay only 5.4 percent of the irrigation cost if they can meet their contractual charges and that the rest of the cost is divided about evenly between power users who pay rates above power cost and taxpayers who must meet the interest subsidy.

---

[5] A statement can be found in "Report on Collbran Reclamation Project, Colorado," S. Rept. 1719, 82d Cong., 2d sess.

[6] The President's Advisory Committee on Water Resources Policy, "Water Resources Policy," pp. 31–32.

A closely related device for subsidy is the basin account, which has been widely advocated for projects in the Columbia Basin, though not yet written into law, and which has been interpreted to apply to water-resource activities in the Missouri Basin.[7] This device would merge the finances of all projects in the basin. Not only would it make the formulas discussed above apply to the power and irrigation of a project, but it would make it possible to subsidize irrigation anywhere in the basin through diversion of power revenues from any power project in the same basin. It is clear that the basin account multiplies the possibilities of the hidden subsidies which are paid by the taxpayer, besides opening the door to subsidies from strong purposes to weak and from good projects to bad.

Finally, the cost allocation proceedings which are used to assign the costs of common facilities to the different purposes have served to reduce the total cost of irrigation. Because of the complexity and importance of the cost-allocation problem we shall treat it separately;[8] in the present connection, let it only be pointed out that the "priority of use method" which the Bureau of Reclamation has applied widely in the past but which has now been eliminated, is particularly suitable for lightening the burden on irrigation. Under this method, different purposes are assigned priorities of use, and the first purpose is allocated all costs necessary for its operation as long as costs do not exceed benefits. The second purpose need only bear the cost of the additional facilities needed, and so on for the third. If a nonreimbursable purpose is assigned priority, total repayment is minimized; if irrigation is the top priority purpose, total repayment is reduced by putting most of the common costs on an interest-free basis.

TABLE 47.—*Summary of repayment analysis of irrigation investment of Colorado River storage project*

Source	Total payments ignoring interest (in millions)	Present value of total payments [1] (in millions)	Percent distribution of total payments including interest
Payments of irrigators [2]	$36.6	$15.2	5.4
Contribution from power revenues [3]	246.2	139.7	49.4
Contribution of taxpayers		127.9	45.2
Total	282.8	282.8	100.0

[1] We assume an interest rate of 2½ percent.

[2] Assumes equal annual payments for 50 years after a development period of 10 years. No specific development period has been authorized as yet, but 10 years is the usual figure.

[3] Assumes equal payments for 50 years. Since actual power revenues will build up gradually, the contribution from power is overstated slightly.

Source: "Report on Colorado River Storage Project," H. Rept. 1087, 84th Cong., 1st sess. Our analysis assumes that the cost allocation is correct.

All of these devices interfere with sound formation of public policy. They mislead the public and the Congress into thinking that the projects as a whole are self-supporting. By their technical obscurity they hide both the size and the source of the subsidy. They make it impossible for the public and the Congress to see the financial issues clearly, and they prevent a judgment on the question whether irrigation projects are worth the subsidies which they entail.

It would be desirable to change irrigation law to correspond to the actual conditions of project finance. Congress might appropriate funds to build a project, to indicate what share of the cost is to be repaid by irrigators, what share is to be financed out of power revenues, and, finally, what share is to be a subsidy out of general revenues. If the present laws are accepted to be beyond change, the issue could still be made to emerge in its true proportions, if the financial analysis of each project report would include figures which indicate the size and the source of the various studies. Such figures might be computed and presented in the manner of tables 46 and 47.

Mr. PROXMIRE. Madam President, without the interest subsidy the cost of the irrigation project would be about $236 an acre, assuming that the cost allocation procedures are legitimate. This amount would provide only supplemental irrigation service to the acres, since none of the acres are new, so the direct cost roughly is $230 an acre.

The interest subsidy cost is about $60 million, or another $220 an acre.

The total cost per acre, therefore, would be about $450.

The purpose of this project, of course, is only to make the present acres, which are already producing, a little more productive.

On the basis of the calculation which I have made, recognizing the amount of increased production for feed grains, for sugarbeets, for popcorn, and so forth, the acres would be made from 20 to 30 percent more productive, on the average.

The minority, in the House report, estimated that the direct cost on this basis would be equivalent or more than $1,000 an acre; and, with the interest cost involved, the direct cost, if it were allocated, over full production or each acre proposed of only the increased production would be more than $2,000 an acre.

I have talked with the Senator from Illinois, who tells me that the best land in his State—and Illinois, as we know, is one of the very richest farm States in the country—sells for about $600 an acre. This is true also in southern Wisconsin. There is some land which is valued as high as $600 an acre.

SUBSIDIES PILED ON TOP OF SUBSIDIES

The Congress, by passing the bill, would be providing a subsidy, if we allow for the fact that this is not new land being brought into production, of $2,000 an acre, far more than three times the value of the best farmland one can find in the Midwest or in the Nation.

Madam President, the irrigation benefits of the project are extremely limited. The study of the reports reveals that they involve one-sixth of an acre-foot—in other words, about 2 inches of water for each acre of land. Two inches, or one-sixth of an acre-foot, is pitifully small.

While the $230 per acre would be repaid by the farmers themselves and by the power users, the $220 per acre of subsidized interest would have to be paid by the other taxpayers of the country over the course of the 50-year repayment period.

What is more, since the Sugar Act payments to growers amount to about $2.30 a ton of sugarbeets, and since from 16 to 20 tons can be grown on each acre, especially with ample water, the annual subsidy to the sugarbeet acres would be about $40 an acre. If this were to continue over the 50-year period, another $2,000 an acre would be paid by the taxpayers to those farmers in order to grow more surplus sugarbeets.

This is really an Alice-in-Wonderland approach, I say with the greatest of respect and admiration for the Senators from Colorado—admiration for their sheer political ability, because they are going to win on this wasteful and unjustified project.

I recognize that the farmers of Colorado, in the Fryingpan-Arkansas Valley, are concerned, since this project is important and vital to them. Nevertheless, judging the project from the national standpoint, it makes no sense whatsoever. This is one of the most obviously extravagant undertakings in which the Senate has indulged. This Senator is definitely going to vote against passage of the bill.

I hope, if the bill should pass—which it probably will—that at long last Senators will begin to take a look at the whole operation and begin to recognize that if we should go forward into the Gunnison project and the other projects, which will be so fantastically expensive, we must appraise them on a realistic dollars-and-cents basis and seriously consider for a change their clearly adverse effects on taxpayers and farmers in other parts of our country.

ONCE AGAIN MIDWEST IS SHORTCHANGED

I want to conclude by again pointing out that this is another example of the Midwest taking it right on the chin. This is one more example of Federal Government activity for which the Midwest pays but from which it does not benefit. In fact, because of the farm surplus problem, it injures the farm economy of my area.

The Midwest is similarly shortchanged in defense contracts, in military installations, in Federal spending for schools through the impact program. The east coast and west coast get the defense contracts. The South gets the space contracts. The West gets the water and hydroelectric projects. All the Midwest gets is the bills.

I want to serve notice right now on behalf of the beleaguered citizens of my State that I intend to take action to change this situation. I intend to protest and protest and protest until Wisconsin and other parts of the Midwest get a better break.

Madam President, I ask for the yeas and nays on the question of passage of the bill.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. PROXMIRE. Madam President, I suggest the absence of a quorum.

Mr. KUCHEL. Madam President, will the Senator from Wisconsin withhold his suggestion for a few minutes?

Mr. PROXMIRE. I am happy to withhold my suggestion.

Mr. KUCHEL. Madam President, on behalf of the State from which I come, California, in connection with the pending bill, I raised the question of transmountain diversion. There was brought out in the hearings, as appears in the committee report, the fact that the diversion contemplated by the proposed project would amount to 2 percent of the water available to the State of Colorado under the Colorado River compact and the Upper Colorado River Basin compact.

---

[7] Huffman, "Irrigation Development and Public Water Policy," p. 174.

[8] See ch. IX.

I mention that point in connection with this debate merely to indicate that the committee which sat in judgment on the pending bill and reported it favorably to the Senate is not in the least unmindful of the legal, engineering, and practical problems arising in connection with any alleged or actual transmountain diversion in the States which together form the Colorado River compact and which exist today by the use of its waters.

In that connection I ask unanimous consent that the section of the report on page 11 under the subheading "Water Supply" may be printed in the Record in full at this point in my remarks.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

WATER SUPPLY

> The State of Colorado is a party to the Colorado River compact of 1922 and the Upper Colorado River Basin compact of 1948. The use of Colorado River water for the Fryingpan-Arkansas project is well within the allocation to the State of Colorado under the provisions of these two compacts. The amount of Colorado River water that would be diverted by the Fryingpan-Arkansas project is only about 2 percent of Colorado's share of the upper basin's expected entitlement.
>
> Studies by both the Bureau of Reclamation and the Colorado Water Conservation Board indicate there is no question as to the physical availability of the annual average amount of water planned to be diverted to the Arkansas Basin through the project works.
>
> In this respect, the Senator from California [Mr. Kuchel] quite appropriately raised the transmountain diversion problem in committee.
>
> The committee is completely mindful of the questions that have been raised with respect to transmountain diversion of Colorado River waters.
>
> However, the Fryingpan-Arkansas project will utilize not more than 2 percent of the waters allocable to Colorado under the terms of the Colorado River compact, and the Upper Colorado River Basin compact and this particular diversion would not impair the rights of any downstream States under any interpretation of these compacts. Nor does the transmountain diversion of this relatively minor amount of water raise any problem as to the physical water supply available to existing projects.

Mr. KUCHEL. Madam President, as a part of the comment which the committee made in its report, the committee stated:

> In this respect, the Senator from California [Mr. Kuchel] quite appropriately raised the transmountain diversion problem in committee.
>
> The committee is completely mindful of the questions that have been raised with respect to transmountain diversion of Colorado River waters.
>
> However, the Fryingpan-Arkansas project will utilize not more than 2 percent of the waters allocable to Colorado under the terms of the Colorado River compact and the Upper Colorado River Basin compact and this particular diversion would not impair the rights of any downstream States under any interpretation of these compacts. Nor does the transmountain diversion of this relatively minor amount of water raise any problem as to the physical water supply available to existing projects.

In my judgment, the committee is completely mindful of the problem of transmountain diversion. In this case, by reason of the very small—almost minuscule—amount of water to be diverted from the basin, I think it quite fair to say that the committee applied the Latin maxim of de minimis non curat lex.

I want that to be a part of the Record, Madam President, as an indication for future projects, when that type of problem arises.

PRIVILEGE OF THE FLOOR

Mr. JACKSON. Madam President, I ask unanimous consent that Mr. J. K. Kaseberg may be permitted the privilege of the floor during consideration of S. 3153, the bill the Senate will consider following action on the pending bill. Mr. Kaseberg is on the legal staff of the Bonneville Power Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

FRYINGPAN-ARKANSAS PROJECT, COLORADO

The Senate resumed the consideration of the bill (S. 284) to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado.

Mr. KEFAUVER. Madam President, I take this opportunity to express my strong support for the Fryingpan-Arkansas project. I have visited the area in which the project would be of very great benefit to the people of Colorado and to the people of other States. I have had the privilege of visiting that section with the distinguished Senator from Colorado [Mr. Carroll] on two occasions. The project is highly justified. It would have a good cost-benefit ratio. The project has been discussed and fully considered on many occasions. I know that the Senator from Colorado [Mr. Carroll] was active in support of the project when he was a Member of the House of Representatives, and that in the 85th Congress, he worked hard, both in the committee and on the floor of the Senate, to secure passage of the bill authorizing the Fryingpan-Arkansas project. The bill passed the Senate in the 85th Congress but did not pass the House.

I know that the strategy this time was to secure passage of the bill in the House first. The project has now been authorized by the House of Representatives.

In seeking the support of the House of Representatives, the distinguished Senator from Colorado [Mr. Carroll], and others who have been interested in the project have left no stone unturned. The Members of the House are to be congratulated upon the success achieved there. In the present Congress the leadership of the Senator from Colorado [Mr. Carroll] and others who have been associated with him has resulted in favorable consideration of the bill by the committee, and a good record in the Senate for the passage of the bill.

The project is highly deserving. We are growing rapidly in population. The project is the kind of development of which we need more in order to build up our resources and opportunities for people in the United States.

Mr. HUMPHREY. Madam President, will the Senator yield?

Mr. KEFAUVER. I am happy to yield to the distinguished deputy majority leader, the Senator from Minnesota.

Mr. HUMPHREY. I wish to associate myself with the comments of the Senator from Tennessee in relation to the program and project. The project has been before the Senate on another occasion. It is my present hope that the bill will be passed and will be sent on to the White House so that the Fryingpan-Arkansas project can render the benefits which it is designed to provide. The proposed legislation is a good measure and a sound investment. I commend Senators who have advanced the proposal.

Mr. KEFAUVER. Madam President, I thank the Senator from Minnesota. As is almost always the case, the Senator from Minnesota is in the front rank of leadership fighting for worthwhile things.

I did not hear the speech of the distinguished Senator from Colorado [Mr. Carroll] today. However, I have had an opportunity to read it. The Senator has presented a convincing and documented argument for the passage of the bill. I congratulate him and other Senators who have presented the issue so clearly and persuasively. I hope the bill will be passed by the Senate on this occasion, as it has been passed on three previous occasions, by an overwhelming majority.

The PRESIDING OFFICER (Mr. Hickey in the chair). The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill (H.R. 2206) was ordered to a third reading and read the third time.

Mr. MANSFIELD. Mr. President, I commend the distinguished Senator from Colorado [Mr. Carroll] for the diligence with which he has pursued the Fryingpan-Arkansas project. The Senator called me 2 weeks ago, during luncheon of the Democratic policy committee, to urge the committee to consider and clear the bill, which was being reported that day. The policy committee responded by clearing the bill, and authorized me to bring it up at the earliest opportunity.

I commend also the distinguished Senator from Colorado [Mr. Allott], who was instrumental and diligent in obtaining the reporting of the bill, and who, in effect, has been quite assiduous in trying to urge early and serious consideration of the proposal. It is my hope that on the basis of the work of these two outstanding Senators the bill will pass overwhelmingly.

The PRESIDING OFFICER. The bill having been read the third time, the question is, shall it pass?

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays.

The yeas and nays were not ordered.

Mr. PROXMIRE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Once again I renew my request for the yeas and nays on the passage of the bill.

The yeas and nays were not ordered.

Mr. PROXMIRE. Mr. President, I ask for a division.

The PRESIDING OFFICER. The question is on the passage of the bill. A division has been requested.

On a division, the bill was passed.

Mr. CARROLL. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. HUMPHREY. I move to lay that motion on the table.

Mr. ALLOTT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CARROLL. Mr. President, I ask unanimous consent that S. 284 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CARROLL. I thank the distinguished senior Senator from Illinois [Mr. DOUGLAS] for his very gracious and generous remarks with respect to this project. Everyone knows of his reputation for fighting projects of a similar nature, and it was a very great and generous act on his part to give us his support on the bill. I personally thank him for it.

I also thank the senior Senator from Tennessee [Mr. KEFAUVER] who all through the years has been a fighter for Fryingpan-Arkansas project. I also extend my thanks to him for his gracious and generous remarks and help through the years on this project.

The chairman of the Committee on Interior and Insular Affairs, the able junior Senator from New Mexico [Mr. ANDERSON] is necessarily absent today. He asked me to help lead the fight on behalf of the bill. I wish to say that under his leadership and his chairmanship the bill became possible in the Senate. I tender him my hearty thanks and congratulations on behalf of the people of Colorado.

I also thank the senior Senator from New Mexico [Mr. CHAVEZ] and the able senior Senator from Arizona [Mr. HAYDEN] for the help they have given us through the years. After all these years this project now becomes a reality for the people of Colorado.

I have spoken of the contribution of the chairman of the Committee on Interior and Insular Affairs. However, two other Members of the Senate made a great contribution to the success of the bill. The majority leader, the Senator from Montana [Mr. MANSFIELD], has always been a stalwart supporter of the bill, even during the days when he was a Member of the House. My good friend, the assistant majority leader, the Senator from Minnesota [Mr. HUMPHREY], has lent his strength to the passage of this important piece of legislation. I tender them my hearty thanks.

Mr. KEFAUVER. Mr. President, I have been in Congress for almost 24 years. I served in the House of Representatives for many years with the Senator from Colorado [Mr. CARROLL]. I fought with him on many occasions for worthwhile projects. I do not believe that I have ever seen a project which received the overwhelming vote which this bill received in the Senate. It speaks well for the outstanding leadership of the Senator from Colorado [Mr. CARROLL].

The Senator from Colorado [Mr. ALLOTT] has done a great deal to secure votes for the bill. I know that to the Senator from Colorado [Mr. CARROLL] this is the answer to a dream on which he has been dreaming and working and planning for many years. I do not believe that any legislation has ever been passed which affects Colorado and that general area with greater significance or which will be of greater value to the people than the Fryingpan-Arkansas legislation. I congratulate him upon his valiant work.

Mr. CARROLL. I thank the able Senator from Tennessee for his gracious remarks. The people of Pueblo and of the Arkansas Valley and all the people of Colorado know how he has stood for this project through the years.

The able Senators from California have also shown the same vision and wisdom. I commend both of them. They have protected the interests of their State. They have been fighting in the interests of their State for years. In a sense this project involves the Colorado River; but I believe they have seen the light and have helped others see the light, with the result that the bill has become a reality.

Mr. ENGLE. Mr. President, I appreciate the kind remarks of the Senator from Colorado. I was chairman of the House Committee on Interior and Insular Affairs for a number of years while this legislation was pending. Also, I was chairman of the House Subcommittee on Irrigation and Reclamation. As my friend the distinguished Senator from Colorado, knows, I supported the Upper Colorado Basin project, and in every instance I have felt that the upper basin had a right to use the water which it owned. I have noted in the committee report language which indicates the infinitesimal amount of water which will be used for this great project. I compliment my friend from Colorado and his colleague the gentleman from Colorado [Mr. ALLOTT] for the great effort they have made. I am glad that their efforts over these long years have led to fruition, and that today they can celebrate the passage of a project which has been long dreamed of and, which has been consummated largely through the persistence and ability and intelligent management of my friends the gentlemen from Colorado [Mr. CARROLL and Mr. ALLOTT].

Mr. CARROLL. Mr. President, I thank the able Senator from California. As a result of the powerful position he occupied in the other body, notwithstanding the fact that he came from California, he knew that the water was ours and that we had a right to use it, and that it would not be used in such fashion as to do harm to the economy of the people whom he represents in the Senate.

Mr. McGEE. Mr. President, first, I commend the distinguished Senator from Colorado [Mr. CARROLL] for his leadership on this project and associate myself with the remarks of the distinguished Senator from California [Mr. ENGLE]. Those of us in the Rocky Mountain West are continually mindful of the great support and unselfish role that he played in our interest at a time when it was unpopular for him to do so, and when it meant that he had to have real confidence in the potential of the West and in our ability to deepen the economic base on which our Nation was operating. It is in that context that the real meaning of the passage of this legislation must be assessed.

As neighbors of the State which the Senator from Colorado represents, we in Wyoming—and I am sure I can speak for the occupant of the chair, my colleague from Wyoming [Mr. HICKEY] who very propitiously presides over the Senate at this moment—salute our neighbors in Colorado for this development. We feel that it will not only enrich and enhance the economic potential of the Rocky Mountain West, but will also make a contribution to the Nation's economy as a whole.

In the history of our land and in the development of our country, a great deal of time has been devoted to research and development, in making our Nation great and rich. We in the West believe that we are continuing this great effort and that we have continued the same kind of research and development that characterized our earlier years. The resource potential lies now more and more in the West. It is within that same frame that the achievement today must be fitted.

The West, indeed, offers a vast opportunity for America to enhance its economic potential in meeting its obligations both at home and abroad. In that sense, we commend the Senator from Colorado for his part in carving out this new milestone along the road that leads to a greater United States.

Mr. CARROLL. Mr. President, I think it is most fortunate for the people of Colorado that on this auspicious occasion we have heard the remarks of the able senior Senator from Wyoming [Mr. McGEE] while at the same time the distinguished junior Senator from Wyoming [Mr. HICKEY] is presiding over the Senate as the Senate voices its approval of the bill. I hope it augurs well for the solving of the problems of our part of the country. Wyoming, too, has reclamation projects it needs, such as Savery-Pot Hook, and the junior Senator from Colorado will try to help Senator HICKEY with early hearings on Savery-Pot Hook, which affects both Wyoming and Colorado. I thank the Senators from Wyoming for their excellent support.

Mr. KUCHEL. And California, too.

Mr. CARROLL. And California, too.

I always listen to the wise recommendations from the leadership on both sides of the aisle.

Mr. JACKSON. Mr. President, will the Senator from Colorado yield?

Mr. CARROLL. I yield.

Mr. JACKSON. I have had the privilege of supporting the Fryingpan-Arkansas project in the past. I was happy to be able to support the bill just passed. We who have served in both the House and the Senate for a long time know that the Fryingpan-Arkansas project has been one of continuing controversies. We are all happy that at last the House has approved the bill. The Senate has approved it on previous occasions.

I commend the distinguished junior Senator from Colorado [Mr. CARROLL] and the distinguished senior Senator from Colorado [Mr. ALLOTT], and other Senators, who have made possible the legislation which has been passed today.

Mr. CARROLL. I thank the able junior Senator from Washington for his remarks and for his continuous support of this project over a long period of time.

Mr. President, I have previously referred to my friend, the distinguished senior Senator from New Mexico [Mr. CHAVEZ], and the help he has given us through the years. In behalf of the people of Colorado, I acknowledge openly and publicly the fine work and strong support which the able senior Senator from New Mexico has given us.

Mr. CHAVEZ. Mr. President, will the Senator from Colorado yield?

Mr. CARROLL. I yield.

Mr. CHAVEZ. It was not easy to accomplish this result. There was much opposition to the project, but we knew the project was a deserving one. That if why we stood for the Fryingpan.

Mr. CARROLL. I thank the able Senator from New Mexico. He knows the people of Pueblo. He knows the Arkansas Valley. He knows that this project was needed by them.

Mr. CHAVEZ. I know it was needed.

Mr. DIRKSEN. Mr. President, will the Senator from Colorado yield?

Mr. CARROLL. I yield.

Mr. DIRKSEN. I think it should be observed that years ago this Chamber was graced by a distinguished Senator from Colorado, the late Honorable Eugene Millikin. Not only was he a great Senator; in my book, he was a courageous statesman. For many years he served as chairman of the Republican Conference. He begot the love, affection, respect, and esteem of every Member of the Senate. He was, indeed, a brilliant person.

Eugene Millikin first manifested interest in the Arkansas-Fryingpan project. He carried on as best he could, even though the project was not consummated in his lifetime. But the distinguished Senator who followed him, the Honorable GORDON ALLOTT, carried on, and now carries on, in that great, fine tradition. I know of the work he has done among Members of the Senate and Members of the House of Representatives in order to assure the consummation of this legislation.

So to him and also to his worthy friend and colleague from Colorado [Mr. CARROLL], congratulations are quite in order for the work that was done on this project.

Mr. CARROLL. Mr. President, I thank the minority leader for his gracious remarks. I heartily concur in his estimate of the character, ability, and intelligence of the late Hon. Eugene Millikin.

Also a Member of the Senate at the same time as Senator Millikin was the Honorable Edwin C. Johnson. He was the senior Colorado Senator, a great Senator, a man of wide experience and vision. In the Senate he was known as "Mr. Wisdom." Senator Johnson was a key man in the first passage of Fryingpan-Arkansas. His influence in the Senate was wide. His years of experience helped propel the first Fryingpan-Arkansas through, along with the dedicated work of his colleague, Senator Millikin.

Senator Johnson had the benefit of vast experience in working for passage of the Colorado-Big Thompson project. His knowledge of our State and its people was, and still is, unsurpassed. He devoted great energy to Colorado water projects and nursed their development in the Congress for years. He was a powerful force in the early development of Fryingpan-Arkansas. I saw him only last week and he is still, I am happy to tell his old friends in this body, a vigorous and knowledgable Colorado leader and statesman.

If my memory serves me correctly, Edwin C. Johnson had returned to the governorship of Colorado when the second Fryingpan-Arkansas bill passed the Senate. Eugene Millikin and my senior colleague, GORDON ALLOTT, were responsible for its passage the second time.

The third time the bill came before the Senate, it fell to the lot of the present junior Senator from Colorado to share with the senior Senator from Colorado [Mr. ALLOTT] the privilege of having the bill passed. I think that was in the 85th or 86th Congress.

Today the passage of the bill by both Houses has finally become a reality. I commend my able senior colleague for his vigorous and intelligent work on the bill.

I also extend commendations to the Governor of Colorado, Steve McNichols, who has worked long and hard to see this project become a reality. Governor McNichols, during the crucial days preceding House passage, came to Washington and stayed here almost 2 weeks with his water experts, meeting the questions and objections of the Congress until the project was fully understood. Along with Governor McNichols, great credit for hard and effective work must go to Len Kuiper, acting director of the Colorado Water Board and Charley Boustead, executive secretary of the Southeastern Colorado Water Conservancy District. I have already mentioned Felix L. Sparks, who almost singlehandedly pulled the long-dissident Colorado water factions together on this project. More than any man, Mr. Sparks, who returns from military service this month, deserves the praise of all Coloradans.

All of the Colorado delegation in both the Senate and the House have pulled together on this measure. There was no partisanship in this effort. We drew the people of Colorado together first; then the delegation came together. In my humble opinion, that is the reason why the bill is now on its way to the President of the United States.

Mr. ALLOTT. Mr. President, I am very happy that the distinguished minority leader spoke as he did—I was about to do so—concerning the late distinguished Senator from Colorado, Gene Millikin, who so ably shepherded a similar bill through the Committee on Interior and Insular Affairs when he was a Member of the Senate.

I commend my distinguished junior colleague from Colorado for his work on the bill.

I also wish to compliment Judge CHENOWETH, a Member of Congress from the Third Congressional District of Colorado, for his work on the project since its inception.

So many persons have had a part in bringing about the passage of the bill that I believe this is one time when we may all say that it is a job that has been well done, because the project has the complete backing of the State of Colorado. We are very happy at last to see this project, for which the people of Colorado have worked so long, and which is of such vital necessity to the actual development of southeastern Colorado for municipal water, for supplemental irrigation water, come to pass. I am sure that everyone will be happy about the result today.

Mr. CHAVEZ. Mr. President I have participated in this proposal for many years. My good friend, the senior Senator from Colorado, is our next-door neighbor. He lives only a few miles away from New Mexico. Lamar is only a few miles from the boundary between our two States.

I know the Fryingpan as I know the Rio Grande; as I know the Navajo Reservation. I know the Colorado very well. I congratulate both Senators from Colorado upon their efforts.

Mr. ALLOTT. Mr. President, will the Senator from New Mexico yield?

Mr. CHAVEZ. I yield.

Mr. ALLOTT. I thank the distinguished senior Senator from New Mexico. He is truly a good neighbor. I always call him my neighbor to the south. Not only is he sympathetic to such projects as the Fryingpan-Arkansas; he understands how necessary projects of this kind are to the development of the West. He has spoken of the Navajo project and of the Rio Grande, which rises in Colorado. Having lived in that region all his life, he has a knowledge of what reclamation projects can mean in the development of the Western States. He knows that they are absolutely necessary for their development.

I pay him my own thanks and appreciation for his support of this subject during all the years it has been in contemplation.

Mr. CHAVEZ. To me this is not a Republican or a Democratic project; it is an American effort.

Mr. ALLOTT. That is entirely correct. I appreciate the Senator's statement.

So far as Colorado, New Mexico, and the other Western States are concerned, I know that those in the Middle West and elsewhere complain about their using water to grow more food. The people in New Mexico complain; they say that the Mountain States cannot produce food as well as New Mexico can.

Let me tell my good friend, the Senator from Colorado, the history of the Rio Grande irrigation project in New Mexico and Texas, and also the history of the Elephant Butte project, and the history of the El Paso Water and Improvement District, in Texas. The average production of cotton in the Deep South is 370 pounds an acre. But in the irrigation districts in New Mexico, Texas, Arizona, and California, it is as much as four bales—or 2,000 pounds—an acre. That shows what irrigation does.

Mr. ALLOTT. The Senator from New Mexico is entirely correct, and I appreciate very much his kind remarks.

NECESSITY FOR STRENGTHENED FEDERAL DRUG LAWS

Mr. HUMPHREY. Mr. President, the Nation welcomes the continued leadership so ably demonstrated by President John F. Kennedy.

Once again, in the area of new drug legislation, the President has taken the initiative. He has renewed his sound appeal of April, in which he recommended to the Senate substantial strengthening of existing drug statutes.

The President's statement greatly increases the likelihood of the adoption of adequate amendments to present drug statutes. We shall, thereby, close intolerable loopholes in the law. Today, the President has submitted to the Senate a number of amendments designed to strengthen S. 1552.

The Nation also welcomes the encouraging demonstration that our new Secretary of Health, Education, and Welfare, Anthony Celebrezze, has promptly mobilized his Department to carry out the President's program.

FAVORABLE REACTION TO SUBCOMMITTEE

It has been personally gratifying to me to note the prompt, enthusiastic response from all parts of the country to the hearing of the Senate Government Operations Subcommittee on August 1.

Our subcommittee, I may say, has only begun its efforts to bring to light certain conditions and problems which have long concerned us. These conditions and problems, so grimly illustrated by the thalidomide tragedy, are part of an international, a national, and a governmentwide pattern, involving almost all scientific research.

I refer, of course, to critical weaknesses in scientific information and communication. This is the undramatic story behind the dramatic thalidomide tragedy. Information and communication deficiencies represent the hidden culprit responsible for innumerable scientific administrative flaws.

THE HUGE FINANCIAL STAKE IN RESEARCH

For 4 long years, I have urged the Federal Government to coordinate the information generated by its scientific research.

In the 1962 fiscal year, the Federal Government is spending 1 out of every 9 budget dollars—$10 billion for scientific research, development, testing, and evaluation. In the 1963 fiscal year, it will spend $12 billion for this purpose.

Perhaps as many as 160,000 federally financed projects are now underway in the 50 States and overseas.

Amazingly enough, there still is not available as of today any systematic means whereby even the President of the United States could secure prompt, reliable, comprehensive information as to all the research which is now in process—or which has been completed—in any one of a dozen broad, major headings.

To identify all the research, even the President, or his able Director of the Office of Science and Technology, Dr. Jerome Wiesner, would have to and does have to ask each Federal agency to compile its own information in its own way—at its own speed—with its own varying definitions.

There is really no Government-wide information system. There is no real system of separate agency systems. There is only a patchwork, a hodgepodge. This is true of interagency drug research. It is true of interagency space science and military research.

Agency information systems do exist and by the dozens. They vary from "excellent"—in the case of, say, the Atomic Energy Commission — to "average," "poor" or "awful."

For 4 years, I have urged reform. I have often felt somewhat like a voice crying in the wilderness. At long last, some reforms are beginning to be made, but, invariably, at a pitifully slow rate.

One would think the Federal agencies felt they were doing Congress a favor by adopting information reforms.

These reforms are actually for the agencies' own good. But they do not seem to view improvements that way. They offer every conceivable excuse for delay and inaction.

AGENCY PACE OF A "TRANQUILIZED TURTLE"

In the subcommittee's approach to these agencies, we have been exceedingly tolerant and patient. We held hearings in 1958 in which we urged them to reform. We held a hearing in 1960 in which we did likewise.

In between and thereafter, we sent a stream of letters, memoranda, mimeographed, and printed reports. We urged; we pleaded; we implored reform.

The agencies, particularly the Department of Health, Education, and Welfare, have made only limited halfhearted response. They are proceeding with the pace of a tranquilized turtle. There is little sense of urgency; there is little interagency teamwork; there is endless buckpassing.

SIRUPY GOVERNMENT COMMITTEE REPORTS

Dr. Wiesner has fortunately empaneled an information group of private experts under the President's Science Advisory Committee. Its report will be out in a few months.

I have been hoping and expecting meanwhile a report from an interagency career group, the Federal Council for Science and Technology, as regards the information problem.

It remains to be seen whether this Council report will be the same "standard sirup" such as usually emerges from Government committees.

ACTION REGARDING APPROPRIATION REPORTS

Meanwhile, this year, I started a new effort. I have gone down the line—appropriations subcommittee after subcommittee—to urge that appropriation reports contain mandates for reform.

My appeal has been heeded. Two such reports, on health and defense, do fortunately now contain such mandates.

I intend to make sure that the agencies are called to account during the 1964 fiscal year appropriation hearings for what they have or have not done by that time.

MESSAGE OF AGREEMENT FROM PHARMACEUTICAL MANUFACTURERS ASSOCIATION

Now, let me turn to the August 1 hearing and its significance in relation to drug research information.

For a reaction to the hearing, I should like to quote but one of many sources which promptly and graciously communicated with me thereafter.

I refer now to a fine message from Dr. Austin Smith, president of the Pharmaceutical Manufacturers Association.

That same day, August 1, Dr. Austin Smith wrote to me. He expressed agreement with a series of statements which I made at the hearing, that is, on the need for improved coordination and communication among agencies of the U.S. Government, between American and foreign agencies, American and foreign drug companies, American and foreign researchers and practitioners.

Dr. Smith likewise expressed agreement with the view which I suggested on the need for systematizing "increased safeguards," so as to reduce the degree of risk which will always, to some extent, be present.

Dr. Smith advised that:

> The subject matter of your hearings deserves examination and discussion throughout the world.

He stated, therefore, that he is—

> taking steps immediately to provide the public record of your subcommittee to the headquarters of associations of the pharmaceutical industry elsewhere in the world.

I am very gratified to receive word of this splendid action.

It is clear that all of us face, in the information and communication problem, a common challenge which merits the best effort of all interested parties.

The medical profession, the pharmaceutical industry, the pharmaceutical profession throughout the world have everything to gain and nothing to lose from strengthening communication on drugs in the interest of better health for mankind.

I ask unanimous consent that the text of Dr. Smith's letter to me be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PHARMACEUTICAL MANUFACTURERS
ASSOCIATION,
Washington, D.C., August 1, 1962.
The Honorable HUBERT H. HUMPHREY,
Chairman, Subcommittee on Reorganization and International Organizations, Committee on Government Operations, U.S. Senate, Washington, D.C.

DEAR SENATOR HUMPHREY: Permit me to comment on statements which you made this morning in connection with the hearing conducted by your Subcommittee on Interagency Coordination in Drug Research Information.

You stated that there may well be serious problems of lack of coordination and communication among agencies of the U.S. Government, and between American and foreign agencies, American and foreign drug companies, and American and foreign researchers and practitioners.

Speaking for the member prescription drug manufacturing firms of this association, I agree with those statements.

Further, in commenting on the fact that the thalidomide problem has been prevented in the United States, you stated a need to systematize increased safeguards and to reduce the degree of risk which will always be present to some extent. You also stated that both Government and private reviewers and investigators must be given better, prompter, more reliable access to the world's medical literature, in all principal languages.

Again, I agree with those statements.

Repeated, continuous and sometimes costly efforts by the U.S. pharmaceutical industry to help solve some of these serious problems are well known in scientific circles.

For example, in 1958, through its association, the industry began a pilot study of mechanical indexing and retrieval of literature references to steroid compounds. In 1961, after expenditure of $35,000, the project was turned over to the U.S. Patent Office, which had been kept advised of its results.

In addition, the Scientific Literature Committee of the PMA Research and Development Section, composed of leading industry scientists, has worked with the National Science Foundation for a number of years in the latter's continuing assignment to expedite indexing and retrieval of scientific research information within the U.S. Government.

In my judgment you are to be commended for your renewed approach to a matter of prime importance in today's climate of rapid scientific advances.

The subject matter of your hearings deserves examination and discussion throughout the world. With this in mind, I am taking steps immediately to provide the public record of the proceedings of your subcommittee to the headquarters of associations of the pharmaceutical industry elsewhere in the world.

Sincerely yours,
AUSTIN SMITH, M.D.

AN ACTION PROGRAM TO PREVENT FUTURE TRAGEDY

Mr. HUMPHREY. Mr. President, we need bold national and international action programs so that a thalidomide-type tragedy will never recur. I speak of the tragedy of malformed babies resulting from the use of a drug.

I should like to suggest a five-point program for this purpose:

First. Enactment of an amendment to assure thorough control of investigational testing on humans by the Food and Drug Administration. The amendment should require adequate testing of drugs on laboratory animals prior to testing on humans, with maintenance of complete records.

Second. A broad-scale, interagency and intra-agency cooperative effort in drug research, to include thorough reporting of drug reactions in the Federal Government's three hospital systems—Veterans' Administration, Department of Defense, and the Public Health Service.

Third. An educational campaign by the Public Health Service, cooperating with medical organizations, to caution physicians and patients against casual, needless use of drugs, particularly on the part of women of childbearing age.

Fourth. Establishment of a medical and drug research information center, under the auspices of the U.S. Public Health Service. At this center, public information and, to the extent that proprietary rights may permit, private information should be gathered, recorded, indexed, evaluated, and made available to pharmaceutical manufacturers, doctors, and hospitals.

The center should, in effect, be the central station of a network of centers. It should be able to draw upon and contribute to Federal inhouse and extramurally supported centers, as well as other public and private resources—medical, pharmaceutical, and others.

Fifth. On the initiative of the United States, an international request to the World Health Organization to provide for exchange of up-to-the-minute information on drugs between the United States and other governments, as well as with the healing arts professions of the respective nations.

INCREASED FEDERAL COORDINATION

Since the Committee on Government Operations, is, per se, interested in efficient Federal activities, we will continue to insist upon the Federal Government putting its own "drug information house in order."

Up to now there has been a shocking lack of coordination within and between U.S. agencies on drug information.

Throughout the executive branch, we need faster, more complete, better indexed, and evaluated information.

We also need a stronger overall drug law—particularly for experimental drugs—stronger food and drug regulations, and more aggressive FDA administration of the regulations.

HAZARDS TO PREGNANT WOMEN

Priority must be given to improvement of information coordination on drugs intended for pregnant women.

Aside from Dr. Frances Kelsey's courage and vision and a few other cases, the Food and Drug Administration does not appear to have been aggressive in protecting the unborn.

Genuine miracle drugs have contributed immeasurably to maternal and child health, but adverse effects are often suspected and must now be thoroughly explored, and suitable safeguards taken.

The Food and Drug Administration should request a report, as soon as feasible, from the National Institutes of Health on drug-related findings in 23,000 pregnancies, now being studied in a nationwide project.

The principal damage to the central nervous system of an unborn baby apparently occurs during the first few weeks after conception.

It is during this time that the woman herself may not know she is pregnant and for trivial reasons may be taking drugs which could affect the child.

It will take unprecedented international teamwork and research to unlock the mysteries of whether, how, and why certain so-called harmless drugs do affect pregnancies.

SUPPORT OF KEFAUVER AMENDMENT ON ANIMAL TESTING

The Senator from Tennessee [Mr. KEFAUVER] is proposing an important amendment for thorough animal testing of investigational drugs, prior—I emphasize, prior—to testing on humans.

I strongly support the principle of this amendment.

I urge that it include thorough testing on pregnant laboratory animals particularly large animals—not only rats or mice—wherever and whenever there is likelihood that pregnant women may ultimately use the drug.

Let me make this point clear. I propose that a vast spectrum of drugs, which may or may not be intended for pregnancy, but which may be regarded as likely to be used by pregnant women—that is, for headaches, insomnia, and so forth—should be thoroughly tested on pregnant laboratory animals.

Of course, even if there is the most thorough testing of investigational drugs on pregnant animals, there is no assurance that the results will prove applicable to human beings. Nevertheless results of such animal tests could alert general practitioners, obstetricians and pediatricians to possible dangers.

Then, too, when the investigational drug is judged ready for testing on humans, such testing should be on a phased basis. This would avoid premature testing on needlessly large populations—male or female, adult or child—before results became available and were evaluated from smaller human samples.

JUSTIFICATION FOR ANIMAL TESTING AMENDMENT

Let me note at this point a documentated justification for the overall amendment and for my stress on tests on pregnant animals, in particular.

First. Louis Lasagna, M.D., division of clinical pharmacology, Johns Hopkins University, stated on July 19, 1961 (hearings, Senate Judiciary Subcommittee, on S. 1552, 87th Congress, p. 1083):

> * * * present FDA prerogatives do not satisfy me with regard to toxicity either. It is shocking that experimental drugs are subject to no FDA regulation of any sort before patients receive them. Some drug houses perform extensive animal tests before a drug is first put into man; others perform almost none. It is reprehensible for man to be the first experimental animal on which toxicity tests are run, simply because bypassing toxicity tests in laboratory animals saves time and money.

Section 2. On July 25, 1961, Dr. Lasagna wrote to the subcommittee—hearings, ibidem, pages 973–974—and I ask unanimous consent to have extracts from the subcommittee hearings printed at this point in the RECORD.

There being no objection, the extracts were ordered to be printed in the Record, as follows:

(1) At present, the Food and Drug Administration has essentially no jurisdiction over experimental drugs until a new drug application is filed. This leaves the decision as to the nature and extent of animal toxicity tests performed prior to human testing up to the drug house (or other proponent of the drug) and, to a lesser degree, to the clinical investigator who is to put the drug into man.

(2) The variation between drug houses in preclinical toxicity testing is tremendous. I have been approached to start human testing of a drug with the only information available being the amount of drug required to kill 50 percent of mice receiving the drug in one intravenous dose. In contrast, it is not infrequent to have a firm supply toxicity information on a proposed drug which runs to many pages in length. The toxicity tests recommended by such experts as Dr. Lehman of the Food and Drug Administration in this country, and Drs. Paget and Spinks of the Imperial Chemical Industries, Ltd., in England, are not infrequently lacking in the toxicity data sent to us by pharmaceutical firms.

(3) Although enough acute animal toxicity data may be available to justify short-term experiments in man, there are often unavailable at the start of human testing adequate chronic toxicity data in animals. This leads to chronic toxicity tests being performed in man first, since for many disease states the repeated use of the drug must be investigated. Clinicians who are impressed by the effect of one or two doses of a new drug will often start chronic administration of the drug, even when the drug has not been cleared for such prolonged human trials by the drug houses supplying the agent. This phenomenon is well known to the industry.

(4) It is, according to FDA officials, a not uncommon occurrence for new drug applications to be filed with extensive clinical data included, but without adequate supporting animal toxicity data being simultaneously available. In fact, it has been made a matter of public record that drugs have been cleared for sale on the market with chronic toxicity tests still pending.

It is easy to understand why drug houses are reluctant to spend the considerable time and money involved in routine toxicity testing unless the drug shows "promise," i.e., until the first human tests are encouraging. It is also, for reasons described above, easy to understand why human testing can "get ahead" of animal testing. In my opinion, therefore, a minimal amount of toxicity testing should be required by law before a drug ever gets put into man.

There are, I suspect, other reasons for inadequate animal toxicity tests besides those mentioned above. Drug houses vary greatly in the caliber of their staffs. Some have excellent pharmacologists, toxicologists, and pathologists, whereas others are deficient in these regards. Therefore on occasion it is likely that poor judgment and ineptitude also enter the picture, instead of (or in addition to) pressures for speed and accuracy.

The very existence of the broad discrepancies in toxicity testing described above testify to a troublesome state of affairs. Are the drug houses who perform extensive toxicity tests before ever going to man merely overcautious conservatives? I think not. Predicting human toxicity is by no means a simple matter, but it is preferable to take all reasonable steps to escape untoward reactions in man that could be predicted from animal work. Somewhere between the extreme care and effort suggested by some pathologists and the inadequacies of the worst of the preclinical evaluation now being done in this country lies a reasonable middle ground which should be standard for all drugs.

Mr. HUMPHREY. Third, Mr. President, Dr. Helen Taussig has written "The Thalidomide Syndrome," Scientific American, August 1962, page 35:

Until recently, no thought has been given to the need for the testing of drugs for potential harmfulness to the human embryo.

Fourth. Senator Kefauver has stated in a letter of July 31, 1962, to several Members of the Senate:

The most tragic aspect of the entire thalidomide history is that, had such studies been made, the horror could have been averted. This is proved beyond doubt by studies of rabbits by the British seller of the product, Distillers Corp., made unfortunately after the drug had been widely used in humans and after it had been identified as the cause of the malformed infants. Reporting in the English medical journal, the Lancet, April 28, 1962, Dr. G. F. Somers notes that experiments in rats showed no malformations but that, "Now we have succeeded in producing deformities in rabbits remarkably similar to those seen in humans." More than half of the litter of the mother rabbits given thalidomide were born deformed. None of the litter of the control rabbits, that is, those of the same colony not given thalidomide, were born deformed. Dr. Somers goes on to state, "No deformities of this kind have been previously observed in the colony, involving the breeding of over 1,000 progeny, and our chief animal technician, Mr. R. E. Hughes, states that he has never seen anything like this during 50 years' experience of rabbit breeding."

Fifth. I am reprinting in the Government Operations Subcommittee hearing various pertinent exhibits on this subject, including the following article from the journal, Pediatrics, which I ask unanimous consent to have printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From Pediatrics, October 1961]

Effect of Drugs Upon the Fetus and the Infant

(Statement by Committee on Fetus and Newborn)

It is a basic premise of pediatrics that physical size is not the most important difference between children and adults. There is increasing awareness that it is also necessary to make more than a quantitative distinction between infants and children. The fetus and the newborn infant often behave so differently as to warrant consideration as separate categories of the human species. This necessitates reevaluation of the effects of drugs independently in each category of the human so that they may be used safely.

Existing drugs and agents that are developed in the future for use in the fetus and in infants must be subjected to more extensive preclinical investigation than is being carried out at the present time. The pharmacologic responses of the immature human may differ greatly both quantitatively and qualitatively from those of the adult. As a result, data obtained from tests in mature animals and human adults or older children cannot be accepted as a satisfactory basis for recommendations concerning the fetus and infant.

The pharmacologic properties of drugs should be studied in vitro and in vivo in the fetus and newborn animal and compared with those in the adult of the same animal species. Of particular importance would be a knowledge of the LD_{50}, dose response, metabolism, and distribution and disposition of the drug. These determinations should be performed in two or more animal species (a rodent and nonrodent species). Pharmacodynamic actions and clinical effects of drugs in humans should be assessed in clinical situations in which they may be useful.

In order to pursue these principles, it is recommended that drug labels should specifically indicate the extent of existing information concerning the use of the agent in the fetus and the infant. When there have been no pharmacologic studies of a drug in immature subjects, an explicit statement of this fact should be indicated on the drug label or in a readily available package leaflet. Physicians who administer drugs to the fetus and the infant must be alert to unusual effects in this subdivision of the human species.

Little, M.D.; Henry K. Silver, M.D.; Samuel Spector, M.D.; J. R. Fouts, Ph. D., Consultant; William H. Kessenich, M.D., Consultant; James M. Sutherland, M.D., Consultant, Committee on Fetus and Newborn.

MY EFFORTS FOR PERINATAL RESEARCH

Mr. HUMPHREY. Mr. President, for 4 long years, I have been urging the strengthening of what has come to be known as perinatal research—the study of the processes of life during the period following conception and into the first month after birth.

On December 1, 1958, I discussed this subject with Premier Nikita Khrushchev in Moscow. At that time, I urged a U.S.-U.S.S.R. partnership in finding the answers to the mysteries of how life develops and how so often and so tragically it emerges with defects.

In the years which have followed, I have been a strong supporter of the perinatal collaborative research project, as supported by NIH.

This project is the greatest effort of its kind ever made in medical history.

I want every U.S. agency and every doctor to gain the greatest insight which may become available through this project.

Meanwhile, in my judgment, evidence gained at the hearing and other evidence which the subcommittee has compiled—but which we have not yet presented—demonstrates that there is an imperative need for a massive Governmentwide effort to reduce to an absolute minimum whatever drug dangers now exist or may in the future develop to pregnant mothers and unborn babies.

Laboratory animals must be utilized; they must be utilized first; and they must include larger animals—not just rats and mice.

I am neither a physician nor a pharmacologist. I am a pharmacist, and I do not presume to have an expertness on issues of toxicity to animals.

Even the greatest experts caution as to applicability of animal findings to human findings.

I do know, however, that it is best to observe every reasonable safeguard before permitting testing on humans.

THE MANY POINTS WHICH THE HEARING CONFIRMED

The hearing which we conducted on August 1 established, I believe, a great many points which bear followup on the part of the executive branch, the drug companies, and the international scientific community.

At the start of the hearing, it may be recalled, I issued a public statement in which I indicated certain tentative observations. I pointed out that confirmation of these observations would await upon the receipt of definitive proof. In every single instance, I believe, that proof was received.

The hearing has, I believe, strengthened the basis on which the Congress can now proceed to examine the legislation which has been so carefully explored in the Senate Judiciary Subcommittee on Antitrust Activities, as headed by the distinguished Senator from Tennessee [Mr. KEFAUVER].

I ask unanimous consent that there be printed, at this point in the RECORD, a memorandum in which I have listed those tentative judgments on which I had commented prior to the hearing, and which were subsequently confirmed.

In this memorandum, I cite the verbatim questions and answers from particular pages of the unedited transcript of the hearing.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM BY SENATOR HUBERT H. HUMPHREY SHOWING THE CONFIRMATION BY THE AUGUST 1 SUBCOMMITTEE HEARING OF TENTATIVE JUDGMENTS WHICH HAD BEEN EARLIER FORMULATED AND SUBMITTED

Tentative judgment: There is inadequate communication and coordination between Federal agencies.

Confirmation: The hearing confirmed the inadequacy of communication and coordination in an appalling number of respects. Let me cite just a few:

1. Dr. James Shannon, Director of the National Institutes of Health, confirmed the lack of a systematic, inter-Institute drug information research system upon which FDA could draw and which, in turn, could contribute to FDA.

2. Dr. Shannon confirmed that only three of the seven NIH categorical Institutes maintain even partial drug information research systems within their own organizations.

Page 102:

"Senator HUMPHREY. I would like to ask, Has the Public Health Service, and particularly the National Institutes of Health, established a centralized, coordinated system for handling research information on the many hundreds and thousands of drugs that are seeking a place in the market?

"Dr. SHANNON. We have not, sir—except in those areas that we are—except in those areas that we have accepted as more or less specific responsibility for development."

Page 105:

"Senator HUMPHREY. Now, doctor, I understand that there is no comprehensive system of handling research information in the National Institute of Allergy and Infectious Diseases. Yet literally hundreds of drugs have adverse allergic effects.

"Dr. SHANNON. That is correct, sir."

Page 107:

"Dr. SHANNON. Senator, fundamentally, Senator HUMPHREY, I am as unhappy as you are about the situation. But I would emphasize that it is not a simple problem that will find simple solutions."

Few important problems are simple. But that is no reason to defer action on them endlessly.

The problems are not getting any simpler. They are getting more complicated. The time to act is now.

3. Dr. Frank Rogers, Director of the National Library of Medicine, confirmed (p. 130) that he had not consulted with the Food and Drug Administration in preparing the plans for the Medical Literature Analysis and Retrieval Service, known as MEDLARS, which will become operational in September 1963.

He said, page 129, "We cannot consult with everybody."

No one asked him to consult with "everybody." There was definite reason, however, for him to consult with an agency in his very own Department which has a vital stake in the National Library's output, namely, the Food and Drug Administration.

4. The Food and Drug Administration was unable to indicate (p. 132) why it did not register research projects with the Science Information Exchange.

Two years ago, it promised the subcommittee to do so, at least with respect to nonconfidential projects.

Why did it not keep its promise?

When does it expect to cooperate with other Government agencies in this exchange?

Does anybody in the executive branch care whether FDA or other agencies cooperate with the exchange?

5. Food and Drug Administration officials confirmed (p. 49) that their Adverse Drug Reaction Reporting System included only 44 of the Nation's 6,000 hospitals. This includes only 8 of the 15 Public Health Service hospitals; none of the Veterans' Administration hospitals; none of the Department of Defense hospitals.

Why, I ask?

The absence of formal Veterans' Administration participation is, I might add, particularly distressing.

VETERANS' ADMINISTRATION'S OTHERWISE EXCELLENT RECORD

I should like to make it perfectly clear that the Veterans' Administration has, in many respects, an excellent record of research cooperation with other Federal health agencies.

The Veterans' Administration clearly recognizes its responsibility and opportunity for the most careful type of clinical testing. It was Veterans' Administration-Department of Defense testing of drugs which has produced so dramatic a decline in TB incidence, and, as a result, in the number of TB hospitals and TB beds. There is excellent cooperation in cancer chemotherapy programs between VA and National Cancer Institute.

The Veterans' Administration now has 171 hospitals—with 112,000 patients—as well as 94 clinics. These represent a controlled population which offer opportunity for rigorous "double-blind" testing, such as is not available and is not practiced in a great deal of investigational testing supported by pharmaceutical companies through individual clinicians. The Veterans' Administration hospital system offers unexcelled opportunity for lifetime followup of patients.

We, in the United States, fortunately, have the finest program of medical care for exservicemen in the world.

It is extremely unfortunate the VA has marred an otherwise outstanding record by a failure to follow through with the Food and Drug Administration. Initial discussions were held in 1960 between VA and FDA for formal participation in the latter's adverse drug reaction reporting program. The arrangements regrettably floundered over the issue of lack of an FDA budget to cover expenses for VA participation.

I am hopeful, however, that neither this nor any other "reason" will prevent VA participation in this program on a formal and systematic basis in the future.

NO LIAISON BETWEEN NINDB AND FDA

(6) Food and Drug Administration officials confirmed that they had had no contact with the perinatal collaborative research project now being conducted by the National Institute for Neurological Diseases and Blindness with 15 hospitals across the Nation.

This project offers a golden opportunity for systematic understanding of, among other phases, the relationship, if any, between drugs, pregnancy difficulties, pregnancy wastage, congenital defects, and related problems.

But regrettably, the National Institute for Neurological Diseases and Blindness, in turn, has had no plans for systematic output to the Food and Drug Administration.

It should be noted that the vast perinatal collaborative research project has been one of the most difficult programs ever to be attempted. It is still too early to draw any definitive conclusions, based upon the initial pregnancies, registered with the cooperating hospitals.

Only relative crude data is available, and it must be analyzed in greatest detail by NINDB's scientific advisers.

The fact, however, that there was apparently no forethought of cooperation between FDA and NINDB is, to say the least, unfortunate.

I have urged Commissioner Larrick to request NINDB to make available initial results as soon as NINDB's scientific panel feels that some judgment can be expressed.

In addition, I am urging the strongest collaboration between NINDB and an American Medical Association's research project, analyzing birth experiences in hundreds of thousands of cases.

It seems clear that infinitely more can be learned and should be learned from birth statistics in the 50 States and abroad. The birth certificate itself should contain, in all the States, information as to congenital malformations. In that way, medical science would be able to spot promptly both longtime or epidemic-type dangers to the birth of healthy babies.

The Director of NINDB, Dr. Richard Masland, is a world-renowned authority on mental deficiency; he has publicly referred to possible relationships between chemical agents and congenital defects. See for example his comments on "The Discovery of Teratogenic Agents" in "The Prevention of Mental Retardation—Part II," a survey, sponsored by the National Association for Retarded Children, Journal of Diseases of Children, volume 95, January 1958, No. 1.

LACK OF INTERNATIONAL COORDINATION

Tentative judgment: There is inadequate international communication and coordination of information with respect to new drugs.

Confirmation: The hearing confirmed a wide array of gaps with respect to information on new and old drugs on the world scene.

In page after page, it confirmed that there is indeed inadequate exchange between the (a) U.S. Government and foreign governments; (b) drug companies at home and abroad; (c) investigational researchers, drug companies, and the medical profession, among the various nations.

Let me cite just one illustration:

Page 33:

"Senator HUMPHREY. At least the immediate evidence that we have, the surface evidence, indicates that there was a lag, if not a total inadequacy, in communication between the West German manufacturer to the British manufacturer, and to the American licensee.

"And apparently no interchange of information between official bodies, such as the World Health Organization, or other international organizations, nor, according to the testimony thus far, has Commissioner Larrick or yourself indicated that either the British or the German Governments present any information to the Government of the United States, to the Food and Drug Administration.

"Is that a correct statement, Commissioner Larrick?

"Commissioner Larrick. That is correct.

"Senator Humphrey. Would you suggest that it might be a good idea for the Congress to look into the possibility of improving this international communication on an official basis?

"Commissioner Larrick. Yes I think it would be well to look into it. I do not know how much of it could be done under present law, how much more law would be indicated. I have personally been to Geneva, and have talked to some of the people over there, about some of these things. I think very much that it would be extremely helpful if there were to be an exchange of information of this sort, preferably through the WHO. I have a letter on my desk from a very important public health official in one of the South American countries, who is obviously very hungry for information about all of the drugs the Food and Drug Administration has taken off the market during the current year, and the reasons for it. And I am sure that that sort of an exchange of information would advance world health."

NEED TO IMPROVE INFORMATION

Tentative judgment: Information systems to record and index the effects of thousands of drugs must be improved.

Confirmation (pp. 34–36):

"Senator Humphrey. What has been disturbing to me is the fact that with all of the international activities that we have, and the exchange of information in a host of fields, that with this new technology—what one might call the new breakthrough in miracle drugs, and all sorts of new drug compounds, that there has not been a more determined effort to make all of this information available as to the testing of the drugs.

"Now, you, Mr. Commissioner, said in your opening statement that one of the reasons that we have this problem that we are dealing with now is because there are so many new drugs, and there is such a tremendous advance in the field of pharmaceuticals, which is true. And may I say that our country has led the world in a very real sense in terms of the perfection and the improvement of new drugs and pharmaceuticals, which have been a blessing to mankind.

"Nevertheless, with this breakthrough, of new drugs busting out all over, does it not appear that one of the great needs today for the scientific community and the pharmaceutical community and the medical community is communication, coordination, the indexing of the effects or drugs, the coordination between countries and manufacturers, the translation from foreign languages into English and vice versa, and the retrieval of information?

"So what we really need to get at here is buckling down to the proposition of how do you perfect a system of communication which includes indexing, which includes the recording of the side effects of drugs, which includes retrieval of this information, so it can be promptly put on the desk of Dr. Kelsey and others in your establishment or in other countries.

"Commissioner Larrick. There is no question about the value of that sort of thing, Senator."

SYSTEMATIC CROSS-INDEXING OF NAMES

Tentative judgment: There must be made available a systematic cross-reference to trade and generic names of new and old drugs.

Confirmation (pp. 46–48): The testimony brought out the need for careful setting forth of generic names. Such action has been contemplated in preceding drug amendments. But prompt, systematic, cross-referencing of trade and generic names in international drug handbooks and in abstracting and indexing journals, has not been previously discussed, unfortunately.

"Senator Humphrey. Now, here is one of the problems we have, Mr. Commissioner. This is a matter of great concern to the medical profession, the pharmacist, and the pharmaceutical industry. I do not quite know what you do about it. There are no less than 16 different trade names of the drugs which do contain thalidomide.

"Now, in the United States this particular compound—I would like to get the chemical analysis of this compound, so at least we can put it in the record, so we know what we are talking about.

"Senator Javits. And also that part of it which causes these bad effects. Can we have that, too?

"Senator Humphrey. Dr. Kelsey can get that for us.

"Dr. Kelsey. The formula of the drug is given in Dr. Taussig's paper. However, it has not been definitely determined what actually causes the side effects. It may be the drug itself, it may be a breakdown product. We just do not know yet.

"Senator Humphrey. Well, now—we will get Dr. Taussig's statement recorded.

"But here is the point that needs to be emphasized. There are 16 different names of this same drug. This shows why it is so difficult to keep track of the pertinent literature. No one knows whether a given drug with a given name is the same or different from other drugs. And it is entirely probable with a doctor that does not possibly have all of the literature on particular drugs, that if he received, for example, in West Germany—if he received information that the contergan drug, the 25-milligram tablet, for example, had some bad side effects, he might very well prescribe grippex, which is the same drug under a different name, or he might very well prescribe peracon expectorans, which is again the same basic preparation.

"There are several trade names within West Germany itself, all of which contain the same basic ingredients insofar as the drug is concerned.

"Now, here is one of the problems that we have today—unless you have the most accurate form of labeling, with the full chemical analysis of the product as dispensed, or the generic term.

"Commissioner Larrick. Senator, you will recall, I am sure, that the President of the United States sent a message to the Congress recommending certain basic changes in our drug laws in this country. And among them was a recommendation with respect to a simple common name for all drugs, which would be displayed in the package with the trade name.

"There is a certain requirement in the present statute with respect to that. But this proposal, which I may say is a bipartisan proposal—would meet the problem that you have raised.

"Senator Humphrey. That is correct, I understand. That is why I wanted to emphasize this particular point.

"Now, there happens to have been some misinformation in the United States relating to this particular incident of the thalidomide compound.

"For example, several drugs have been erroneously identified as containing thalidomide, been erroneously identified in the press. And certain companies are quite up in arms about the fact that their tranquilizer, which does not have thalidomide in it, has been erroneously identified as having it. This has had a very serious effect upon the companies and the product."

PREMATURE TESTING ON TOO MANY HUMANS

Tentative judgment: There probably is a great deal of premature testing of investigational drugs and on too large a population sample.

Confirmation: page 61:

"Commissioner Larrick. I think, I am convinced by this episode, and by some others, that our present regulations need to be reexamined and tightened. And I agree with you that there have been instances where the number of doctors, in my opinion, who have been selected to do experimental work, has been substantially greater than they should have been."

INADEQUATE REPORTING ON INVESTIGATIONAL DRUGS

Tentative judgment: There is inadequate reporting on investigational drugs to the drug company, as well as to the U.S. Government.

Confirmation: page 89:

"Senator Humphrey. Are you fully satisfied that in these experimental drugs, in which there are investigative physicians administering these drugs, that there is adequate reporting procedures back to the companies that have released the drug for experimental purposes?

"Commissioner Larrick. No.

"Senator Humphrey. You think there ought to be a requirement that under experimental drugs, which you are required ultimately to either license or reject, the reporting procedures should be improved or strengthened?

"Commissioner Larrick. Yes."

Pages 109–110:

"Dr. Shannon. A deficiency here, I think, in our reporting systems is the physician who accepts a drug for study has no more than a casual obligation to the pharmaceutical concern who makes the material available in fact to report his total experience with the drug.

"Senator Humphrey. This is the point to which Dr. Taussig referred in her article.

"Dr. Shannon. Yes. So that pharmaceutical manufacturer is placed in the position of receiving only a partial historical résumé of the activity. And I think it is only human that this will be colored by the enthusiasts, rather than those who became disappointed and dropped the use of it, and left the drug on the shelf.

"Although perhaps the most critical information may be in the hands of the physicians who have begun investigations and discarded it for one reason or another.

"So the one thing is one has a lack of total information on the preliminary definitive careful study of the drug."

STRENGTH COMMUNICATION BETWEEN UNITED STATES AND FOREIGN COMPANIES

Tentative judgment: There is inadequate communication between American drug companies and foreign drug companies.

Confirmation: The hearing thoroughly confirmed the need for improved communication between companies. Testimony on the case history of thalidomide confirmed that information was not promptly and systematically exchanged between the German company, the British company, and the American company.

The followup letter from Dr. Smith, president of the PMA, indicated on a general basis the need to strengthen such communication.

* * * * *

COORDINATED HEW INFORMATION SYSTEMS

Mr. HUMPHREY. Mr. President, there will follow at this point excerpts of my statement of June 20, 1961, on a few of the many information inadequacies in the HEW information situation, and in the National Institutes of Health, in particular:

STATEMENT BY SENATOR HUBERT H. HUMPHREY

The case, as I see it, for the objectives of the amendments being recommended today will be found in the record of the House Appropriations Subcommittee (pp. 710 ff).

A few additional points are elaborated herein, and several relatively new phases are cited.

* * * * *

SURGEON GENERAL'S OFFICE

The next amendment, 6-14-61B, is designed to accomplish three purposes:

(a) Provide for the first time a line-item sum for information-communications research; and

* * * * *

FIXING INFORMATION RESPONSIBILITY

Over and above my amendment, may I respectfully suggest that the Appropriations subcommittee, in its report, make known to the Department of Health, Education, and Welfare, the absolute need for fixing responsibility for information research management within the Department.

In other words, I am not simply recommending that there be given $3½ million in communications research funds to the Public Health Service. In my judgment unless there is a greater degree of centralization and identification of responsibility for handling information research policy, we will not accomplish our real purpose.

The fact of the matter is, at least in my view and that of the Senate Government Operations Subcommittee staff, that information management within the Department has tended to be handled on a relatively routine basis. It has consisted of distribution, by offices of public information, of printed materials, leaflets, reports, monographs, etc. This is a necessary and important function, but it is not information research.

In terms of studying the major policies involved, and in terms of interagency information research, there has been no fixed responsibility. For example, there is apparently no single place in the National Institutes of Health where one or more experts, continuously charge with information policy per se, has or have had a clear mandate to serve as liaison with the National Library of Medicine, with other units of the Public Health Service, and with other Federal agencies, including the National Science Foundation and its Office of Science Information Service.

The National Institutes of Health have not been adequately represented, according to my understanding, on the interagency Federal Advisory Committee on Scientific Information. The information responsibility is still apparently blurred and diffused among the seven categorical Institutes and the Division of General Medical Sciences. But in my judgment, we will never get the full advances which we need in the information-communications field, until responsibility is definitely pinpointed in one or more individuals, offices and panels for NIH intramural, as well as NIH-supported extramural effort, in this growing area of activity.

"Everybody's business is and has been nobody's business." The time is overdue for information policy to become somebody's continuous business at NIH and elsewhere in PHS and in the Department. At stake is the efficiency and coordination of future information-communications research. At stake too is the speed with which hundreds of millions of dollars of research findings can be capitalized upon.

NEED FOR COORDINATED LITERATURE SEARCH ON DRUGS

There is a specific instance of a need for clear-cut and coordinated decision on information policy which I should like to bring to your attention. It concerns the need for comprehensive NIH-supported review of thousands of articles in professional journals on the main and side effects of drugs.

There have now been published two precedent-making volumes entitled "Volume II, Parts 1 and 2: Cardiovascular Agents," issued under the auspices of the National Academy of Sciences-National Research Council, under the splendid support of the National Heart Institute.

The cardiovascular literature project, responsible for this great effort, has diligently reviewed, abstracted, and indexed in an imaginative new way, some 400 biomedical journals on a page-by-page basis. But unfortunately, the project was only given the responsibility of reporting upon those drugs which are of cardiovascular significance.

The fact of the matter is, however, that many drugs such as the rauwolfia alkaloids, used in the treatment of hypertension (and, thus, of interest to the National Heart Institute), are also of great interest in terms of effects on behavior and mental disease (and therefore are of interest to the National Institute of Mental Health).

Compounds of hormonal origin, which play a role in hypertension (National Heart Institute) are also of interest to the National Institute of Arthritis and Metabolic Diseases.

Some antibiotics, which are promising as anticancer treatments (and are of interest to the National Cancer Institute), are also of interest to the National Institute of Allergy and Infectious Diseases. Anesthetics and analgesics (painkillers) have important cardiovascular effects (National Heart Institute) and are of interest to the National Institute of Neurological Diseases and Blindness, as well. Obviously, there is need for inter-Institute cooperation in funding joint projects.

Thus far, I understand, only three of the Institutes, the National Heart Institute, the National Cancer Institute, and the National Institute of Mental Health, have established systematic, large-scale programs for reporting on the experimental effects of drugs, as reported in the professional literature.

Here, however, is an ideal instance where NIH as a whole, by adopting an Institute-wide policy, could search not just part of the literature but all of the literature, so to speak. This could and should be done definitively, once—not eight separate times—by eight different projects.

The alternative is to comb hundreds of journals (including many of the same journals repeatedly), once for reports on drug effects on the heart, a second time for effects on a second organ system, then for effects on a third system, etc.

This repetitious search represents poor use of skilled manpower.

The cardiovascular literature project has now proved what can be done in indexing and in abstracting main and side effects. I, for one, feel, based on data compiled by the Government Operations Subcommittee staff, that its historic effort should now be broadened and extended. Limited, piecemeal literature searchers should now give way to an NIH mandate for comprehensive and coordinated inter-Institute searches, such as this project team, supported by the National Heart Institute, has proved it can handle.

Automatic data processing methods, such as are contemplated by the project team, should be examined.

What I am urging in effect, is not only a more coordinated approach, a more scientific approach, but a more modern, high-speed, high-reliability approach in place of obsolete techniques.

NIH and other units of PHS, particularly the National Library of Medicine, fortunately have able experts in communications and EDP problems. These experts should be given the green light to move ahead.

I have concentrated, I may say, on this information phase, because it has been the special field of interest of our subcommittee. It is, I believe, fair to say, that no committee of the Congress has studied science information problems more intensively than we have. (See for example, S. Rept. 263, 87th Cong., on "Coordination of Information on Current Scientific Research and Development Supported by the U.S. Government.")

Only last Thursday, I met with Dr. Jerome Wiesner, Special Assistant to the President for Science and Technology, to review science information problems.

COMMITTEE MEETINGS DURING SENATE SESSIONS

Mr. JACKSON. Mr. President, I yield to the distinguished minority leader [Mr. DIRKSEN].

Mr. DIRKSEN. Mr. President, first, I ask unanimous consent that a special subcommittee of the Committee on the Judiciary be permitted to conduct a hearing during the session of the Senate on Tuesday, August 7, 1962, for the purpose of considering the nomination of Irving Ben Cooper, to be a U.S. district judge for the southern district of New York.

Mr. KEATING. Mr. President, reserving the right to object—and I shall not object, because I believe this hearing should be concluded—I wonder, since the Senator from South Carolina [Mr. JOHNSTON], chairman of the subcommittee dealing with the Thurgood Marshall nomination is on the floor, if I may ask that this permission be extended to include the hearing scheduled for the following day with reference to the nomination of Thurgood Marshall.

Mr. DIRKSEN. I certainly would have no objection.

Mr. JOHNSTON. I have no objection to the request of the Senator from Illinois, but I do have objection with respect to the nomination of Thurgood Marshall, which is scheduled not for Tuesday, but for Wednesday morning. I understand the full committee is going to be sitting on that day on a matter that the administration wants, a drug bill.

Mr. KEATING. Mr. President, reserving the right to object, obviously this is something which requires unanimous consent, but my request was to enlarge the unanimous consent to permit the subcommittee sitting on the nomination of Thurgood Marshall to sit on Wednesday. It is true that the full committee is considering a drug bill. We discussed it in committee today. My understanding is that those hearings or discussions may continue tomorrow. They will probably be continued during the hearing on the nomination of Judge Cooper. I do not believe there is any difference in the circumstances in this respect and I do not see why we could not sit on the nomination of Judge Marshall even if the drug bill is being considered just as we may sit on the nomination of Judge Cooper while the drug bill is being considered. It is time we brought to a conclusion the subcommittee's hearings on Judge Marshall. His nomination has been pending since January and he has actually been sitting on the court for more than 9 months without confirmation. The subcommittee has had more than ample time to consider this nomination and it is time steps were taken to bring this matter to a conclusion.

I ask unanimous consent that permission be included for the Judiciary subcommittee to sit during the session of the Senate on Wednesday to conduct the Thurgood Marshall hearing.

Mr. MANSFIELD. Mr. President, has the Senator made a unanimous-consent request to that effect?

Mr. JOHNSTON. Mr. President, I am objecting to the subcommittee's meeting on Wednesday when the Senate is in session. That morning we are meeting on the Thurgood Marshall nomination at 10:30, and will be in session until the Senate meets, but I would object to the committee's meeting after that.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois?

Mr. DIRKSEN. Mr. President, I submit two requests: One for the subcommittee to meet on the nomination of Judge Cooper on Tuesday, tomorrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. DIRKSEN. And the other a request for the subcommittee hearing the nomination of Judge Thurgood Marshall to meet on Wednesday at 10:30.

The PRESIDING OFFICER. Is there objection?

Mr. JOHNSTON. I only object to the last request, the meeting to consider the Thurgood Marshall nomination on Wednesday while the Senate is in session.

The PRESIDING OFFICER. The Chair hears objection.

Mr. JOHNSTON. We are being asked to pass on something we know nothing about.

The PRESIDING OFFICER. The Chair has heard objection to the Senator's second request.

NECESSITY FOR STRENGTHENED FEDERAL DRUG LAWS

Mr. DIRKSEN. Mr. President, with reference to the drug discussion by my distinguished friend, the Senator from Minnesota, the full Judiciary Committee met this morning, and we had in attendance at the meeting Mr. George Larrick, Commissioner of the Food and Drug Administration, and also Dr. Kelsey.

A few specific things developed amidst a great deal of confusion. The first was that the Food and Drug Administration under existing law has authority to issue regulations, which authority has never been used. I think Dr. Larrick made that concession at least three different times this morning, so when he was asked, "Why has not the authority been used?" he had no answer. We can only prescribe this to some kind of bureaucratic inertia, if that is not too harsh a term.

Second, we had the latest report this morning on the new drug, very much in the public eye, with respect to 3,700 pregnant mothers, to all of whom the drug was administered. There was a report of no malformity and no deformity whatsoever.

There were other things. Questions arose with regard to the Presidential request and with respect to proprietary drugs.

I think I should say for the RECORD that the distinguished chairman, the Senator from Tennessee, at the outset of the hearings excluded proprietary drugs from consideration. Our entire hearing was directed toward what are known as ethical drugs. The proprietary drug people have never been heard. If they are to be included, the question is, Should the hearings be opened up for further testimony? Should they be deferred until some later date?

At least I wish to have the RECORD clear that there was no inclusion of proprietary drugs in the hearings on the first proposal of S. 1552, and they are not included at the present time.

I add, Mr. President, that the bill has now been on the calendar for a considerable period of time. It came from the committee by a vote of 14 to 0. If it is to be amended—if there is a necessity for amendments—I am sure the distinguished chairman of the committee will take cognizance of that fact.

We had a meeting this morning. There will be another meeting of the Judiciary Committee tomorrow. I presume there will be as many meetings as are necessary to adequately deal with the whole problem.

Mr. KEFAUVER and Mr. HUMPHREY addressed the Chair.

Mr. DIRKSEN. If I may do so, I am glad to yield to the Senator from Tennessee.

Mr. KEFAUVER. I was going to talk about the amendments submitted by the President, which I have discussed with the Senator from Mississippi [Mr. EASTLAND]. He agrees that I should put them in the RECORD and give a short explanation.

I agree with the Senator from Illinois about proprietary drugs. The hearing we had was on ethical or prescription drugs. The proprietary drug people could have been heard. They did not request to be heard and were not heard during the course of the hearings. It was stated on occasion that the bill, in certain of its provisions, would not apply to proprietary drugs. Now they wish to be heard and have been promised a hearing.

While they are entitled to a hearing on the factory inspection provision, I do not think passage of S. 1552, together with any amendments which might be accepted, should be endangered by a request to have hearings in the Senate and on the proprietary drug issue.

It will be my purpose to introduce a bill, as soon as it can be prepared, so that that matter can be separated from S. 1552, and also so that the proprietary drug people can be given an opportunity for a hearing. I do not think the passage of the bill, which is so urgent for the protection of the people who have to take drugs, ought to be delayed by virtue of hearings which would have to be held if proprietary drugs were to be included in the factory inspection provision.

Mr. President, if the Senator will permit, I wished to speak on my own.

Mr. DIRKSEN. Mr. President, I thank the distinguished Senator from Washington for yielding to me.

Mr. JACKSON. Mr. President, I yield briefly to the distinguished Senator from Tennessee.

The PRESIDING OFFICER. The Senator from Tennessee may proceed.

Mr. KEFAUVER. Mr. President, as has already been stated, on Saturday, August 4, the President sent to the Senator from Mississippi [Mr. EASTLAND] seven amendments to S. 1552, the Drug Industry Act. The Senator from Mississippi [Mr. EASTLAND] has given me permission to introduce into the RECORD these amendments, together with the brief explanations which accompanied them.

I think this is important, because all the news media do not have copies of the seven amendments. Undoubtedly, they will be considered by the Senate shortly. They should be printed in the RECORD, so that all Senators, the press, and the public can have an opportunity to study them. I shall ask unanimous consent that they may be printed in the RECORD, together with the explanation of them as they came from the President.

I wish to compliment the President of the United States upon sending these recommendations to the chairman of the Committee on the Judiciary of the Senate. They will improve the bill insofar as powers needed by the Food and Drug Administration are concerned. We will have a better law to protect the people. We will have safer and better drugs, which are properly tested. Everyone will be able to place greater reliance on the quality of drugs. The danger that a drug such as thalidomide would get to the market will be greatly reduced.

I commend the President for awarding a medal to Dr. Kelsey for her courageous performance in not letting thalidomide get on the market in the United States. This medal will be presented tomorrow. Many of us made recommendations to the President. I so urged the President and Mr. Macy, the Chairman of the Civil Service Commission, describing in some detail the pressures to which she had been subjected and which she had resisted.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. KEFAUVER. I wish to say, before I yield to the Senator, I am glad that his subcommittee of the Committee on Government Operations is going further into the question of intergovernmental relations in connection with the exchange of information on drugs, particularly drugs with potentially serious side effects. The Antitrust Subcommittee of the Committee on the Judiciary went into the problem of side effects at some length.

I should like to commend to all pages 198 to 222 of the subcommittee's report on the drug industry. The report describes side effects, which have caused illness, and even cost lives when there was no indication in the drug's advertisements that there were any side effects at all, or that the drug was as dangerous as it was known to be.

This is a field which needs to be further explored. I am glad the Senator from Minnesota is going to do so. What nearly happened in connection with thalidomide, while more dramatic, is illustrative of what has actually happened in connection with many other drugs, which are discussed in the report of the subcommittee and on page 43 of the report on the bill, representing the individual views of Senators CARROLL, HART, LONG of Missouri, DODD and myself. I know that much good will come from the Senator's inquiry.

I am happy to yield to the distinguished Senator from Minnesota.

Mr. HUMPHREY. Mr. President, my purpose in asking the Senator to yield was, first, to say that I believe the moment is at hand when we must have effective action on the question of strengthening our laws relating to drugs, and particularly the investigational processes that are involved in the marketing of a new drug.

I join the Senator in saluting Dr. Kelsey of the Food and Drug Administration for her outstanding example of attention to duty, her vigilance, and her alertness. However, I believe it should be noted that it was only by a stroke of good fortune that Dr. Kelsey was able to intercept certain information about the drug called thalidomide and to bring that information to the attention of her superiors and, in turn, to keep the drug off the American market. She happened to read a letter to the editor of the British Journal of Medicine.

Mr. KEFAUVER. Lancet.

Mr. HUMPHREY. That letter to the editor alerted Dr. Kelsey to some problems relating to thalidomide. The tragic fact is that the drug has been used widely in West Germany.

The manufacturer had not given information to a manufacturer in Great Britain who was using the same formula for a compound that was to be sold under a different name, but which was the same as the drug manufactured in West Germany. So we had the peculiar situation of a drug which was widely used, supposedly as a tranquilizer or sleeping pill, one which had wide acceptance, but which had never been tested upon pregnant women, and had never been tested as to its effect upon an unborn child.

The drug had been reported in West Germany only by the manufacturer. No report had been given to Great Britain, where the drug was being manufactured, and no report was made to the United States, where the drug was under license. So there was a complete breakdown in the dissemination of information. We have better information on airline schedules. We have better information, of course, on weather. On an international basis we have better information available on chewing gum than we had on the drug thalidomide. The Senator from Minnesota and his subcommittee are involved in studying that situation.

I wish to make it quite clear that the substance of the proposed legislation has been under the jurisdiction of the distinguished Senator from Tennessee, and he has done an excellent job. The subcommittee over which I am privileged to serve as chairman looks at the interagency coordination and the international coordination efforts. There is no interagency coordination on drug research in our Government between the National Institutes of Health and the Food and Drug Administration, between the Veterans' Hospital and the Food and Drug Administration, or between the U.S. Public Health Service and the Food and Drug Administration.

Everyone goes his own way, runs his own train, has his own show. If there is any coordination, it comes about only because there are a couple of friends in different departments who talk with each other. The lack of coordination is a situation which must be remedied.

If the bill as reported from the Committee on the Judiciary, or any of the amendments proposed by the Senator from Tennessee or the amendments proposed by the President today would bring the agencies into an exchange of coordinated information, they should be adopted at once, before there is more tragedy in our country.

I thank the Senator.

Mrs. NEUBERGER. Mr. President, will the Senator yield?

Mr. KEFAUVER. Before I yield to the Senator from Oregon, I wish to comment that while our Subcommittee on Antitrust and Monopoly did conduct hearings and consider the entire drug problem over a period of almost 3 years, there is a great deal yet to be considered, particularly in the area of intergovernmental relations. That whole area is an exceedingly important one. The cost of drugs and devices is greater than the cost of medical fees. I am glad that the Senator from Minnesota will hold hearings on the subject. But it is absolutely imperative that we enact legislation now.

In connection with the remarks of the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN], that no malformed children had yet been reported as a result of thalidomide dispensed in our country, I wish to say that a number of such children have been reported as a result of thalidomide purchased elsewhere. Moreover, the new drug application was not withdrawn in the United States until March 28, 1962. Up to that time 1,200 doctors were still giving the drug to their patients to test it on a clinical or experimental basis. So we shall not know until the first of next year whether the drugs that the doctors have put out on an experimental basis have caused malformed children.

In connection with the remarks of the Senator from Minnesota, I wish to say also that in this country the manufacturer was going to put it on the market without testing it on any animal except mice and rats. Yet, as reported in Lancet of April 28, 1962, it was discovered in England after the drug had been taken off the market there that if the drug were tested on pregnant rabbits, their offspring displayed the same kind of deformities which have occurred in children.

Thus the entire tragedy would not have arisen if those tests had been given before the drug was given to human beings. The danger would have been discovered.

One amendment, which I shall discuss later, would authorize the Food and Drug Administration to test new drugs on animals before they are issued for clinical testing on humans.

I yield to the distinguished Senator from Oregon.

Mrs. NEUBERGER. Apropos to the discussion, the other day a little item published in the Northwest Medical Journal for July 1962 came to my attention which I believe would be of interest to the Nation. I should like to read the article for the attention of Senators at this time. The article states:

> The American pharmaceutical industry * * * has served this country and the world very well, and still is. And the present powers of the FDA are still adequate. And free enterprise is still preferable to medication according to the wisdom of Mr. Ribicoff or any of his probable successors. Nineteen hundred and eighty-four is approaching fast enough; let's not hurry it.

Imagine making that statement in the light of all the evidence. One line I have read and reread. I still do not understand it. It states:

> And free enterprise is still preferable to medication—

What does that statement mean?

Mr. KEFAUVER. What the Senator has read is a sample of what members of the committee have had thrown at us by the bushel for more than 3 years. I am for free enterprise. But free enterprise involves some responsibility, and that responsibility in the ethical drug field means seeing that people have reasonably priced, safe, effective, and properly advertised drugs, which the American people have not had in recent years.

As I said the other day, S. 1552, which is on the calendar, and has been there for 2 or 3 weeks, is a considerably watered-down version of the bill approved by the Antitrust Subcommittee. I invite Senators to the original bill as they consider the one on the calendar.

However, S. 1552, as reported, has many good provisions, although they generally do not go far enough and can be improved with amendments such as those the President has submitted.

I was talking about the amendments sent to the Senator from Mississippi [Mr. EASTLAND] by the President on Saturday. These are excellent proposals, which, if adopted as amendments to S. 1552 as reported by the Judiciary Committee, will go a long way toward insuring the American people that any drug which they purchase is safe and effective and has been manufactured in plants which have been adequately inspected. The adoption of these amendments will represent a great step forward in protecting the public interest in this critical field.

Let me make it clear here that there is little in the amendments which will reduce the price of drugs. Price reductions would come about principally from changes in the patent laws, covered in provisions which were taken out of the bill in the Judiciary Committee, and which I will discuss at a later time.

Three of the amendments are virtually identical to amendments proposed in the individual views in the report on S. 1552 by Senators CARROLL, DODD, HART, LONG of Missouri, and myself. These are the amendments (a) that claims as to the efficacy of drugs be adequately supported by evidence and approved by the FDA; (b) that all advertisements for prescription drugs carry statements—or summaries thereof—of their side effects and safety and in addition show the generic name in type at least half as large as that of the trade or brand name; and (c) that all time limitations upon the FDA for the approval of a new drug be eliminated, so that no drug can be marketed until the FDA is satisfied that it is safe and effective.

Dr. Kelsey testified today before the Judiciary Committee and stated that this change is absolutely necessary. Mr. Larrick, the Commissioner of the Food and Drug Administration, was of the same opinion.

The President has proposed amendments relating to factory inspection and quality manufacturing controls. While less stringent than the amendments contained in S. 1552 in the form in which it was approved by the Antitrust Subcommittee, these amendments represent a substantial improvement over the provisions approved by the full Judiciary Committee. The ability of FDA to do its job in inspecting drug plants and in seeing to it that such plants conform to adequate standards will be substantially enhanced by the adoption of these two amendments.

The President's amendment to the factory inspection provision would apply to all drug plants, regardless of whether they are manufacturers of prescription or over-the-counter drugs. Although manufacturers of over-the-counter drugs did not request a hearing on this matter during the consideration of S. 1552, they have recently been seeking and have been promised a hearing. That is true in the Senate, and perhaps the same is true in the House.

It would be unfortunate if action on all of the other amendments were to be delayed until such a hearing could be held. Therefore, it is my view that the Senate should act now on the factory inspection provision relating to prescription drugs and hold hearings and take action as quickly as possible on a separate but identical bill relating to proprietary drugs. I plan to introduce such a companion measure tomorrow.

Another Presidential recommendation relates to the certification of antibiotics. The President is particularly desirous of eliminating from S. 1552 an exemption for antibiotics for veterinary purposes adopted in the Judiciary Committee. If this exemption were removed, the section of S. 1552 dealing with antibiotics would be substantially identical with the President's recommendations.

Finally, there is one area in which I think that the provisions of S. 1552 as reported by the Judiciary Committee have important advantages which should not be lost. Under the President's recommendations the authority to designate generic names would simply be lodged with the Secretary of HEW. A generally similar provision was contained in the original version of S. 1552. As a result of hearings, we decided that the Secretary should have that authority but would exercise it under only two conditions: (a) where requested to do so by a compiler of an official compendium, and (b) upon reviews to be made by the Secretary of generic names. These conditions have been carefully worked out in cooperation with the U.S. Pharmacopoeia and should, in my opinion, be retained.

The U.S. Pharmacopoeia, which is a very fine organization, and the American Medical Association have set up a committee on this subject, that under the committee bill they would have the initial obligation of trying to agree with the manufacturer upon a proper generic name. If they were not successful, they would refer the matter to the Secretary of Health, Education, and Welfare, and he would have to designate the generic name. In reviewing the generic name, he would also have the power to designate generic names upon a review. I think it is important that these conditions be maintained.

Finally, the other majority members of the Antitrust Subcommittee are joining me in offering an amendment authorizing the Secretary of HEW, where he deems it necessary, to require animal testing before a drug is given to humans for clinical testing. Man has been, but should not be, the first creature on whom a drug is tested. It is very doubtful whether the present law, even as modified by the Harris bill, in the House would confer this authority upon the Department of Health, Education, and Welfare. If there is one lesson to be learned from the thalidomide tragedy, it is the importance of requiring appropriate animal tests before a drug is given to humans. As I have said, animal tests performed by the Distillers Corp. of England disclosed the horrible abnormalities in the legs of rabbits, but these tests were conducted after the effect of thalidomide on humans had been identified and after the drug had been taken off the market in England.

It was stated that Mr. Larrick had not used his present authority to make regulations governing clinical testing. I do not believe he has sufficient authority under present law, or even under the present version of S. 1552, to require the testing of animals when he thinks it necessary before a drug is put out to doctors for experimental administration.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. KEFAUVER. I am happy to yield.

Mr. KEATING. Is it not a fact that under existing law the head of the Food and Drug Administration, if he sees fit, can issue such a regulation, requiring the testing on animals?

Mr. KEFAUVER. No. I say to the Senator from New York that in my best judgment—and this has been studied by lawyers on the staff—he could not do so. Section 505 of the Food and Cosmetics Act contains a subsection which reads:

> The Secretary shall promulgate regulations for exempting from the operation of this section drugs intended solely for investigational use by experts qualified by scientific training and experience to investigate the safety of drugs.

That is a regulation relative to exemption. It does not give him the affirmative authority which in my opinion he would need to require testing on animals before a drug is put out to doctors for experimentation. In any event, this authority ought to be clearly spelled out, so there can be no question about it.

Mr. KEATING. I agree it should be spelled out. My interpretation of existing law is that he has had that power right along. However, it is a legal question.

Mr. KEFAUVER. In my judgment he does not have the authority.

Mr. HART. Mr. President, will the Senator yield?

Mr. KEFAUVER. I am glad to yield to the distinguished Senator from Michigan.

Mr. JACKSON. Mr. President, I have yielded with the understanding that I would not lose the floor. I started to do so about an hour ago, when I yielded for 5 minutes. I yield to the Senator from Michigan.

Mr. HART. I did not know that the Senator had yielded for this purpose. I thank him for his consideration, and will shorten my questions.

Mr. KEFAUVER. I thank the Senator from Washington for yielding to me, and I wish publicly to express my appreciation to the Senator from Michigan for his work and interest and his support for legislation designed to give us safer and better and more reasonably placed drugs. He has been a real battler for the people in this fight all the way through.

Mr. HART. Mr. President, needless to say, I appreciate the kind remarks of the Senator from Tennessee, but in a way it destroys the effect of my next point, the only point for which I sought the floor.

S. 1552 is the Kefauver-Hart bill. During the many months that have intervened since the introduction of that bill, many beatings have been absorbed by some of us. No one likes to think that vindication is at a high cost. Surely none of us seeks to have the bill enacted because of tragic consequences that were not possible for us in conversation and debate on the floor to portray or suggest might happen. I have sought the floor at this time only to commend again the Senator from Tennessee for the courage which he has displayed throughout many months.

This has not been a particularly easy period for any of us. Criticisms have ranged from "Evidently you have no conception of the responsibility of the producers of these drugs, or you would not suggest there was any need for improving the requirements of the law," to the much more critical and far more harsh suggestions with respect to our failure to understand the virtue of free institutions.

I feel, as I know the Senator from Tennessee feels, that every member of the committee sought fully to understand the implications which attached to every section of the bill as we considered it. But

I am sure, too, that in the light of the tragic chapter which is being written these days on the front pages of the newspapers, the study will now be more careful, the feeling of personal responsibility fully to understand what is proposed far deeper. As a consequence of this, I am certain that the future of S. 1552 is a much brighter one.

The Senator from Tennessee and I, and other Senators, have always been convinced that if S. 1552 became law, the future of the public health of America would be brighter.

So I really rose to congratulate the Senator under whose leadership this effort has been undertaken, and whose leadership has brought it to the point where now, I think, we can reasonably expect its passage.

Mr. KEFAUVER. I thank the Senator from Michigan. Many Senators, many doctors, and many thoughtful citizens have played a more important part in this inquiry than I have; but I am glad to be a part of the team.

Mr. President, I ask unanimous consent to have printed at this point in the Record an explanation of the President's amendment No. 1, factory inspection, and the amendment.

The PRESIDING OFFICER. Without objection, the explanation and amendment will be printed in the Record.

The explanation and amendment are as follows:

AMENDMENT 1—FACTORY INSPECTION

Section 4, of S. 1552, amends section 704 of existing law to clarify and strengthen FDA's present inspection authority over prescription drug plants. The provision is overly restrictive in terms of the type of records that can be inspected and is limited to prescription drug plants only. The President has said this new authority to inspect records, etc. "* * * cannot feasibly be limited to a particular class of drugs and should therefore be made applicable to over-the-counter as well as prescription drugs."

On June 12 the full committee approved a factory inspection provision covering all drugs and food, cosmetics, and devices as well. At a later meeting (June 18) the full committee reversed this vote, limited the expanded authority to prescription drug plants only and added further restrictions.

It is proposed that the Harris bill inspection provisions be substituted but limited to drugs (including nonprescription drugs). This would include provisions to strengthen safeguards in existing law against disclosure of information obtained by inspection. Also, a refusal to permit lawful inspection would be made subject to injunction so as not to require criminal action in all cases as under existing law.

The attached factory inspection amendment to S. 1552 would be identical in effect with title II of the Harris bill insofar as factory inspection relating to drugs is concerned.

FACTORY INSPECTION AMENDMENT

On page 27, line 18, strike out "; and (3)", and insert in lieu thereof ": *Provided*, That".

On page 27, lines 20 and 23, strike out "prescription".

One page 28, line 5, insert after the word "violation" the words "or potential violation".

On page 28, line 5, strike out the words "No inspection" and strike out all that follows down through "Secretary.", line 21.

On page 29 strike out lines 1 through 24.

On page 30, insert the following between lines 2 and 3:

"(c) Subsection (a) of section 302 of such Act is amended by striking out '(f),'.

"(d) Paragraph (j) of section 301 of such Act is amended by—

"(1) inserting 'or as authorized by law,' after 'Act,'; and

"(2) striking out the following: 'concerning any method or process which as a trade secret is entitled to protection'.

"(e) Nothing in the amendments made by subsections (a) and (b) of this section shall be construed to negate or derogate from any authority of the Secretary existing prior to the enactment of this Act."

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the Record an explanation of the President's amendment No. 2, quality manufacturing controls, and the amendment. The language of the amendment is somewhere between that of the bill proposed by the Subcommittee on Antitrust and Monopoly and the language of the Judiciary Committee bill. In my opinion, it is an improvement upon the latter.

The PRESIDING OFFICER. Without objection, the explanation and the amendment will be printed in the Record.

The explanation and the amendment are as follows:

AMENDMENT 2—QUALITY MANUFACTURING CONTROLS

Section 5, of S. 1552, amends existing law to authorize FDA to promulgate regulations requiring drug manufacturers "to maintain facilities and controls that will assure the reliability of their product." Failure to maintain such facilities and controls would deem a drug (both prescription and nonprescription) adulterated and subject it to the enforcement provisions of the act (multiple seizure, etc). To this extent the provision is consistent with the Harris bill, but it falls short in that the FDA regulations would be merely interpretive in nature, establishing only prima facie evidence of what constitutes current good manufacturing practices in any court test. This would create endless de novo litigation on the question of what constitutes good manufacturing practices each time there is enforcement action. Under the Harris bill, these regulations, issued through formal rulemaking and subject to judicial review on the record, would be binding in enforcement proceedings. In addition, S. 1552 fails to require that the manufacturing controls be such as to insure proper labeling and also to insure that the efficacy of the drug will be what it purports to be.

The attached quality manufacturing control amendment to S. 1552 would be identical to section 101 of the Harris bill. It would make the regulations binding. In addition, the amendment would make clear that personnel responsible for establishing and carrying out the necessary manufacturing methods and controls must be adequately qualified and that the manufacturer's controls must be such as to assure that the product meets all the requirements of the act, including the claimed efficacy and proper labeling.

AMENDMENT ON QUALITY MANUFACTURING CONTROLS

On page 30, line 10, strike out all following the semicolon down through line 23 and insert in lieu thereof the following: "or (B) if it is a drug and the methods used in, or the facilities or personnel or controls used for, its manufacture, processing, packing, or holding were inadequate (as determined in accordance with regulations promulgated by the Secretary on the basis of good manufacturing practice) (i) to insure that its identity and strength do not differ from, and that its purity, quality, and efficacy do not fall below, those which it purports or is represented to possess, or (ii) to insure that it will not be injurious to health when used in accordance with directions for use on its labeling, or when used in accordance with a prescription of a licensed practitioner (which prescription is consistent with its labeling), or (iii) to insure that its labeling is not such as to cause it to be adulterated or misbranded;".

(b) Section 701(e) of such Act is amended by striking out, in the first sentence, "501 (b)" and insert in lieu thereof "501 (a) or (b)".

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the Record an explanation of the President's amendment No. 3, relating to new-drug clearance procedure, and the amendment. The amendment is identical to the provisions of the original version of S. 1552.

The PRESIDING OFFICER. Without objection, the explanation and the amendment will be printed in the Record.

The explanation and the amendment are as follows:

AMENDMENT 3—NEW-DRUG CLEARANCE PROCEDURE

It is possible, under existing law, for a new-drug application to become effective automatically (60 or 180 days after filing) without approval by FDA and before that agency is satisfied as to the safety of the product. In so critical an area as drug safety, no automatic clearance should be possible, theoretically or in practice.

Section 6 of S. 1552 does not foreclose this possibility. Moreover, the bill, while eliminating the present statutory time limit insofar as the actual hearing period is concerned if a formal hearing is held on the application, still places an arbitrary time limit (90–180 days) on initial action by the Department and on the Department's preparation for hearing thereafter (30 days).

We fully support the attached amendment which eliminates all time limits with respect to a new-drug application. No new drug could be marketed legally unless and until the Secretary (subject to judicial review) was satisfied as to its safety and efficacy no matter how long it took him to reach that conclusion (so long as he did not act in an arbitrary or capricious manner).

In addition, the judicial review procedures of this Harris bill (sec. 104(d)) should be incorporated in S. 1552. These provisions would permit direct appeal to the U.S. court of appeals as provided in other comparable parts of the Federal Food, Drug, and Cosmetic Act. The attached amendment includes the necessary language.

AMENDMENT 3—NEW-DRUG CLEARANCE PROCEDURE

On page 31, insert "(a)" after "Sec. 6." in line 2; and strike out lines 5 through 18 and insert in lieu thereof the following:

"(c) No application filed under subsection (b) shall become effective until the Secretary has (1) determined, after the conduct of such investigation and tests as he may consider necessary, that the new drug described in that application is safe for use and is effective in use, under conditions prescribed, recommended, or suggested in the labeling thereof, and (2) transmitted to the applicant in writing notice of his determination."

(b) (1) The first four sentences of subsection (h) of such section 505 are amended to read as follows:

"(b) An appeal may be taken by the applicant from an order of the Secretary refusing to declare an application to be effective or revoking the effectiveness of an application under this section. Such appeal shall be taken by filing in the United States court of appeals for the circuit wherein such applicant resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia Circuit, within sixty days after the entry of such order, a written petition praying that the order of the Secretary be set aside. A copy of such petition shall be forthwith transmitted by the clerk of the court to the Secretary, or any officer designated by him for that purpose, and thereupon the Secretary shall certify and file in the court the record upon which the order complained of was entered, as provided in section 2112 of title 28, United States Code. Upon filing of such petition such court shall have exclusive jurisdiction to affirm or set aside such order, except that until the filing of the record the Secretary may modify or set aside his order."

(2) The ninth sentence of such subsection (h) is amended to read as follows: "The judgment of the court affirming or setting aside any such order of the Secretary shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28 of the United States Code."

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an explanation of the President's amendment No. 4, effectiveness and safety of new drugs. The amendment is virtually the same as that contained in the original bill approved by the Subcommittee on Antitrust and Monopoly.

The PRESIDING OFFICER. Without objection, the explanation and the amendment will be printed in the RECORD.

The explanation and the amendment are as follows:

AMENDMENT 4—EFFECTIVENESS AND SAFETY OF NEW DRUGS

Definition of "new drug"

Section 8 of S. 1552 does not add to the definition of the term "new drug" in existing law the concept of "effectiveness." This is necessary in order to assure that all new drugs will have to be proved effective as well as safe for the uses for which they are offered as is provided in the Harris bill.

The Harris bill also contains appropriate transitional provisions which would require a commercially established drug to go through the "new drug" process only (a) where we find that there is substantial doubt as to its efficacy, (b) where the new-drug clearance has been withdrawn on other grounds, or (c) where an amended new-drug application is submitted. With these provisions, it would make clear that the amendment to the definition of "new drug" would not require the resubmission of all the thousands of "new drugs" hitherto cleared for the market in order to obtain reclearance for efficacy.

Standard of proof of effectiveness

Section 8 of S. 1552 requires "substantial evidence" of effectiveness to be submitted with each new-drug application. This standard of proof is inadequate in terms of assuring that drugs that reach the market have been shown to be effective for the claims made for them.

Additional grounds for suspension or withdrawal of approved new-drug applications

Section 8(c) of S. 1552 authorizes the Secretary, after notice and opportunity for hearing, to suspend the effectiveness of a new-drug application when new evidence raises a "substantial doubt" as to the safety of the product.

The Harris bill grants similar authority, but does not require new evidence. In addition, the Harris bill extends this authority to suspend when—

(a) records and reports, such as are required in section 7 of S. 1552, are not maintained;

(b) quality manufacturing controls, such as are required in section 5 of S. 1552, are not maintained; and

(c) a substantial doubt of efficacy exists.

Also, the Harris bill would authorize the immediate suspension of a new drug application on a finding that there is an iminent hazard to the public health.

Attached are amendments to section 8 of S. 1552 which would bring it into conformity with the Harris bill insofar as the effectiveness and safety of new drugs are concerned.

AMENDMENT 4—EFFECTIVENESS AND SAFETY OF NEW DRUGS

Amend section 8 (beginning on p. 35, line 15, down through p. 38, line 11) to read as follows:

"Effectiveness and safety of new drugs

"(a) Section 201(p)(1) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321(p)(1) defining the term 'new drug', is amended by (A) inserting therein, immediately after the words, 'to evaluate the safety', the words 'and effectivness', and (B) inserting therein, immediately after the words 'as safe', the words 'and effective'.

"(b) Section 201(p)(2) of that Act is amended by inserting therein, immediately after the word 'safety', the words 'and effectiveness'.

"(c) (1) The first sentence of Section 505(b) of such Act (21 U.S.C. 355(b)) is amended to read as follows: 'Any person may file with the Secretary an application for determination by the Secretary of the safety and effectiveness of any drug subject to the provisions of subsection (a).'

"(2) The second sentence of such section 505(b) is amended by inserting the words 'and effective' after 'safe' in clause (1) thereof.

"(d) Section 505(d) of such Act (21 U.S.C. 355(d)) is amended by—

"(1) inserting 'and effective' after 'safe' in clause (1) thereof;

"(2) inserting in clause (2) thereof the words 'or ineffective' after the word 'unsafe' and the words 'and effective' after the word 'safe';

"(3) striking out the words 'and purity' in clause (3) thereof and inserting in lieu thereof the words 'purity, safety, and effectiveness';

"(4)(A) inserting in clause (4) thereof the words 'and effective' after the word 'safe';

"(B) striking out in such clause the phrase ', he shall, prior to the effective date of the application, issue an order refusing to permit the application to become effective', and inserting in lieu thereof the following: 'or (5) the proposed labeling of such drug is false or misleading in any particular, he shall issue an order refusing to declare the application to be effective. If, after such notice and hearing, the Secretary finds that clauses (1) through (5) do not apply and makes the determination required under subsection (c), he shall issue an order declaring the application to be effective'.

"(e) Section 505(e) of such Act (21 U.S.C. 355(e)) is amended to read as follows:

" '(e) The Secretary shall, after due notice and opportunity for hearing to the applicant, revoke the effectiveness of an application with respect to any drug under this section if the Secretary finds (1) that clinical or other experience, tests, or other scientific data show that such drug is unsafe or ineffective, or show that there is substantial doubt as to the safety or effectiveness of such drug, for use under the conditions of use upon the basis of which the application was approved, or (2) that the application contains any untrue statement of a material fact, or (3) that the applicant has failed to establish or maintain any required records, or to make any required report, in accordance with an applicable regulation or order under subsection (j), or that the applicant or any person under his control has refused to permit access to, or copying or verification of, any such record as required by paragraph (2) of such subsection, or (4) that the methods used in, or the facilities and controls used for, the manufacture processing, and packing of such drug are then inadequate to assure and preserve its identity, strength, quality, purity, safety, and effectiveness, or (5) that the labeling of such drug is false or misleading in any particular, or (6) that any condition attached to approval of the application has been violated: *Provided*, That if the Secretary finds that there is an imminent hazard to the public health, he may suspend the effectiveness of such application immediately upon notice, pending the opportunity for hearing required by this subsection. The order shall state the findings upon which it is based.'

"(f) Section 505(f) of such Act (21 U.S.C. 355(f)) is amended to read as follows:

" '(f) An order refusing to declare an application with respect to any drug to be effective shall be revoked, and such application declared to be effective, whenever the Secretary finds that the facts so require.'

"(g)(1) Except as otherwise provided in this subsection, the amendments made by the foregoing provisions of this section shall take effect on the date of enactment.

"(2) The amendments made by section 6 and by this section to section 201(p), and to subsections (b), (c), and (d) of section 505, of the Federal Food, Drug, and Cosmetic Act, insofar as such amendments relate to the effectiveness of drugs, shall not apply to any drug intended for use under conditions prescribed, recommended, or suggested in labeling covered by an application with respect to such drug under section 505 of such Act which application was effective on the day immediately preceding the date of enactment of this Act, so long as amendment of such application is not proposed and the effectiveness of such application has not been suspended or revoked under section 505 of such Act as amended by this Act."

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an explanation of the President's amendment No. 5, relating to conspicuousness and standardization of official names. I have already discussed this matter.

The PRESIDING OFFICER. Without objection, the explanation and the amendment will be printed in the RECORD.

The explanation and the amendment are as follows:

AMENDMENT 5—CONSPICUOUSNESS AND STANDARDIZATION OF OFFICIAL NAMES

Conspicuousness of official names

Section 9 of S. 1552 provides that the "official name" of a drug (either the one established by the Secretary in section 10 or the one identified in an official compendium) be printed in a manner complying with existing law which requires, in general terms, "prominence and conspicuousness". This adds nothing to existing law and in fact rolls it back in two respects:

First, section 9 would repeal the requirement of existing law that the "common or usual" name appear on the label if there is no official name. This would allow virtually all proprietary drugs to be marketed without a declaration of the ingredients.

Second, section 9 would exempt small packages from the name disclosure requirement of existing law.

The Harris bill (sec. 112) contains neither of these "rollbacks" and, in fact, requires the "generic" name to be printed in type at least as large and prominent as that used for the trade name and be given precedence in position as well, as is already true of biological drugs.

Attached is an amendment substituting section 112 of the Harris bill for section 9 of S. 1552.

Standardization of official names

Section III of the Harris bill should likewise be substituted for section 10 of S. 1552 inasmuch as the procedures for drug nomenclature standardization of that section are unnecessarily cumbersome.

Attached is an amendment substituting section 111 of the Harris bill for section 10 of S. 1552.

AMENDMENT ON CONSPICUOUSNESS AND STANDARDIZATION OF DRUG NAMES

Commencing on page 38, line 12 strike out all down through and including line 24, page 41, and insert in lieu thereof the following:

"Name to be used on drug label

"SEC. 9. (a) Paragraph (e) of section 502 of such Act is amended by—

"(1) inserting the subparagraph designation '(1)' after '(e);'

"(2) striking out the words 'If it is a drug and is not designated solely by a name recognized in an official compendium unless its label bears (1) the common or usual name of the drug, if such there be; and (2), in case it is fabricated from two or more ingredients, the common or usual name of each active ingredient', and inserting in lieu thereof 'If it is a drug, unless (A) its label bears, to the exclusion of any other nonproprietary name (except the applicable systematic chemical name or the chemical formula), (i) the established name (as defined in subparagraph (2)) of the drug, if such there be, and (ii), in case it is fabricated from two or more ingredients, the established name and quantity of each active ingredient;

"(3) striking out the words 'the name' and inserting in lieu thereof the words 'the established name';".

Commencing on page 38, line 12, strike out all down through and including line 24, page 41, and insert in lieu thereof the following:

"Name to be used on drug label

"SEC. 9. (a) Paragraph (e) of section 502 of such act is amended by—

"(1) inserting the subparagraph designation '(1)' after '(e);'

"(2) striking out the words 'If it is a drug and is not designated solely by a name recognized in an official compendium unless its label bears (1) the common or usual name of the drug, if such there be; and (2), in case it is fabricated from two or more ingredients, the common or usual name of each active ingredient', and inserting in lieu thereof 'If it is a drug, unless (A) its label bears, to the exclusion of any other nonproprietary name (except the applicable systematic chemical name or the chemical formula), (i) the established name (as defined in subparagraph (2)) of the drug, if such there be, and (ii), in case it is fabricated from two or more ingredients, the established name and quantity of each active ingredient';

"(3) striking out the words 'the name' and inserting in lieu thereof the words 'the established name';

"(4) inserting before the colon preceding the proviso the following: '; and (B) the established name of such drug or ingredient, as the case may be, on such label (and on any labeling on which a name for such drug or ingredient is used) is given precedence in position over any proprietary name or designation for such drug or ingredient and is in type at least as large and prominent as that used for such proprietary name or designation';

"(5) striking out the words 'clause (2) of this paragraph' in the proviso to such paragraph and inserting in lieu thereof 'clause (A)(ii) or clause (B) of this subparagraph'; and

"(6) adding at the end of such paragraph the following new subparagraph:

"'(2) As used in this paragraph (e), the term "established name", with respect to a drug or ingredient thereof, means (A) the applicable standard name established pursuant to section 509, or (B), if there is no such name and such drug, or such ingredient, is an article recognized in an official compendium, then the official title thereof in such compendium, or (C) if neither clause (A) nor clause (B) of this subparagraph applies, then the common or usual name, if any, of such drug or of such ingredient: *Provided further*, That where clause (B) of this subparagraph applies to an article recognized in the United States Pharmacopoeia and in the Homoeopathic Pharmacopoeia under different official titles, the official title used in the United States Pharmacopoeia shall apply unless it is labeled and offered for sale as a homoeopathic drug, in which case the official title used in the Homoeopathic Pharmacopoeia shall apply.'

"(b) Section 502(g) of such Act is amended by inserting immediately before the period at the end thereof a colon and the following proviso: '*Provided further*, That, in the event of inconsistency between the requirements of this paragraph and those of paragraph (e) as to the name by which the drug or its ingredients shall be designated, the requirements of paragraph (e) shall prevail.'

"(c) This section shall take effect on the first day of the seventh calendar month following the month in which this Act is enacted.

"Authority to standardize names

"SEC. 10. The Federal Food, Drug, and Cosmetic Act, as amended by this Act, is further amended by adding at the end of chapter V the following new section:

"'SEC. 509. Whenever in the judgment of the Secretary such action is necessary or desirable in the interest of achieving usefulness or simplicity of drug nomenclature, or because of the existence of two or more nonproprietary names (other than the systematic chemical name) for the same drug (or for two or more drugs which are identical in their active ingredients and substantially identical in their pharmacological action, strength, quality, and purity), or because the common or usual name of a drug is misleading, confusing, or not sufficiently informative, or because there exists no common or usual name for a drug, he may promulgate regulations establishing a single standard name for such drug (or for such identical drugs), together with any related or additional information which in the judgment of the Secretary is desirable to facilitate the correct and effective uses of such standard name.'"

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an explanation of the President's amendment No. 6, relating to advertising, and the amendment.

The **PRESIDING OFFICER.** Without objection, the explanation and the amendment will be printed in the RECORD.

The explanation and the amendment are as follows:

AMENDMENT 6—ADVERTISING

S. 1552 contains no provision designed to eliminate misleading drug advertisements directed to doctors. Such advertisements should be required to make fair disclosure to physicians of the information (good or bad) needed to permit them to do a better job of selecting drugs for use in their practice.

We are in complete support of the attached amendment to S. 1552 which would deem a drug "misbranded" unless advertisements and other descriptive printed matter with respect to such drug contain the official name thereof prominently in addition to information on harmful side effects and effectiveness.

ADVERTISING AMENDMENT

On page 42, line 5, change the word "paragraph" to "paragraphs", and immediately after line 18 add the following new paragraph:

"(p) In the case of any prescription drug distributed or offered for sale in any State, unless the manufacturer, packer, or distributor thereof includes in all advertisements and other descriptive printed matter issued or caused to be issued by the manufacturer, packer, or distributor, with respect to that drug (A) the official name thereof printed prominently and in type at least half as large as that used for any trade or brand name thereof, (B) a warning or summary thereof prepared with the approval of the Secretary as to any dangerous or harmful property or effect thereof, and (C) a full and correct statement of its efficacy, or summary thereof prepared with the approval of the Secretary."

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an explanation of the President's amendment No. 7, relating to certification of antibiotics, and the amendment.

The **PRESIDING OFFICER.** Without objection, the explanation and amendment will be printed in the RECORD.

The explanation and the amendment are as follows:

AMENDMENT 7—CERTIFICATION OF ANTIBIOTICS

Section 12 of S. 1552, while extending certification requirements of existing law to all antibiotics, is objectionable in that—

(a) the extension excludes veterinary antibiotics, thus complicating the enforcement problem in tracking down food contaminated by use of unfit veterinary antibiotics;

(b) the criteria required to be considered in granting exemptions from the certification requirements unnecessarily substitute rigid standards for the scientific judgment of FDA; and

(c) the prohibition against referring on the labeling to the fact that the antibiotic is from a certified batch works unfair disadvantage to small manufacturers, who cannot afford large promotional campaigns.

Section 105 of the Harris bill contains none of these restrictive limitations and should be substituted for section 12 of S. 1552. The attached amendment on certification of antibiotics would bring the bill into conformity with the Harris bill.

CERTIFICATION OF ANTIBIOTICS AMENDMENT

Amend section 12, page 43, line 9, to page 45, line 15, to read as follows:

"Certification of all antibiotics

"SEC. 12. (a) The heading of section 507, as amended, of such Act is further amended to read 'Certification of Drugs Containing Antibiotics', and the first sentence of subsection (a) of such section 507 is amended to read as follows: 'The Secretary of Health, Education, and Welfare, pursuant to regulations promulgated by him, shall provide for the certification of batches of drugs composed wholly or partly of any kind of penicillin, streptomycin, chlortetracycline, chloramphenicol, or bacitracin or any derivative thereof, or composed wholly or partly of any other kind of antibiotic substance (including the chemically synthesized equivalent of any such substance).'

"(b) Paragraph (l) of section 502 of such Act is amended to read as follows:

"'(l) If it is, or purports to be, or is represented as a drug composed wholly or partly of any kind of penicillin, streptomycin, chlortetracycline, chloramphenicol, or bacitracin, or any derivative thereof, or a drug composed wholly or partly of any other kind of substance within the purview of section 507, unless (1) it is from a batch with respect to which a certificate or release has been issued pursuant to section 507, and (2) such certificate or release is in effect with respect to such drug: *Provided*, That this paragraph shall not apply to any drug or class of drugs exempted by regulations promulgated under section 507 (c) or (d).'

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of a further amendment proposed to be offered by Senators CARROLL, HART, DODD, LONG of Missouri and myself. The Senator from New York [Mr. KEATING] and I have discussed this subject. The amendment authorizes the Secretary of Health, Education, and Welfare to require animal testing, if the Secretary seems it necessary, and to require that those engaged in clinical testing maintain and submit to the Department records and reports. I ask unanimous consent that the amendment and a letter of explanation from me to the above Senators be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, the letter and amendment will be printed in the RECORD.

The letter and amendment are as follows:

JULY 31, 1962.

DEAR SENATOR: As a member of the Judiciary Committee who joined me in urging the adoption of several strengthening amendments to S. 1552, the Drug Industry Act, I request your support for an additional strengthening amendment which an investigation into the facts surrounding the thalidomide disaster has now convinced me is necessary. This is an amendment to authorize the Secretary of Health, Education, and Welfare to require "adequate tests in animals" and to give him the authority to approve such tests "before a new drug may be distributed by a manufacturer to scientific experts for testing and evaluation of its effects in human beings."

Amendment No. 3 of our report on the drug bill would go a long way toward meeting the problem raised by the thalidomide episode, but after studying the FDA file on this drug I believe there is need for a further amendment.

The reasons why I have come to this conclusion may be briefly summarized as follows: Under the present law a new drug application becomes effective automatically in 60 days unless it is disapproved or the Secretary postpones its effective date "to such time (not more than 180 days after the filing thereof) as the Secretary deems necessary to enable him to study and investigate the issue." The substantive change in the bill as reported by the Judiciary Committee is to extend the 60-day period to 90 days. Under S. 1552 as originally reported by the Antitrust Subcommittee and under our amendment No. 3 no time limit would be imposed; the new drug application would not become effective until the Secretary had determined the drug to be "safe for use and * * * efficacious in use under conditions prescribed, recommended, or suggested in the labeling thereof."

As is set forth in our dissenting views, the need for this amendment is to remove the cruel dilemma under which the physicians in the new drug division now labor: either the drug is approved for sale automatically or they must formulate and be able to support objections within an unduly short period of time. The problem would be much the same regardless of whether the time period was 60 days or 90 days.

With the automatic approval feature removed, it had been my expectation that the FDA's physicians would be able to call for, receive, and have time to analyze those types of data which they would regard as necessary for a careful appraisal of each individual drug. Presumably the types of data required would vary somewhat from drug to drug. Where, as in the case of thalidomide, there are grounds, theoretical or otherwise, for suspecting its lack of safety or effectiveness, they could not only require animal testing but make it quite clear that no consideration would be given to tests on humans until satisfactory animal studies had been completed.

While such a change in the law, accompanied by an increase in funds for the new-drug division, would in most cases provide adequate protection for the public, my inspection of the thalidomide file has convinced me of the need for a further amendment. Although most drug companies, I am sure, would defer to a request from the FDA for animal tests prior to tests on humans, there may be others who would do so only if the request were backed up by specific statutory power. The zeal of the Wm. S. Merrell Co. to get thalidomide on the U.S. market, its noncooperative attitude toward the FDA displayed throughout the file, and its continuous and high-handed pressures on the physician handling the application, Dr. Frances Kelsey, raise a serious question as to whether the company would have deferred to a request, not specifically required by law, which would have further delayed the introduction of the drug.

This is particularly the case since the company did make animal tests on mice and rats. But to disclose whether thalidomide had the specific side effect feared by Dr. Kelsey, the company would have been required to make studies on larger animals in the early stages of pregnancy.

The most tragic aspect of the entire thalidomide history is that, had such studies been made, the horror could have been averted. This is proved beyond doubt by studies of rabbits by the British seller of the product, Distillers Corp., made unfortunately after the drug had been widely used in humans and after it had been identified as the cause of the malformed infants. Reporting in the English medical journal, the Lancet, (Apr. 28, 1962), Dr. G. F. Somers notes that experiments in rats showed no malformations but that, "Now we have succeeded in producing deformities in rabbits remarkably similar to those seen in humans." More than half of the litter of the mother rabbits given thalidomide were born deformed. None of the litter of the control rabbits, i.e., those of the same colony not given thalidomide, were born deformed. Dr. Somers goes on to state, "No deformities of this kind have been previously observed in the colony, involving the breeding of over 1,000 progeny, and our chief animal technician, Mr. R. E. Hughes, states that he has never seen anything like this during 50 years' experience of rabbit breeding."

The question is how to require that this very type of testing be done, where FDA regards it as necessary, before the drug is released for use in humans, either on an experimental basis or for sale on the market. It is my judgment, with which I hope you will concur, that the seriousness of the problem warrants an additional amendment along the lines of the proposal which I am attaching hereto in draft form.

Sincerely yours,

ESTES KEFAUVER,
Chairman.

AMENDMENT TO S. 1552

On page 32, line 17, add after "Secretary" the following new sentences:

"Such regulations shall include provisions for adequate tests in animals and approval by the Secretary of the results of such tests before a new drug may be distributed by a manufacturer to scientific experts for testing and evaluation of its effects in human beings. Such regulations shall also include provisions requiring said experts to register with the Secretary, to keep records with respect to the tests performed, and to furnish to the Secretary simultaneous copies of their reports to the manufacturer and, upon request of the Secretary, reports at other times."

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S.1771. An act to improve the usefulness of national bank branches in foreign countries;

S. 2869. An act to amend chapter 31 of title 38, United States Code, to afford additional time during which certain veterans blinded by reason of a service-connected disability may be afforded vocational rehabilitation training;

S. 2978. An act to authorize the Foreign Claims Settlement Commission of the United States to investigate the claims of citizens of the United States who suffered property damage in 1951 and 1952 as the result of the artificial raising of the water level of Lake Ontario;

S. 3109. An act to amend chapter 17 of title 38, United States Code, in order to authorize hospital and medical care for peacetime veterans suffering from noncompensable service-connected disabilities; and

S. 3525. An act to authorize the Administrator of General Services, in connection with the construction and maintenance of a Federal office building, to use the public space under and over 10th Street SW., in the District of Columbia, and for other purposes.

PACIFIC NORTHWEST POWER PREFERENCE

Mr. JACKSON. Mr. President, I fully appreciate the importance of the discussion of subject which has occupied the attention of Senators. We are all deeply aware that what has happened in recent days and weeks requires the need for urgent action on the part of the Senate. However, I wish to suggest that the Senate now proceed with another subject.

Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1707, Senate bill 3153.

The PRESIDING OFFICER. The bill will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with an amendment, on page 8, line 12, after the word "thereof.", to insert "Nothing in this Act shall be construed to modify the geographical preference of power users in the State of Montana which is established by the Hungry Horse Dam Act (Act of June 4, 1944, 58 Stat. 270), as amended."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, as used in this Act—

(a) "Secretary" means the Secretary of the Interior.

(b) "Pacific Northwest" means (1) the region consisting of the States of Oregon and Washington, the State of Montana west of the Continental Divide, and such portions of the States of Nevada, Utah, and Wyoming within the Columbia drainage basin and of the State of Idaho as the Secretary may determine to be within the marketing area of the Federal Columbia River power system, and (2) any contiguous areas, not in excess of seventy-five airline miles from said region, which are a part of the service area of a distribution cooperative which has (i) no generating facilities, and (ii) a distribution system from which it serves both within and without said region.

(c) "Surplus energy" means electric energy generated at Federal plants in the Pacific Northwest which would otherwise be wasted because of the lack of a market therefor in the Pacific Northwest at any established rate.

(d) "Surplus peaking capacity" means electric peaking capacity at Federal plants in the Pacific Northwest for which there is no demand in the Pacific Northwest at any established rate.

(e) "Non-Federal utility" means any utility not owned or controlled by the United States, including any entitly (1) which such a utility owns or controls, in whole or in part, or is controlled by, (2) which is controlled by those controlling such utility, or (3) of which such utility is a member.

(f) "Energy requirements of any Pacific Northwest customer" means the full requirements for electric energy of (1) any purchaser from the United States for direct consumption in the Pacific Northwest, and (2) any non-Federal utility in that region in excess of (i) the hydroelectric energy available for its own use from its generating plants in the Pacific Northwest, and (ii) any additional energy available for use in the Pacific Northwest which, under a then existing contract, the utility (A) can obtain at no higher incremental cost than the rate charged by the United States, or (B) is required to accept.

Sec. 2. Subject to the provisions of this Act, the sale, delivery, and exchange of electric energy generated at, and peaking capacity of, Federal plants in the Pacific Northwest for use outside the Pacific Northwest shall be limited to surplus energy and surplus peaking capacity.

Sec. 3. (a) Any contract for the sale or exchange of surplus energy for use outside the Pacific Northwest, or as replacement, directly or indirectly, within the Pacific Northwest for hydroelectric energy delivered for use outside that region by a non-Federal utility, shall provide that the Secretary, after giving the purchaser notice not in excess of seven days, will not deliver electric energy under such contract whenever it can reasonably be foreseen that such delivery would impair his ability to meet, either at or after the time of such delivery, the energy requirements of any Pacific Northwest customer. The purchaser shall obligate himself not to take delivery of or use any such energy to supply any load under such conditions that discontinuance of deliveries from the Pacific Northwest in seven days would cause undue hardship to the purchaser or in his territory, and, further, the purchaser shall acknowledge full responsibility if any such hardship occurs. Deliveries by a non-Federal utility from its generating plants in the Pacific Northwest for use on its own distribution system in an area outside but contiguous to the Pacific Northwest (not including any extension of its outside service area by merger or acquisition after the effective date of this Act) shall not be deemed deliveries by such utility for use outside the Pacific Northwest.

(b) Electric energy generated at Federal plants in the Pacific Northwest which can be conserved, for which there is no immediate demand in the Pacific Northwest at any established rate, but for which the Secretary determines there may be a demand in meeting the future requirements of the Pacific Northwest, may be delivered for use outside that region only on a provisional basis under contracts providing that if the Secretary determines at a subsequent time that, by virtue of prior deliveries under such contract, the Secretary is or will be unable to meet the energy requirements of any Pacific Northwest customer, the purchaser will return the full amount of energy delivered to him, or such portion or portions thereof as may be required, at such time or times as may be specified by the Secretary, except that the Secretary shall not require return during the purchaser's daily peak periods. The Secretary shall require the return of the energy provisionally delivered hereunder, to such extent and at such times, as may be necessary to meet demands at any established rate for use within the Pacific Northwest.

(c) Any contract for the disposition of surplus peaking capacity shall provide that (1) the Secretary may terminate the contract upon notice not in excess of forty-eight months, and (2) the purchaser shall advance or return the energy necessary to supply the peaking capacity, except that the Secretary shall not require such advance or return during the purchaser's daily peak periods. The Secretary may contract for the sale of such energy to the purchaser, in lieu of its return, under the conditions prescribed in subsection (a) of this section.

(d) The Secretary, in making any determination of the energy requirements of any Pacific Northwest customer which is a non-Federal utility having hydroelectric generating facilities, shall exclude any amounts of hydroelectric energy generated in the Pacific Northwest and disposed of outside the Pacific Northwest by the utility which, through reasonable measures, could have been conserved or otherwise kept available for the utility's own needs in the Pacific Northwest. The Secretary may sell the utility as a replacement therefor only what would otherwise be surplus energy.

Sec. 4. Any contract of the Secretary for the sale or exchange of electric energy generated at, or peaking capacity of, Federal plants in marketing areas outside the Pacific Northwest for use within the Pacific Northwest shall be subject to limitations and conditions corresponding to those provided in sections 2 and 3 for any contract for the sale or exchange of electric energy or peaking capacity generated within the Pacific Northwest for use outside the Pacific Northwest.

Sec. 5. Without regard to the limitations specified in sections 2 and 3 of this Act, the Secretary may enter into contracts for the exchange with areas other than the Pacific Northwest of (1) surplus energy during the Pacific Northwest storage refill period, (2) any energy during the Pacific Northwest storage refill period which will be returned to the Pacific Northwest in equal amounts during the same Pacific Northwest refill period or the succeeding storage drawdown period, (3) any energy which will be returned to the Pacific Northwest in equal amounts during the same Pacific Northwest storage drawdown period, (4) peaking capacity, or (5) surplus peaking capacity for energy. All benefits from such exchanges, including resulting increases of firm power, shall be shared equitably by the areas involved, having regard to the secondary energy and other contributions made by each.

Sec. 6. Any capacity in Federal transmission lines connecting, either by themselves or with non-Federal lines, a generating plant in the Pacific Northwest or Canada with the other area or with any other area outside the Pacific Northwest, which is not required for the transmission of Federal energy or the energy described in section 8, shall be made available as a carrier for transmission of other electric energy between such areas. The transmission of other electric energy shall be at equitable rates determined by the Secretary, but such rates shall be subject to equitable adjustment at appropriate intervals not less frequently than once in every five years as agreed to by the parties. No contract for the transmission of non-Federal energy on a firm basis shall be affected by any increase, subsequent to the execution of such contract, in the requirements for transmission of Federal energy, the energy described in section 8, or other electric energy.

Sec. 7. The Secretary shall offer to amend, without imposing any other requirement as a condition to such amendment, all existing contracts for the sale or exchange of electric power generated at Federal plants in the Pacific Northwest to include, and shall include in all new contracts, provisions giving the purchaser priority on electric power generated at such plants in conformity with the provisions of this Act.

Sec. 8. The provisions of this Act shall not be applicable to (1) the Canyon Ferry project and (2), except as provided in section 6, downstream power benefits to which Canada is entitled under the treaty between Canada and the United States relating to the cooperative development of the water resources of the Columbia River Basin, signed at Washington, January 17, 1961, nor to energy or capacity disposed of to Canada in any exchange pursuant to paragraph 1 or 2 of article VIII thereof. Nothing in this Act shall be construed to modify the geographical preference of power users in the State of Montana which is established by the Hungry Horse Dam Act (Act of June 4, 1944, 58 Stat. 270), as amended.

Mr. JACKSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JACKSON. Mr. President, I shall state the reasons why the Committee on Interior and Insular Affairs reported S. 3153 to the Senate.

The purpose of this bill is to provide a means for the Pacific Northwest to solve a rather complicated problem of marketing its surplus of seasonal, or dump, hydroelectricity. At the same time, the bill would clear the way for other areas to benefit from the purchase of this surplus hydroelectricity.

This problem is unique to the Northwest which unlike any other area, generates 96 percent of its electricity by waterpower.

The region has a predicted shortage in 1965–66 of firm power—that is, power, that its dams could produce if critical waterflows would reoccur in the Columbia River that year.

On the other hand, the Northwest now has, and for many years will continue to have, large surpluses of seasonal or dump power—power which is available when streamflows are normal, but is not available in a critical water year.

This year, and last year, for example, the region produced about 15 billion kilowatt-hours of this secondary energy which had to be wasted.

In terms of dollars, the Bonneville Power Administration was forced last year, and again this year, to waste more than $30 million of this seasonal power by spilling it over the dams.

From a national standpoint, as well as a regional standpoint, this waste of energy and dollars should stop. All segments of the electric industry in the Northwest—public power and private power—agree that this bill is necessary to help end such waste.

The marketing of hydroelectricity produced at Federal dams on the Columbia River system is different from that of any other Federal dam in the West. Whereas other Federal projects sell virtually all of their firm power to public agencies and cooperatives, the Bonneville Power Administration does not.

BPA, of course, serves all of the public agencies and cooperatives in its marketing area—which presently includes the States of Washington and Oregon; northern Idaho, and western Montana. Most of these public agency customers, I might say, are located in the State of Washington. Presently about 38 percent of BPA's power sales are to preference customers.

Historically, a large proportion of the BPA's sales—more than 50 percent—have been to private utilities and private industries. At the present time its sales to these nonpreference customers comprise approximately 51 percent of its total energy sales.

With the concurrence of Congress, Bonneville Power Administration has built one of the greatest high voltage transmission systems in the world to serve these public and private loads. This system represents an investment of $500 million being paid for by the customers of the Bonneville Power Administration.

In reliance on a continued supply of firm power from Bonneville, industrial companies have made large investments in plant facilities—investments of approximately $450 million. These factories, directly and indirectly, employ 40,000 men and women. Such companies as these: Carborundum—silicon carbide; Alcoa—aluminum pig, rods, and wire; Pennsalt—chlorine, ammonia, and other chemicals; Union Carbide—ferromanganese; Victor Chemical—phosphorus.

We have, therefore, this situation: Our area needs to sell the seasonal or dump energy now being wasted to the extent of $30 million every year. But, at the same time, these sales must be made on such a basis that they do not threaten the firm power supply on which long-established industries and private utilities rely.

The difficulty under existing laws of accomplishing these two goals has been recognized for many years. In the 80th Congress, the distinguished junior Senator from California [Mr. ENGLE] introduced the first bill attempting to solve the problem—H.R. 6367, 80th Congress, 2d session.

In 1959 and 1960, the Senate Committee on Interior and Insular Affairs held hearings on a proposal of the Pacific Gas & Electric Co. to build a line interconnecting with the Bonneville transmission system. At the hearings, we received statements from the Governors of Oregon, Washington, and California, and from many of the public and private utilities in these three States.

The 1959–60 hearings revealed that if the proposed interconnection were built, it could result in an extension into California of the Bonneville Power Administration's marketing area. This, in turn, could result in demands from California public agencies, serving from 20 to 25 percent of the State's electric loads, that would threaten the industrial power base of the Northwest.

To put it another way: The Bonneville Power Administration under present law could not sell its seasonal or dump power to California customers and be assured that it could terminate such sales in the event of a recurrence of low-water conditions in the Columbia River.

The committee therefore requested the Secretary of the Interior not to sign a power sales contract with P. G. & E.—but, instead, to draft a proposed bill to remedy this difficulty in the present laws. S. 3153 is what the Secretary and the President have recommended in response to the committee's request.

This bill has been drafted and redrafted many times after the most careful study by Bonneville, the public agencies, the private utilities, Bonneville's industrial customers, and the Governors of Oregon, Washington, and California. It was supported before the committee by the public agencies and private utilities of the Northwest, by BPA's industrial customers, and by the public agencies of California. Governor Rosellini of Washington and Governor Hatfield of Oregon have endorsed the bill—the latter, subject to clarifying amendments which he feels desirable.

In summary, Senate bill 3153 sets forth a legislative definition of the Bonneville marketing area. It includes all of BPA's present marketing area, and leaves to the discretion of the Secretary of the Interior the addition of the parts of the Columbia Basin not presently served by Bonneville.

As the law now stands, Congress has placed no limit on Bonneville's marketing area, other than "economic transmission distance". In 1937, when the Bonneville Project Act was adopted, the economic transmission distance was about 200 miles. The Bonneville Administrator testified before the committee that today the economic transmission distance is 2,000 miles.

Obviously, Bonneville could not take care of all the electric loads of public bodies and cooperatives within 2,000 miles, or even 1,000 miles, of the Columbia River. There is not that much power to be developed in the Northwest. Furthermore, it would be economically foolish to shut down industries now served by Bonneville, in order to serve a new customer located 1,000 miles away.

The marketing area described in Senate bill 3153 was carefully chosen because it makes economic sense. It is not a small area; in fact, it is probably the largest marketing area of any utility in the United States. It is three times the area of the TVA. On the other hand, the defined marketing area is of such a size that Bonneville can economically continue to serve the loads within it, and not spread so thin as to do no one any good.

Senate bill 3153 expressly permits BPA to sell surplus electric energy and peaking capacity outside its described marketing area but subject to recall when such electricity is needed within the marketing area.

There is a large market in California for this seasonal power. California, unlike the Northwest, generates most of its electricity by steam. Both public and private utilities in California want to purchase Northwest dump power for steam displacement.

Senate bill 3153 also permits larger term contracts for the shipment of seasonal surpluses of power back and forth between other areas. Large electrical interties permit utilities to make the most economic use of generating plants by taking advantage of seasonal or even daily diversities of loads between interconnected systems. Senate bill 3153 has been carefully drawn to allow this to be done. The result, of course, is that more power is made available to each interconnected system when it is needed.

This bill would assist the Bonneville Power Administration to solve the difficult financial problem now facing it. Bonneville has a surplus, estimated at $20 million at the close of the fiscal year ending June 30, 1962. But 5 years ago this surplus was almost $79 million. And here is the paradox: In every one of the past 5 years, while the surplus has been reduced, BPA has had to waste dump power worth far more than the annual deficit. In 1961, for instance, its annual deficit was about $15 million, and it spilled more than $30 million worth of water.

Senate bill 3153 is a key measure in Administrator Luce's program for turning BPA's current deficits into annual surpluses. Those who are genuinely concerned about Bonneville's financial problems should support this proposed legislation.

Let me correct a misimpression that a few persons seem to have about this bill and its relationship to the construction of extra-high-voltage interties by Federal agencies. This bill does not authorize the construction of such interties. Bonneville already has legal authority to construct lines anywhere within economic transmission distance of Columbia River plants. The bill is equally necessary regardless who constructs interties between the Bonneville system and other regions. Two private utilities have already announced a plan for building the first link in a Northwest-California intertie at 500,000 volts. Public agencies in both the Northwest and California are known to be considering the construction of as large or larger intertie between the two regions. It matters not who owns the lines—the need for this bill is the same.

In summary, these are the main points that commend S. 3153 for enactment by the Congress:

First. It will help end a waste of seasonal power presently worth $30 million per year.

Second. It will provide assurance to investors and employees of the basic industries that sales of seasonal power will not threaten their investment or their jobs.

Third. It will make practicable the shipment of large quantities of surplus power to other regions, with great savings to electric consumers of both public and private utilities.

Fourth. It has been carefully worked out by all segments of utility industry to provide a sensible, homogeneous Bonneville marketing area, and ground rules for the shipment of surpluses of power in and out of the area.

Mr. President, I recommend S. 3153 for passage by the Senate.

Mr. GOLDWATER. Mr. President, I call up my amendment.

The **PRESIDING OFFICER.** The Senator's amendment is not in order until the committee amendments have been acted upon.

The Clerk will state the committee amendment.

The Legislative Clerk. On page 8, line 12, insert language, beginning with the word "Nothing," down to page 8, line 16.

The **PRESIDING OFFICER.** Is there objection to the amendment?

Mr. METCALF. Mr. President, may I make a couple of comments on the committee amendment before the Senator from Arizona calls up his amendment?

The **PRESIDING OFFICER.** The Senator from Montana.

Mr. METCALF. Mr. President, the Senator from Washington has discussed the huge Bonneville power system, which is, as he has said, three times the area of the TVA. The purpose of the bill is to provide that the status quo in the Bonneville system will be maintained, and at the same time we will be able to dispose of the surplus power generated in the Bonneville system in other marketing areas outside the Columbia Valley region.

In the Columbia we have a happy marriage, a marriage of private, public, and non-Federal public power, of marketing the power there through the Northwest Power Pool.

For instance, in Montana we have Hungry Horse, the northernmost and the highest dam in the region, a Federal dam. Farther down the river we have Kerr Dam, one of the oldest Montana Power Co. dams in the area. Farther down the river there are Noxon Rapids Dam and Cabinet Gorge, built in Montana by the Washington Power Co. All of them are members of the Northwest Power Pool. All of them get along and benefit from the storage we have provided at Hungry Horse, and at the same time generate power for western Montana, northern Idaho, and eastern Washington and Oregon.

We want to maintain that status quo.

When Hungry Horse Dam was built, in the act authorizing Hungry Horse, which is chapter 234, 78th Congress, the following language is contained.

I ask unanimous consent that section 1 of that chapter be incorporated in the Record at this point in my remarks.

There being no objection, the section was ordered to be printed in the Record, as follows:

CHAPTER 234

An Act to provide for the partial construction of the Hungry Horse Dam on the South Fork of the Flathead River in the State of Montana, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of irrigation and reclamation of arid lands, for controlling floods, improving navigation, regulating the flow of the South Fork of the Flathead River, for the generation of electric energy, and for other beneficial uses primarily in the State of Montana but also in downstream areas, the Secretary of the Interior is authorized and directed to proceed as soon as practicable with the construction, operation, and maintenance of the proposed Hungry Horse Dam (including facilities for generating electric energy) on the South Fork of the Flathead River, Flathead County, Montana, to such a height as may be necessary to impound not less than one million acre-feet of water.

Mr. METCALF. When Hungry Horse was authorized, Congress provided that it was "for the purpose of irrigation and reclamation of arid lands, for controlling floods, improving navigation, regulating the flow of the South Fork of the Flathead River, for the generation of electric energy, and for other beneficial uses primarily in the State of Montana."

Since then we have had many acts dealing with Hungry Horse Dam. We have had appropriations. We have had discussions on the floor. We have had administrative decisions.

I have prepared a brief summary of the preference for Hungry Horse power, which was contained on pages 19 and 20 of the hearings, and I ask unanimous consent that it be incorporated in the Record at this point as a part of my remarks.

There being no objection, the extract was ordered to be printed in the Record, as follows:

PREFERENCE TO MONTANA FOR HUNGRY HORSE POWER

1. Montana preference for Hungry Horse power is explicit in the authorizing legislation, and in justification of the appropriations for constructon.

2. Authorization for construction, the Mansfield Act (act of June 5, 1944, ch. 234, 53 Stat. 370) authorizes and directs construction of Hungry Horse Dam (including power-generation facilities) for, among other purposes "* * * the generation of electric energy, and for other beneficial uses primarily in the State of Montana * * *."

3. The priority position of Montana thus accorded in the authorizing legislation rests on—

(a) Full discussion by the project sponsors in the congressional hearing on H.R. 3570, 78th Congress;

(b) The report and testimony of the Department of the Interior; and

(c) The report of the House Committee on Irrigation and Reclamation that recommended enactment.

4. In the 78th Congress, Congressman (now Senator) Mansfield placed in the Congressional Record (Mar. 4, 1944, p. 2395) a full statement of the justification for Hungry Horse Dam authorization on the basis, among other reasons, of the needs of Montana for additional power supply.

5. In the hearings on H.R. 3570 (which became law) statements by (then) Congressman Mansfield (p. 6) and Senator Murray (pp. 16–22) explicitly state the purpose of providing electric generation to meet Montana needs. Comments during the hearing by committee members, Congressman (now Senator) Barrett and (former) Congressman O'Connor (p. 16 et seq.), clarify the intention to afford priority to Montana. Excerpts from testimony in the hearing relevant to Montana's priority for Hungry Horse power are in the Congressional Record (Apr. 20, 1944, p. 3663).

6. The report of the Department of the Interior on H.R. 3570 (letters of February 19, 1944, from Abe Fortas, Acting Secretary of the Interior, to Hon. Compton L. White and J. N. Bankhead, chairmen of the House and Senate Committees on Irrigation and Reclamation) also are explicit in recognition of Montana priority to Hungry Horse power. This recognition is shown in the Department report, by the recommended amending language that repeats the phrase "* * * primarily in the State of Montana * * *." The Department report further states that by marketing the energy through the Bonneville Power Administration "* * * abundant low-cost electric power can be made available throughout the area, including western Montana." Testimony in the hearing on H.R. 3570 by William E. Warne (then Assistant Commissioner of Reclamation), stated as a purpose of Hungry Horse Dam "* * * power production for use in Montana."

7. In the report of the House Committee on Irrigation and Reclamation recommending enactment (H. Rept. 1193, 75th Cong.), amending language was adopted including explicitly the phrase "* * * primarily in the State of Montana * * *." Agreement of the House and the Senate is reported in the Congressional Record (May 26, 1944, pp. 5105–5106).

8. Appropriations for construction of Hungry Horse Dam have repeatedly been made on the basis of explicit disclosure to the Congress that the electric power generated is primarily for use in the State of Montana. Examples of such disclosure include:

Congress	Appropriation for fiscal year	Bill No.	Witness	Hearing page No.
79th	1947	6335	Murray	(House) 702.
79th	1947	6335	D'Ewart	(House) 705.
79th	1947	6335	Murray	(Senate) 1154.
80th	1948	3123	D'Ewart	(House) 1409.
80th	1948	6705	Gov. Ford Murray Mansfield	(Senate) 1044. (Senate) 1046. (Senate) 1056.

> Another example is that the appropriation for construction of Hungry Horse Dam was increased over the budget estimate with disclosure by (then) Congressman MANSFIELD of Montana's priority to Hungry Horse power (CONGRESSIONAL RECORD, May 27, 1948, p. A2992). Similar disclosure was made by (then) Congressman MANSFIELD on July 5, 1949 (CONGRESSIONAL RECORD, p. 4465).

Mr. METCALF. With reference to this amendment, which was adopted by the committee, as Mr. Norwood said, as appears on page 65 of the hearings:

> I would like to emphasize that the Montana amendment would underline and strengthen the Hungry Horse preference and create a further legislative record in favor of enabling the cooperatives in central Montana to have the right to Hungry Horse power which they have never been able to obtain up to this time.

Mr. President, this committee amendment is merely an amendment to carry out the basic purpose of the bill to maintain the status quo on the river. The amendment was obtained by a series of administrative decisions, legislative reports, and statements and colloquies on the floor, and is based on the proposition that I have outlined and previously read.

We are not putting anything new into this bill by this amendment. We are not getting anything new for the State of Montana. We are merely, by submitting the amendment to the committee—and I am very grateful to the committee for bringing it to the floor—carrying out the provisions of the bill and, by this amendment, not taking anything away from Montana.

I make that point because other amendments will be offered that will vary the purpose of the bill, or will vary the status quo of the power situation in the Northwest, and will vary the distribution of power insofar as it is provided as between the Columbia Basin and other basins. This amendment does not vary any of that distribution, but merely carries out what is established law under the previous decisions of the Bonneville Power Authority and the provisions of law.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment. Without objection——

Mr. MUNDT. Mr. President, reserving the right to object, what is the specific language before the Senate now?

The PRESIDING OFFICER. The specific language is on page 8, beginning at line 12.

Mr. MUNDT. I would like to raise the question, then, with the author of the bill, or the Senator from Montana, or with some Senator who understands, what is intended here, and as to what impact, if any, this language would have concerning a very similar geographic preference which was established by law for the power users of the Big Bend project in South Dakota.

It would seem to me, as I read the bill, that it is not designed at present to make it necessary for this language to be written concerning Hungry Horse. If there is something in the bill which is tucked away or hidden by implication which would make such a reservation for Montana with regard to Hungry Horse, then it seems a similar provision should be applicable to power produced at Big Bend.

Mr. JACKSON. I shall be glad to respond to the question of the Senator from South Dakota. This amendment will not have any effect on the Big Bend project.

Mr. MUNDT. I know that. Why was the committee amendment added?

Mr. JACKSON. The committee amendment was added for clarification. A preference for Montana was in the original law authorizing the Hungry Horse project, but there had been some question raised as to the exact language, especially in the report accompanying the act. This allocation has always been recognized by the Department of the Interior. The purpose of the amendment was to reaffirm existing law. That was the judgment of the committee.

Mr. MUNDT. Does the Senator from Montana want to add anything to that statement?

Mr. METCALF. The only addition is that Hungry Horse is in the Columbia Basin and is affected by this bill, and when the Department sent up the proposed bill, it said, "We think this bill would change the Hungry Horse preference." That is the only act the bill would have changed. The Hungry Horse Preference Act would give preference first to the Columbia Basin, including western Montana, the second preference to the marketing area in California, Nevada, and Utah, where this dump power is going to be sold, and, third, eastern Montana.

The Hungry Horse Preference Act at the present time applies to the entire State of Montana. We do not want to build a wall one way or the other. We merely want to see that we have the same preference for the entire State of Montana that we had in the original act. This would not destroy a preference we have had before. Neither Big Bend Dam, Oahe, nor any other dam, would be affected by passage of the bill. There would be no preference which would be altered or changed by passage of the bill. Therefore, there was no necessity for such an amendment.

Mr. MUNDT. What the Senator says is completely true of all the other Missouri River dams in South Dakota and North Dakota except with respect to the construction of Big Bend. In that act there are provisions which tend to reserve for that area certain of the power which is produced, up to the extent of 50 percent. Our legislation was modeled and passed, very frankly, as a followup to the Hungry Horse legislation. We used that as a model, as a guide, as a precedent. Our legislation, therefore, did for Big Bend, to the extent of 50 percent of its power potential, precisely the same thing which the reservation did for the Hungry Horse project in Montana.

I merely wish to be positive that we establish by legislation or by legislative history the fact that although there will appear in S. 3153 an amendment specifically stating that nothing in the act is going to affect in any way the geographical preference for power users in the Hungry Horse Dam vicinity, by saying nothing and remaining silent it does not become established policy that something in the act conceivably might change the preference clauses so far as Big Bend is concerned.

Mr. METCALF. I say to the Senator from South Dakota that if the act were to be applicable to the Missouri River Basin, the Senator from Montana would be on the Senator's side, preserving his rights in regard to Big Bend, exactly as I hope the Senator will be on our side with regard to the Columbia River, to preserve our rights in the Hungry Horse project.

Mr. MUNDT. Quite apart from the merits of the bill—I shall have something to say about that later—since we are dealing with this particular amendment, may I have from the Senator from Montana, first, a categorical statement that there is nothing in the proposed legislation and that there would be nothing by the adoption of the amendment, if it is adopted, which in any way, shape, or form would change in any degree the existing considerations, legislation, and policies obtaining at Big Bend.

Mr. METCALF. The Senator has that assurance from the Senator from Montana. So far as I know, that is true, and I have carefully examined the bill.

Mr. JACKSON. Mr. President, as previously stated the bill will have no effect whatsoever on the Big Bend project. That is about as unequivocal a statement as one could make.

Mr. MUNDT. The Senator is talking about the bill?

Mr. JACKSON. I am talking about the bill, which includes the amendment adopted by the committee now pending before the Senate.

Mr. MUNDT. In other words, as the author of the bill the Senator is stating for the record that there is nothing in S. 3153, as presented to the committee or including the amendment affecting Hungry Horse Dam, which in any way would alter the prevailing policies and regulations and programs as they have prevailed concerning Big Bend.

Mr. JACKSON. The Senator is precisely correct. It would not affect Big Bend one iota. Is that unequivocal enough?

Mr. MUNDT. The Senator, as always, speaks with conviction and with certainty.

Mr. JACKSON. I speak with the facts, if that statement is in order. I give only the facts, nothing else.

Mr. MUNDT. The facts are what we want.

Mr. JACKSON. That is precisely the situation. As the distinguished junior Senator from Montana stated, the bill relates only to the Columbia Basin.

Mr. MUNDT. I wanted that established for the legislative record. I have no objection to the amendment per se, but only to its implications.

I think there are some serious flaws in S. 3153, quite apart from the amendment the Senate is about to consider, but I wanted this established for the legislative record at the time the amendment affecting Hungry Horse is considered.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The committtee amendment was agreed to.

Mr. GOLDWATER. Mr. President, I call up my amendments designated "8-1-62—A."

The PRESIDING OFFICER. Does the Senator from Arizona want to have the amendments printed in the RECORD rather than read?

Mr. GOLDWATER. I can explain the amendments briefly. I ask unanimous consent that the amendments may be printed in the RECORD, and that the clerk need not read them.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arizona? The Chair hears none, and it is so ordered.

The amendments ordered to be printed in the RECORD are as follows:

On page 1, in line 1 of the title to the bill, insert after the words "Pacific Northwest", the words "and in the State of Arizona".

On page 1, in lines 2 and 3 of the title to the bill, strike out the words "that region" and insert in lieu thereof the words "those areas".

On page 2, line 9, after the words "Pacific Northwest" insert the words "and in the State of Arizona".

On page 2, line 11, strike out the words "the Pacific Northwest" and insert in lieu thereof the words "those areas".

On page 2, line 13, after the words "Pacific Northwest" insert the words "and in the State of Arizona".

On page 2, line 14, strike out the words "the Pacific Northwest" and insert in lieu thereof the words "those areas".

On page 3, after line 7, insert a new subparagraph (g) as follows:

"(g) 'Energy requirements of any State of Arizona customer' means the full requirements for electric energy of (1) any purchaser from the United States for direct consumption in the State of Arizona, and (2) any non-Federal utility in that State in excess of (i) the hydroelectric energy available for its own use from its generating plants in the State, and (ii) any additional energy available for use in the State which, under a then existing contract, the utility (A) can obtain at no higher incremental cost than the rate charged by the United States, or (B) is required to accept."

On page 3, line 10, after the words "Pacific Northwest" insert the words "and in the State of Arizona".

On page 3, line 11, strike out the words "the Pacific Northwest" and insert in lieu thereof the words "those areas".

On page 3, line 14, after the words "Pacific Northwest" insert the words "or the State of Arizona".

On page 3, lines 15 and 16, after the words "Pacific Northwest" insert the words "or the State of Arizona".

On page 3, lines 16 and 17, strike out the words "that region" and insert in lieu thereof the words "those areas".

On page 3, line 23, after the word "customer" insert the words "or the energy requirements of any State of Arizona customer".

On page 4, line 1, after the words "Pacific Northwest" insert the words "or from the State of Arizona".

On page 4, line 5, after the words "Pacific Northwest" insert the words "or in the State of Arizona".

On page 4, line 7, after the words "Pacific Northwest" insert the words "or the State of Arizona".

On page 4, line 10, after the words "Pacific Northwest" insert the words "or the State of Arizona".

On page 4, line 12, after the words "Pacific Northwest" insert the words "and in the State of Arizona".

On page 4, line 13, after the words "Pacific Northwest" insert the words "or in the State of Arizona".

On page 4, line 16, after the words "Pacific Northwest" insert the words "and the State of Arizona".

On page 4, line 17, strike out the words "that region" and insert in lieu thereof the words "those areas".

On page 4, line 21, after the word "customer" insert the words "or the energy requirements of any State of Arizona customer".

On page 5, line 5, after the word "Northwest" insert the words "or within the State of Arizona".

On page 5, line 17, at the end of the line, insert the following words "or the energy requirements of any State of Arizona customer".

On page 5, line 20, after the words "Pacific Northwest" insert the words "or in the State of Arizona".

On page 5, line 21, after the words "Pacific Northwest" insert the words "or the State of Arizona".

On page 5, line 24, after the word "Northwest" insert the words "or in the State of Arizona".

On page 6, line 13, after the words "contracts for" insert the letter "(a)".

On page 6, line 22, after the word "energy" insert the following language: "and (b) the exchange with areas other than the State of Arizona of (1) surplus energy during the State of Arizona storage refill period, (2) any energy during the State of Arizona storage refill period which will be returned to the State of Arizona in equal amounts during the same State of Arizona refill period or the succeeding storage drawdown period, (3) any energy which will be returned to the State of Arizona in equal amounts during the same State of Arizona storage drawdown period, (4) peaking capacity, or (5) surplus peaking capacity for energy."

On page 7, line 11, after the word "energy" insert the words "in the Pacific Northwest".

On page 7, line 15, after the word "energy" insert the words "in the Pacific Northwest".

On page 7, line 24, between the words "west" and "to include" insert the words "and in the State of Arizona".

On page 8, add a new section 9, as follows:

"SEC. 9. In the case of Federal hydroelectric power projects now or hereafter situated at points on streams which form the boundary of the State of Arizona with an adjoining State, the State of Arizona shall be allotted one-half of the energy and capacity of such Federal power projects and such capacity and energy shall be subject to the provisions of this Act."

Mr. GOLDWATER. Mr. President, we are considering a regional preference bill, S. 3153, a bill that would limit an Interior Department curtain around all of the power produced by the Federal Government in the Pacific Northwest and retain it in the Bonneville system for all users in that area—that is retain all that those users, public and private alike, want or need to meet all of their requirements.

Laws applying to the disposal of electric power produced by the Federal Government carry preference provisions that say the power shall first be made available to public agencies of States, municipalities, and nonprofit rural electric cooperatives. Those provisions, as discriminatory and unjust as they may be, have been zealously defended by the Government power advocates. But now there is a situation where the preference provisions interfere with another objective of the Government power advocates. They want the Government to construct a high-voltage transmission line that would extend from the Bonneville system down to Los Angeles. But if the Government built the line, under present preference laws, those qualifying as preference customers in California would have equal rights to preference customers in the present Bonneville marketing area and superior rights to the nonpreference customers in that area.

Some of our friends from Washington and Oregon want to have their cake and eat it, too. Being ardent Federal power advocates they would like to see the Government build the tieline but they do not want to see preference customers in California cutting in on power produced in the Bonneville system so long as there is any need for it in their area. Mr. President, I do not blame these people for wanting to keep first call on this power—it is the cheapest in the country with Government subsidy, of course. But it is interesting to note how these great defenders of preference are willing to shade such obstacles as principle a little bit if it interferes with something else they want to do.

It is also interesting to see how other advocates of Government power are willing to bend principle a little bit too and to note how they attempt to reconcile these things. Assistant Secretary of Interior Kenneth Holum, in a speech out in Nebraska on August 2, 1962, had this to say:

> Now, for this regional preference matter. As you know, the legislation is related to the proposed construction of an extra high voltage common carrier transmission line between the Pacific Northwest and Pacific Southwest.

I hope you will note, Mr. President, that according to Mr. Holum, an administration spokesman, the purpose of this legislation is to clear the way for construction of a Federal transmission line down the west coast which, incidentally, would be an important link in a federally owned national grid which is the ambition of those who favor the nationalization or socialization, whichever you want to call it is immaterial, of our electric power industry.

Mr. Holum continued:

> The legislation we propose is nothing new. The uniqueness of the Northwest situation has been recognized for some time—both in Congress and under the previous administration. The record shows that since May 1959 the Senate Interior Committee has been concerned with the question of need for regional preference in the Northwest, should an intertie with Pacific Southwest markets be constructed. It also shows that in August 1960 the Secretary of the Interior sent a letter to that committee indicating the Department had assisted Senator Lusk, of Oregon, in preparing a regional preference bill.

How do you like that, Mr. President? We are supposed to be gullible enough to accept that sort of doubletalk. What does he mean when he says legislation that would bottle up power in one marketing area despite preference laws is nothing new. I am sure the Interior Department recognized the necessity of this legislation if it was going to build the west coast intertie. But the necessity is a political one. The Interior Department does not want to offend or enter into a contest with the Government power advocates of the Pacific Northwest—people who support every attempt to expand Federal power and who defend the preference concept unless it conflicts with their ambitions.

The Assistant Secretary said further:

> The Northwest's situation is unique because a number of important industrial concerns dependent upon cheap and abundant power have settled here and are now large customers of the Federal system. Because of their unique operations they are dependent upon the low-cost Bonneville power rate to stay in business. Their purchases have ranged from a high of 60 percent of Bonneville's sales in 1945 to an average of about 36 percent in the last 4 years.
>
> These firms employ 15,000 Pacific Northwest citizens directly and another 30,000 indirectly. Obviously, in such a unique situation, where the very life of a region is concerned, commonsense dictates the necessity of protecting that area's long range power needs through legislation. Organizations such as the American Public Power Association have endorsed this position by appropriate resolution.

Mr. President, here we have a very strange and unusual situation. Mr. Holum, a spokesman for the Interior Department, is expressing concern for the future welfare of some investor-financed businesses. I am sure that I have every bit as much interest in private business as anyone connected with the present administration and especially that incubator of socialized electric power, the Interior Department. But, Mr. President, here we are being asked to pass a special law to give business in one section of the country advantages over businesses elsewhere. These businesses Mr. Holum is so solicitous of have been enjoying electric rates subsidized by the taxpayers of this country for a long, long time and I have no inclination to pass a special law to continue that subsidy. The Bonneville Power Administration has been losing money for several years with the loss increasing yearly. I understand the Administrator admits it faces a $17 million loss this year. The unit costs of the new projects being added to the Bonneville system greatly exceed the costs of Bonneville and Grand Coulee which were built during depression days and yet the selling price of power is still based on the cost of those two projects. Instead of considering legislation to reserve this low-cost power for a specific area we should be passing legislation to require the Bonneville and all other Federal power marketing agencies to increase rates in a sufficient amount to keep the taxpayers whole. The new prices of power should also include an allowance for taxes forgone.

Mr. Holum included another interesting paragraph in his speech:

> While we have recommended regional preference legislation to meet the Northwest's special problems, we just as strongly assert that we firmly oppose the establishment of regional preference fences around any other portion of the United States. We believe that our position is consistent with our strong beliefs in the preference clause.

Mr. Holum believes that this special preference the administration now requests is consistent with their strong beliefs in the preference clause. In other words, they have a strong belief in preference but they also have a strong belief in another preference within the preference clause. Just how inconsistent can these people get, Mr. President? It would be amusing if the question was not so serious to observe the tortuous reasoning these people use to try to uphold something they have been defending for years while at the same time trying to alter it in order for them to do something else. You will also note that they will firmly oppose such special provisions for any other portion of the United States.

Mr. President, I have never believed in the preference clause because I do not believe in special privileges for any of our citizens. There has been entirely too much of that already. Each time we give any group of citizens special privileges over another we violate our Constitution and thereby weaken our whole form of government. But if there is going to be discrimination for any section of the country, then I am going to insist that my constituents receive like advantages. That is the reason for my amendment. All that my amendment does is reserve for use in Arizona power which the Federal Government generates in Arizona. That is exactly what the bill we are considering does for the present Bonneville marketing area. If such legislation is good for the Pacific Northwest, then my amendment is good for Arizona, and similar amendments would be good for other sections of the country.

Mr. President, I must start out my explanation of my amendments by stating that I cannot blame the States from the northwest region for wanting to see passage of the bill. If it has the merit they seem to feel it has, I see no reason why it should be confined to the Northwest. My amendments would merely add the name of the State of Arizona to the Northwest territory, so that we would not be damaged by anything the Senate does today.

I suggest that my colleagues from other States would do well to study the bill and to listen to my few remarks, or to read them, because I feel that if this proposal is good for one section of the country it is good for other sections of the country. To be fair to all States and to all people, I suggest that the provisions of the bill could well be and should be extended to all of the States in the country.

The PRESIDING OFFICER. If the Senator from Arizona will yield at that point, the Chair is advised by the Parliamentarian that there are a series of amendments offered by the Senator from Arizona, each relating to a specific portion of the bill. Does the Senator from Arizona wish to have the amendments considered en bloc?

Mr. GOLDWATER. Mr. President, when it is time to consider my amendments they should be considered en bloc. There are a series of amendments which merely provide that my State, Arizona, would be included in the bill. I think, by the time we are through, other States will wish to be included also.

This is merely a series of technical subamendments which constitute an overall amendment to the bill.

Mr. KEATING. Mr. President, will the Senator from Arizona yield to me for a parliamentary inquiry?

Mr. GOLDWATER. I am happy to yield.

Mr. KEATING. My parliamentary inquiry is, Mr. President: Suppose the amendments of the distinguished Senator from Arizona are agreed to. Would that preclude adding the names of other States to the bill? Must those States be added in amendments to the Senator's amendment?

The PRESIDING OFFICER. That would not preclude adding any other amendment to the bill.

Mr. GOLDWATER. Mr. President, I would suggest it might be easier if the Senators who want their States added to this protective device should merely add the name of the States to my amendment. There are a number of places where the addition of the name of the States must be provided.

This looks like a rather complicated series of amendments, but I assure the Senate it is not. This would protect Arizona, as well as protecting the States of Washington, Oregon, and other States in the Northwest.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. MUNDT. I should like to ask the Senator from Arizona, in line with what he has said, if he is willing to modify his amendment, which is now at the desk, to include after "the State of Arizona" the words "the States of South Dakota and of North Dakota" at every place appropriate in the amendments? I shall discuss the reasons for that later, but this seems to be the propitious time to make the modification and to have the whole thing placed before the Senate.

Mr. GOLDWATER. The Senator from Arizona would be very happy to modify his amendment in the manner suggested by the Senator from South Dakota.

Mr. MUNDT. I thank the Senator. Mr. President, does that conclude all that needs to be done in order to have it now a part of the Goldwater amendments?

The PRESIDING OFFICER. The Senator from Arizona has a right to modify his amendment. That is all that is necessary.

Mr. MILLER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Arizona has the floor.

Mr. GOLDWATER. I yield for that purpose.

Mr. MILLER. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator from Iowa will state it.

Mr. MILLER. Would the junior Senator from Arizona be in order, in view of what the Presiding Officer has stated, to further modify his amendment?

The PRESIDING OFFICER. The Senator from Arizona can modify his amendment further.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. MILLER. In line with the comments made by the distinguished Senator from South Dakota, I invite the attention of my colleague to the fact that the State of Iowa borders on the State of South Dakota, and that we are likewise deeply interested in the regional power development of the area.

I wonder if the Senator from Arizona would be agreeable to a further modification of his amendments so as to include the State of Iowa.

Mr. GOLDWATER. The junior Senator from Arizona would be very happy to modify his amendments, as the Senator has requested.

The PRESIDING OFFICER. The amendments are so modified.

Mr. MILLER. I thank the Senator from Arizona.

Mr. KUCHEL. Mr. President, will the distinguished Senator from Arizona yield?

Mr. GOLDWATER. I am happy to yield to my friend from California.

Mr. KUCHEL. As I understand the amendments of the Senator from Arizona, they deal with the bill before the Senate in a number—perhaps in most—respects, but not entirely so. Am I correct in my understanding that the Senator from Arizona has included in the last section of his amendments an extraneous provision from the standpoint of the bill before the Senate?

Mr. GOLDWATER. Does the Senator refer to section 9?

Mr. KUCHEL. Yes.

Mr. GOLDWATER. I do not believe that the section is extraneous. I think it is in keeping with the tenor of the bill. In section 9, I have proposed:

> SEC. 9. In the case of Federal hydroelectric power projects now or hereafter situated at points on streams which form the boundary of the State of Arizona with an adjoining State, the State of Arizona shall be allotted one-half of the energy and capacity of such Federal power projects and such capacity and energy shall be subject to the provisions of this Act.

I point out to Senators, as my friend from California well knows, that the boundary between California and Arizona is the Colorado River. Hoover Dam, Davis Dam, and Parker Dam are all situated on the Colorado, half in my State and half in the State of the distinguished Senator from California.

I assure the Senate that the State of Arizona does not enjoy 50 percent of the power produced. By the amendments I would merely provide that what has happened could never happen again. I remind my friend from California that a filibuster by Arizona's two Senators was required in 1927 or 1928 in order to insure that Arizona would get any power from Hoover Dam. It has been a continuing struggle. I do not want to see my State or, for that matter, any other State, have the problems that we have had in getting our just share of power from dams constructed half in my State and half in the State represented by the able Senator.

Mr. KUCHEL. Up to the last provision in the amendments of the Senator from Arizona, his amendments deal with Bonneville and the Pacific Northwest. The last provision interjects another problem. It is different subject matter than is covered in the remainder of his amendments. Is that not correct?

Mr. GOLDWATER. I believe the Senator might be able to construe it that way, but the junior Senator from Arizona does not agree that the provision is extraneous. For example, a question I wish to ask during the period of debate is, What is the definition of "Pacific Southwest"?

I believe that if the definition were correctly interpreted to include the State of Arizona, it would then apply directly. But I have a feeling that the Pacific Southwest is to be considered by the Federal Power Commission and by the authors of the bill as being southern California. If that is the case, it puts an entirely different light on the bill. I can well understand the concern of the senior Senator from California. However, I do not believe that the provision is different or outside the boundary of the bill. If the Senator can convince me in the interim, I shall be very glad to consider a modification.

Mr. KUCHEL. No. The Senator has a perfect right to offer the amendments as written. I respect that right. My point in raising the question, however, is that I shall object to having the amendments considered en bloc. I want the Record to show that. I wish to preserve my rights to have the last section of the amendments offered by my friend from Arizona considered separately and independently. I do not quarrel with a proposal to consider the other items of the amendments, if I correctly understand that they deal with the Pacific Northwest and the surplus power energy being generated today at Bonneville. But, proceeding from an abundance of caution, I wish to preserve my right to consider separately the last section of the amendments apart from any other section of the amendments having to do with the problems of hydroelectric projects—"now or hereafter situated at points on streams which form the boundary of the State of Arizona with an adjoining State."

I wish to make a little clearer to the Senate the views that I have on that portion of the amendments.

Mr. GOLDWATER. I should be happy to withdraw my unanimous-consent request that the amendments be considered en bloc, and we can proceed through them one at a time.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. JACKSON. I think the Senator from California will find, if he reads the amendments offered by the Senator from Arizona, that they are inseparable, and that he would not accomplish what he has in mind by merely separating the section. I think it is all one amendment. I make that statement in all fairness.

Mr. GOLDWATER. I agree, but I can understand the position of my friend from California.

Mr. JACKSON. The amendments would have a substantial effect on the relationships that now exist in the disposition of power from Federal dams in that area even if the two proposals were separated.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. KUCHEL. I agree with what my friend from Washington has said. However, because the implications in the last section of the proposed amendments of the Senator from Arizona present to the Senate a considerably different and certainly not less important issue than the other provisions of the bill, I think it would be easier to state my position as best I can, were they separated.

Mr. GOLDWATER. Mr. President, as I said, I will withdraw my request to have the amendments considered en bloc. I recognize that the distinguished Senator from California [Mr. Kuchel] is giving his usual careful attention to the problems of his State. It is a question with which probably only four Members of the Senate have great association. We cannot make the situation any worse.

Mr. ALLOTT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Arizona yield to the Senator from Colorado?

Mr. GOLDWATER. I yield.

Mr. ALLOTT. Does the Senator construe the bill S. 3153, as it is now before the Senate without the amendments of the Senator from Arizona, as providing that hereafter, except for surplus energy and surplus peaking energy, both of which are described or defined in the bill, the Pacific Northwest would erect a fence around itself for the use of its own power?

Mr. GOLDWATER. The Senator has correctly interpreted the bill. As I said at the outset, I cannot find fault with any Senator attempting to do what is best for his own State or section. I am merely trying to get my State in the act.

Mr. ALLOTT. Mr. President, will the Senator yield for another question?

Mr. GOLDWATER. I yield.

Mr. ALLOTT. The Senator is aware, I believe, that the Bonneville system has been operating at a deficit.

Mr. GOLDWATER. Yes. If the Senator is interested, I shall read from the 1961 report on the U.S. Columbia River power system, U.S. Department of the Interior. On page 1 the following statement appears:

> Four years ago, BPA was $78,800,000 ahead of schedule in repaying its obligations to the

> Treasury. However, 4 successive deficit years—$15,300,000 last year, alone—have reduced this surplus to $37,800,000. Future deficits are predicted for the next 4 or 5 years.

I add this merely as an interesting comment. As shown on page 2, construction during an 8-year period has had no new starts, and there have been large amounts of generation by public and private utilities, which have reduced Bonneville sales. This seems to speak rather well for private development in this area. However, there has been a deficit, and it is predicted it will continue.

Mr. ALLOTT. Is it not also true that Bonneville's power rates, which are effective for 5 years, have not been increased?

Mr. GOLDWATER. From what I have been able to ascertain, the Senator is correct.

Mr. ALLOTT. I am reading from a committee print of the Committee on Interior and Insular Affairs, dated May 3, 1960, in which the statement is made that the present rates are to continue in effect until December 20, 1964. Therefore, with a system which is operating at a loss now, and so far with a refusal to raise rates, to which the Federal Government is, in effect, adhering, they are putting a fence around themselves to keep any power from going outside their area, and in that way have all of it remain with them. Is that the Senator's interpretation?

Mr. GOLDWATER. That is my interpretation. That is the reason for my amendment; it is the only reason for it.

Mr. ALLOTT. To go one step further, if the Senator does not mind answering my questions, what the pending bill does is create a preference within a preference. Is that correct?

Mr. GOLDWATER. If the Senator does not use "preference" as it is interpreted by the law. If we use it in its dictionary meaning, the Senator is correct. However, I hope to develop that this proposal would actually destroy preference where it exists.

Mr. ALLOTT. What it does is to give a preference to the customers in the Pacific Northwest, whether they are preference customers as we use the term with relation to Government projects, or whether they are private customers. Is that correct?

Mr. GOLDWATER. The Senator is absolutely correct. I read further from the Bonneville report, at page 2:

> As a result of the foregoing circumstances, we have shaped our program to achieve two paramount purposes: (1) To maintain our low rates; (2) to meet the load growth requirements of the region, including those for new industries whose location in the region is dependent upon the availability of low-cost power.

This should be of great interest to my friend from New York [Mr. KEATING], and Senators from other Eastern States. This is the development of power below cost to draw industries away from other sections of the country.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. GOLDWATER. Has the Senator from Colorado finished with his questions to me?

Mr. ALLOTT. I have one or two more questions to ask, if the Senator will yield. The amendment of the Senator from Arizona is very intriguing. Of course, we all have an interest in the same question. He is aware of the Upper Colorado River Project Act. He is just as aware as I am, I am sure, that the Glen Canyon Dam will be located in the State of Arizona. Would the Senator from Arizona construe the effect of his amendment as keeping power from the Glen Canyon Dam from going along the transmission lines of the Government into the State of Colorado?

Mr. GOLDWATER. No; I would not construe it in that way. We are talking now about the upper and lower basin. We are talking about a single compact which created the Colorado River Basin, and then divided it. We already have entered into agreements with respect to lines and wheeling, and so forth. Therefore we would be treating the Colorado River Basin as the pending bill is treating the Columbia River Basin. I do not believe it would affect the language. We already have entered into agreements along that line. Before I conclude my argument on this point, let me say that when we were drafting the amendment we tried to do it by basins. However, we found, in our opinion, that it was impracticable to do so. For example, the Mississippi River system would have to be broken up into a number of components. The Missouri River Basin is a constituent part of the Mississippi River Basin; and it, in turn, would have to be broken into segments. The Columbia River Basin is broken into segments in the pending legislation when we consider provisions for the State of Montana as separated from the remainder of the Columbia Basin.

That is the reason why I did not offer the amendment based on the basin concept, because I think it would be impossible properly and minutely to define the areas of concern. Then, too, I believe we would encounter a problem such as the Senator from Colorado has mentioned.

Mr. ALLOTT. Therefore, this point should be made clear, particularly with respect to the legislative history on the bill: In offering the amendment the Senator in no way would affect the Upper Colorado River Project Act or any of the participating projects under it. Is that correct?

Mr. GOLDWATER. I agree to that. I believe the safest way to be sure of that would be for the State of Colorado to have its name attached to the amendment.

Mr. ALLOTT. It would be impossible to do that, of course, unless the legislative history made it absolutely clear as to what the intent of the Senator's amendment is, because I would not want the name of Colorado on the amendment if there were any question that the amendment might be interpreted in the way suggested by the questions I have asked the Senator. Therefore, I should like to ask, in light of the legislative history, whether the Senator would have any objection to including the State of Colorado in his amendment.

Mr. GOLDWATER. No; I would be very happy to have the great State of Colorado added to the amendment.

Mr. ALLOTT. Would the Senator make such a request?

Mr. GOLDWATER. I do not have to make the request. I am told that I can modify my own amendment at any time. I ask the Chair whether I am correct.

The PRESIDING OFFICER. The Senator is correct. Until the yeas and nays have been ordered on his amendment, the Senator may modify his amendment.

Mr. GOLDWATER. I am very happy to modify my amendment to include the State of Colorado.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. MUNDT. With respect to this same point, the Senator from Colorado is well advised to have his State added, in the same way that the amendment was modified earlier when the States of South Dakota and North Dakota were included. We had looked at this problem from the original standpoint of dealing with it by basins, because lines are not clearly defined. However, it was thought best to do it by naming the States.

From the big dams in South Dakota, we have been transmitting power to the State of Minnesota and to other neighboring States, other than to North Dakota.

I did not see either Senator from Minnesota on the floor at the time I offered my amendment. I believe the State of Minnesota should be entitled to continue to receive the power it is now getting from our dams. However, if we enact the proposed legislation, Minnesota will be cut off from South Dakota dams, as will Nebraska, Iowa, and other States, because they are not mentioned in the bill. Those States will not be cut off because we want to be unneighborly, but because we are forced to adopt a program which I believe is highly improper and highly injurious to the development of a national power system.

I wish to protect South Dakota and North Dakota. We have consulted on this subject; and if this proposal is to become policy for the others, it will become policy for us.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. In my effort to defend the interest of my State I should like to ask the Senator from South Dakota where he finds anything in the proposed legislation—in the bill, not in the amendments—which would affect the right of the people of Minnesota to enjoy the same power benefits from the Missouri River development?

Mr. MUNDT. The bill—not the amendment—proposes to Balkanize the power grids of this country for the first time. It starts in the Northwest by establishing around the Northwest a Chinese wall. It provides that none of the power which is generated from the dams, in which Federal funds have been employed—and I think that even includes private generating plants in this instance—shall be transmitted beyond the boundaries of the areas into other areas not located in the area in which the power is generated.

So the Senator from Arizona very wisely and prudently, in my opinion, sought, because his State and North Dakota and South Dakota are located in areas which are producing this power—and those are the four States in the country which primarily produce power, so far as the location of generating plants is concerned——

Mr. HUMPHREY. Only the location of generating plants. The States do not produce the power; the Federal Government produces the power.

Mr. MUNDT. Precisely; just as in the Northwest the States do not produce the power; it is produced by Federal money.

The Senator from New York [Mr. KEATING] is on his feet. He is concerned because New York pays healthy taxes—and it will pay even healthier taxes if this bill is passed—to subsidize industry in the Northwest with cheap power, because there will be no possibility of transmitting power outside the grid.

So the Senator from Arizona has acted on the old axiom that what is sauce for the goose is sauce for the gander, because obviously if this is to be a new Federal policy, if this is to be considered proper for the Northwest—I do not consider it to be proper—but if it is to be the policy, it should be equally proper for Arizona and certainly for North Dakota and South Dakota.

So in the absence of Minnesota's inclusion in the amendment, if the bill should become law, and the amendment should prevail, and the precedent should prevail, we would find that adjacent States which are receiving the benefits of hydroelectric power will cease to receive them.

In that context, I mentioned Minnesota, because we have worked together. Many transmission lines have been built into Minnesota. We are hoping to have an interchange of power. But under the concept established by S. 3153, I think that happy relationship would be brought to an end.

Mr. HUMPHREY. Mr. President, will the Senator further yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. It is my understanding that the proposal to be offered by the Senator from South Dakota would provide for making North Dakota and South Dakota an area separate unto themselves, and would exclude Minnesota.

Mr. MUNDT. Only because, as I stated when we were discussing this proposal, when I learned what was involved, neither Senator from Minnesota was present. Although I admire that State, where I attended college, I did not think it would be proper to include Minnesota in the amendment. But I am sure the Senator from Minnesota, upon inquiry, will want to include Minnesota, as well.

Mr. HUMPHREY. Senators suggest the inclusion of their own States; but if a Senator is not present, his State is forgotten.

Mr. MUNDT. The Senator from Minnesota usually gets around.

Mr. HUMPHREY. Do not worry. The Senator from Minnesota will be present to protect the vital interests of the State which he is privileged to represent in part.

What disturbs me is that the Senator handling the measure, the distinguished junior Senator from Washington [Mr. JACKSON], finds nothing in the measure which adversely affects the interests of either North Dakota, South Dakota, or Minnesota; but he finds that a few monkeywrenches are being thrown into the gears of the bill by one State after another being mentioned by name, which is an exclusive reference, and means that those not mentioned are left outside the arrangement. It seems to me that this is a rather hodgepodge way to legislate. If we want to legislate concerning the Missouri River Basin, we can do so. I know what States are in the Missouri River Basin. One of them is Minnesota.

Mr. MUNDT. The Senator is correct. The Senator from Washington bases his proposal upon the specific line of reasoning that Congress should enact a pattern of legislation regarding power which shall become applicable for that area only. I do not believe the Senator from Minnesota needs to be told that when we adopt a policy which would become a precedent, it will spread. If it is proper to enact legislation to meet the criteria established for a certain area, it is equally proper and appropriate to establish criteria in our area; so I think the best time to protect against this situation is while the bill is being discussed.

Mr. JACKSON. Mr. President, will the Senator from South Dakota yield?

Mr. MUNDT. I yield.

Mr. JACKSON. Let us keep the record straight. Every region is different. The situation in which we find ourselves today with respect to the bill before the Senate develops from a situation which occurs in the Northwest, a situation not applicable to any other area of the United States.

Mr. MUNDT. Will the Senator spell that out?

Mr. JACKSON. The Northwest has 96 percent hydropower. We are producing a vast amount of dump power. The Bonneville Power Administration has been criticized because the dump power is not being sold. Thirty million dollars worth of power is being dumped into the Pacific Ocean each year because of water going over our dams.

On the one hand, we hear people say, "Look at Bonneville, it is running a deficit." The reason we are here is to correct that deficit. There is no other reason. This bill is the result of resolutions adopted in 1959 and 1960, when the Pacific Gas & Electric Co. wanted to buy power from the Bonneville Power Administration without any protection being offered to the consumers in the Northwest. We obtained a ruling—and this was under the previous administration—which held that if power was sold in California, it would open the Bonneville marketing area to California. Sales to preference customers in California would interfere with long-term contracts with private industry and public bodies, and with short-term contracts with private utilities.

We want to be able to sell the power which is being dumped into the Pacific Ocean over the tops of our dams, so that we can make up a deficit which is running about $15 million a year. California wants to buy it. The marketing area of Bonneville Power Administration has been defined in the present law as the economic transmission distance. When the act was passed, that meant a distance within 200 miles. Because of advances in technology and the state of the art, Bonneville can now deliver power almost anywhere in the United States.

Would the distinguished Senator from South Dakota want the power from his State delivered to Florida or some other State? It is necessary to deal with this situation by regions. Every region has a different problem.

That is the only reason why we are here. We want to sell power to private and public bodies of California, if they want the power. No effort is being made to discriminate. What worries the Pacific Gas & Electric Co. is that they will not get all the power. The private utilities, the public bodies, and the private industries of the Northwest unanimously endorse the proposed legislation. What is taking place is, I think, obvious. Let us be completely candid. There was no appearance before the committee when hearings were held to change this area and include other sections of the United States. We know that the disorderly way to legislate on this subject is to bring in State after State, without hearings being held—and all the interested and affected States having an opportunity to be heard.

I know that the Pacific Gas & Electric Co. does not want the proposed legislation. I know it has been lobbying day and night to kill this bill because it hopes to get all of the power.

Mr. KUCHEL. Mr. President, will the Senator from Washington yield?

Mr. JACKSON. I do not have the floor.

Mr. GOLDWATER. I have the floor.

Mr. MUNDT. Mr. President, I wish to correct a misstatement the Senator from Washington inadvertently made; namely, that no statement was made about this matter. On July 12, I wrote a letter about it to the Senator from New Mexico [Mr. ANDERSON], chairman of the Committee on Interior and Insular Affairs.

Mr. JACKSON. But that was after the hearings were completed.

Mr. MUNDT. Yes; but I wrote the letter when we found out what some Senators were endeavoring to do, and the letter was written before the committee had acted on the bill.

Mr. JACKSON. The bill was introduced on April 11, and has been pending all this time.

Mr. MUNDT. That may be; but when I learned that the committee was finally going to act on this particular bill, as one of a small handful among the whole basketful which were introduced, I became concerned about the reservation, and I wrote the letter. It is dated July 12; and it appears in the CONGRESSIONAL RECORD of July 13, on page 13534. In the letter I questioned the wisdom of trying to Balkanize the power grids in this country—which is what would be done if this arrangement were to be applied in connection with the same problems on the Missouri River. We have the problem of the transmission of hydroelectric power, the problem of dump power, and the problem of sales across State lines. These problems are as characteristic of our areas as they are of the areas in the Pacific Northwest. There is nothing particularly unique about these problems. They exist both under the Bonneville Power Administration and under the systems handled by the Department of the Interior.

Mr. JACKSON. If the Senator from South Dakota wishes to use the word "Balkanization," I point out, with all due respect, that the power in his area is sold within a given area. Is that not true?

Mr. MUNDT. Yes.

Mr. JACKSON. Then why is the Senator from South Dakota talking about "Balkanization"?

Mr. MUNDT. The power in our area is sold under a power transmission system, as is the power in the Pacific Northwest, although in regard in the Pacific Northwest the bill is narrowed down, so as to define a specific area geographically.

Mr. JACKSON. I am sure the Senator from South Dakota is misinformed about the problem of surplus power or dump power. That problem does not exist in the Missouri River Basin. But I am sure the Senator from South Dakota would not want it to be held that if in the Missouri Basin it was possible to sell dump power, all existing rights to take care of their own customers would be lost.

Mr. MUNDT. But that problem is not before us.

Mr. JACKSON. But that is precisely the situation. The Solicitor of the Department of the Interior has ruled that if Bonneville power is transmitted to California, in the absence of the enactment of this bill, our marketing area will be extended all the way to the Mexican border. That would jeopardize the power supply of private industry and all private utilities in the Pacific Northwest. That is the only reason why we are seeking to have this bill enacted, and it was for that reason that the bill was introduced.

Mr. GOLDWATER. Mr. President, our concern, and also the reason we have offered this amendment, is not so much over what is provided by the bill as it is over what is outside the bill. It was a part of a message from the President. The bill was introduced by request. In my opinion, it is a part of a program to federalize power in this country. All that is needed to start that is a high-voltage transmission line out of any basin into any other basin or region, and then it will not be long before there will develop the problem of what will happen to Minnesota, North Dakota, South Dakota, or Arizona or any other area in the United States.

With the completion of this line—and I am not insinuating that the bill has any reference to a high-voltage line from the Pacific Northwest to the Southwest—there will be completed an important part of an interconnecting grid that would need only a relatively short transmission line in order to reach into the TVA area, and then the creation of a relatively few reactor-type generators in the Pacific Northwest in order to completely take over the power industry in the United States. When that happens, my area, which happens to be a power-starved area—and it will continue to be, even with the completion of the Glen Canyon Dam—would find that the power available there could be used to supply power wherever it might be wanted.

Arizona is not a customer of the Pacific Gas & Electric Co.; that company does not operate in my State.

Mr. JACKSON. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I am glad to yield.

Mr. JACKSON. Let me explain that at the present time the Pacific Gas & Electric Co. has entered into an agreement with the Pacific Power & Light Co., of the Pacific Northwest, for the construction of an interconnecting line and for P.P. & L. to send its surplus power to California.

This line could be made available to public bodies in California. If it were, the Solicitor of the Department of the Interior under both administrations has ruled that such public bodies in the State of California would become preference customers under the Bonneville Act and the Bonneville marketing area would be extended to California.

So the proposed legislation is needed, regardless of whether there is a Federal line or a non-Federal line. The question of a Federal line is not involved here, as has been properly pointed out; this bill does not authorize any Federal transmission line.

Mr. GOLDWATER. It does not need to.

Mr. JACKSON. True, because that is authorized by previous Federal law. But I point out that the enactment of this bill is needed, even if the present plans go through. I refer to the plans of the private utilities. I have no objection to having the Pacific Gas & Electric Co. obtain surplus power from Bonneville. That will be fine. If they want to buy it there, that will be fine. We want to be able to reduce the $30 million annual waste of dump power that is going to the Pacific Ocean. In order to stop that waste and end that deficit, we need the proposed legislation.

If the bill is not enacted, the firm power supply of both the private utilities in the Northwest will be affected most disadvantageously.

I wish to make clear that in the Pacific Northwest the private utilities and industries get more than half of all the power produced by Bonneville. So the proposed legislation is absolutely essential if we are to reduce the deficit which now is being incurred because we cannot market dump or waste power, which has an annual value of $30 million.

Mr. GOLDWATER. But under the Senator's argument the area could very easily be extended; all that would be needed would be a few short miles of transmission line between that high-voltage line and either Hoover Dam or Davis Dam, in order to connect into the Glen Canyon grid and connect all the Rocky Mountain States with that basin, and then extend into the southeastern area; and then, under the argument the Senator from Washington is using, it could be required that Federal power flow from our area into all those States—both the power we have now and the power we shall have when Glen Canyon Dam is completed.

Mr. JACKSON. Mr. President, the Senator from Arizona is basing his argument on what can be done now.

Mr. GOLDWATER. I do not follow the Senator's point.

Mr. JACKSON. Let me explain. The Pacific Power & Light Co., in connection with the Pacific Gas & Electric Co., is building a large tieline into California, and can interconnect it with another system elsewhere, and have a private utility grid throughout the country. This is sound engineering practice—so that power flows can be reversed to carry maximum loads. We do this in the Pacific Northwest. The Bonneville Power Administration has invested over $500 million in transmission lines in the Northwest, connecting with private and non-Federal utilities. This makes it possible to maximize the power available in that area, so we do not waste it, and so that each utility does not operate as a separate entity. This is sound engineering practice.

The bill is needed for the purpose of making it possible to sell such power to private utilities or to public bodies in such a way as not to jeopardize or upset the marketing practices which now exist in the Pacific Northwest.

Mr. GOLDWATER. Mr. President, if what the Senator from Washington says is true—and I know it to be true, because we have worked out similar agreements between the Upper Basin and the Lower Basin in Arizona, Utah, and Colorado—why should there be objection to the inclusion, if not on a regional or basin basis, on a State-by-State basis? If it is good for the Pacific Northwest, it is good for the Southwest and the Middle West.

Mr. JACKSON. I will state why. It is because the situation confronting the Pacific Northwest does not exist anywhere else in the Nation. In the Pacific Northwest there is a vast amount of surplus or dump hydroelectric power. That situation does not exist anywhere else in the Nation. But if the proposed legislation is not enacted, it will be possible to arrive at a precedent for any Federal dam to sell power 1,000 or 2,000 miles away from the State in which it is located; and I am sure the Senator from Arizona is not arguing that that should be done. I am sure he does not want to ask for a Federal grid system to bring that about.

Mr. GOLDWATER. No; the Senator from Arizona is trying to prevent that.

Mr. JACKSON. That matter about which he is concerned is not involved in the pending bill.

Mr. GOLDWATER. I recognize that, but I cannot help but read in the report and read in the hearings the intent. The intent is interconnection. That is a part of the report made on December 15 from the task force. I remember mentioning my concern about it. It is a blueprint.

Mr. JACKSON. That is an entirely separate matter of appropriations.

Mr. GOLDWATER. I do not argue that, but I think this is merely getting the nose under the tent, getting the foot in the door. It is part of the measure, and it did not come from any Senator's pen; it came from the White House in a message that is a part of the overall Federal power program. If it is good for the Northwest, it is good for other parts of the country.

Mr. JACKSON. It is good for the Treasury of the United States, because we are now wasting $30 million worth of power, virtually all of which could be sold.

Mr. GOLDWATER. Perhaps the Federal Government ought to get out of the generation and sale of electric power.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield to the Senator from New York.

Mr. KEATING. I appreciate the Senator's courtesy in yielding to me. I commend him for his diligence in protecting the State of Arizona, and commend the Senator from South Dakota for his diligence. I commend also the Senator from Colorado, and the Senator from Iowa. They have put all their States into the amendment. So far we are only as far east as Iowa, but I assume we will go farther east. I will not add an amendment yet to include New York.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. KEATING. I yield.

Mr. HICKENLOOPER. By all means, I want Iowa scheduled.

Mr. KEATING. Iowa is included.

Mr. HICKENLOOPER. Are we in?

Mr. KEATING. Iowa is in.

Mr. HICKENLOOPER. I am sorry; I just entered the Chamber. I think we have as much right to be in as any other State.

Mr. KEATING. I agree. I commend the Senator from Washington. He is diligently looking out for the interests of his own State. He wants to keep all his power in that small area.

This is a very revealing letter from the Administrator of the Bonneville Administration to the Honorable Stewart Udall, Secretary of the Interior. This sentence has been read once before, but it had better be read again. There may be some Senator who will take an interest in it, including the Senator from Vermont, and perhaps other Senators from other areas around our vast and glorious country:

> As a result of the foregoing circumstances, we have shaped our program to achieve two paramount purposes: (1) to maintain our low rates; (2) to meet the load growth requirements of the region, including those for new industries whose location in the region is dependent upon the availability of low-cost power.

We know that that area has been trying to lure industries away from other States, but now it is down in black and white that, "We want all of the taxpayers of this country to agree, through their representatives in Congress, that we will keep this power in our own little hot hands in this area; we will not let it get out of there, so we can attract some industries from the States of New York, Connecticut, and Ohio." My friend the Senator from Ohio [Mr. LAUSCHE] will be present tomorrow to say something on this subject, and I shall have much more to say on it in due course.

This is an alert to all Senators who happen to represent areas which are not entirely within the Federal public power complex, that they had better be present tomorrow to look into this bill very carefully, because there is a warning in writing to them that their industries are to be taken away and they are being asked to pay for moving their own industries into this area.

Think of it, Mr. President, they are being asked to contribute their tax dollars in order that this area can hold this power, within its confines, and can assure X corporation, "This bill has gone through. You do not have to worry any more. We can assure you of cheap power. We will not raise our rates. We have been maintaining our low rates. We will never raise our rates on you. Move in here, and you will have these low rates forever. We will take good care of you, and we will make all the taxpayers in the United States pay for it. And we will see that they never have to share our riches and resources."

It is a great thing if one can do it.

Mr. HICKENLOOPER. Mr. President, will the Senator yield?

Mr. KEATING. I yield.

Mr. HICKENLOOPER. I am surprised to hear the Senator's argument. Is there any objection on the part of anyone to having all the States get some of the electricity paid for by all the taxpayers?

Mr. KEATING. I do not know about that. The Senator from Washington does not want to have specific States added. He does not like to have Arizona and Colorado added. I am sure he is going to object when I try to add New York.

Mr. JACKSON. Will the Senator explain what the law is with respect to Niagara?

Mr. KEATING. What I am objecting to is that all the taxpayers, including those in the State of New York, are being asked to subsidize this purloining of their own industries by the cheap power areas.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. KEATING. I do not have the floor.

Mr. GOLDWATER. I yield to the Senator from Washington.

Mr. MAGNUSON. Before we become too excited about this proposal, I think one thing should be made clear. I suppose I have had as much to do with appropriations for the development of hydropower as any other Member of the Senate.

Mr. KEATING. The Senator is an effective spokesman for his State.

Mr. MAGNUSON. I hear these statements continually sometimes even in the Appropriations Committee. The Senator from South Dakota knows about the taxpayers paying for hydro development in the Columbia Basin. We have paid back every nickel, with interest, and we are ahead of our payment schedule. That is not true of Niagara, but I am for Niagara, too. We happen to have a great resource in our area, a great river that is available to develop low-cost power in the Northwest. Pennsylvania has coal. Some States have gas. The State of New York has the St. Lawrence. We went down the line to help New York develop it. It is not on a payback basis. This is the only investment the Federal Government has ever made which pays back with interest.

I have supported all the reclamation and irrigation projects. Some of the early projects in Arizona have paid back. I think the Salt River project has paid back, in taxes alone, more than its cost. I have supported projects in South Dakota and Nebraska. They have paid back, but without interest. We are the best investment the Federal Government has ever made.

Mr. KEATING. In view of the generosity of the Senator, I cannot understand why the Senator is saying, "We want to keep the power here."

Mr. MAGNUSON. We are trying to sell our dump power down south. We have to do it. River basins must be kept intact. The whole river basin area is usually a development that includes reclamation, navigation, and all kinds of uses, even recreation. It has become a part of this development. It is not a question of whether we want to keep something. What we want to do is not to keep something, but to leave there what we had. We did not get it, ourselves. The taxpayers loaned the money. We are paying it back, and we are ahead of the repayment schedule.

Mr. GOLDWATER. If the Senator will yield to me——

Mr. MAGNUSON. Bonneville Dam is now 50 percent paid for, with 3 percent interest.

Mr. GOLDWATER. Mr. President, I have the floor.

Mr. MAGNUSON. I merely wanted to keep the record straight, in respect to the taxpayers.

Mr. GOLDWATER. I do not mind yielding to Senators. What my friend from Washington has been discussing does not enter into the question today. We are happy to have him discuss his projects, but now the Senator is talking about an amendment I have offered, which would include my State.

Mr. MAGNUSON. I know.

Mr. GOLDWATER. And any other State which wishes to be added.

Mr. MAGNUSON. Yes.

Mr. GOLDWATER. We could debate later about Bonneville, about the TVA, and any other project later.

Mr. MAGNUSON. I was merely answering the question of my friend from Iowa and of my friend from New York, who talked about the taxpayers of the United States putting up money, to be taken to the State of Washington, for the purpose of developing low-cost power, thus bringing industry to Washington.

Mr. HICKENLOOPER. Are they not doing so?

Mr. MAGNUSON. The money has been loaned to us. I have voted for many projects on the Mississippi River, on the Missouri River, and in the whole of the Columbia Basin. Congress has helped to support those projects, and has worked for them.

Mr. HICKENLOOPER. Mr. President, will the Senator yield to me?

Mr. GOLDWATER. I am happy to yield.

Mr. HICKENLOOPER. We have never tried to put into law, for the Mississippi River Basin or for the Missouri River Basin, anything to provide that the power would be exclusively for the use of the States nearby.

Mr. MAGNUSON. I will obtain some information to present tomorrow to show certain instances in which Senators have tried to write various proposals into law. At one time there was a request to build a transmission line out of South Dakota into the area of Minnesota. Everyone from South Dakota and neighboring areas opposed it.

Mr. HUMPHREY. It received seven big votes.

Mr. METCALF. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield to the Senator from Montana.

Mr. METCALF. Mr. President, I come from an area where the great rivers of America rise. The Missouri River rises in the State of Montana. Some of the hydroelectric dams ship power all the way to the Mississippi River. Many of the headwaters of the Columbia River are in the State of Montana.

I am as concerned as is the Senator from South Dakota with respect to the development of power and other resources of eastern Montana, which is three-fifths of the State I represent.

There is a power shortage in the Missouri River Basin. If we could develop the coal resources of South Dakota, Wyoming, and Montana, to supplement the hydroelectric power, we could take care of the power shortage which exists.

The Senator from Montana [Mr. MANSFIELD], the majority leader, and I have asked for a survey as to how to make use of the Columbia River power in the Missouri River Basin. The situation has been the same as it is in the area of the Senator from Arizona, and as it was in previous authorization for the Fryingpan-Arkansas project.

When Glen Canyon power comes on the line, it is possible that there will be a surplus of dump power for a while, which it would be the wish of the people to dispose of in some other power-hungry area, thus helping to pay off the debts to the Federal Government.

At the same time, the people will wish to preserve for the State, as the Senator's amendment would seek to do in this instance, or for the region, the benefits of the resources of that region.

So what we are saying to the people of the United States, from the western two-fifths of Montana and the Pacific Northwest, is "Give us an opportunity to help pay off the Federal Government by the shipment of our surplus power into power-hungry regions. Then, when Glen Canyon power comes on the line, when a survey of that region or river basin is needed, and when some of the other power dams are on the line in the Missouri River Basin, so that there is a surplus of power, we can devise a program for that river basin. We have an exceptional and, so far as we are concerned at this time, a unique situation in the Bonneville Power Administration and in the development of the Columbia River, which is one of the great resources of our country. We want to share it with other people. We want to share the surplus power with the people of our neighboring States. At the same time, we want to have the advantage of a great resource which we possess, exactly as we wish to maintain an advantage for the Missouri River Basin when the Senator from South Dakota gets his power from the line, and exactly the same as other people wish to have the advantage of Glen Canyon power when that power comes on the line."

I predict that there will be a power surplus, with regard to Glen Canyon similar to that which we have, for a temporary time, in the Columbia River Basin.

Mr. GOLDWATER. In answer to the Senator's remarks, by the adoption of the committee amendment, he has taken care very adequately of Montana. I congratulate the Senator. I am merely trying to do the same for my State by offering an amendment. That is the extent of what my amendment would do.

So far as the possibility of Glen Canyon producing surplus power is concerned, I assure the Senator that that will never happen. We shall be fortunate if sufficient power is produced to pay back.

Mr. METCALF. I hope the Senator is correct. If he will yield for a moment more, the point at which we got the amendment for Hungry Horse was when Hungry Horse was authorized and when the appropriations for it were made. We did not get that amendment in an omnibus bill of this sort. The amendment with respect to Arizona should have been obtained in connection with the Upper Colorado River authorization bill; or in the same manner in which the Senator from South Dakota got the preference clause for Big Bend, in the authorization bill and in the appropriation bill.

This is not the time to divide the territory State by State and say, "Let us add one other State, even though we do not have a survey as to what would happen to the other river basins and to the other regions in the Nation."

Mr. GOLDWATER. I say to my good friend from Montana that hindsight is the only 20-20 legislative vision of which I know. When we pressed for the Glen Canyon project, had we known of the report which was to be submitted, which came to the committee on December 15 of last year, certainly we would have asked to have this plan agreed upon and probably it could have been done on a basin basis.

But we were not intelligent enough to do so. We could not visualize that the Federal Government would ever want to get into a national grid, or that it would ever want to construct high voltage lines across the country. Had we then realized it, we would have objected to not having an exclusive clause, such as the Northwest basin is suggesting now, and which Hungry Horse has had, as the Senator correctly observes, ever since the passage of the original bill.

The Representatives from Montana must have had some foresight at that time which we were not possessed of, because they did precisely what I now seek to do at this late hour.

Mr. METCALF. If any foresight was involved, it was exercised by the majority leader when he was a Member of the House of Representatives.

Mr. GOLDWATER. The majority leader has always had excellent foresight. I saw that when I saw the committee amendment. I said, "Oh, oh; here comes a long-range look again."

Mr. MANSFIELD. No. Mr. President, will the Senator yield?

Mr. GOLDWATER. He is not looking backward. He is not even looking at the New Frontier. He is looking far out in front. I admire him.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. MANSFIELD. I wish to support in full what my distinguished colleague has said relative to the preference clause in the Hungry Horse Dam Act. I point out that this is almost absolutely necessary for our part of the country. As the Senator from Montana [Mr. METCALF] pointed out, both the Columbia River and the Missouri River have their origins in Montana, but the Hungry Horse project in Montana has the prior use of only approximately 200,000 kilowatts of power. Downstream the people get 700,000 or 800,000 kilowatts of power, because of storage as a result of the impounding of the Hungry Horse Reservoir.

Insofar as the Garrison Dam is concerned—and I note that the Senator from North Dakota is in the Chamber—their power is implemented because of impounding of waters behind Fort Peck Reservoir.

What happens, in effect, is that we have all these resources and we get very little by way of return. What we are asking the Senate to do is to protect us and strengthen us in the rights we already have, because this is a question of life and death.

Mr. GOLDWATER. We have already done that, by adopting the committee amendment. All the junior Senator from Arizona is attempting to do is to get a little of that which the Northwest and Montana now are to have. I believe in spreading the benefits around. In this respect I follow the preachments of the New Frontier. I want to get some action on this proposal, and not to see the benefits confined to one region.

It may be a partial answer to the remarks of my friend from Minnesota to point out that under section 1 of the bill the report refers to preference:

> This subsection, together with sections 2 and 3, superimposes a regional geographic priority on existing preference and priority statutes.

I suggest that this is something which should give the REA people great concern.

It should give preference customers more concern, because it superimposes a regional geographic priority that does not now exist. I am sure that is the reason the distinguished Senator from Montana suggested the amendment to the committee bill in the committee. I merely mention that point as further food for thought for those who wish to study the question tonight before action is taken on the bill.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. MUNDT. I am glad the Senator has touched upon an issue which had not previously been mentioned this afternoon, but has greatly disturbed many of the REA people in South Dakota. The issue is the impact that the new kind of community preference will have on the established preference-customer concept which has done so much to develop, build, perpetuate, and expand REA. I am frank to say that the committee report skips over that subject lightly. But I have received through the mail from an REA constituent back home a speech which the REA Administrator, Norman Clapp, delivered in San Juan, P.R., on May 17, which I had printed in the Record on July 13, and in which he raised some very serious questions about the "Balkanization" of power—that was not his term, but is mine—which proposes a new concept of preference.

Let me explain the way the plan would inevitably work if the bill should become law and there were preference customers—rural people, rural REA's and public bodies outside of the periphery which is being fenced in by the bill. Before such people could get their power, the power needs of all the people in the Northwest area, from the smallest REA to the biggest Kaiser aluminum plant, would have access to the power. I seriously fear that if we enact the proposed legislation as it is presently presented, we shall jeopardize, if not destroy, the preference-customer concept which has done so much to develop farm electricity and REA's throughout America, and which, I submit, is as much needed now as when REA was in its infancy, because there was nothing to protect the preference customer outside the preference area.

I doubt the wisdom of developing preference communities, which is what the bill would do. I believe we ought to adhere to our preference-customer legislation. But certainly if we should pass the bill without amendment, we would protect preference customers outside the preference communities, and then we would begin to sound the death knell to the preference-customer legislation and regulations in America.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. DIRKSEN. I should like to ask the assistant majority leader the program for the remainder of the day. I also would like to know whether he expects to have the Senate convene at an earlier hour tomorrow.

Mr. HUMPHREY. Mr. President, it is hoped that the Senate can adjourn very shortly and reconvene at 11 o'clock tomorrow morning. I gather that considerable more discussion is desired on the amendments that are being offered. There would be little or no opportunity to vote on the amendments at any early hour tonight. Rather than to ask the Senate to remain in session late tonight, if it is agreeable, I suggest that the debate be concluded in another half hour or so for the evening, the Senate to reconvene at 11 a.m. tomorrow.

Mr. DIRKSEN. Mr. President, if the Senator will yield further, I should like to ask a question.

Mr. GOLDWATER. I yield.

COMMITTEE MEETING DURING SENATE SESSION

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet tomorrow morning notwithstanding the session of the Senate, because the committee is now considering the drug bill.

The PRESIDING OFFICER. Is there objection?

Mr. HRUSKA. Mr. President, reserving the right to object, some of us who are interested in the hearing of the Committee on the Judiciary are also interested in the pending bill. It will be a little difficult for us to be in two places at the same time.

Mr. DIRKSEN. I respectfully suggest to my distinguished friend from Nebraska that there will doubtless be discussion on the bill. There will be a quorum call, and by the hour of 12 o'clock we should be back in the Senate Chamber. I do not make the request for the afternoon, but only for the morning.

Mr. HRUSKA. There is a hearing also scheduled for 2 o'clock on the confirmation of the nomination of Judge Irving Cooper.

Mr. DIRKSEN. That is correct.

Mr. HRUSKA. Would the Senator's request include that hearing also?

Mr. DIRKSEN. Yes. I obtained that consent earlier today.

Mr. HRUSKA. The hearing was postponed from last week when we had an extended discussion on another bill in the Senate.

Mr. HUMPHREY. Mr. President, we might be able to accommodate Senators if the Senate were to meet at noon tomorrow.

Mr. HRUSKA. That would help.

ORDER FOR ADJOURNMENT

Mr. HUMPHREY. Mr. President, I move that when the Senate completes its business today it stand in adjournment until 12 noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HICKENLOOPER. Mr. President, will the Senator yield so that I might ask the acting majority leader a question?

Mr. GOLDWATER. I yield.

COMMITTEE MEETINGS DURING SESSION OF SENATE TOMORROW

Mr. HICKENLOOPER. Mr. President, I should like to ask the acting majority leader whether the Committee on Foreign Relations will be authorized to meet tomorrow?

Mr. HUMPHREY. I shall make a special unanimous-consent request to continue the hearings, which are being held without too much interference with the work of the Senate.

Mr. President, I ask unanimous consent that the Senate Committee on Foreign Relations may be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the Senate Committee on the Judiciary be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the Senate Subcommittee on Permanent Investigations be authorized to sit during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

PACIFIC NORTHWEST POWER PREFERENCE

The Senate resumed the consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

Mr. GOLDWATER. Mr. President, I had no idea that the amendments would create so much interest. I had a prepared statement to make on the amendments themselves. A great deal of interesting discussion has taken place today. When Senators who were not present read it, it will give them some pause in the consideration of the bill. Frankly, I do not think the bill is needed. Even if my amendments were agreed to, I would be reluctant to vote for the bill, because I think the Secretary has all the authority that is needed today. I further feel that we would jeopardize very seriously the preference clauses in our Federal construction. That statement comes from one who does not happen to believe in the preference concept.

Mr. HUMPHREY. Mr. President, will the Senator from Arizona yield for a point of information?

Mr. GOLDWATER. I yield.

Mr. HUMPHREY. Does the Senator wish to press his amendments to a vote tonight?

Mr. GOLDWATER. No; the Senator will not press his amendments for a vote tonight.

Mr. HUMPHREY. I thank the Senator.

Mr. GOLDWATER. I understand that certain Senators who are out of the city today are vitally interested in the amendments of the Senator from Arizona and other amendments that will be offered by Senators on both sides of the aisle.

Mr. HUMPHREY. I so understand. For the information of Senators, there will be no votes tonight.

Mr. GOLDWATER. That is correct.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. DIRKSEN. I would regard it as rank discrimination if the State of Illinois were not included in the amendments of the Senator from Arizona.

Mr. GOLDWATER. I think the Senator is absolutely correct. I think he would find it rather difficult to explain to some of his constituents why Illinois did not feel just as entitled to the benefits as the Pacific Northwest, Arizona, Iowa, and Colorado.

Mr. DIRKSEN. Is the Senator from Arizona agreeable to the inclusion of an amendment that would include also the great Commonwealth of Illinois?

Mr. GOLDWATER. I modify my amendments to include the great Commonwealth of Illinois.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. GOLDWATER. I am happy to yield.

Mr. KEATING. We are coming farther and farther east all the time. I wish to think the question over. I do not want to act precipitately by asking for the inclusion of New York. There are arguments on both sides. But I now congratulate the distinguished Senator from Illinois for looking after his State. One upon whom I neglected to heap encomiums was our distinguished majority leader, who acted before the bill ever reached the floor of the Senate. That is the time to protect a State. We have all learned that. He did a fine job, as he has always done, representing Montana. I congratulate him and my friend, the chairman of the committee. I shall not ask the distinguished Senator from Arizona to modify his amendments tonight.

Mr. GOLDWATER. I would be most happy to do so.

Mr. KEATING. I am sure the Senator would be happy to do so, but I do not want to make that request until I am sure it is in the best interest of my State. Senators are all looking out for their own States. After all, I feel we should do something about it. I wish to confer with my friend, the Senator from Vermont.

Mr. GOLDWATER. I cannot consider a better axis than a New York-Arizona axis.

Mr. KEATING. I agree with the Senator. I think it would be absolutely unbeatable.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. MUNDT. For the information of the Senate, since my request was made to the committee before the committee had marked up the bill, and because I received no consideration for my proposed amendment at that time, I have been working rather diligently on the problem. It is a very real problem for anyone outside the Pacific Northwest. So, working with the legislative counsel, I have had prepared in my office an amendment which I shall now read. The amendment would apply the same criteria to every State in the Union meeting the same problems as they arise.

I hope the Senator from Washington will listen to my reading of the amendment, because he is a very fair-minded individual, and perhaps after reading the amendment in the RECORD he may desire to become a cosponsor of it tomorrow, in which case I shall be glad to add his name. I read the amendment:

> At the end of the bill insert a new section, as follows:
>
> "SEC. 9. (a) Any contracts of the Secretary for the sale or exchange of electric energy generated at, or peaking capacity of, Federal plants in any State for use outside such State shall be subject to limitations and conditions corresponding to those provided in sections 2, 3, 6, and 7 for any contract for the sale, exchange, or transmission of electric energy or peaking capacity generated within the Pacific Northwest for use outside the Pacific Northwest.
>
> "(b) The provisions of this section shall apply only to States and parts of States not included in the Pacific Northwest."

What we do here is to apply precisely the same situation that is proposed for the Pacific Northwest.

I would also amend the title to read, as follows: "A bill to guarantee electric consumers in the Pacific Northwest region and in any State or part of a State outside such region first call on electric energy generated in Federal plants in such region or in such State, respectively, and for other purposes."

I send the amendment to the desk and ask that it be printed for use at the time the Senate enters upon consideration of amendments to the bill.

The PRESIDING OFFICER. The amendment will be received and printed and will lie on the table.

Mr. MUNDT. Mr. President, I have a second amendment, which I also send to the desk, which I read, as follows:

> At the end of the bill insert a new section as follows:
>
> "SEC. 9. Any contracts of the Secretary for the sale or exchange of electric energy generated at, or peaking capacity of, Federal plants in the States of North Dakota, South Dakota, and Arizona for use within any area outside such States shall be subject to limitations and conditions corresponding to those provided in sections 2, 3, 6, and 7 for any contract for the sale, exchange or transmission of electric energy or peaking capacity generated within the Pacific Northwest for use outside the Pacific Northwest."

Amend the title to read as follows: "A bill to guarantee electric consumers in the Pacific Northwest region and in the States of North Dakota, South Dakota, and Arizona first call on electric energy generated in Federal plants in such region or such State, respectively, and for other purposes."

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. MUNDT. Therefore, tomorrow we will present for consideration two proposals: One, to provide for Arizona, North Dakota, South Dakota, and the Pacific Northwest, as the major power-producing States of the area, precisely the same criteria, considerations, and protective measures; the other, to provide for every State this new pattern of protection which would be established by precedent in the proposed legislation as affecting the Pacific Northwest.

I submit these amendments reluctantly, because I believe that our present program of preference customers for public purposes and for REA's is better than the proposed substitution of regional preference or community preference for preferred customers. I believe it is undesirable to start balkanizing the great power systems of this country, which are brought about by the expenditure of public funds or by money borrowed from the Public Treasury.

However, I submit that if it is wise to do this under certain considerations in the Pacific Northwest, it is equally wise to meet the same problems as they arise, and to cure the same conditions, in the other States of the Union.

The criteria should be made applicable to all of them, but certainly to the other big power producing States like Arizona, North Dakota, and South Dakota.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. AIKEN. Am I correct in understanding that the Senator's amendment would apply to storage dams and reservoirs which are constructed with public funds but which are utilized for the generation of power at privately owned plants?

Mr. MUNDT. If they are constructed by public funds; yes.

Mr. AIKEN. Or if they were constructed to take care of flood conditions and later used as storage basins. Would that entitle the people of that area to the preference use of power?

Mr. MUNDT. I presume it would, although I should probably yield on that question to the distinguished Senators from Washington, who are the authors of the pending bill, because we would apply precisely the same criteria, whatever they are, to other States which are proposed for the Pacific Northwest.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. JACKSON. I believe it is perfectly clear what is involved in the Senator's amendment. The purpose is to change completely all existing law with relation to the distribution of power from Federal dams throughout the United States.

Mr. MUNDT. Only if the conditions which the Senator says are unique to the Pacific Northwest can be shown to prevail in the other areas.

Mr. JACKSON. I believe the amendment should be considered as a separate bill, after proper hearings have been held, with opportunity given to all interested parties to testify.

Mr. MUNDT. We would make applicable the same desiderata to our proposal as to the Senator's proposal. The Senator may wish to become a cosponsor, as I have said.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. MAGNUSON. Who prepared the amendments?

Mr. MUNDT. I prepared the amendments in my office, in cooperation with the legislative counsel, who put them into legislative language.

Mr. MAGNUSON. The concept of area preference is not a new one. In one form or another it has been a part of Federal power policy for nearly 35 years. The Boulder Canyon Project Act (45 Stat. 1057) grants a preference to Arizona, California, and Nevada. I do not believe anyone would want to change that. Perhaps Arizona would like to change the percentages.

Mr. GOLDWATER. We want to protect that situation.

Mr. MAGNUSON. We want to protect it also.

Mr. GOLDWATER. I agreed at the outset that the Senator from Washington was wise. We merely want to get hitched to the Senator's wagon.

Mr. MAGNUSON. Hungry Horse Dam Act (58 Stat. 270) grants a preference to the State of Montana.

Mr. MUNDT. Which is recited in the pending bill.

Mr. MAGNUSON. The Priest Rapids Project Act (68 Stat. 573, 574) requires that the Federal Power Commission license of the project must offer a reasonable portion of the capacity and energy of the project for sale within the economic market area in neighboring States. The Niagara Power Project Act (71 Stat. 401) requires that any Federal Power Commission license of the project must make a portion of the power available for use within reasonable economic transmission distance in neighboring States. The River and Harbor Act of 1958 (72 Stat. 297, 311) provides that the States in which future Corps of Engineers dams in the Missouri basin are located shall have preference to a portion of the power.

Mr. MUNDT. That is correct. That has been reaffirmed in the legislative history today.

Mr. MAGNUSON. Most recently, the 1959 amendments to the Tennessee Valley Authority Act (73 Stat. 280) define the marketing area of the Authority and thereby grant a form of regional preference to that area. There is nothing conceptually new in the proposal. Congress has provided a power reservation on a number of occasions. But it is important to note that the reservations have not been uniform. Each area or region is different and Congress, after a careful study, tailored, and should tailor, the power reservation to meet the needs and problems of the particular area or region involved. That is what is being done here. This is nothing new.

Mr. MUNDT. It was done in the Pacific Northwest originally.

The Senator's colleague pointed out that now, to use a happy phrase, the state of the art has reached the point where the power can be pumped a little farther than at the time of the enactment of that act. However, the state of the art which creates a new situation in the Northwest also creates it in the Missouri Valley.

Mr. JACKSON. Mr. President, we can debate this issue tomorrow, but it is clear that what is involved is a change in the fundamental law which is applicable now to the distribution of power from the various Federal dams. These laws were passed after careful and detailed hearings. It is clear that if we wish to approach this problem intelligently, it is necessary to approach it by regions.

This is what Congress had done throughout the years. We have approached this problem by a Pacific Northwest regional approach. It seems to me it is commonsense that other areas which have problems that are unique to those areas should approach them on that basis. We cannot legislate in an orderly fashion by doing what is proposed in the various amendments.

Mr. GOLDWATER. As I stated on August 1, when I submitted this amendment, I explored at great length the possibility of acting on a regional or a basin basis. In my own judgment and the judgment of my legal advisers, that could not be done, because it would not be definitive enough. For example, there are existing contracts and agreements in the Colorado basin, which my amendment would not alter. In the basin from which the Senator from Washington comes, there are agreements which my amendment would not alter.

Mr. JACKSON. But it would alter them.

Mr. GOLDWATER. No, I do not think so. I do not think Senators have fully realized the situation. Subsection (b) of section 1, together with sections 2 and 3, would impose a regional geographic priority on existing preference priority statutes. In other words, if the bill were passed, it would then be a niche above the existing statutes and preference agreements.

I did not intend to enter into a discussion of this subject today, because it is only remotely related to my bill; but I think it is something the Senate should consider. We should consider whether we want to superimpose regional geographic priorities or the priorities we have already established between the States of the Upper and Lower Basins of the Colorado River, and whether we want to do the same thing with respect to the Pacific Northwest.

If there had been any other way in which to offer my amendment, I would have offered it in that way.

I must admit that it is difficult to act State by State; but I see no other way of acting if we are to prevent other areas of the United States from taking power out of my State, which is now a power-starved State, and will be even after the completion of the Glen Canyon Dam.

Mr. JACKSON. Nothing in the pending bill takes anything away from Arizona.

Mr. GOLDWATER. But an extension of this idea would make it possible eventually to apply not only to Arizona, but to any other State where a grid would touch. I remind the Senator from Washington that the grid comes very close to the Columbia basin right now. It could be connected clear up into Idaho.

Mr. JACKSON. This proposal has nothing to do with the Federal grid.

Mr. GOLDWATER. I have agreed with the Senator as to that.

Mr. JACKSON. It has nothing to do with it.

Mr. GOLDWATER. One reason why I have been apprehensive about this type of legislation, even though I recognize the Senator's problem in the Pacific Northwest, where large amounts of power have to be dumped, is that the argument might be extended to TVA. TVA might say, "Let us build 10 more steamplants."

Mr. JACKSON. Congress has limited the transmission distance of TVA. That is what we are seeking to do in this instance. Private utilities were concerned in the Tennessee Valley. They wanted to have the area distribution limited. In this proposal, we seek to limit the area of distribution.

Mr. GOLDWATER. That is all I am asking. I do not blame the Senator.

Mr. JACKSON. But we are not proposing to change any basic law in relation to the distribution of power from Federal dams. However, the amendments which have been proposed turn upside down all the laws which have been passed over the last 50 years providing for the allocation and distribution of power from Federal dams. Those laws were passed after careful and detailed hearings, in which witnesses from the various areas within a region had an opportunity to be heard. The proposed amendment denies that opportunity.

Mr. GOLDWATER. The Senator's bill imposes, in his own area, a regional, geographic priority over existing agreements that the Northwest district might have. The Senator from Arizona does not like that. I do not like the idea of the Federal Government disturbing any arrangement that has been made by agreement among the States or within the States or by the districts.

If this were to happen in the case of the Pacific Northwest, it would not be many years or many Congresses until some kind of preferential treatment were sought by some other area. It may not seem to be a problem, but a problem can be found. Those in the Federal Government who want to federalize the power system of this country are hard at work, day after day, trying to find a way to do it. In the case of the Senator from Washington, there is too much water; in our case, there is too little water and too little power. We have many steamplants.

Mr. JACKSON. All the private utilities of the Pacific Northwest participated in the drafting of the bill. They agree with it. I do not suppose they would be parties to the bill if they believed they were to be federalized. Their worry is that if the proposed legislation is not passed and the dump power is sold in California, they will lose their present contractual rights to buy firm power from the Bonneville Power Administration. That is very important, because more than half of all the power from the Bonneville system goes to private utilities and private industries in the Northwest.

Mr. GOLDWATER. The Senator has said that the private power interests of the Pacific Northwest have participated in the drafting of the bill. In my own State, my attention has been called to the bill by the Arizona Power Authority, a State body which controls the power in that State.

While I have had no direct contact with our own large private utility, Arizona Public Service Co., I believe I am correct in stating that they share the position of the Arizona Power Authority with respect to the bill.

One might not expect a State body to be opposed. However, the Arizona Power Authority is. They believe that if it is good for the Northwest—which I have recognized—it is also good for our section of the country, the Southwest.

I wish that sometime the Senator from Washington would define what "Pacific Southwest" means. I have a suspicion it ends at the Colorado River going east. If it excludes the State of Arizona, that might make some difference in future consideration, but not at this time.

Mr. MUNDT. Mr. President, I must admit to the Senators from Washington that I am always predisposed to support any proposed legislation bearing the names of JACKSON and MAGNUSON, and that I have sought to propose amendments which would get the bill into an affirmative position on the floor of the Senate.

The junior Senator from Washington [Mr. JACKSON] said the bill had its genesis in the fact that the Bonneville Power Administration wants to sell dump power in California, but that two different solicitors have ruled that if power were sold into southern California, they would have a vested interest on the part of the consumer and could never withdraw it.

Mr. JACKSON. Preference consumers.

Mr. MUNDT. I can see that this is a problem. It is something that should be solved.

I am concerned about the other ramifications involved in the bill. I do not see the particular implication between the private power and public power problem that the Senator from Arizona is concerned about, because I do not believe this proposal would create any new transmission lines or develop any new problems in that area. But it seems to me that the Senator from Washington is using a sledge hammer when a tack hammer would solve the problem just as well. Why not devise a piece of legislation which would upset the opinion of the Solicitor of the Department of the Interior and would provide solely for that kind of recapture, instead of extending into the area into which this bill would go, for the bill covers a much larger field, and would, I believe, by creating a new kind of preference, upset the customers' preference clauses which have been created in this country.

Mr. JACKSON. No, that is not the case at all. We are taking care of a need to sell surplus, dump power without changing the pattern which has been established over all these years.

The Senator's argument amounts to saying that when a dam is built and when power from it is to be allocated, we should pass a law to allocate it to the entire country. Certainly when dams were built in the Missouri basin, each dam was handled separately.

Mr. MUNDT. No; only the Big Bend was handled separately; and that was based on the precedent developed at Hungry Horse, and later applied to Niagara Falls.

Mr. JACKSON. When the legislation in regard to the Missouri basin was passed, it was not applied to all power throughout the United States.

Mr. MUNDT. It did until the development of the precedent at Hungry Horse, which was reaffirmed at Niagara Falls.

I point out that if this precedent is established, it will apply to other areas, just as the precedent established at Hungry Horse was applied to other areas. So we must protect the power developed in other areas, as is being done with respect to the Pacific Northwest.

Mr. JACKSON. I think the Senator from South Dakota will find that when legislation affecting dams in the Missouri basin was passed, it was geared only to dams in that area.

The late Senator Case of South Dakota was responsible for the special allocation to the Big Bend, in South Dakota. No attempt was made to apply such a yardstick throughout the country. We have never attempted to legislate on that basis.

That is why we have brought this bill before the Senate—to deal with a situation which is unique to the Pacific Northwest.

ADJOURNMENT

Mr. JACKSON. Mr. President, if there is no further business to come before the Senate at this time, I move that the Senate adjourn, pursuant to the order previously entered, until tomorrow, at 12 o'clock noon.

The motion was agreed to; and (at 6 o'clock and 2 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Tuesday, August 7, 1962, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate August 6, 1962:

JUDGES OF JUVENILE COURT OF THE DISTRICT OF COLUMBIA

Morris Miller, of the District of Columbia, to be judge of the juvenile court for the District of Columbia for the term of 10 years; new position.

Marjorie McKenzie Lawson, of the District of Columbia, to be judge of the juvenile court for the District of Columbia for the term of 10 years; new position.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 6, 1962:

COMMISSIONER OF NARCOTICS

Henry L. Giordano, of Maryland, to be Commissioner of Narcotics.

TAX COURT OF THE UNITED STATES

Howard A. Dawson, Jr., of Maryland, for the unexpired term of 12 years from June 2, 1958, to be judge of the Tax Court of the United States.

Austin Hoyt, of Colorado, for a term of 12 years from June 2, 1962, to be judge of the Tax Court of the United States.

COLLECTOR OF CUSTOMS

Raymond F. Hufft, of Louisiana, to be collector of customs for customs collection district No. 20, with headquarters at New Orleans, La.

EXTENSIONS OF REMARKS

FHA Mortgage Loans

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1962

Mr. ROSENTHAL. Mr. Speaker, I introduce today a bill to authorize payment of certain claims for major defects in homes protected by Federal Housing Administration insured mortgages, and to require indemnification bonds in the case of certain new construction under such mortgages. The scope of this bill is confined to one- to four-family dwellings covered by FHA mortgage insurance, so it deals with the family resident or the small piece of investment property.

In the case of such dwellings previously or subsequently covered by FHA mortgage insurance, this bill would permit the Commissioner to reimburse the mortgagor, within 3 years after issuance of the insured mortgage, for the reasonable costs of correcting structural or other defects in the dwelling that are necessary to bring it into substantial conformity with the Commissioner's plans and specifications, or to make the dwelling safe and habitable. The bill would confer a maximum of administrative latitude upon the Commissioner, who would be empowered to prescribe the terms and conditions under which he would honor mortgagors' claims.

With respect to dwellings on which the mortgage is insured by FHA after enactment of this measure, the Commissioner would be empowered to require that a bond be posted, by the builder or seller, for example, to indemnify the Commissioner in the event that he is subsequently required to reimburse the mortgagor for correction of structural or other defects.

I believe that this bill will provide a workable and economical procedure for correcting what often are tragic and sometimes unavoidable situations which leave a helpless homeowner saddled with a defective dwelling and without a legal or financial remedy. I urge its favorable consideration and enactment.

Mukwonago, Wis., Picnic

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 6, 1962

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD excerpts from an address prepared by me for delivery at the Mukwonago, Wis., picnic, on August 5, 1962.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Friends: The "happy air" of a picnic—wonderful in itself—does not provide an atmosphere in which to easily discuss the great, solemn and sometimes grave, challenges of the times. For you might rather be eating another hotdog; the children might rather be scampering around the playgrounds; and I, too, might rather be slicing another delicious piece of the watermelon.

Even at such a festive time, however, perhaps we justifiably could pause to think of a few of the achievements which make possible our freely picknicking here; some of the wonders around us in our national life and the world; the challenges of the times in which we live.

Through the ingenuity, creativity, imagination and hard work and sweat of a forward-striding people, we: Agriculturally, feed more and more people on less and less land than ever before; industrially, turn out millions of types and kinds of products and goods to provide the best standards of living in the history of humanity; scientifically, too, we are literally "reaching for the stars"—talking and televising through satellites such as Telstar—traveling almost at supersonic speeds in jet planes—rocket-powering manned X–15's upward into space—orbiting the earth—planning trips to the moon, and perhaps ultimately, to the other planets of the universe. On earth, too, we enjoy ever-better homes, food, clothing, schools, cars, and other good things of life.

In such a miraculous age then, our heads, at times, may be in the stars; however, we must "keep our feet on the ground." Why? Despite great benefit—much still unknown—from such progress, there are also serious built-in problems. These must be resolved: If we are to adequately meet the needs of our people; if we are to maintain a strong, forward-striding nation; and if we are to create and preserve peace in the world.

AGRICULTURAL OUTLOOK

First, let us take a look at agriculture. According to the Secretary of Agriculture, we—in the next 20 years—will be feeding 77 million more people on 50 million acres less land than is now in production.

Normally, high efficiency and productivity would—and should—be considered a great national asset—not a liability—as, indeed, for the most part, it is. Unfortunately, however, inadequate consumption, lack of effective distribution channels, and too little effort to utilize farm commodities for commerce—industrial purposes have resulted in:

A national surplus stockpile of about $9 billion worth of farm commodities, including now about 93 million pounds of cheese, 376 million pounds of butter, and 472 million pounds of dry milk.

Too low returns to farmers for the sale of produce—even though the farmer, himself, has to meet ever-higher taxes and costs of labor, machinery and equipment, and general operations of the farm; and for the future, other serious readjustments in farm life itself.

Now, what can be done?

In Congress, the outlook for miracle-type, problem-solving legislation is extremely dim.

Recently, the House of Representatives passed its version of the Food and Agriculture Act of 1962.

As of now, the Senate bill is still pending.

In general, the Senate Agriculture Committee recommended legislation to create a revised land-use program, including: Permanent agricultural conservation programs on a national basis; assistance to producers under long-term agreements (not to exceed 15 years) to conserve and develop soil, water, forest, wildlife, and recreational resources; appropriations would be restricted to $10 million annually. A loan program to State and local public agencies for carrying out more effective land utilization programs; special assistance for Federal participation in installation costs of recreation projects and in land costs for fish, wildlife and other purposes.

The committee also recommended extension of the existing law relating to feed grains; a modified wheat program; revised laws for shipping surplus food abroad; liberalization of farm credit; and expanding research for industrial uses of agricultural products.

The pending bill, then, contains some highly controversial provisions—particularly those relating to extending Federal control.

Consequently, the outcome at this point is unpredictable.

Regrettably, the outlook for price improving legislation for dairying—of major interest to Wisconsin—however, is extremely poor. To the contrary, the existing policies have resulted in (a) greater surpluses, and (b) lower prices. As things stand now, there is little hope for immediate legislative action for improving the dairy farm income—significant, of course, not only to the farmer, but to the whole economy, particularly that depending upon farm buying power.

For the days ahead, we need, then, a more realistic, imaginative and creative effort to improve the outlook in agriculture. Among the proposals I included the following:

1. Expanding research, as I mentioned, for greater industrial-commercial utilization of dairy and other farm commodities.

2. Greater utilization of food, as a strategic weapon in the cold war.

3. Establishment of an Advisory Production Board within the Department of Agriculture—utilizing existing, not hiring new, personnel. The purpose would be to provide better guidance to farmers in long-range production planning.

4. Promoting greater efforts to sell, not just give away, food elsewhere in the world. As of now, about two-thirds of the world is hungry. During World War II, you—the Wisconsin and American farmer—produced food for the people of many nations. Why can't we try this now? The idea would be to explore for contracts—by individuals, organizations, and government—for the sale of food to nations that have an inadequate food supply. Wisconsin, for example, could well supply a whole country with high-quality milk and other dairy products, for 1, 2, 5 or 10 years. Unfortunately, a great many of the food deficient countries are poor. Nevertheless, the available resources could be invested in no better way than providing healthful food for their people.

5. Finally, early completion of the family farm study—now underway by the Department of Agriculture—is essential. The purpose would be to help solve some of the great problems, particularly those confronting the farm family in the years ahead.

MUTUAL FARM-CITY INTERESTS

As a nation, we—after a long time, perhaps too long—are also realizing that farm-city interests are mutual—not conflicting. Realistically, a dynamic, forward-moving economy depends upon: Greater town-farm cooperation on communitywide development projects; stimulating greater industrial growth in both city and rural communities; expanding rural development programs for improving the economic outlook in chronically low-income areas; improvement in rural buying power, of course, affects the growth and development of local villages and towns; and improving town planning, development and administration to better meet the needs of the citizens.

GETTING OUT OF THE RUT

Unfortunately, we, as citizens, farmers, businessmen, professionals, teachers, conservationists, sportsmen: all of us—often get into a rut—adhering to, and practicing, outworn and outmoded ideas.

For this reason, we need, from time to time, to take a new look at ourselves; to reevaluate our progress; to reassess our potential; and to determine whether or not we are best utilizing our citizen and community resources to serve the well-being of our people and promoting progress.

How could this be done? Possibly by:

First. Reestablish the town-meeting-type council—for farm; for city; for farm-city groups and then appoint special community committees to undertake the following action: Study economic problems and trends; reevaluate the pace, and direction, of progress; consider alternative steps for solving problems and getting ahead faster; and encourage local citizens to pool efforts, material, and finances to undertake needed projects.

Second. In attempting to speed up progress, obtain guidance and assistance from the available outside sources, such as: State agencies, educational institutions, bureaus of business research; bureaus of economic research; etc.; the Area Redevelopment Administration of the Department of Commerce; the Small Business Administration; agricultural or conservation programs that may be applicable to local problems; and rural development programs, particularly in developing farm-village projects for mutual benefit.

Third. After determining the needs of the community, and establishing plans to promote progress, there must be efforts to mobilize the people, in spirit and action, as well as resources, for promoting economic and other types of progress.

ECONOMIC ILLITERACY

Historically, free enterprise—the establishing and successful operation of business—has represented a fundamental working principle of action, of progress, of our way of life.

Over the years, however, we have gradually diminished our appreciation of the significance of our economic system to our progress and security.

How then, can we better understand and strengthen free enterprise?

This can, I believe, be done by the following steps:

1. By better educating our citizens, adult, and in school, of the significance and working principles of our economic system.

2. By encouraging more people, not only to understand and appreciate—but also confidently invest in—enterprises, small and

large, serving as a hub of economic life for a community.

3. By undertaking renewed efforts to brighten the economic prospects for enterprise, over 95 percent of which fall into the category of small business, such as: by encouraging community support of community development corporations to provide financing for necessary projects; formation of farm, small business and other type pools—to undertake research, tackle production problems too large for single operations, or shoot for higher goals; cooperative efforts to foster new enterprises under the area redevelopment program—now beginning to get underway in Wisconsin and elsewhere; by reawakening our citizens' enterprising spirit, full of faith and confidence, to improve the economic status of existing, and creating new enterprises for a strong, free economy.

President Kennedy Hails Representative Farbstein's Aid

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1962

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Record, I am pleased to include an article which appeared in the New York Times, Thursday, July 26, 1962. The article, which follows, reports President Kennedy's appreciation of Representative Farbstein's support of his program:

LETTER MAY BE FIRST IN PLEDGE BY PRESIDENT TO HELP THE SUPPORTERS OF PROGRAM

(By Richard P. Hunt)

Representative Leonard Farbstein, of Manhattan, who is running for reelection, made public yesterday a letter from President Kennedy praising him for his work in Congress.

The letter, dated July 20 and addressed to "Dear Congressman," was the first of its kind to come to light here since the President said on Monday that he was "going to help elect Democrats" who supported his legislative program.

Although the President did not specifically endorse Mr. Farbstein for reelection, he praised the Representative for "clear judgment, wisdom, dedication, and energy." Mr. Farbstein left no doubt that he considered it an endorsement.

BACKED KENNEDY BILLS

Although the Representative has voted consistently for administration bills, he faces a contest for the Democratic nomination in the 19th Congressional District. The winner will run against Richard S. Aldrich, a cousin of Governor Rockefeller, who is unopposed for the Republican nomination.

The letter, written on White House stationery, said:

"Dear Congressman: Thank you for sending me a copy of your bill which would provide for a Domestic Peace Corps to aid in combating juvenile delinquency. I shall be watching its progress with interest.

"I would like to take this opportunity, at this point late in the second session, to express my personal appreciation for your sustained support of our legislative program. In the important Foreign Affairs Committee and on the floor, your clear judgment, wisdom, dedication, and energy have significantly furthered our advancement toward our common goal of greater progress at home and the attainment of a peaceful world of free and independent nations.

"With warm regards and best wishes,

"Sincerely,

"John F. Kennedy."

The 19th Congressional District includes most of the area between the southern tip of Manhattan and 14th Street on the East Side and 86th Street on the West Side.

I hope that Representative Farbstein will be successful in his endeavors. He has been a most loyal supporter of the Kennedy administration and President Kennedy's letter signifies his appreciation.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1962

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following newsletter of August 4, 1962:

THE REPUBLIC WITHIN A DEMOCRACY

(Washington Report, by Congressman Bruce Alger of Texas)

A republic is representative government, wherein at all levels the people (the components of the democracy) are represented by elected officials—the Republic in action. Elected officials must exercise their judgment based on the facts as they see them and then subject their decisions and the facts as they know them to the electorate for acceptance or rejection—every 2 years for House Members and 6 years for the Senate. Naturally, the Representatives are expected to be knowledgeable. To the extent their knowledge exceeds the knowledge of the electorate collectively the Representatives at any time on any issue may seem to be out of step. At that point, they must explain satisfactorily their conduct. So the element of choice is present always in each of these (1) to get the facts, (2) to act judiciously, (3) to explain. The danger (and politics encourages such weakness) is to take the easy way: (1) be loose with (not be bound by) facts, (2) act expediently and politically, (3) dodge or curtail explanation. The question unanswered—at least satisfactorily by our generation—will elected officials pursue courses not politically popular even though facts and moral rightness dictate the proper course? As a result deficit financing, debt, and staggering taxes have grown, wartime programs have not been terminated, and politically expedient (not commonsense) programs have been the rule. Without study and self-discipline by elected officials and constituents representative government will fail. Is this to be our course? I say not, but I cannot now prove when or how we'll take the right course to prevent it. In my own case, I make every endeavor to relate my conduct and votes to facts, use my best judgment, and do my best to report to the people of Dallas by newsletter, radio, and television, beyond the normal correspondence in soliciting of views and answering inquiries. The time is ripe for constituents throughout the United States to subject our Government (the body politic) to scrutiny, to determine how the Republic is functioning, just as we submit our physical body to the doctor for examination to restore good health, or our car to a trained mechanic for a tuneup.

The independent offices appropriations bill 1963 passed overwhelmingly (Alger against). This bill involved appropriations totaling $11,501 million for 26 executive agencies and is approximately $2 billion more than appropriations for similar purposes last year, which is approximately $1 billion less than the President asked in the budget. (Note: Increased expenditures over last year but reduced expenditures below the budget request permit any Member of Congress to be for increased spending or reduced spending while voting for the bill). For my part, I disapprove the increase in size of the Federal Government which has averaged 6,500 people per month since President Kennedy came into office. Also the bill contained $155 million for 33 new public buildings, which, as I see it, is downright immoral in a period of deficit financing. Funds for the Dallas Federal Building are lacking in the bill. This is a glaring omission from any listing of new Federal buildings and makes it obvious that some projects have been included for reasons other than meritorious. Some new buildings approved in the bill, such as a Federal building in Boston, Mass., home of the President, and Austin, Tex., the political headquarters of the Vice President, seem to be far less necessary and far less carefully considered than the Dallas project.

The Department of Labor and Health, Education, and Welfare appropriation bill 1963 conference report between House and Senate compromising differences passed 348 to 35. Disagreement centered around an increase of $120 million above the budget of the National Institutes of Health which by the testimony of responsible leaders was more money than was necessary to accomplish the task. Once again, it is obvious that the only solution for the liberals is to throw money into all the programs, a solution which has failed so many times as to have taught many of us the lesson that money alone will not solve problems confronting us.

The payment of balance of awards under Philippine Rehabilitation Act of 1946 provoked sharp differences of viewpoint on the floor during debate. Admittedly the United States has repaid war claims for Philippine war damage and this bill was in the nature of gifts for rehabilitation to specific companies and individual groups. Many of those opposing this bill are not against further aid to the Philippines for rehabilitation but strongly object to financially aiding other countries when the United States itself is borrowing the money in order to give it away (through deficit financing). It's time we thought about strengthening the economy of our own country.

The Public Relations Society of America is composed of leading executives of large corporations in public relations and members of public relations organizations who meet annually to be informed on and to discuss isues of the day in all fields of our domestic economy. It was my pleasure to address this group at Cornell University this week. It was a most rewarding experience for me and, I hope, for them.

The National Lottery of Bolivia

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1962

Mr. FINO. Mr. Speaker, I would like to tell the Members of this House about the national lottery of Bolivia. This lottery is operated solely for the benefit of health and welfare agencies in the country.

In 1961, the gross receipts of the Bolivian lottery came to over $1 million. The profits in that year amounted to over $400,000. This income was not retained by the Government but was distributed to several welfare and charitable organizations. Half of the money went to the Bolivian Red Cross.

Bolivia is not a rich country by any means, and a national lottery offers needed revenues. These moneys are well used. America, with all its affluence, could derive tremendous financial benefits from a lottery. Why are we holding back?

Mr. Speaker, if we could operate a national lottery in the United States we would raise over $10 billion a year in additional revenue. This needed income could bring happiness to our overtaxed wage earners.

"This Problem Is Much More Serious With Drugs"—Testimony in Opposition to Bills To Relax Delaney Clause on Animal Feeds

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 6, 1962

Mrs. SULLIVAN. Mr. Speaker, I appeared this morning as the first witness before the Subcommittee on Health and Safety of the House Committee on Interstate and Foreign Commerce on legislation to relax some of the provisions of the Delaney anticancer clause in the Food Additives and Color Additives Acts as it applies to animal feeds. While the legislation has one important redeeming feature—that is, in authorizing the Government to remove quickly from the market any previously approved animal feed ingredient if there should arise substantial doubt as to safety—primarily, it is legislation to aid some feed manufacturers to overcome a competitive and technical business problem, and is not, in any sense, consumer legislation.

It seems to me that in view of the urgent need for strengthening our laws to protect the consumer, we should get to that task quickly and not diffuse our efforts and energies by selecting out for special attention at this time just one obscure provision of the administration bills to amend the Food, Drug, and Cosmetic Act.

In my testimony, I tried to outline the vital areas of the law which require corrective action at this time, including changes intended to strengthen the hand of Dr. Kelsey and her associates in the FDA in evaluating new drug applications. Because of the widespread interest in this whole issue as a result of the thalidomide incident, I am submitting my testimony this morning for inclusion in the CONGRESSIONAL RECORD. It stresses the need for action on H.R. 1235, which I introduced 19 months ago, or on H.R. 11581 and H. 11582, the two administration bills introduced recently to cover some of the same ground included in H.R. 1235. I do not think we should be diverted into consideration of a minor amendment of interest primarily to only one inudstry when so many major changes are needed in the Food, Drug, and Cosmetic Act—and needed urgently.

The statement follows:

STATEMENT BY CONGRESSWOMAN LEONOR K. SULLIVAN OF MISSOURI

Chairman ROBERTS and members of the subcommittee, I have mixed feeling about appearing this morning to oppose a bill introduced by the chairman of this subcommittee, whom I regard not only as a good friend and an outstanding Member of Congress but as one who has probably done more than any single American to protect the safety of the American people on the highways of this Nation. The attack on exhaust fumes and the increasing use of seat belts in automobiles can be attributed largely to the work of this subcommittee and its chairmen. And in the general field of health legislation, hospital construction, and health professions education, this subcommittee has a proud record.

Thus, I would never take the position that this subcommittee, under Congressman KENNETH A. ROBERTS, is interested in weakening the protections of the American consumer from dangerous food products, or that it is interested in undermining, in any way, the effectiveness of the Food, Drug, and Cosmetic Act. On the contrary, I am sure the subcommittee joins me in wishing to see the Food, Drug, and Cosmetic Act 1938 brought up to date and made much more effective in protecting our lives and health and safety.

Nevertheless, I feel I must go on record here that I believe strongly that we should not enact as a separate piece of legislation H.R. 12437 by Chairman ROBERTS or H.R. 12420, the bill introduced by Congressman NELSEN, even though the language of these bills was taken out of one of the administration bills to amend and strengthen provisions of the Food, Drug, and Cosmetic Act. When I testified before the full Committee on Interstate and Foreign Commerce in June on H.R. 11581, the administration bill on drugs, and H.R. 11582, the bill dealing with cosmetics and therapeutic devices, containing together most of the major provisions of my own bill introduced 19 months ago—H.R. 1235—I raised some questions about the validity and the justification for this particular provision of H.R. 11582, the feed additives amendment, which has now been reintroduced as a separate bill. After mentioning approvingly some of the few provisions of H.R. 11581 and H.R. 11582 which are not in H.R. 1235 but which I would be willing to see added on to my bill, I turned to this particular provision on feed additives, relaxing the Delaney clause, and said:

"However, I have strong doubts, I must admit, over the retreat on the Delaney anticancer clause on feed additives, as contained in H.R. 11582, particularly in view of the Government's experience several years ago with the hormone-treated chickens. It cost us $10 million to remove from the market the fowl treated with a drug considered safe for the purpose—after it was learned that there were residues of the cancer-inducing substance in the skin of the chicken. Too often for complacency, new testing methods disclose the existence of harmful residues which had not shown up in earlier tests, but by then the damage is done."

NOT INCLUDED IN PRESIDENT'S CONSUMER MESSAGE

Mr. Chairman, it will be noted that my comments at the time on this particular provision of one of the administration bills were mild indeed. I thought I recognized why this provision had been included in the package of administration proposals making drastic changes to close loopholes and eliminate unsafe features in the 24-year-old Food, Drug, and Cosmetic Act. Most of the administration proposals, like nearly all of those in H.R. 1235, are tough changes in the law—necessarily so—to cope with increasing evidences of danger to the consumer. The President touched on some of these in his March 14 message to Congress on consumer protection, but there was not a single word in the President's message about relaxing or changing the Delaney anticancer clause in either the food additives or color additives sections of the law.

On the other hand, he strongly endorsed proposals—all of them in H.R. 1235—for requiring pretesting for safety of all cosmetics; for requiring proof of efficacy as well as safety of all new drugs; for requiring proof of safety and efficacy for all new therapeutic devices; for tightening up drastically our powers to cope with the illicit sale of pep pills and sleeping pills; for rewriting the factory inspection authorization to enable the Food and Drug Administration inspectors to ferret out dangerous conditions in the manufacture, distribution, warehousing and sale of foods, drugs, and cosmetics; for promoting the feasibility of having doctors prescribe by generic terms instead of trade names as a means of bringing down the cost of prescription drugs, and, for enabling the Government to move quickly—immediately—in taking off the market any previously approved drug about which serious doubts have developed after the drug has gone on sale.

These are the major provisions of H.R. 1235 and of those sections of H.R. 11581 and H.R. 11582 which amend the Food, Drug, and Cosmetic Act. None of these purposes would be accomplished by passage of either of the two bills now before you this morning.

LEGISLATION BENEFITS ONLY SOME BUSINESS FIRMS

Instead, you propose in this legislation to take out of the administration package of proposals to strengthen the Food, Drug, and Cosmetic Act one obscure provision which does nothing whatsoever for the consumer, but puts profits into the pockets of some businesses making animal feeds.

Perhaps there are inequities in the feed additives "grandfather" clause which permit some feed manufacturers to continue to use cancer-inducing substances or coloring matter in their animal feed products if the particular firms were permitted to do so prior to the passage of the Food Additives Act of 1958 and the Color Additives Act of 1960, and as long as the Government cannot prove danger to the consumer on the other hand, a feed manufacturer not authorized before 1958 to use cancer-inducing chemical substances and not authorized before 1960 to use cancer-inducing coloring matter in animal feed cannot use them now, because of the Delaney clause, contained in both the 1958 and 1960 acts. So it is a competitive inequity.

But, gentlemen, let us look at it from the consumer standpoint. There is no value whatsoever to the consumer—none—in having our meat and poultry supply fattened for market with the aid of feed additives containing materials which could cause cancer. Some of the hormones are of economic value to the producer—fattening his livestock quicker with less feed.

I don't believe it means a single cent's difference in the consumer price of the meat, and it could endanger the consumer's health.

That is why the stilbestrol-treated chickens had to be taken off the market several years ago at huge cost to the taxpayers. The Government had sanctioned the use of the stilbestrol pellets on the basis of evidence that no residue was found in the edible portions of the meat. Later—much later—with better testing methods, traces of this dangerous and cancer-inducing substance were found in the skins, and also in the livers and kidneys of the chickens. Who among us can guarantee that the further improvement of tasting methods in the near future—or the distance future—will not demonstrate similar consequences from use of the cancer-inducing materials now permitted in some animal feeds under the "grandfather's" clause?

PROBLEM MUCH MORE SERIOUS IN NEW DRUGS

I did not come here to be obstructive. I know there is a competitive problem among feed manufacturers based on when a particular firm happened to begin marketing a particular feed additive which competitors later going into the field could not legally use. But the problem goes much deeper than the competitive situation in the animal feed industry.

Our present law on new drugs requires very stringent proof of the safety of a new drug before it can be marketed. Thalidomide could not be marketed in this country because the manufacturer was not able to convince Dr. Frances Kelsey of FDA that such beyond-a-doubt proof existed. She has testified that, for a long time, she could not put her finger on the exact danger.

If she had approved the drug, based on what appeared to be very convincing proof of safety as a result of widespread usage abroad, she would not have been the heroine she is now, but I am sure she would not have been criticized for accepting the scientific proof presented to her as sufficient. This is a terribly complex scientific problem in the clearing of new drugs, since, as we know, any new drug carries dangers with it and the question is whether the good it can do—under proper medical supervision—outdoes the potential danger. Think how long it took before researchers connected this drug to the sudden increase in the birth of malformed infants.

But here is my point: If Dr. Kelsey had approved the application for sale of this drug, the Food and Drug Administration would then have had to wait for legal and incontrovertible proof of its danger before it could then have removed it from the market. The "tingling sensation" Dr. Kelsey had read about in a letter to the editor of the British Medical Journal—a piece of information which alerted her suspicions—would hardly have been the proof necessary to stop sale of the drug if it had already been approved for sale in this country.

That is the big loophole in our new drug law. The bills you are considering this morning seek to meet this problem as it involves feed additives by providing that the Secretary can quickly move to withdraw from sale any feed additive containing a chemical or color additive which he has once approved, if later he has substantial doubt of its safety. That part of the Roberts-Nelsen bill is all to the good.

OTHER CHANGES NEEDED IN DRUG LAW

But this problem is much more serious with drugs than it is with feed additives. We should not call forth a mouse when we need a massive solution to this problem of removing from the market drugs once approved but later found to be dangerous. Thus, if we are going to do anything on this, we should change all of the appropriate provisions of the food, drug, and cosmetic law to cover not only feed additives, but all drugs—in fact, I believe the feed additives involved in this matter are technically drugs under the act, and the safety feature of H.R. 12437 would be accomplished by H.R. 1235 or the administration bills.

Dr. Kelsey's experience points up the need for another important change in the drug laws: extending the period during which the Government has to act on a new drug application, as H.R. 1235 and H.R. 11581 both provide. Secretary Ribicoff and Commissioner Larrick testified on this during the full committee hearings in June. Dr. Kelsey herself has said that such a change in the law is needed to give her and other FDA scientists sufficient time for evaluating new drug applications. We don't need legislation to tighten up on experimental testing of drugs—FDA can now do that. But we need legislation to close other loopholes in the drug laws and it is urgent that we pass such legislation as I have proposed and the President has called for.

I know the present jurisdiction of the subcommittee is somewhat limited by the fact that H.R. 11581, H.R. 11582 and H.R. 1235 are pending before the full committee, and that this feed additives amendment alone, rather than any of the omnibus bills, is all that is before you right now.

But I think it would be most unfortunate if, out of all of the truly vital, urgent—changes needed in the Food, Drug, and Cosmetic Act right now, the Congress should rush to pass only a bill giving profits to feed manufacturers who happened to have run into a technicality in the law which prevents them from marketing feeds containing cancer-inducing substances, while other firms may still do so.

Furthermore, I refer you to the information I supplied this committee 2 years ago in connection with the color additives bill—information from experts at the NIH—that there is no such thing as a harmless portion of a cancer-inducing substance in food or in drugs or in anything which might be ingested. Tests so far have shown that small quantities of some cancer-inducing substances fed to or injected in some classifications of meat animals, notably beef cattle, in animal feed, to speed the fattening process or for similar economic purposes, do not show up in the edible meat and apparently also do not harm the animal. But please keep in mind that the same "proof" existed on the use of stilbestrol pellets in chickens. That "proof" was faulty, just as the "proof" of the safety of thalidomide was faulty.

GIVE THE CONSUMER "SOMETHING FOR SOMETHING"

I ask that you put this legislation aside as a separate bill. If the Food and Drug Administration can give you incontrovertible evidence that this proposed change in the law is important or necessary, then—even then—I would say, make it part of an omnibus bill which also does something for the consumer. This is one of the few sections of any of the omnibus bills which any industry will enthusiastically support. I say: If you're going to go out of your way to provide relief, as this bill would, to some feed manufacturing companies, make it, to use the Latin, a quid pro quo—something for something—in other words, as part of the price the consumer must pay for getting a whole lot more consumer protection in the law. Otherwise, the industry gets what it wants, and the consumer gets nothing.

Mr. Chairman, I have the whole story of what happened on the stilbestrol pellets case involving chickens several years ago. This consists of a statement by former HEW Secretary Flemming, at a news conference December 10, 1959, when HEW announced its agreement with Agriculture that stilbestrol would not be used in chickens and that the Government would then buy up all fowl which had been treated with this previously approved drug. Also, at the same time, Mr. Flemming released a chronological report on how the crisis had developed. This is my only copy. I believe it should be part of the hearing record on this legislation. I ask that you include this material—that you obtain copies from HEW and insert this information in your hearings. It shows what happened when it was discovered that this harmless use of stilbestrol in chickens was not harmless after all—and why the Government could not move quickly on its own authority when the evidence indicated substantial doubt as to safety. The lesson we should learn from it is this: We should be extremely wary about authorizing any cancer-inducing substance under any circumstances in food, drugs, or cosmetics, as the Delaney clause provides. I do not believe the Delaney clause should now be weakened. We fought too hard to get it into law to see it weakened merely to help some animal feed manufacturers improve their competitive situation.

Kastenmeier of Wisconsin: A Profile in Courage

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1962

Mr. JOHNSON of Wisconsin. Mr. Speaker, few newspapermen have done as admirable a job of catching the quality of a man as has Ivan Kaye, in his recent feature report "KASTENMEIER of Wisconsin: A Profile in Courage."

In printing this article on July 30, 1962, the Capital Times, of Madison, Wis., has done a service to many Wisconsin people. I firmly believe that we must remain true to our finest traditions. I think that the Members of the House of Representatives will benefit from this article and will agree that the United States cannot condone brutality in any fashion in any part of the world.

After reading this article, Mr. Speaker, I asked Congressman KASTENMEIER for a copy of the letter he sent to the President which I believe will be of interest to the Members of the House. I include the article and letter under leave granted me so to do:

KASTENMEIER: A PROFILE IN COURAGE—YOUNG CONGRESSMAN FROM WATERTOWN ASKS UNITED STATES TO BE TRUE TO ITS FINEST TRADITIONS

(By Ivan Kaye)

WASHINGTON.—The capacity for true moral outrage is about as rare in this city as a balanced budget.

There are any number of Congressmen who can work themselves into oratorical tantrums over trivia, but there are only a few, who can focus an aroused conscience on those issues that must be brought to the national attention if Americans are to be able to look themselves in the eye.

One of the few is ROBERT WILLIAM KASTENMEIER, of Watertown, Wis., and last week he applied his unyielding moral sensitivity to one of the real dilemmas of the cold war.

It all started when he opened a copy of Time magazine and found a picture of an American soldier standing by while a couple of good Vietnamese exhibited a little patriotic brutality toward a couple of bad Vietnamese.

The bad Vietnamese were two teenage boys who had some Communist songbooks in their possession. The good, or pro-American, Vietnamese wanted their captives to tell them certain things, and when they refused, several gallons of water were poured down one boy's throat as a way of inducing cooperation.

The fact that the boys survived the ordeal, and the fact that there are admittedly worse ways to torture a prisoner were beside the point, as far as KASTENMEIER was concerned. So was the suspicion that there may be worse brutalities that have not yet come to light.

What he was really concerned about was the American in the picture, and the well-known fact that the Vietnamese are under the influence of our military advisory group there.

The question KASTENMEIER would now like answered, and it is perhaps the fundamental question about American posture in the cold war, is: How far are we willing to go?

To what extent, that is, are we as a nation willing to look away from these and other similar acts, and to rationalize them as a necessary aspect of the confrontation with Russia and China?

KASTENMEIER wants to know whether our complicity in such practices will be justified in official quarters on the basic of expediency.

He has fired off a letter to President Kennedy and a copy to Defense Secretary McNamara urging an immediate end to such goings-on as the water episode.

In the letter, written with a bright and burning eloquence, he left no doubt that if such acts could be justified officially as part of cold war policy, we would then have lost something of our essence as people dedicated to fairplay—something that no totalitarian ever could have taken from us.

If brutality to children were to be accepted as a component of our foreign policy, KASTENMEIER wondered, how long would it be before the United States were called before the bar of world opinion as France was for its inhuman treatment of the Algerian rebels?

"It matters not whether the men are Algerian or Vietnamese, young or old; nor indeed how hostile may be their political views," KASTENMEIER wrote, "they are human beings and should not be treated in this way."

What he was asking, in essence, was for Americans to make a judgment.

They must decide whether there are some acts that cannot be justified under any circumstances, or whether, in a time of national peril, there are some otherwise reprehensible practices that will now be tolerated.

Wiretapping is another example, and KASTENMEIER has come out completely against it in every case.

It takes a kind of courage even to ask the question. It is so much easier to paint the Nation's enemies as devils, and thus to justify any inhumanity toward them.

It also takes a rare kind of fortitude to remind one's countrymen that they cannot evade responsibility when an American soldier—a representative of the Government, and thus of the people themselves—supervises the sadistic treatment of prisoners.

Since a great many citizens may not want to accept this responsibility, and since the electorate has never exactly idolized those who reminded it of its obligations, this is not an issue that has what the professionals here call political mileage.

Yet, if it does not have political mileage, KASTENMEIER obviously feels that it has moral mileage.

It is the sort of issue that may reveal only too well the real composition of the American conscience.

The way litmus paper tells a chemist when there is acid present, the public attitude on this may tell a sensitive Congressman the temper of the society he represents. And, more important, it may also tell the people something about themselves.

KASTENMEIER has a reassuring faith in his countrymen. He is certain that a great many of them have not been raised in this civilization to accept sadism as a means to any end.

There are those here who would disagree with him—who would say that we have become so progressively brutalized over the past generation, and so dedicated to creature comforts, that practically nobody is going to be willing to put himself out over the water torture of a couple of pink Vietnamese.

If some would call KASTENMEIER naive for expecting any better conduct from American soldiers in southeast Asia, it could be said in his defense that he is also naive enough to take American ideals seriously.

"There is no room for indifference to the value of the individual in American history, tradition, or mortality," he wrote to the President.

If KASTENMEIER turns out to be wrong—if there is now room for indifference to the value of the individual in a new American cold war morality—then he may have to ask one more question: If we must become brutalized in order to save our way of life, what have we saved?

JULY 20, 1962.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: A picture in the July 20, 1962, issue of Time (p. 29) shows two young Vietnamese boys being led off to be tortured under the watchful gaze of an American adviser.

The story explains that the youths, who are said to be 15 and 19 (but look no older than 11 and 13) were captured with Communist songbooks in their possession: "The older boy was pinned to the ground and—as the Rangers call it—'taken for a swim.' His jaw was forced open and 5 gallons of water from a rusty old can gradually poured into his mouth. The youth gagged and screamed, but refused to talk, even when prodded with a rifle butt."

The fact that this scene took place under the eyes and camera of an American newsman indicates a callous indifference to the opinion of the world. It also indicates a strange insensitivity to the inhumanity of the actions, for these are men who do not seem to care who is watching as they supervise the brutal treatment of youths. To what depths must men sink before they feel shame and the fear of other men's judgments? And if we are permitted to witness these acts, we might well ask what is now being done that may be hidden from our view.

The U.S. soldiers advising the Vietnam soldiers represent both the Government and the people of this country. I am shocked to see them associated with these practices. There is no place for our help or cooperation, or even our complacency in the face of such facts. The world is fully aware of our deep involvement in Vietnamese affairs. We publicly proclaim that we are advising, training and, indeed, supervising the actions of the Vietnamese forces. We cannot escape responsibility for our participation in these less than human acts.

It was not long ago that we read with disgust of the tortures of Algerians by the French Army. Then the French clergy and men of conscience throughout the world joined in the protest against inhuman acts done in the name of necessity. I would hope our country will not be the next to be called before the judgment of the world. For it matters not whether the men are Algerian or Vietnamese, young or old; nor, indeed, how hostile may be their political views: they are human beings and should not be treated in this way.

In the past our men have been criticized for their lack of morale and fighting spirit in Korea and elsewhere. I have never doubted the courage or dedication of our soldiers. But these recent stories force me to question whether or not some really understand what they are fighting for. I do not understand how men brought up in America can condone the practice of torture in Vietnam or elsewhere. There is no room for indifference to the value of the individual in American history, tradition, or morality. And I am forced to the conclusion that these men must be instructed once more in the real meanings and demands of democracy.

I need not point out that the ends cannot justify the means in this situation. Nor need I say that the excuse of necessity or expediency should not be offered, and cannot be accepted in America. I can only ask that, before we begin the slow descent to a moral level where men pass off reports of torture with indifference and impatience, actions be taken to halt our complicity in these inhuman practices.

Mr. President, I respectfully request your response on this matter.

Yours respectfully,
ROBERT W. KASTENMEIER.

CC.: Secretary of Defense.

Hon. ROBERT S. MCNAMARA,
Secretary of Defense,
The Pentagon,
Washington, D.C.

DEAR MR. SECRETARY: I am enclosing a copy of a letter describing the brutal treatment of prisoners in Vietnam which I sent to the President today. I hope that on your trip to Vietnam you will have an opportunity to fix responsibility for these practices and call a halt to them.

Yours sincerely,
ROBERT W. KASTENMEIER,
Member of Congress.

Independence Day of Upper Volta

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1962

Mr. POWELL. Mr. Speaker, we take this opportunity to send warm felicitations to His Excellency the President of the Republic of Upper Volta, Maurice Yameogo; and His Excellency the Ambassador of Upper Volta to the United States, Frédéric Fernand Guirma, on the occasion of the second anniversary of Upper Volta's independence.

On August 5, 1960, the former French West African Territory of Upper Volta became the independent Republic of Upper Volta. Like the other now independent states of former French Africa, its Government is based on the principle of popular sovereignty, and legislative power is exercised by an assembly elected by direct universal suffrage. In 1959 Upper Volta joined with three other French West African territories—Ivory Coast, Niger, and Dahomey—to form the Conseil de l'Entente, a loose cooperative association which was continued after independence and which has resulted in the coordination of development plans and of various social, fiscal, and economic policies. The Conseil has set up a customs union providing for free trade among the four members and a solidarity fund for financial assistance. Thus, in political development the Republic of Upper Volta has not only become a modern democratic state but with three of its sister states has formed a unique cooperative association especially adapted to the African scene where economic and social development is of prime importance.

The land itself, which has no outlet to the sea, is a vast plateau rising from a low of 650 to a high of 1,000 feet. It is a land of wooded hills and harsh desert, of cattle-grazing savannahs and lowland rice paddies. Its history before the advent of the European is the tale of the empire-building Mossi, a people believed to have come from East Africa sometime in the 11th century and gradually to have created feudal empires throughout Upper Volta. In the 19th century it became a French protectorate, and later a territory of French West Africa. Now as an independent state and a member of the United Nations it is a respected participant in the world community.

Since the economy of Upper Volta is based on agriculture and animal husbandry, the increase of agricultural and livestock production has been one of the main goals of the country's economic development plans. The new republic has made concentrated efforts to intensify production through the adoption of soil conservation measures, the initiation of agricultural research programs, and the establishment of animal breeding centers. These measures attest to the clear sightedness of Upper Volta's economic planners.

And in the fields of health, education, and welfare Upper Volta has also exerted intensive efforts since independence. A program aimed at expanding primary and secondary education is underway, and it is hoped that full enrollment will be achieved within 15 years. Health conditions are steadily improving, and through the introduction of compulsory innoculations epidemics of infectious diseases such as yellow fever and the plague have been checked. Social welfare programs have been developed in urban areas. A workingman's compensation fund handles accident compensation and allowances to families of incapacitated workmen.

Thus, Upper Volta has quickly assumed the responsibilities of a sovereign state. In foreign relations it is peace loving and trustworthy. In domestic affairs the Government has willingly accepted its obligations toward its citizens and is devoting its every effort toward raising their standard of living as quickly as possible. We congratulate the Government and people of Upper Volta on the second anniversary of their independence.

SENATE

TUESDAY, AUGUST 7, 1962

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O God, whose spirit searcheth all things, and whose love beareth all things: For this dedicated moment, turning from our often divisive loyalties and our party cries, we would humbly bow in a unity of spirit, realizing our oneness in Thee.

Forgive us for praying that Thy kingdom may come, and then, by our own selfish stubbornness, barring the way when it has sought to come through us.

Deliver us from the hypocrisy of giving lipservice to the golden goals of Thy kingdom, as if we looked for it without, in others, and not in our own hearts. Grant us a fundamental fealty to the common good, expressing itself in divergent attitudes and convictions which are the glory of our national heritage, yet putting always above partisan advantage the weal and welfare of the commonwealth to which we solemnly pledge our supreme allegiance. Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Monday, August 6, 1962, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on August 6, 1962, the President had approved and signed the following acts:

S. 1074. An act for the relief of Chao Yao Koh;

S. 1889. An act for the relief of Mrs. Geohar Ogassian; and

S. 2339. An act for the relief of George Ross Hutchins.

REPORT OF NATIONAL CAPITAL HOUSING AUTHORITY—MESSAGE FROM THE PRESIDENT

The **PRESIDENT** pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on the District of Columbia:

To the Congress of the United States:

In accordance with the provisions of Section 5(a) of Public Law 307, 73d Congress, approved June 12, 1934, I transmit herewith for the information of the Congress the report of the National Capital Housing Authority for the fiscal year ended June 30, 1961.

JOHN F. KENNEDY.

THE WHITE HOUSE, *August 7, 1962.*

EXECUTIVE MESSAGES REFERRED

As in executive session,

The **PRESIDENT** pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the following bills of the Senate, each with an amendment, in which it requested the concurrence of the Senate:

S. 3064. An act to amend section 9 of the act of May 22, 1928, as amended, authorizing and directing a national survey of forest resources; and

S. 3089. An act to amend the act directing the Secretary of the Interior to convey certain public lands in the State of Nevada to the Colorado River Commission of Nevada in order to extend for 5 years the time for selecting such lands.

The message also announced that the House had passed the following bills of the Senate, each with amendments, in which it requested the concurrence of the Senate:

S. 1308. An act to incorporate the Sea Cadet Corps of America, and for other purposes; and

S. 3174. An act to provide for the division of the tribal assets of the Ponca Tribe of Native Americans of Nebraska among the members of the tribe, and for other purposes.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 7796. An act to amend certain lending limitations on real estate and construction loans applicable to national banks;

H.R. 8419. An act to provide for the presentation of medals to the officers and men of the Byrd Arctic Expedition of 1926;

H.R. 9280. An act to amend section 2 of the act of July 31, 1947 (61 Stat. 681), and for other purposes;

H.R. 9728. An act to amend the Cooperative Forest Management Act;

H.R. 10540. An act to exclude deposits of petrified wood from appropriation under the U.S. mining laws;

H.R. 11049. An act to amend the Mineral Leasing Act of February 25, 1920;

H.R. 12078. An act to provide for the settlement of claims of certain residents of the Trust Territory of the Pacific Islands;

H.R. 12355. An act to amend the law relating to the final disposition of the property of the Choctaw Tribe;

H.R. 12513. An act to provide for public notice of settlements in patent interferences, and for other purposes; and

H.R. 12688. An act to authorize the Secretary of Agriculture to encourage and assist the several States in carrying on a program of forestry research, and for other purposes.

The message also announced that the House had agreed to a concurrent resolution (H. Con. Res. 474) extending the greetings and felicitations of the Congress to the Bethel Home Demonstration Club of Bethel Community, Sumter County, S.C., in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message further announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 1771. An act to improve the usefulness of national bank branches in foreign countries;

S. 2869. An act to amend chapter 31 of title 38, United States Code, to afford additional time during which certain veterans blinded by reason of a service-connected disability may be afforded vocational rehabilitation training;

S. 2978. An act to authorize the Foreign Claims Settlement Commission of the United States to investigate the claims of citizens of the United States who suffered property damage in 1951 and 1952 as the result of the artificial raising of the water level of Lake Ontario;

S. 3109. An act to amend chapter 17 of title 38, United States Code, in order to authorize hospital and medical care for peacetime veterans suffering from noncompensable service-connected disabilities;

S. 3525. An act to authorize the Administrator of General Services, in connection with the construction and maintenance of a Federal office building, to use the public space under and over 10th Street SW., in the District of Columbia, and for other purposes; and

H.R. 2206. An act to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 7796. An act to amend certain lending limitations on real estate and construction loans applicable to national banks; to the Committee on Banking and Currency.

H.R. 8419. An act to provide for the presentation of medals to the officers and men of the Byrd Arctic Expedition of 1926; to the Committee on Armed Services.

H.R. 9280. An act to amend section 2 of the act of July 31, 1947 (61 Stat. 681), and for other purposes;

H.R. 10540. An act to exclude deposits of petrified wood from appropriation under the U.S. mining laws;

H.R. 11049. An act to amend the Mineral Leasing Act of February 25, 1920;

H.R. 12078. An act to provide for the settlement of claims of certain residents of the Trust Territory of the Pacific Islands; and

H.R. 12355. An act to amend the law relating to the final disposition of the property of the Choctaw Tribe; to the Committee on Interior and Insular Affairs.

H.R. 9728. An act to amend the Cooperative Forest Management Act; and

H.R. 12688. An act to authorize the Secretary of Agriculture to encourage and assist the several States in carrying on a program of forestry research, and for other purposes; to the Committee on Agriculture and Forestry.

H.R. 12513. An act to provide for public notice of settlements in patent interferences, and for other purposes; to the Committee on the Judiciary.

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 474) extending the greetings and felicitations of the Congress to the Bethel Home Demonstration Club of Bethel Community, Sumter County, S.C., was referred to the Committee on the Judiciary, as follows:

Whereas the Bethel Home Demonstration Club, founded in Sumter County, South Carolina, in March of 1915, was the first home demonstration club in the United States; and

Whereas home demonstration clubs have been of great value to the people of the United States by aiding in the diffusion of knowledge and skills among the women of rural America; and

Whereas Winthrop College, the South Carolina college for women, pioneered in developing the concepts and in providing leadership for the home demonstration club movement; and

Whereas the year 1962 is the one hundredth anniversary year of the United States Department of Agriculture and of the land-grant college system: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress of the United States recognizes that the Bethel Home Demonstration Club of the Bethel Community, Sumter County, South Carolina, was the first such club to be established in the United States, and extends its greetings and felicitations to the Bethel Home Demonstration Club on the occasion of the one hundredth anniversary year of the establishment of the United States Department of Agriculture and the land-grant college system.

LIMITATION OF DEBATE DURING MORNING HOUR

On request of Mr. Mansfield, and by unanimous consent, statements during the morning hour were ordered limited to 3 minutes.

COMMITTEE MEETING DURING SENATE SESSION

On request of Mr. Mansfield, and by unanimous consent, the Public Roads Subcommittee of the Committee on Public Works was authorized to meet during the session of the Senate today.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SENATOR FROM IDAHO

Mr. CHURCH. Mr. President, I advise the Senate that the Governor of Idaho, on the 6th day of August, appointed Hon. Len B. Jordan, a Senator from Idaho, to represent the State in the Senate of the United States until the vacancy therein, caused by the death of our beloved colleague, Henry C. Dworshak, is filled by election as provided by law.

I send the certificate of appointment to the desk.

The certificate of appointment was read and ordered to be placed on file, as follows:

CERTIFICATE OF APPOINTMENT

STATE OF IDAHO,
EXECUTIVE DEPARTMENT,
OFFICE OF THE GOVERNOR.

To the PRESIDENT OF THE SENATE OF THE UNITED STATES:

This is to certify that, pursuant to the power vested in me by the Constitution of the United States and the laws of the State of Idaho, I, Robert E. Smylie, the Governor of said State, do hereby appoint Len B. Jordan, a Senator from said State to represent said State in the Senate of the United States until the vacancy therein, caused by the death of Henry C. Dworshak, is filled by election as provided by law.

Witness His Excellency our Governor, Robert E. Smylie, and our seal hereto affixed at Boise, our capital, this sixth day of August, in the year of our Lord 1962.

ROBERT E. SMYLIE,
Governor.

[SEAL]

By the Governor:

ARNOLD WILLIAMS,
Secretary of State.

The PRESIDENT pro tempore. If the Senator-designate will present himself at the desk, the oath of office will be administered to him.

Mr. JORDAN of Idaho, escorted by Mr. Church, advanced to the Vice President's desk.

The oath of office prescribed by law was administered to Mr. Jordan by the President pro tempore, and was subscribed by him.

[Applause, Senators and occupants of the galleries rising.]

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

NOTICE OF PROPOSED DISPOSITION OF CERTAIN CHESTNUT TANNIN EXTRACT

A letter from the Acting Administrator, General Services Administration, Washington, D.C., transmitting, pursuant to law, a notice to be published in the Federal Register of a proposed disposition of approximately 12,245 long tons of chestnut tannin extract now held in the national stockpile (with an accompanying paper); to the Committee on Armed Services.

SALE OF CERTAIN RIGHT-OF-WAY BY COMMISSIONERS OF THE DISTRICT OF COLUMBIA

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to authorize the Commissioners of the District of Columbia to sell a right-of-way across a portion of the District Training School grounds at Laurel, Md., and for other purposes (with an accompanying paper); to the Committee on the District of Columbia.

REPORT ON TORT CLAIMS PAID BY OFFICE OF EMERGENCY PLANNING

A letter from the Director, Office of Emergency Planning, Executive Office of the President, reporting, pursuant to law, on tort claims paid by that Office, during fiscal year 1962; to the Committee on the Judiciary.

ADJUSTMENT OF STATUS OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered relating to the adjustment of status of certain aliens (with accompanying papers); to the Committee on the Judiciary.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Acting Administrator, General Services Administration, Washington, D.C., transmitting pursuant to law, a report of the Acting Archivist of the United States on a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The PRESIDENT pro tempore appointed Mr. JOHNSTON and Mr. CARLSON members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the convention of the Knights of St. John, at Cleveland, Ohio, favoring the enactment of a constitutional amendment to define the status of religion in relation to government; to the Committee on the Judiciary.

A resolution adopted by the convention of the General Federation of Women's Clubs, at Washington, D.C., relating to prayer in schools; to the Committee on the Judiciary.

THE 200TH ANNIVERSARY OF THE UNITED STATES—RESOLUTION

Mr. CLARK. Mr. President, I present, for appropriate reference, a resolution adopted by the Descendants of the Signers of the Declaration of Independence, of Philadelphia, Pa., relating to the 200th anniversary of the United States, and favoring the proposal that that anniversary be in the nature of a world's fair to be held in Philadelphia in 1976. I ask that the resolution be printed in the RECORD.

There being no objection, the resolution was referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Whereas, on the historic date of July 4, 1776, was born a new nation, of the people, by the people and for the people; conceived in liberty and founded on justice; a nation dedicated to the ennobling principles of democracy and representative government—the United States of America; and

Whereas the approaching bicentennial, in 1976, of the adoption of the Declaration of Independence of the United States of America, as our charter of liberty, will afford an occasion for celebration and jubilation, not only in Philadelphia and the United States, but also among all those nations that cherish our national ideals of freedom and justice, and of respect for the dignity and rights of the individual in the pursuit of happiness; and

Whereas the city of Philadelphia is extending to all the peoples of the world its invitation to join in its celebration of our Nation's bicentennial in 1976 and has proposed that this sublime anniversary be signaled by a great world's fair of freedom in which the virtues and blessings of liberty and justice for all will be enshrined and extolled: Now, therefore, be it

Resolved, That we, the direct, bloodline descendants of the Signers of the Declaration of Independence of the United States of America, do hereby declare our desire and intent to cooperate in every way in the celebration of our Nation's 200th anniversary, and particularly to endorse and support the proposal of the city of Philadelphia, as the most eminently fitting place for the World's Fair of 1976; and be it further

Resolved, That we pray the approval of the Bureau of International Exhibitions, Paris, France, for the proposal of the city of Philadelphia to serve as host for said World's Fair of 1976; and that we do also commend to the nations of the world preparation for participation on a grand scale in said World's Fair of 1976, as evidence of their people's dedication to the principles of freedom and justice for all.

Surely in this coming bicentennial year of freedom, bells will ring all over the world, as did the Liberty Bell in Philadelphia in 1776, "to proclaim liberty throughout the land, and to all the inhabitants thereof."

PERCY HAMILTON GOODSELL, Jr.,
President General.
THOMAS GRAHAM,
Secretary General.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with an amendment:

H.R. 7782. An act to authorize the Secretary of the Interior to convey certain lands in the State of Maryland to the Prince Georges County Hospital, and for other purposes (Rept. No. 1848).

By Mr. GRUENING, from the Committee on Interior and Insular Affairs, with amendments:

S. 1065. A bill to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Unalakleet, Alaska, to Mrs. William E. Beltz (Rept. No. 1849).

By Mr. KUCHEL, from the Committee on Interior and Insular Affairs, with amendments:

S. 103. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Auburn-Folsom south unit, American River division, Central Valley project, California, under Federal reclamation laws (Rept. No. 1859).

By Mr. McGEE, from the Committee on Commerce, without amendment:

S. 3504. A bill to provide for alternate representation of secretarial officers on the Migratory Bird Conservation Commission, and for other purposes (Rept. No. 1856).

By Mr. McGEE, from the Committee on Commerce, with an amendment:

S. 1542. A bill to authorize and direct the Secretary of the Interior to conduct studies of the genetics of sport fishes and to carry out selective breeding of such fishes to develop strains with inherent attributes valuable in programs of research, fish hatchery production, and management of recreational fishery resources (Rept. No. 1857).

By Mr. McGEE, from the Committee on Commerce, with amendments:

H.R. 1171. An act to assure continued fish and wildlife benefits from the national fish and wildlife conservation areas by authorizing their appropriate incidental or secondary use for public recreation to the extent that such use is compatible with the primary purposes of such areas, and for other purposes (Rept. No. 1858).

By Mr. ENGLE, from the Committee on Commerce, with amendments:

S. 3389. A bill to promote the foreign commerce of the United States through the use of mobile trade fairs (Rept. No. 1850).

By Mr. SMITH of Massachusetts (for Mr. BIBLE), from the Committee on the District of Columbia, without amendment:

S. 3428. A bill relating to the appointment of judges to the municipal court for the District of Columbia, the municipal court of appeals for the District of Columbia, and the juvenile court of the District of Columbia (Rept. No. 1851).

By Mr. CLARK, from the Committee on Labor and Public Welfare, without amendment:

S. 3529. A bill to amend the Manpower Development and Training Act of 1962 with regard to reimbursement of the railroad unemployment insurance account (Rept. No. 1853).

By Mr. CLARK, from the Committee on Post Office and Civil Service, with amendments:

S. 2937. A bill to amend the Civil Service Retirement Act so as to provide for increases in annuities, eliminate the option with respect to certain survivor annuities, and provide for interchange of credits between the civil service retirement system and the insurance system established by title II of the Social Security Act (Rept. No. 1854); and

S. 3164. A bill to amend the Civil Service Retirement Act so as to increase, in the case of children attending school, from 18 to 21, the maximum age for receiving benefits under such act (Rept. No. 1855).

URBAN MASS TRANSPORTATION ACT OF 1962—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (S. REPT. NO. 1852)

Mr. WILLIAMS of New Jersey. Mr. President, I have been requested by the chairman of the Committee on Banking and Currency to report for the committee a bill entitled "Urban Mass Transportation Act of 1962," which would authorize the Housing and Home Finance Administrator to provide assistance for the development of mass transportation systems in metropolitan and other urban areas of our Nation.

This bill is a result of extensive hearings and consideration by members of the Banking and Currency Committee. I was asked by the committee to report the bill today with the hope that it could be given consideration for passage by the Senate at the earliest opportunity. Committee prints were prepared on the bill as passed by the committee, and copies are available in the committee room of the Banking and Currency Committee for any Senator who may want to read the bill in detail prior to its being printed tomorrow.

I ask unanimous consent that a section-by-section summary of the bill be included at the end of my remarks.

The PRESIDENT pro tempore. Without objection, it is so ordered.

(See exhibit I.)

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent that the individual views of Senators ROBERTSON, CAPEHART, and BUSH, members of the committee, with respect to the bill may be filed as late as midnight tonight.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. WILLIAMS of New Jersey. Mr. President, I also ask unanimous consent that these views may be included as a part of the committee report.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, may I ask the distinguished Senator from New Jersey: Is the report ready?

Mr. WILLIAMS of New Jersey. The report is ready. I believe the materials are in the committee room. The report will be printed tonight, and will be available to the minority leader tomorrow.

The **PRESIDENT** pro tempore. The report will be received, and the bill will be placed on the calendar.

The bill (S. 3615) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes, was read twice by its title, and ordered to be placed on the calendar.

Exhibit I

Section-by-Section Summary of Urban Mass Transportation Act of 1962

Section 1. Title of bill: "Urban Mass Transportation Act of 1962."

Section 2. (a) Findings, (b) purposes.

Section 3. Federal financial assistance.

(a) Eligibility for assistance:

Eligible applicants: States and local public bodies and agencies thereof. Applicants must have or will have (a) the legal, financial, and technical capacity to carry out proposed project and (b) satisfactory continuing control of use of facilities and equipment; with respect to private mass transportation companies, applicant shall give full consideration to such continuing control being exercised by an existing regulatory agency.

Eligible projects: Facilities and equipment, acquired, constructed, reconstructed and improved, for use in mass transportation service in urban areas (including commuter service into or between such areas) and in coordinating such services with highway and other transportation in such areas. (No funds shall be used for payment of ordinary governmental or nonproject operating expenses).

Eligible facilities and equipment: Any real or personal property including land (but not public highways), buses and other rolling stock, needed for an efficient and coordinated mass transportation system.

(b) Compensation to private companies:

No grants or loan shall be made for a project involving acquisition of facilities or property of private enterprise motor transit systems unless (1) such assistance is essential to the program for a unified coordinated urban transportation system; (2) the program provides for participation of private mass transportation companies to the maximum extent feasible; and (3) just compensation will be paid to such companies for their franchises or property to the extent required by applicable State or local laws.

Section 4. Long-range program:

(a) Planning requirements: Complete preparation of a program meeting criteria established by the Administrator for a unified coordinated urban mass transportation system as a part of a comprehensively planned development of the urban area, encouraging to the maximum extent feasible, the participation of private enterprise.

Grant Formula:

Federal share: Two-thirds of net project cost (that portion of project cost that cannot be financed on reasonable terms from revenues).

Local share: One-third of net project cost in cash from sources other than Federal funds.

Refunds: Refund of local share permitted provided a proportional refund of Federal share is made.

(b) Grant authorization: Authorizes Administrator to enter into contracts for grants of up to $100 million upon enactment; an additional $200 million on July 1, 1963; and an additional $200 million on July 1, 1964. Full faith and credit of United States pledged upon contract appropriations for payments authorized.

(c) Loan authorization: Extends for an indefinite period the uncommitted portion of the $50 million Treasury borrowing authority under existing law. Loans are subject to restrictions and limitations as provided by the Public Facility Loan program (a term of 40 years and an interest rate of 3¾ percent at the present time).

Loans would be authorized for projects where private loans cannot be obtained on reasonable terms if such loans would make effective mass transportation possible without grant assistance.

Section 5. Emergency program:

Eligible facilities and equipment: Same as the items listed in section 3 above, provided there is an urgent need for their preservation or provision and such items can reasonably be expected to be required for a long-range program.

Federal share: One-half of net project cost (defined same as in sec. 4(a) above) plus additional one-sixth of net project cost if long-range program planning requirements are fully met within 3 years after execution of grant contract.

Local share: One-half of net projects cost in cash or one-third if conditions of long-range program are met within 3 years after execution of grant contract.

Financing: Grants or loans may be used to finance emergency program. Funds would come from the same authorizations described in section 4 above.

Expiration date: No emergency program may be entered into on or after July 1, 1965.

Section 6. Research, development, and demonstration programs:

(a) Eligibility: Administrator authorized to undertake development and demonstration projects for all phases of urban mass transportation which will result in the improvement of mass transportation service and needs at a minimum cost.

(b) Financing: The unobligated balance of the present $25 million demonstration grant authority would be made available to finance such projects, plus up to $30 million of the new $500 million grant authority under section 4 above.

Section 7. Relocation requirements and payments:

(a) Relocation program: Requires adequate relocation for families displaced by mass transportation programs as a prerequisite for financial assistance.

(b) Relocation payments: Requires payment of not to exceed $200 to families, or $3,000 (or if greater, total certified actual moving expense) to businesses or nonprofit organizations for relocation expenses. Federal Government to reimburse applicant for full amount of relocation expenses.

Section 8. Coordination of Federal assistance for highways and mass transportation facilities:

Requires Administrator of HHFA and Secretary of Commerce to consult and exchange information on proposed projects in urban areas.

Section 9. Interstate compacts to implement comprehensive urban planning:

Amends section 701 program to authorize interstate compacts for comprehensive mass transportation planning purposes or for carrying out mass transportation programs.

Section 10. General provisions:

(a) Gives HHFA Administrator the necessary functions, powers, and duties to carry out the purposes of the bill.

(b) Empowers the Administrator and the Comptroller General or their representatives to have access to and audit the books and records of all pertinent contracting parties.

(c) Defines certain terms applicable to the act.

(d) Authorizes funds to be appropriated for administrative expenses of program and funds appropriated for other than administrative expenses shall remain available until expended.

(e) Provides a ceiling to any one State for grants of 12½ percent of section 4(b) authorization ($500 million), except that Administrator could distribute an additional 10 percent of such amount among States.

Section 11. Labor standards:

Makes applicable the prevailing wage scale provisions of Davis-Bacon Act, and requires that time and one-half be paid for all hours worked in excess of 8 hours in any 1 day or 40 hours in a workweek. Also gives Secretary of Labor authority to issue regulations and provide for enforcement of labor standards.

Section 12. Air pollution control.

Provides that Administrator, in approving grants and loans shall take into consideration whether facilities and equipment will be designed or equipped to prevent and control air pollution in accordance with criteria established by the Secretary of Health, Education, and Welfare.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WILLIAMS of New Jersey:

S. 3615. A bill to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes; placed on the calendar.

(See the remarks of Mr. Williams of New Jersey when he reported the above bill, which appear under a separate heading.)

By Mr. McCARTHY:

S. 3616. A bill to amend the Internal Revenue Code of 1954 to provide an exemption from the highway use tax in the case of certain trucks and other vehicles which are used primarily for hauling unprocessed farm and forest products from their place of production to market or mill; and

S. 3617. A bill to provide for the abatement of certain penalties and interest otherwise payable with respect to the highway use tax in the case of certain motor vehicles used primarily for hauling unprocessed farm and forest products from their place of production to market or mill; to the Committee on Finance.

By Mr. YOUNG of North Dakota:

S. 3618. A bill to amend the Internal Revenue Code of 1954 so as to provide an additional income tax exemption for a taxpayer or spouse who is totally disabled; to the Committee on Finance.

By Mr. BYRD of West Virginia (for himself and Mr. Randolph):

S.J. Res. 213. Joint resolution to provide for the actual participation of the United States in the West Virginia Centennial Celebration; to the Committee on the Judiciary.

By Mr. CLARK (for himself, Mr. Fulbright, and Mr. Saltonstall):

S.J. Res. 214. Joint resolution authorizing the President of the United States to designate the period from November 26, 1962, through December 2, 1962, as National Cultural Center Week; to the Committee on the Judiciary.

(See the remarks of Mr. Clark when he introduced the above joint resolution, which appear under a separate heading.)

DESIGNATION OF NATIONAL CULTURAL CENTER WEEK

Mr. CLARK. Mr. President, on behalf of the distinguished Senator from Arkansas [Mr. Fulbright], the distinguished Senator from Massachusetts

[Mr. Saltonstall], and myself, I introduce, for appropriate reference, a joint resolution authorizing the President of the United States to designate the period from November 26 through December 2, 1962, as National Cultural Center Week.

The National Cultural Center, on whose Board of Trustees my two colleagues and I sit, has, since its inception in 1958, been struggling with two problems.

The first is that of developing its program to carry out the intention of Congress that the Center serve as a national forum of the arts. The Center is endeavoring to develop programs which will symbolize the importance of the arts in our national environment and will relate the National Cultural Center to the entire country, so that it will serve as a memorial to the art of every segment of American society and every geographic area.

The second problem is that of raising funds to plan, build, and operate the Center—a task which Congress left solely in the hands of the American people. The trustees of the National Cultural Center have planned a nationwide fundraising campaign, to allow the American people to express their support for this institution.

This fundraising program will reach a climax on November 29, 1962, in a coast-to-coast closed-circuit telecast entitled "An American Pageant of the Arts," which will be a presentation of the regional art of our national heritage; and from which local sponsoring committees will keep up to 50 perecnt of the proceeds. This dual support of both national and local cultural institutions is in keeping with the Center's intentions of strengthening cultural organizations everywhere.

I urge all my colleagues to join in supporting this measure as evidence of our bipartisan support for the realization of the National Cultural Center and its goals.

The PRESIDENT pro tempore. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 214) authorizing the President of the United States to designate the period from November 26, 1962, through December 2, 1962, as National Cultural Center Week, introduced by Mr. Clark (for himself, Mr. Fulbright, and Mr. Saltonstall), was received, read twice by its title, and referred to the Committee on the Judiciary.

STRENGTH OF THE MILITARY AND AIR FORCE ACADEMIES—AMENDMENTS

Mr. LONG of Louisiana submitted amendments, intended to be proposed by him, to the bill (H.R. 7913) to amend title 10, United States Code, to bring the number of cadets at the U.S. Military Academy and the U.S. Air Force Academy up to full strength, which were ordered to lie on the table and to be printed.

TRADE EXPANSION ACT OF 1962—AMENDMENTS

Mr. JAVITS. Mr. President, I send to the desk eight amendments to H.R. 11970, the Trade Expansion Act of 1962 for printing under the rule and ask unanimous consent to have them remain on the table until the end of business on August 10, in the event any of my colleagues desire to join me in sponsoring any of them. I am pleased to state that the distinguished Senator from West Virnigia [Mr. Randolph] is joining me in sponsoring the last amendment which would set up a council of advisers from major industry, agriculture and labor groups for the purpose of giving counsel and advice to our trade negotiators.

An August 9, this Thursday, I shall appear before the Committee on Finance to discuss these proposed amendments in detail. Therefore, I should like to confine myself today to saying only that I support the objectives of the President's trade program and that these proposals are intended to improve its ability to serve the domestic and foreign economic policy of the United States. These proposed amendments are intended to strengthen the program of trade expansion. Indeed, the challenges facing our Nation are so great that we cannot afford halfhearted forays into foreign economic policy. We must place all of our strength and capacity into the meeting of these challenges.

Mr. President, I ask unanimous consent to have the text of these eight amendments and a brief summary explanation of them printed in the Record at this point.

I have asked unanimous consent to have printed at this point in the Record an explanation of the importance of the amendments, so that any who wish to join me, may notify me in advance of the 10th of their desire to join.

There being no objection, the amendments and explanations were ordered to be printed in the Record, as follows:

A

On page 3, beginning with line 21, strike out all through line 14, on page 6, and insert in lieu thereof the following:

"CHAPTER 2—SPECIAL AUTHORITY WITH RESPECT TO FULLY DEVELOPED COUNTRIES OR AREAS

"Sec. 211. Basic Authority.

"(a) The President may, in carrying out any trade agreement with fully developed countries or areas, issue proclamations as to articles or categories of articles without regard to the limitation expressed in section 201(b)(1): *Provided,* That the more substantial concessions shall be made on products of industries which the President determines to have the greatest demonstrated capacity and potential for export expansion and the greatest growth potential and highest productivity.

"(b) As used in this chapter, the term 'fully developed country or area' means (1) the European Economic Community, and (2) any other foreign country or area, or any group of such countries or areas operating as a customs union or free trade association (other than any country or area described in section 231) which the President has, by Executive order, designated as a fully developed country or area: *Provided,* That such an Executive order shall have been in effect for at least 180 days prior to the entering into of any trade agreement with respect to which the provisions of subsection (a) are applicable. In making any such designation the President shall consider the output per worker engaged in manufacturing and the extent of manufacturing activity in the country or area to be considered for such designation, as compared to such output and the extent of such activity in the United States."

On page 6, line 15, strike out "(e)" and insert "(c)".

On page 6, lines 20 and 21, strike out "European Economic Community" and insert in lieu thereof "fully developed countries or areas".

On page 7, strike out lines 12 through 15, and insert the following:

"(3) the fully developed countries or areas have made a commitment with respect to duties or other import restrictions which is likely to assure access for such article to the markets of such countries or areas."

On page 20, between lines 12 and 13, insert a new section as follows:

B

"Sec. 253. Utilization of Authority To Enter Into Trade Agreements.

"The authority conferred by section 201 (a) shall, subject to the provisions of this title, be utilized by the President—

"(1) so as to base any concession made by the United States substantially on the effectiveness of such a concession in obtaining the extension of any concession made by fully developed countries or areas to the United States to all other countries or areas which are not referred to in section 231; and

"(2) in any trade agreements entered into pursuant to such authority, so as to establish special arrangements (including the lowering of tariffs on specified quantities of products and the rendering of marketing and servicing assistance) to aid in the development of stable and growing markets in fully developed countries or areas for the products of other countries or areas which are not referred to in section 231 with a minimum of economic dislocation and a maximum of economic benefit to such markets."

On page 20, line 13, strike out "253" and insert "254".

On page 20, line 15, strike out "254" and insert "255".

On page 21, line 18, strike out "254" and insert "255".

On page 21, line 22, strike out "253" and insert "254".

On page 22, line 4, strike out "255" and insert "256".

On page 22, line 15, strike out "256" and insert "257".

On page 24, between lines 12 and 13, insert the following:

"(8) The term 'fully developed country or area' means (A) the European Economic Community, and (B) any other foreign country or area, or any group of such countries or areas operating as a customs union or free trade association (other than any country or area described in section 231) which the President has, by Executive order, designated as a fully developed country or area. In making any such designation the President shall consider the output per worker engaged in manufacturing and the extent of manufacturing activity in the country or area to be considered for such designation, as compared to such output and the extent of such activity in the United States."

On page 24, line 13, strike out "257" and insert "258".

On page 20, between lines 12 and 13, insert a new section as follows:

C

"SEC. 253. UTILIZATION OF AUTHORITY TO ENTER INTO TRADE AGREEMENTS.

"It is the sense of the Congress that the President should utilize the authority conferred by section 201(a) to negotiate an agreement under which all countries receiving trade concessions pursuant to trade agreements entered into, and all contracting parties to the General Agreement on Tariffs and Trade, report annually to the appropriate organ established pursuant to said general agreement on the progress achieved in (1) improving working conditions in those industries the products of which have been subject to such concessions, and (2) raising living standards in those countries or areas which are dependent on such industries."

On page 20, line 13, strike out "253" and insert "254".

On page 20, line 15, strike out "254" and insert "255".

On page 21, line 18, strike out "254" and insert "255".

On page 21, line 22, strike out "253" and insert "254".

On page 22, line 4, strike out "255" and insert "256".

On page 22, line 15, strike out "256" and insert "257".

On page 24, line 13, strike out "257" and insert "258".

D

On page 19, line 18, strike out "tolerance of international cartels" and insert in lieu thereof "infringements of United States patents, copyrights, or registered trademarks, or tolerance of such infringements or of international cartels".

E

On page 33, between lines 12 and 13, insert a new section as follows:

"SEC. 303. TERMINATION OF AUTHORITY TO ISSUE CERTIFICATES OF ELIGIBILITY.

"(a) No certification of eligibility shall be issued under section 302 with respect to any firm or group of workers after June 30, 1974, or such earlier date as the Congress may by concurrent resolution prescribe.

"(b) The termination of the authority to issue certifications of eligibility, as provided in subsection (a), shall not affect the eligibility of any firm or worker to apply for or to receive adjustment assistance pursuant to a certification of eligibility duly issued prior to the date of such termination."

F

On page 75, line 5, after the period insert the following: "Such report shall also show the amount of funds which have been appropriated pursuant to sections 312(d) and 337 and have been expended or committed for each type of adjustment assistance authorized by chapters 2 and 3 of title III."

G

On page 75, between lines 21 and 22, insert the following:

"(d) The Tariff Commission shall bring up to date and publish, at intervals of not to exceed five years, the 'Summaries of Tariff Information'."

H

On page 16, between lines 10 and 11, insert the following:

"(c)(1) The Special Representative for Trade Negotiations shall appoint a Council of Advisers which shall consist of not to exceed fifty appointive members to be selected from the major organizations in the United States representing industry, agriculture, and labor. In addition, the congressional delegates to negotiations, selected pursuant to section 243, shall, during any period in which they are accredited members of a United States delegation to any negotiation under this title, serve as ex officio members of such council. The Special Representative shall serve as chairman of such council. Members appointed to such council, while attending meetings or otherwise engaged in the performance of their duties as members of the council, shall be entitled to receive compensation and reimbursement as provided in section 401(3), and the provisions of section 1003 of the National Defense Education Act of 1958 (20 U.S.C. 583) shall apply to such members.

"(2) Members of the Council of Advisers shall give advice and counsel with respect to products of direct interest to them to members of any United States delegation to negotiations under this title, and to the United States delegates to any other international meeting dealing with modifications of existing trade restrictions. The Special Representative for Trade Negotiations shall provide members of the council with such information with respect to such negotiations and meetings as he determines will enable such members to fully and effectively discharge their functions under this subsection."

SUMMARY OF AMENDMENTS TO THE TRADE EXPANSION ACT OF 1962 (H.R. 11970) PROPOSED BY SENATOR JAVITS

Proposed amendment A would authorize the President to eliminate tariffs on a mutual basis with all fully developed countries or areas of the free world, provided that the most substantial concessions are made on the products of the strongest U.S. industries. The determination by the President of what is a fully developed country or area shall be based on output per worker engaged in manufacturing and on the extent of industrialization. Agricultural products which are dealt with separately in H.R. 11970 are excluded from this authority.

Comment: H.R. 11970 authorizes tariff elimination only with the European Economic Community (EEC), and only in categories of products in which the United States and the members of the EEC account for 80 percent or more of world exports. I believe that this concentration on the EEC and on present or past levels of international trade has three serious disadvantages: (1) While the EEC members remove trade barriers among themselves, the United States could be left in the position of being unable to do so with any nation, if the EEC decides to shut us out or if the United Kingdom does not become a member of the EEC; (2) effective U.S. bargaining power with the EEC, whatever its composition, would be diminished, if the United States were unable to negotiate for the broadest possible concessions with other nations; (3) shaping negotiating authority to existing trade patterns places artificial and often unrealistic constraints on our negotiators, who must bargain for future benefits in the context of rapidly changing international economic conditions. The proposed amendment is designed to free U.S. trade policy from overdependence on the EEC and from criteria patterned on a bygone era of world trade.

Proposed amendment B would direct the President to shape the nature of U.S. concessions to fully developed countries or areas in such a way as to obtain the extension of most-favored-nation treatment to the less developed nations from the fully developed ones; would direct the President to utilize his negotiating authority in order to bring about the establishment of special arrangements for the orderly expansion of markets for the exports of the less developed nations.

Comment: H.R. 11970 provides for no directions on the use of authority for the purpose of getting the fully developed nations to share the burden of providing markets for the developing nations—a burden which the United States has been carrying to a large extent alone. The two parts of this proposed amendment are designed to accomplish this either through a multilateralization of most-favored-nation treatment or through special arrangements on a multilateral basis—or both.

Proposed amendment C would express the sense of the Congress that the President enter into agreements with all our trading partners for the submission of annual reports to an organ of the General Agreement on Tariffs and Trade (GATT), on the progress achieved in raising wage and living standards.

Comment: This proposed amendment is designed to facilitate the escalation of international labor standards and to place greater pressure on exporting nations to refrain from subsidizing their exports through artificially depressed wages. This idea was suggested by the AFL–CIO delegation to a meeting of the Trade Union Section of the European Productivity Agency in March 1960. It also reflects the principle of proposals made by George Meany, president of the AFL–CIO, in his testimony before the Senate Finance Committee on July 24, 1962.

Proposed amendment D would specify infringements of U.S. patents, copyrights and registered trademarks as actions unjustifiably restricting U.S. commerce and as cause for retaliatory action by the United States.

Comment: It is doubtful that the problem of patents, etc., has ever been considered in a meaningful way in the context of our trade policy. Yet, infringements of these United States held rights have materially interferred with our ability to export and have even resulted in the U.S. Government's purchase, under the statutory requirement to buy at the lowest price, of foreign goods made according to pirated patents.

Proposed amendment E would provide for a termination date for the certification of firms and workers eligible for adjustment assistance; would provide for such termination through concurrent resolution of the Congress.

Comment: H.R. 11970 has no such provision for termination and no such congressional control. I believe that the termination date of June 30, 1974, provides for a reasonable limit to the program. It allows for the establishment of injury from imports resulting from the last stage of tariff reductions under agreements made up to the June 30, 1967, termination date of the President's negotiating authority, plus 2 additional years. Furthermore, it seems to me that congressional control should be more firmly established than is contemplated by the "open end" authority for expenditures in the present bill.

Proposed amendment F would require the President to submit a detailed report on expenditures and commitments under the adjustment assistance program, in connection with the annual report on the administration of the entire Trade Expansion Act now required by H.R. 11970.

Comment: This proposed amendment is designed to permit stricter congressional oversight on the expenditure of adjustment assistance funds and would enable the Congress and the public to obtain a better perspective on the real implications of the trade program in terms of domestic adjustments.

Proposed amendment G would require the Tariff Commission to keep up to date and publish at least every 5 years the "Summaries on Tariff Information."

Comment: These "summaries" have not been published since 1948 and, even though the data is kept current in the Tariff Commission files, it is difficult for students of trade policy and for industry to obtain this data which is vital to their research.

Proposed amendment H would establish a council of advisers, composed of representatives of major industry, agriculture, and labor groups. Its chairman would be the special representative for trade negotiations provided for in section 241 of H.R. 11970. Congressional delegates to negotiations would be ex officio members of the council. Any or all members of the council with a direct interest in an article under negotiation would have such access to U.S. negotiators as is determined by the special representative to be necessary to give advice and information to the negotiators. Members of the council would receive a per diem allowance while serving.

Comment: H.R. 11970 does not appear to provide the status for representatives of the private sector, necessary for the best utilization of the detailed knowledge of trade and economic conditions which these representatives dispose of. I believe that this proposed amendment would give them the necessary status without subjecting our trade negotiators to undue pressure from special interests.

The PRESIDING OFFICER. The amendments will be received, printed, and referred to the Committee on Finance; and, without objection, the amendments will lie on the desk as requested by the Senator from New York.

NOTICE OF HEARINGS BY SUBCOMMITTEE ON TRADING WITH THE ENEMY ACT

Mr. JOHNSTON. Mr. President, the Subcommittee on Trading With the Enemy Act of the Senate Committee on the Judiciary will hold public hearings on proposals to amend section 9(a) of the Trading With the Enemy Act at 10:30 a.m. on Wednesday, August 22, 1962, in room 2228, New Senate Office Building. Only Government witnesses will be heard on this day.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. SPARKMAN:

"Ready Reference Guide to Senate Press Aides," published in the July 1962 issue of the National Publisher.

DEATH OF FORMER AMBASSADOR WHITING WILLAUER

Mr. SALTONSTALL. Mr. President, with the death of Whiting Willauer at his summer home on Nantucket Island, Mass., on Monday, the Nation lost an outstanding public servant who made important contributions to his country, especially in the field of foreign affairs.

Mr. Willauer served as Ambassador to Honduras from 1954 to 1958, and then became Ambassador to Costa Rica, where he remained until 1960. He also served as a special assistant to former Secretary of State Christian Herter. Ambassador Willauer was among the first of our envoys in the Caribbean area to sense the true nature of Fidel Castro's government in Cuba, and urged that our Government speak out against it.

A graduate of Princeton University, Mr. Willauer received his law degree at Harvard University. Following his graduation from Harvard, he joined the Boston firm of Bingham, Dana & Gould, where he specialized in admiralty law. Later he was employed by the Civil Aeronautics Board, the Department of Justice, and the Federal Power Commission.

During World War II he worked to get support for Gen. Claire Chennault's Flying Tigers, which flew supplies from India to China, and in 1946 he and General Chennault established the Civil Air Transport Co. Mr. Willauer became president and vice chairman of the board of that company. During the Korean conflict this group helped move supplies into Korea. He resigned from the organization in 1954, when President Eisenhower appointed him Ambassador to Honduras.

I knew Mr. Willauer and respected his judgment. His passing is a serious loss to the Nation.

To his wife, the former Louise Knapp Russell of Nantucket, his son Whiting Russell Willauer of Washington, and his daughter, Mrs. Peter W. Nash of Dedham, Mass., Mrs. Saltonstall and I extend our sympathy.

THE ESTABLISHMENT OF RELIGION CLAUSE OF THE FIRST AMENDMENT

Mr. ERVIN. Mr. President, the Charlotte News, of Charlotte, N.C., carried a very thoughtful editorial entitled "Church and State: Why the People Should Define the First Amendment" in its issue of July 12, 1962. This editorial ought to be made available to all the Members of the Congress for consideration in connection with various resolutions to amend the interpretation placed upon the first amendment by the recent decision of the Supreme Court in the Engel case. For this reason, I ask that this editorial be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. METCALF in the chair). Is there objection to the request of the Senator from North Carolina?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHURCH AND STATE: WHY THE PEOPLE SHOULD DEFINE THE FIRST AMENDMENT

Reaction to the Supreme Court decision on prayer in public schools breaks down roughly into three categories: (1) Those content with the decision and its implications of a religiously sterile state. (2) Those concerned by the decision, as exemplified by our morning contemporary, but content to accept it. (3) Those concerned, as the News is, to the point of favoring positive consideration of a constitutional amendment to protect governmental recognition of the Nation's pervasive and immensely valuable religious tradition. Because of the importance of the question, and the community's interest, we think it worthwhile to consider the amendment question from both sides.

The argument for acceptance of the decision is pinned to the claim that, in the Regents Prayer case, the Court made a narrow decision or, as the Observer puts it, a relatively narrow decision. It is said in addition that debate of a constitutional amendment would be divisive in a pluralistic society such as ours. This latter, of course, is a mere debater's point; all issues of substance are divisive. A mature democracy cannot draw back from great questions in fear of controversy.

Certainly the Court, capping the divisive desegregation and reapportionment cases with provocative language in the prayer case, shows no disposition toward reticence. The plea for patience and restraint, if valid at all, should more properly be addressed to the Court itself.

The Court perforce is ingenious in leaving constitutional hairs unsplit when it deems avoidance of an issue the wiser course. It waited, for example, 58 years before finding in the 14th amendment a constitutional stricture against segregation of the races in education and, by swift extension, in parks, swimming pools, buses, pools, et cetera.

The Court, in sum, has the power of discretion in constitutional matters; the fact that it did not use that discretion wisely in the prayer case cannot reasonably be converted into an argument for timid acceptance by responsible citizens whose intelligence and convictions may be offended by the Court's holding.

No, the main argument for acceptance is that the Court's decision, being relatively narrow, does not raise issues worthy of constitutional debate among the citizens who are the ultimate arbiters of constitutional questions. And this argument, in our opinion, goes directly counter to the evidence; it is contrary to what the Court has done and said in the few first amendment cases that have been decided.

What the Court is about is the process of defining the first amendment for the first time and establishing its meaning for future generations. Moreover, it is asserting a meaning in a sensitive field that is contrary to what Justice Reed once called the accepted habits of our people, and doing so in a manner capable of upsetting practices embedded in our society by many years of experience. Now, of course, the Court upsets traditions in many fields; it must do so if the Constitution is to remain a living document. And it would be unthinkable to propose that the people intervene in murky matters such as taxation, criminal procedures, or international agreements.

But for two principal reasons, the present Court cannot claim any overriding competence in deciding the meaning of the first amendment:

1. The Court is without the guidance of a body of precedent. Rather than drawing upon the distillation of decades or argument and thought, the justices are relying upon their own opinions plus those lay views to which they may cleave. Because the first significant first amendment case came to the Court in 1947, Justice Black cannot quote Marshall, Holmes, Brandeis, or any of the other great shapers of constitutional doctrine. Justice Black quotes Justice Black. And Justice Douglas, regretting the holding in that first case, *Everson* v. *Board of Education*, reverses Justice Douglas.

2. The Court is without the guidance of the intent of the framers. In the debates of the constitutional convention there is little evidence as to what the framers meant by an establishment of religion. What evidence there is has been sifted throughly, of course, but there is nothing approaching agreement among scholars or lawyers. Having been through it, Harvard professor of government Robert G. McCloskey notes that one of the most impressive things about the literature on the subject is the comparative

ease with which each partisan demolishes the positive arguments of his opponents and the corresponding difficulty each has in establishing his own interpretation of the amendment's intention on irrefutable ground.

Finally, we return to the phrase "narrow decision" and ask what that means—if anything. John Marshall, deciding to require then Secretary of State James Madison to deliver papers of appointment to two justices of the peace (*Marbury* v. *Madison*, 1803) established the Supreme Court's right to review acts of the Congress and the legislatures. In upholding conviction of a man for selling lottery tickets (*Cohens* v. *Virginia*, 1821) Marshall established the right of a citizen convicted in a State court to carry his case into Federal courts.

All Supreme Court decisions are narrow in the sense that they pronounce upon a specific question posed by one or more individuals. In the original desegregation decision (*Brown* v. *Board of Education*, 1954) the Court specifically ordered the admission of a few Negro children to a few schools. The important question is not the decision, but the doctrine, which the decision asserts.

Our reading of the first amendment cases convinces us—barring amendment or the meaningful assertion of opposition through consideration of an amendment—that the Court is framing, and will continue to frame, a doctrine of rigid and absolute separation of church and state. Justice Black, to be sure, has not yet accepted Justice Douglas' radical strictures against the employment of chaplains, for example, but he is coming that way fast enough under his own momentum. Norfolk Ledger-Star Editor William Fitzpatrick, a close student of the Constitution, notes correctly "the general expectation * * * that the Court decision (on prayer) will reach to all religious expression in the public schools."

With the deepest respect for the indispensable institution that is the Supreme Court, we submit that it is entirely proper for the people to participate in defining the first amendment for themselves and their children. To disagree with the Court is not to attack or demean it. The 12 amendments following those embodied in the Bill of Rights are, some of them, of far less consequence than the question of whether the Nation will continue to recognize the influence of religion on its origins and its history in a time of great testing with a fanatic philosophy of materialism.

Whether or not Mecklenburgers favor or disapprove consideration of an amendment, they deserve to know that the Court has made no narrow decision; indeed, that such a decision is highly improbable, if not impossible, in the barely touched field of the first amendment.

BIRTHDAY CONGRATULATIONS TO SENATOR JOE H. BOTTUM

Mr. MUNDT. Mr. President, on behalf of his many old friends in South Dakota and his many new friends in the Senate of the United States, it is my pleasure to announce that South Dakota's junior Senator, JOE BOTTUM, is today celebrating his 59th birthday.

I think it is highly appropriate that on the occasion of his 59th birthday Senator BOTTUM no longer wears the mantle of the "baby Senator" of the United States, but that on this occasion he moves up one notch on the important ladder of seniority.

I suspect that, due to the tragic and unfortunate passing of our beloved friend, Henry Dworshak, JOE BOTTUM will go down in history with one designation attached to his name, at least, and that is that he has been the bearer of the designation of "baby Senator" probably for a shorter period of time than any other Senator who has taken the oath of office, because it was less than 3 weeks ago that his name was presented to the Senate for confirmation.

Mr. SCOTT. Mr. President, will the Senator yield at that point?

Mr. MUNDT. I yield.

Mr. SCOTT. I take it the Senator is saying that Senator BOTTUM is about the quickest man off the bottom in the Senate for some time.

Mr. MUNDT. The Senator is correct. He is also a fast man toward the top.

Mr. MILLER. Mr. President, I wish to join with my distinguished colleague, the senior Senator from South Dakota, in conveying congratulations to the junior Senator from South Dakota [Mr. BOTTUM] on the occasion of his 59th birthday. I express the hope that he will continue to represent our sister State, adjacent to my own State of Iowa, in the U.S. Senate, and that he will climb to the top in the years to come.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MILLER. I am glad to yield.

Mr. DIRKSEN. The distinguished junior Senator from South Dakota is a man of great vigor. I know how he comported himself when I campaigned in that great State. I know the vitality and vigor he possesses. I am sure he will use it in addressing himself to the public business. May his energy never diminish, even though his years will accumulate.

I congratulate him.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. MILLER. I yield to my colleague from California.

Mr. KUCHEL. I merely say to my good friend from South Dakota, I hope very much that the U.S. Senate 1 year from today will salute my friend on the occasion of his next birthday, and that he will enjoy the same health and vigor he now enjoys. I hope that he may spend many future birthdays on the floor of the Senate as a Member of the U.S. Senate.

Mr. BEALL. Mr. President, it is a very real privilege to join in congratulating the junior Senator from South Dakota, Senator JOSEPH H. BOTTUM, on the occasion of his birthday anniversary.

The late Senator Francis Case, for whom I had the highest respect, used to tell me of JOSEPH BOTTUM's remarkable ability and diligence, and in the short time I have known Senator BOTTUM I have been highly impressed by the manner in which he has more than lived up to his excellent reputation. Our Nation, as a whole, and South Dakota in particular, are fortunate in having such a man in this body, and I sincerely hope we will be privileged to have his services for many years.

FOREIGN AID "FUMBLES"

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the RECORD a recent editorial from the Davenport Daily Times entitled "Congress Fumbles Its Opportunity."

In the editorial is presented the view that Congress should be a little more careful with respect to the foreign aid program, and specifically three points are made.

The first is that expenditures should be reduced in order to assist this Nation to preserve its financial integrity. The second is that the amount of foreign assistance should be reduced to alleviate some of the pressure on the balance-of-payments problem. The third is that more attention should be given to curbing assistance to Communist-dominated nations.

I might point out, Mr. President, with respect to the third point, the language in the bill as passed by the Congress does place considerably more restrictions on the President's powers to dispense aid to Communist countries than heretofore existed.

With respect to the first two points, the Congress will have an ample opportunity to cut down when it considers the appropriation bill relating to foreign aid.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS FUMBLES ITS OPPORTUNITY

President Kennedy signed the bill Wednesday by which Congress authorized $4,672 million in foreign aid. It was a case of turning the key in the lock barring the best opportunity the United States had in 1962 to remedy several ills.

There had been signs earlier that Congress might this time fulfill its responsibility first to cut down on the expenditures which have helped perpetuate the Nation's financial disorder. Specifically, in the second place, a reduction in foreign aid would help to bring foreign payments near a balance which would stem the dangerous outflow of gold. Third, the chance was frittered away to put some sort of a check on the use of such funds to benefit Communist countries.

On any of the three counts, or all, there is no question of popular support. In the course of the battle over the restrictions which were proposed and then allowed to be chopped from the foreign aid bill, there was strange reasoning that some of the Members of Congress were lending support because they felt it would be popular at home, but that they were confident such limitations would not survive conference committee action.

If this is to be accepted as reliable, it reflects an appalling disregard upon the part of the legislators for the will of the people they are supposed to represent.

The average American finds that Congressman JOHN M. ASHBROOK, an Ohio Republican, made sense when he expressed wonder:

"The interesting facet (of the bill's victory in Congress) was the fact that the ability to dispense taxpayers' money to Communist countries was hailed as a victory for the President. In many other areas of the country, this action would be acknowledged with shame."

This takes into account the plain fact that economic assistance extended those Red countries supposed not to be completely under the domination of the Soviet does not bring them into accord with the United States any more than do the handouts to the others looking for bribes not to go Communist.

If the results thus far indicate what can be expected of giving the President, whoever he may be, unfettered freedom in foreign policy, there is every reason why Congress, serving the American people, should take a hand.

INTEGRITY OF THE AMERICAN DOLLAR

Mr. MILLER. Mr. President, the lead editorial in the July 2 issue of the Evening World-Herald of Omaha, Nebr., entitled "Inflation Push," indicates the concern which is increasingly being expressed in my part of the country over the future integrity of the purchasing power of the American dollar. I ask unanimous consent that the editorial may be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INFLATION PUSH

A dollar bill that has been shrunken to about half its original size is a joke item in Washington these summer days.

But the shrunken dollar is no joke outside America, where the sudden deterioration of U.S. currency is big news.

Donald I. Rogers, financial editor of the New York Herald Tribune, writes:

"The outside world is refusing to accept the obligations of private firms that specify payment in dollars after the first of next year."

He goes on to say that European central banks have set December 31 as the deadline past which they will no longer add to their holdings in dollars.

Why 6 months?

That apparently is the time which has been allowed the American Government to improve its economic affairs.

Europeans are afraid of the mounting Federal deficit and of signs that President Kennedy may stampede the United States into deeper deficit spending and a policy of low interest rates.

Treasury officials are well aware of the foreign pressures, says Mr. Rogers. The Federal Reserve System recently swapped currencies with countries which have reserves of American gold and balances of American dollars. This swap provides partial and temporary restraint against a disastrous run on America's gold supply, but it only buys time.

The fact, says Mr. Rogers, is this: "Forces beyond political control appear ready to place a new, lower value on the American dollar, occasioning further deep drains on American gold reserves."

So what's to be done?

Mr. Rogers, Senator HARRY BYRD, and others urge that the Government use the 6-month grace period to cut Federal spending and get the Federal budget back in balance.

But this obviously is not going to happen. The Government ended the fiscal year Saturday some $7 billion in the red. Spending this fiscal year will be even heavier. Only a complete reversal of fiscal policy would bolster the dollar by December 31. So some kind of dollar devaluation seems likely.

In the last few days, says Mr. Rogers, there has been talk in Wall Street of something called simultaneous revaluation. It's a gimmick by which European central banks and the U.S. Government would simultaneously announce an upward revaluation of gold, perhaps by 50 percent. This would have the effect of devaluing all the participating currencies.

It is reasoned that this would take the curse off devaluation of the dollar only. All countries would benefit from increased commodity prices. It would take the slump out of the American stock market, get money in circulation, move prices swiftly ahead of wages so that unions would be justified in demanding wage increases.

In short, it would create great inflationary pressures everywhere, but especially in the United States, and supposedly would delay the day of reckoning. There is no sign that Washington takes this simultaneous revaluation scheme seriously at present, but Mr. Rogers cites it as the kind of thing that may come because the administration refuses to follow a course of fiscal prudence.

"GOLDWATER THE JEFFERSONIAN: MR. CONSERVATIVE"—BOOK REVIEW

Mr. TOWER. Mr. President, the Senator from Arizona [Mr. GOLDWATER] as a most eloquent spokesman for conservative and Republican causes, is much talked about and widely written about. At present, if my information is correct, and I am confident it is, there are five Goldwater books on the newsstands or in the bookstores. Two of these are by the Senator himself: "Conscience of a Conservative," and "Why Not Victory." Three have been written about him: "Freedom Is His Flight Plan," by Steve Shadegg; "Biography of a Conservative," by Dean Smith and Robert Wood; and "Mr. Conservative," by Jack Bell, the distinguished dean of the Senate staff of the Associated Press.

Mr. President, this thoughtful and provocative newly published volume by Mr. Bell is being favorably reviewed and enthusiastically received by readers everywhere. One such review, by Joe Benham, the discerning political writer of the San Antonio, Tex., Express, has just come to my attention. It is well-turned and incisive, and I ask unanimous consent, Mr. President, to have this review, titled "Goldwater, the Jeffersonian: Mr. Conservative," printed in the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

GOLDWATER THE JEFFERSONIAN: MR. CONSERVATIVE

(By Joe Benham)

In the realm of politics, one finds few people able to take a dispassionate look at BARRY GOLDWATER, the Arizona businessman-turned-politician who has become the symbol and spokesman of conservatism. People interested in politics either love him or hate him, as a rule.

But Jack Bell, chief political writer for the Associated Press, has managed to stand back and look at the controversial GOLDWATER without being blind either to his virtues or to his faults, in "Mr. Conservative: BARRY GOLDWATER" (Doubleday).

And it's an oft-fascinating picture that he paints, of an almost accidental recruit of Republicanism in his youth, in whom "there reside some of the swashbuckling qualities of Theodore Roosevelt."

GOLDWATER, grandson of a Russian Jewish peddler who had roamed the arid lands of California and Arizona, also bears a resemblance to one John F. Kennedy, in the view of Bell, who comments: "They are alike in their ability to arouse the emotions of the electorate * * * the people who back them are for Jack Kennedy or BARRY GOLDWATER."

Freed from newspaper space limitations and deadline pressures, Bell takes a long and thoughtful look not only at where BARRY GOLDWATER came from and what he is like, but, more important, what he stands for and where he is likely to go.

Many of the precepts of the tanned, rugged-looking photographer-flier-folklorist are familiar: opposition to deficit spending, impatience with the failure of the United Nations to act in sympathy with U.S. aims, antagonism toward labor racketeers, opposition to Federal aid to education and to socialized medicine, opposition to the growth of centralized government at the expense of local and State control.

But less well known, perhaps, is the fact that GOLDWATER, sometimes unwilling spokesman for the archconservatives of the Republican party, actually regards himself as Jeffersonian Democrat.

Bell quotes him: "I would agree with Bob La Follette nearly all of the time, with Thomas Jefferson practically all of the time." The reason he is a Republican rather than a Democrat, he says, is that the Democratic party no longer represents the ideals of Jefferson.

"He is not above suggesting," Bell observes, "that the Democrats populate a war party and are mighty soft on communism."

What of the future? A Rockefeller-GOLDWATER ticket is by no means out of the question, says Bell, with the observation "the Democrats had demonstrated with their Kennedy-Johnson ticket that political cynicism is not necessarily repellent to the average voter."

TRIBUTE TO SENATOR ROBERT S. KERR

Mr. TOWER. Mr. President, the Longview, Tex., Daily News on July 31 gave editorial recognition to a man "nationally recognized as one of the most distinguished products of a State renowned for its distinguished citizen leaders."

The Longview Daily News was referring to the senior Senator from Oklahoma, the Honorable ROBERT S. KERR.

Mr. President, this editorial is a justified and well-earned tribute to our friend and colleague. It reflects, I am sure, the consensus of the Senate. I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MAKINGS OF OPPORTUNITY

It is seldom that more than once during a lifetime does the opportunity present itself for a man to achieve true national greatness. U.S. Senator ROBERT S. KERR, of Oklahoma, stands on the fiery threshold of such an opportunity today.

Senator KERR is no novice, nor is he without high personal achievement. He is today nationally recognized as one of the most distinguished products of a State renowned for its distinguished citizen leaders.

Now at the peak of a career that has included oversea military service in the field artillery, successful business and industrial operations, Governor of his State, and Democratic national committeeman, Senator KERR today occupies a strategic position in the senior body of the national administration.

It is precisely this position of trust and honor and high responsibility that affords Senator KERR his unusual opportunity. For, standing as he does in a key position of senatorial power and influence in the high councils of the administration, the Oklahoman in the next several days can give enlightened direction to policy for an administration which has been sadly lacking in understanding and responsible direction toward the business and industrial community—the basis on which American strength and progress rests.

Senator KERR's unusual opportunity arises by virtue of his key position concerning the major questions of national policy affecting the vital extractive industries—oil and gas, other minerals and commercial earth elements of an exhaustible nature.

One of the major questions is the necessity for greater protection for oil and other mineral industries in President Kennedy's trade expansion bill. Senator KERR believes, as do most of the domestic leaders of these industries, that the national security section of this bill must be strengthened. He is reported in news dispatches to believe that technical changes in the wording of the security section can achieve the desired security, and he has wisely said that any language in the bill must be broad enough to cover all domestic industry.

The Oklahoma Senator, one of the most knowledgeable men in the U.S. Senate concerning the minerals industries by reason of his own successful personal experience, believes the domestic oil industry is entitled to and should be assured its rightful and proportionate share of the domestic market. This objective he hopes to achieve through negotiation. He makes it clear he is going to support the trade bill, recognizing national needs and interests in this direction.

The other major issue—which is not officially before the Congress but which is being broadly considered in government agency circles and widely discussed in national news media—is that of Federal tax treatment of the minerals industries.

The whole complicated field of taxation is under study and consideration. News and opinion column theorists and comic pundits are attacking the time-proved principle of depletion credit as a tax loophole which they say must be closed before any tax reform can be worked out. Other liberal self-anointed social reformers vie for hearing in the rising din of attack on depletion. Some even suggest that depletion be replaced by a system of Federal subsidies at taxpayer expense—a la the Federal agricultural program.

President Kennedy wisely has not called for abandonment of the depletion principle. Congress instituted this principle long ago and has stood by it for more than a generation—while domestic industry has given this Nation the greatest abundance of low-cost fuel and energy the world has ever known, and at no cost to the taxpayer.

Without a doubt, the President wants the Nation to go forward. One of his chief aims has been to increase the rate of economic growth. He has made some unfortunate blunders. He cannot now afford and would not knowingly adopt a course that would halt the progress of nearly 100 minerals industries which provide the basic employment, payrolls, and economic backbone of some 35 States.

This is where Senator KERR faces his great opportunity. Out of his broad personal experience in business and industry, he can render the administration most valuable advice and counsel. By his skill as a legislator, he can properly represent the legitimate interests of business and industry. Through his knowledge of economics, gained in both private business and in Government, he can serve the consumer interests of the Nation in an enlightened and effective manner.

This is a complicated and difficult assignment. But we believe Senator KERR has the experience and the judgment to realize that—politics and social reform to the contrary notwithstanding—any solution of these problems that does not strengthen and safeguard the vital minerals industries is in neither the short-term nor long-term public and national interest, and that which is not in the public and national interest surely is not and never can be in the best interest of good politics or good reform.

It is under just such trying circumstances and such great pressures as Senator KERR faces today that men of courage and faith and dedication down through the ages have forged these characteristics into the stalwart stature of statesmen. The valiant-hearted Oklahoman can seize in these makings the opportunity of a lifetime to confirm for historians and posterity his right to the eminent honor of true statesmanship.

GOOD NEWS FOR WEST COAST SHIPBUILDING PROGRAM

Mr. KUCHEL. Mr. President, since the glorious autumn day over four centuries ago when the Spanish explorer, Cabrillo, took his men ashore at San Diego, the colonization, growth, and economic stability of my native State of California have been influenced immeasurably by the sea which washes our extended coastline and by ocean transportation. Our Nation, likewise, has historically been a nautical power since the early colonists began fabricating sailing vessels of timbers from the New England forests.

America's position on the high seas has ranged from preeminence during the clipper-ship days to nearly disastrous inadequacy to transport men and supplies vital to the defense of freedom-loving peoples on distant fronts across the Atlantic and the Pacific.

These facts prompted me early this session to voice alarm at curtailment of the long-range program for replacement of merchant ships in the face of unmistakable Russian determination to become a major ocean trader.

The fiscal year 1963 budget items for merchant marine construction now are being reviewed by the Senate Appropriations Committee. Shortly, this body will have before it the bill providing funds for the Federal Maritime Administration and the payment of vital construction subsidies for replacement of obsolescent and aging ships.

Details of the replacement program to be carried out during the present fiscal year recently have been revised and are reflected in a supplemental budget estimate requesting an additional $14,200,000 in the disappointingly small amount originally proposed to Congress.

I was gratified to learn upon inquiry that this recent increase recognizes appreciation of the importance of providing new, faster, larger vessels for service on the Pacific. The revised program takes cognizance of the opening of potential new markets, intensified foreign competition, and prospects for expanded trade with countries off our western shores upon which we have focused ever-increasing attention since our involvement in World War II.

Under the supplemental estimates now before the Senate Appropriations Committee, it is proposed to build five ships for the Pacific trade. Originally none were scheduled but following a reappraisal of the needs of commerce, three are to be constructed for the globe-girdling American President Lines and two for the American Mail Line. Both of these companies are based on and operate services primarily from the west coast.

I was pleased to see that the total planned construction-differential payments of more than $100 million for ships to be started in fiscal year 1963, some $31 million is earmarked for those intended for these two Pacific operators.

This is indeed good news for California and the entire West. It is important for the Nation, since the tempo of foreign-flag operations in the Pacific has stepped up greatly in the postwar era. The volume of commerce through Pacific ports is mounting. Within months, upon completion of a deepwater channel, California's inland capital city, Sacramento, will have direct access to the ocean. More than 10,000 families on the west coast derive their living from work in shipbuilding and ship repair industries. It is to be hoped that Pacific seaboard shipyards will be successful in competition for some of this new construction.

With more modern ships, it should be possible to step up our seaborne commerce with our allies—Australia, New Zealand, the Philippines, and others—in the distant reaches of the world and with the developing countries of Asia, the expanding populations of the southeastern Asian islands, and the Orient. This will be significant to longshore workers, who number some 25,000 in California alone. It should give new impetus to growing Western industry and to agriculture over a wide area.

The increased emphasis upon the condition of our merchant fleet in the Pacific is recognition of the importance of this trade and presents a challenge as well as an opportunity for California and her people.

INTERNAL REVENUE SERVICE RULING UNFAIR TO AMERICAN JAPANESE

Mr. KUCHEL. Mr. President, the Register-Pajaronian and Sun of Watsonville, Calif., observed a few days ago:

> No group in American history, with the possible exception of the native Indians, was more shamefully treated than our people of Japanese ancestry at the outbreak of World War II.

I agree. I think the Members of Congress agree. Indeed, I think the citizens of the United States agree.

It is regrettable, Mr. President, that the Internal Revenue Service has now seen fit to announce that it will go forward with plans to levy a tax against the small moiety awards which were made to the American citizens of Japanese extraction after World War II. I have submitted an amendment, cosponsored by some of my colleagues on both sides, to prevent that from happening.

Mr. President, I ask unanimous consent that the excellent editorial to which I have referred may be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTERNAL REVENUE SERVICE SLASHES OPEN A WOUND

No group in American history, with the possible exception of the native Indians, was more shamefully treated than our people of Japanese ancestry at the outbreak of World War II.

There was no difference, declared the military commander of this area, between an enemy alien and a citizen descended from immigrants from a country then an enemy. "A Jap's a Jap," said Gen. John L. DeWitt.

And General DeWitt's troops, with the blessing of the national administration, proceeded to clear the California coast not only of citizens of Japan but also citizens of the United States whose ancestors happened to be born in Japan. Our schools were partly emptied, our farms partly evacuated. Whole families were torn from their roots in this community, and they were thrown into concentration camps euphemistically labeled "relocation centers."

There was no need for it, as a sober look at the record after the war indicates. Not a single instance of sabotage or espionage was detected in Hawaii, not a single act of disloyalty uncovered in Watsonville by the FBI and Army agents who ruthlessly turned homes inside out, viewing with horror young boys' .22-caliber rifles and their elders' ancestral ceremonial swords as though they were about to be used to capture the city hall. We know; we saw it.

Now the Internal Revenue Service is about to reopen an old wound, to offend once again good American citizens who proved their loyalty over and over again in World War II—families which in some cases gave the lives of their sons in combat.

When the Japanese and Japanese-American population was so cruelly jerked out of the Pajaro Valley and other parts of California at the outbreak of war, many of this group suffered measurable and admittedly unnecessary financial loss. Some sold their homes at panic prices; some left their farm machinery and their household goods on the land.

After the war ended and the hysteria was over, a Congress, shamefaced for us all, acknowledged injustice. It passed the Evacuation Claims Act, which only partially compensated the rudely handled Japanese and Japanese-Americans for their provable losses.

The Nisei are back among us now, most of them. They have shown more forbearance than most of us would exhibit under the circumstances; and to the credit of the Anglo-Saxon part of the population it must be said that these uprooted Americans were received back home with a minimum of incident and that they are once again a respected and accepted part of the community. No one begrudged them the small settlements some of them received from the U.S. Government—with the possible exception of a few despicable people who were not above theft and fraud at the expense of the "relocated" Americans of Japanese ancestry.

And at this point, when the wound is mostly healed (although the scar will remain forever on the sensibilities of these people and on the conscience of America), the Internal Revenue Service brandishes the knife. It decrees now, 17 years after war's end, that these indemnity payments, insofar as they exceeded the original cost of the property, are subject to income tax, and proposes to take a part of them back.

Perhaps that's how it reads in the book. Perhaps, as the IRS men put it, there is no difference in the law between an indemnity payment to a shamefully mistreated citizen yanked from his home and placed behind barbed wire and the taxpayer whose land is taken for a freeway.

If there isn't a difference in the law, then Congress should move speedily to draw a line. The Kennedy administration shows great concern for the rights of minorities in Dixie; let it now move speedily to protect the rights of a minority in California. Let the administration, as the San Francisco Examiner has it, "put an end to the absurdity that Government can admit a wrong, offer indemnification for it, and then take it back in taxes."

The story of the miserable treatment meted out to those of Japanese ancestry in California in early 1942 was well told in a book by Morton Grodzins entitled "Americans Betrayed." Let's hope he does not find it necessary to write a sequel.

MEDICARE—IT IS BOUND TO COME

Mr. KUCHEL. Mr. President, the Santa Barbara News-Press in an editorial which was published in that estimable newspaper on Thursday, July 19, states:

> We believe the American people are bound to get some kind of health cost protection through their Government, because they need it and demand it. They are not frightened by the term "socialized medicine," for it has been tossed about much too loosely by the medical and insurance spokesmen.
>
> The American people want a reasonable, peaceable, workable plan to meet a very real and present need. And they expect their doctors and their elected representatives to find and agree on such a plan.

I commend a reading of the editorial to Senators. I ask unanimous consent that the text of the entire editorial be printed at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEDICARE—IT'S BOUND TO COME

The administration's medical care bill, modified to gain the support of liberal Republicans, has been killed for this session of Congress. The 52–48 vote in the Senate, while close, was enough to block any further action this year, in view of the fact that the House bill on the subject is bottled up in the Ways and Means Committee.

The American Medical Association and its allied groups can chalk up a victory, for the moment. Its reputed $7 million lobby and propaganda fund was used effectively, according to the rules of the political game as it is played.

But in the end it may turn out to be a Pyrrhic victory—too costly to bear repetition. Congressmen persuaded against their own political judgment do not always stay persuaded next year, and next. Some of those won over to the American Medical Association's side may be defeated in November. A $7 million fund may not be enough to assure victory in 1963, and attempts to raise it may backfire.

The medical organization has won a holding action, but if it is wise in strategy it will prepare a safe line of retreat, giving some ground in order to avoid a rout in the next encounter. It did this when it accepted the Kerr-Mills Act, to provide medical care for the elderly indigent, last year.

It is not impossible for reasonable men to work out some new medical aid legislation that will go a long way to meet the health insurance needs of millions of our older citizens—people who are not indigents, but who may speedily become so if unprotected against the increased health hazards of age.

If the American Medical Association remains stiffnecked in its brief victory, it will see the issue taken to the people in black-and-white terms by a popular President who has everything to gain and nothing to lose in campaigning for health protection for the people.

There has been complaint in some quarters about the President applying pressure in the effort to get this medicare program adopted. The pressure he has used, and can use, is weak compared with the pressures exerted by the rich and powerful insurance interests—the real strength behind the American Medical Association political action movement. The doctors should pause now and consider whether they are being used by the insurance interests, pawns in a war over private or public insurance, not in a war over private or public medicine.

The doctors, as a matter of fact, were not affected in the least by the provisions of the medicare bill. They were not to be paid by the Government, nor their practice of medicine touched in any respect. The bill was concerned only with helping the aged meet their hospital and nursing costs. Any doctors who felt in this a threat to the freedom of medical practice were simply deluded by the propagandists of their own association and of the insurance interests.

If the organized doctors refuse to budge over Government aid for the people's health security, and if the insurance interests continue to use their resources of wealth and power to block any public insurance at all costs, the time may come when the people will cry "a plague on both your houses" and demand both Government insurance and Government medicine.

We would deplore such an outcome. We are against true socialized medicine, and against Government monopoly of insurance. We are for effective partner-combinations of public and private enterprise in these two areas, as in various other areas where private initiative and Government agencies work together for the mutual welfare of workers, employers, investors, and the public.

We believe the American people are bound to get some kind of health cost protection through their Government, because they need it and demand it. They are not frightened by the term "socialized medicine," for it has been tossed about much too loosely by the medical and insurance spokesmen. They are not wedded to the social security system of financing it, but are willing to go along with it if this seems the most workable. The Saskatchewan spectacle has made them equally distrustful of radical Government action and of doctors who go on strike against their own patients.

The American people want a reasonable, peaceable, workable plan to meet a very real and present need. And they expect their doctors and their elected representatives to find and agree on such a plan.

JAMES H. KINDELBERGER, CHAIRMAN OF THE BOARD OF NORTH AMERICAN AVIATION, INC.

Mr. KUCHEL. Mr. President, a few days ago, the American people lost a distinguished American patriot, James Howard (Dutch) Kindelberger, age 67, chairman of the board of North American Aviation, Inc., in California. Many Senators called him friend. I was proud to do so. "Dutch" Kindelberger was one of those gallant and supremely efficient and dedicated American businessmen who, during the dark days of the 1930's, as World War II approached, conceived new means by which the defense of the American people might be greatly strengthened.

During World War II it was "Dutch" Kindelberger who, with his fast-growing and farflung defense industry, created such aircraft for the Defense Department and the U.S. Air Force as the Mitchell bomber and the Mustang fighter, and during the Korean war created the superb F–86 Sabre Jet. Today the amazing X–15 rocket plane has come from the mind of that great man.

We have lost a very great American. The citizens of the free world have lost one whose entire lifetime was given over to providing strength for the cause of free peoples against Communist imperialism.

I ask unanimous consent that an article touching on the background and life of Mr. Kindelberger published in the Los Angeles Times of July 28 be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KINDELBERGER, NORTH AMERICAN CHAIRMAN, DIES

James Howard (Dutch) Kindelberger, 67, chairman of the board of North American Aviation, Inc., died early Friday at his home, 14880 Corona Del Mar, Pacific Palisades.

Death was believed caused by congestive heart failure. He had been ill several months.

Mr. Kindelberger was one of the great figures of the American aviation and aerospace industries and one of the aircraft production giants of World War II.

He was president of North American from its fledgling days in 1935 until 1948, and its chief executive officer until 1960.

TREMENDOUS GROWTH

Under his direction North American grew from a small Maryland plant employing 75 on a single airplane to the present $1-billion-a-year corporation employing 96,000 in 6 divisions, including projects in electronics, rocketry, atomic energy, and space vehicles.

Mr Kindelberger's name was stamped on the development of such historymaking aircraft as the Mitchell bomber and Mustang fighter of World War II, the F–86 Sabre jets of the Korean war, and today's space-conquering X–15 rocket plane.

With other aviation figures, Mr. Kindelberger led the Nation into wartime superiority over Germany and Japan, and in postwar years retooled the industry for the jet and missile age.

One of his last important coups for North American was the winning of a $2 to $3 billion contract to build the forthcoming moonship Apollo.

Mr. Kindelberger was born May 8, 1895, in Wheeling, W. Va.

He quit high school after 1 year to work in a factory, studying drafting at night. He enlisted in the Army in 1917 and served with the Signal Corps, winning a pilot's wings in what was then the Army's flying branch.

WAS DRAFTSMAN

In 1918 he went to work as a draftsman under Donald Douglas, chief engineer of the Glenn L. Martin Co. in Cleveland. When Douglas came here to launch his company, Mr. Kindelberger followed in 1925 to become his chief engineer.

He helped Douglas develop the world's leading passenger planes until 1934, when he became president of General Aviation Manufacturing Co., a General Motors subsidiary.

In 1935 General Motors cut the subsidiary loose, and it became North American Aviation, with Mr. Kindelberger as president and general manager. It started with a one-plane contract in Dundalk, Md.

OBVIOUS ADVANTAGE

"We started with an obvious advantage," the president recalled later. "It couldn't have been worse."

North American sold its unfinished plane for scrap and got into military production with a $1 million contract for Army trainers. In 1936 he moved the company to Los Angeles, predicting this would soon be the aircraft center of the Nation.

After a tour of German aircraft plants in 1938, Mr. Kindelberger came back with a contract to build fighters for Britain. In 127 days he completed the first P–51 Mustang. It was the first American plane to take the sky against the Nazi Luftwaffe.

During the war North American built 15,603 Mustangs, 9,817 Mitchells, and more than 15,400 AT–6 Texans.

HIGHEST HONORS

Mr. Kindelberger received many of this country's highest civilian honors and others from Allied Nations for his role in arming the Allies.

Mr. Kindelberger leaves a daughter, Mrs. Joan Kindelberger Graham, and three grandchildren.

He was divorced by his first wife, Mrs. Thelma Knarr Kindelberger, in 1945. He married Mary Louise Allen in 1946. They were divorced in 1960.

Mr. KUCHEL. Mr. President, I believe I may say, not merely for this California Senator, but for the Congress of the United States and the American Government, that we salute a great and gallant American patriot, and we extend to his family our most sincere condolences.

THE EFFECTS OF SMOKING

Mr. MOSS. Mr. President, there could be no more conclusive argument for the passage of Senate Joint Resolution 174, which asks the President to create a Commission on Tobacco and Health to conduct a massive educational campaign, than the article which appears in the July issue of Scientific American entitled "The Effects of Smoking."

The article was written by E. Cuyler Hammond, director of the statistical research section of the American Cancer Society. It presents no new scientific findings, but puts together in one place the most important conclusions reached on the association between cigarette smoking and lung cancer, and between cigarette smoking and heart failure. It is essential reading for everyone concerned with this grave problem.

I have been heartened by the announcement that the U.S. Public Health Service has undertaken a comprehensive review of all data bearing on cigarette smoking and health risks, and I hope the evaluation can be made public soon. But meanwhile I feel it would be wise for Congress to set up the machinery for an extensive educational campaign to spread the facts that can be proved. I feel it only fair to the American people that they be widely apprised of the conclusions reached and then let them decide for themselves what—if anything—they wish to do about them personally. England and some of the other European countries are way ahead of us in doing this for their citizens.

I commend Mr. Hammond and the American Cancer Society for gathering together for us the evidence linking various ailments to heavy cigarette smoking, and the Scientific American for printing it. I ask unanimous consent that the article—although rather long—be printed in the body of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE EFFECTS OF SMOKING

(By E. Cuyler Hammond)

In 1560 Jean Nicot, the French ambassador to Portugal, wrote that an American Indian herb he had acquired had marvelous curative powers. For a time his view was widely accepted, and in his honor the herb was given the generic name Nicotiana. The species Nicotiana rustica, first introduced into Europe for smoking in pipes, was harsh and rather disagreeable. Later it was supplanted by Nicotiana tabacum, which produces a pleasanter smoke. N. rustica is still grown in the U.S.S.R. and other parts of Asia, but N. tabacum is now the chief source of smoking tobacco and is the only species cultivated in the United States.

Skepticism about the medical value of tobacco developed near the end of the 16th century; not long thereafter smoking was condemned as a pernicious habit responsible for all manner of ills. This did not prevent smoking from becoming an almost universal habit among men in Europe and the American colonies. Actually there was no scientific evidence for any harmful effects of tobacco until the middle of the 19th century.

It appears that M. Bouisson, an obscure French physician, deserves credit for the first well-documented clinical study of the matter. In 1859, reporting on patients in the hospital at Montpellier, he observed that of 68 patients with cancer of the buccal cavity (45 of the lip, 11 of the mouth, seven of the tongue and 5 of the tonsil) 66 smoked pipes, 1 chewed tobacco, and 1 apparently used tobacco in some form. He noted that cancer of the lower lip ordinarily developed at the point where the pipe was held in the mouth. He further noted that lip cancer occurred more frequently among individuals who smoked short-stemmed pipes (then called "mouth burners") than among those who smoked long-stemmed clay pipes or pipes with stems made of a substance that does not conduct heat. He suggested that the cancer resulted from irritation of the tissue by tobacco products and heat.

Bouisson's observations were confirmed repeatedly over the next half century, but since mouth cancer did not loom as a major medical problem the effect on smoking habits was insignificant. Another statistically unimportant problem early recognized as being associated with smoking was Buerger's disease, a rare affliction of the peripheral arteries. It was found to occur exclusively among smokers and to subside when the patient stopped smoking. In 1936, however, two New Orleans surgeons, Alton Ochner and Michael E. De Bakey, observed that nearly all their lung cancer patients were cigarette smokers. Noting that lung cancer seemed to be on the increase and that it was paralleled by a general rise in cigarette smoking, they suggested a casual connection between the two phenomena. In 1938 Raymond Pearl, the noted Johns Hopkins University medical statistician, reported that smokers had a far shorter life expectancy than those who did not use tobacco. The effect was so great as to indicate that smoking must be associated with diseases other than cancer. The first experimental evidence for an association between tobacco and cancer came in 1939, when A. H. Roffo of Argentina reported that he had produced cancer by painting tarlike tobacco extracts on the backs of rabbits. After World War II there was renewed interest in the subject of smoking and health, due partly to trends in tobacco consumption and partly to trends in death rates.

Before 1914 tobacco had been consumed mainly in pipes, cigars, chewing tobacco, and snuff. Cigarettes began to be popular during World War I. In the period from the early 1920's to 1960 the consumption of manufactured cigarettes in the United States rose from about 750 per adult per year to 3,900 per adult per year. During the same period the consumption of tobacco in all other forms declined by about 70 percent. The net result was that consumption of all tobacco products rose about 30 percent.

The changes in smoking habits are more significant than the overall rise in tobacco consumption. Smoke from cigars and pipes is heavy and as a rule slightly alkaline. Few people can inhale it without coughing or becoming dizzy or nauseated. Cigarette smoke, on the other hand, is relatively light, nearly neutral, and can be inhaled readily. Most habitual cigarette smokers inhale to some degree, and heavy cigarette smokers tend to inhale deeply. In a recent study conducted by the American Cancer Society detailed information has been obtained on the smoking habits of 43,068 men and women. Only 7 percent of the cigarette smokers among the men said that they did not inhale, whereas noninhalation was reported by 53 percent of the pipe smokers and 71 percent of the cigar smokers. Deep inhalation was reported by 24 percent of the cigarette smokers compared with only 3 percent of the pipe smokers and 1.5 percent of the cigar smokers. Women who smoke inhale to a lesser degree than men smokers do. Furthermore, women over the age of 40 smoke far fewer cigarettes than men of the same age do, and few women over 55 smoke as much as a pack a day. Among current cigarette smokers now over 50, the majority of the men started the habit before they were 20, whereas the majority of the women did not begin until they were over 35.

During the past half century, total death rates—including death rates from almost all infectious diseases and some noninfectious ones—have declined rapidly. Lung cancer is a striking exception. Deaths from lung cancer in the United States have climbed from 4,000 in 1935 to 11,000 in 1945 and to 36,000 in 1960. The toll in 1960 was approximately equal to the number of deaths caused by traffic accidents. In 1960, 86 percent of those who died from lung cancer were men. Between 1935 and 1960 the age-standardized death rate from lung cancer among U.S. men (the death rate adjusted for age differences in the composition of the population) increased 600 percent; among women it increased 125 percent. And for the past several years lung cancer has been the principal form of fatal cancer among men.

Painstaking studies have clearly demonstrated that the increase in lung cancer is real and not attributable merely to improvement in diagnosis. Lung cancer (that is, bronchogenic carcinoma) arises in the epithelium, or lining of the bronchial tubes. The increase seems to be confined to two closely related forms of the disease: epidermoid carcinoma and undifferentiated carcinoma. There seems to be little, if any, increase in another form of the disease: adenocarcinoma. (In adenocarcinoma the diseased cells assume an arrangement resembling that of the cells in a gland.)

Lung cancer accounted for about 2 percent of all U.S. deaths in 1960, and for about 6 percent of deaths among men in their late fifties and sixties. The leading cause of death in the United States is coronary artery disease of the heart, which accounted in 1930 for nearly 29 percent of all deaths, and for about 35 percent of deaths among men still in their 40's and 50's. As in the case of lung cancer, coronary artery disease is less common among women, accounting for only about 16 percent of the deaths occurring between the ages of 40 and 59.

In the late 1940's, when a number of investigators became concerned with lung cancer, cigarette smoking was only one of several factors suggested as possible causes for the increase in the disease. It was already well known that lung cancer could result from prolonged and heavy occupational exposure to certain industrial dusts and vapors. These include chromates, nickel carbonyl and dusts containing radioactive particles. Moreover, they result in epidermoid or undifferentiated carcinoma of the bronchial tubes and not in the less common adenocarcinoma.

This led to the hypothesis that the increase in lung cancer was due to increased exposure of the human population to air contamination of some sort. The factor involved had to be widespread and not confined to any particular occupational group. (In all countries with adequate mortality statistics lung cancer was found to have increased.) Three factors that met the requirements were: fumes from the combustion of solid and liquid fuels, dust from asphalt roads and the tires of motor vehicles, and cigarette smoking. The first two have not been ruled out as possibly contributing somewhat to the occurrence of lung cancer. It is the third that concerns us here.

As a first step a number of studies were made comparing the smoking habits of lung cancer patients with the smoking habits of individuals free of the disease. The results confirmed the 1936 observation of Ochsner and De Bakey. In every such study a far larger percentage of cigarette smokers was found in the lung cancer group than in the control group. Indeed, virtually all patients with epidermoid or undifferentiated carcinoma of the bronchial tubes admitted to smoking. There appeared to be less association, if there was any at all, between smoking habits and adenocarcinoma of the lung.

Cancer was not the only disease studied in relation to smoking habits. Knowing the acute effects of nicotine on the circulatory system, many physicians believed that smoking might be bad for patients with heart disease. In fact, a study made at the Mayo Clinic in 1940 by John P. English, Fredrick A. Willius, and Joseph Berkson had indicated a considerable degree of association between smoking habits and coronary artery disease. Furthermore, many doctors were under the impression that smoking had a bad effect on patients with gastric and duodenal ulcers.

A number of investigators, myself among them, were uncertain as to the validity of these clinical impressions and retrospective studies. A useful way to minimize bias and other difficulties in looking for an association between a disease and its possible causes is to employ the prospective, or followup method of investigation. The method consists of questioning a large number of presumably healthy individuals, keeping in touch with them for a number of years and finally ascertaining whether or not deaths in later years are associated with habits reported by the subjects before they became ill.

Two such prospective studies were undertaken in the fall of 1951, one in Britain by W. Richard Doll and A. Bradford Hill and the other in the United States by Daniel Horn and me. Under the auspices of the British Medical Research Council, Doll and Hill initiated their investigation by mailing questionnaires on smoking habits to all British physicians. They obtained information on all deaths among British physicians by checking death certificates. Their study is still in progress. Several years later similar investigations were undertaken by Harold F. Dorn, who studied U.S. veterans holding life insurance; by E. W. R. Best, G. H. Josie, and C. B. Walker, who are studying Canadian veterans and pensioners; and by John Edward Dunn, Jr., George Linden and Lester Breslow, who are studying men employed in certain occupations in California. In 1959 I started a new and more extensive prospective study in which smoking is included as only one of many factors under investigation.

The findings in all these investigations are remarkably similar; indeed, they are as close as could possibly be expected considering that the subjects were drawn from different populations and were of different ages. In the interest of brevity, therefore, I shall present data only from two studies with which I am personally concerned. The first of these was carried out as follows:

After designing and pretesting a questionnaire in the fall of 1951, we trained more than 22,000 American Cancer Society volunteers as researchers for the study. Between January 1 and May 31 of 1952 they enrolled subjects in 394 counties in 9 States. The subjects, all men between the ages of 50 and 69, answered a simple confidential questionnaire on their smoking habits, both past and present. A total of 187,783 men were enrolled, filled out usable questionnaires and were successfully kept track of for the next 44 months. Death certificates were obtained for all who died, and additional medical information was gathered for those who were reported to have died of cancer. Altogether 11,870 deaths were reported, of which 2,249 were attributed to cancer.

The most important finding was that the total death rate (from all causes of death combined) is far higher among men with a history of regular cigarette smoking than among men who never smoked, but only slightly higher among pipe and cigar smokers than among men who never smoked.

Men who had smoked cigarettes regularly and exclusively were classified according to their cigarette consumption at the time they were enrolled in the study. It was found that death rates rose progressively with increasing number of cigarettes smoked per day, as shown in the second chart in the series. The death rate of those who smoked two or more packs of cigarettes a day was approximately two and a quarter times higher than the death rate of men who never smoked.

Being a heavy cigarette smoker myself at the time, I was curious to know the death rate of ex-cigarette smokers. The death rate of men who had given up cigarette smoking a year of more prior to enrollment was considerably lower than that of men who were still smoking cigarettes when they were enrolled in the study.

Next we analyzed the data in relation to cause of death as reported on death certificates. Such information is subject to error, but on checking medical records we found that the diagnosis of cancer had been confirmed by microscopic examination of tissue in 79 percent of the deaths ascribed to this disease. Even in some the these cases, however, the site of origin of the cancer was unknown or open to question. This is because cancer, unless successfully treated at an early stage, spreads through the body and its source is often difficult to determine. There is another difficulty that has to do with other causes of death. People in the older age groups not infrequently suffer from two or more diseases, one or another of which could be fatal. Since death can result from the combined effects of these diseases, it is difficult, and perhaps illogical, to ascribe death to one alone. These difficulties should be kept in mind in evaluating the following findings.

During the course of the study 7,316 deaths occurred among subjects with a history of regular cigarette smoking (some of whom smoked pipes and/or cigars as well as cigarettes). We divided these deaths according to primary cause as reported on death certificates. Only 4,651 of the cigarette smokers would have died during the course of the study if their death rates had exactly matched those of men of the same age who had never smoked.

Since coronary artery disease is the leading cause of death among men in the United States today, it is not surprising that we found it to be the leading cause of death among nonsmokers as well as among cigarette smokers. But the rate was 70 percent higher among cigarette smokers.

Lung cancer is an extremely rare cause of death among nonsmokers, except for those who have had prolonged and heavy occupational exposure to certain dusts and fumes. Taking death-certificate diagnosis at face value, the lung cancer death rate was more than 10 times higher among cigarette smokers than among nonsmokers. On obtaining medical records we found that, of 448 deaths attributed to this cause, the diagnosis of bronchogenic carcinoma was established by microscopic examination in addition to other evidence in 327 cases, of which 32 were adenocarcinoma. The rate was very low for men who had never smoked, it increased with the amount of cigarette smoking, and it was very high for men who smoked two or more packs of cigarettes a day. When standardized both for age and for the amount of smoking, the rate for ex-cigarette smokers who had given up the habit for a year or more was considerably lower than the rate for men who were smoking cigarettes regularly at the start of the study. The lung cancer death rate of cigar and pipe smokers was very low compared with that of cigarette smokers, although higher than the rate for nonsmokers.

Altogether 127 deaths were attributed to cancer of other tissues (mouth, tongue, lip, larynx, pharynx, and esophagus) that are directly exposed to tobacco smoke and material condensed from tobacco smoke. In 114 of these cases the diagnosis was confirmed by microscopic examination. Of these 114 men, 110 were smokers and only 4 had never smoked. The figures suggest that pipe and cigar smoking may be more important than cigarette smoking in relation to cancer of one or more sites included in this group, but the number of cases was not sufficient for a reliable evaluation of this point. Nevertheless, these cancers were the only causes of death for which the death rate of pipe and cigar smokers was found to be far higher than the death rate of nonsmokers.

Other reported causes of death showing a fairly high degree of association with cigarette smoking were gastric and duodenal ulcers, certain diseases of the arteries, pulmonary diseases (including pneumonia and influenza), cancer of the bladder and cirrhosis of the liver. Many other diseases appeared to be somewhat associated with cigarette smoking.

In 1959 I started a new study considerably larger than the first one. By securing the services of some 68,000 volunteer workers of the American Cancer Society in 1,121 counties in 25 States, we enrolled as subjects 1,079,000 men and women over the age of 30. Each of them filled out a lengthy confidential questionnaire including questions on family history, diseases and physical complaints, diet, smoking and other habits, residence history, occupational exposures, and many other factors not included in previous studies. We plan to follow these subjects for 6 years. So far followup information is available only for the first 10½ months of observation.

The early findings on smoking are in close agreement with findings in all previous studies. In this study smokers were asked the degree to which they inhaled the smoke. It was found that, in relation to total death rates, the degree of inhalation is as important, and perhaps more important, than the amount of smoking.

The new study has also revealed a high degree of association between cigarette smoking and a number of physical complaints, most particularly coughing, shortness of breath, loss of appetite and loss of weight. These complaints were related to the degree of inhalation as well as to the amount of smoking. They were reported less frequently by cigar and pipe smokers (most of whom do not inhale) than by cigarette smokers (most of whom inhale either moderately or deeply).

Two prospective studies of smoking in relation to the occurrence of coronary artery disease have been carried out in Framingham, Mass., and Albany, N.Y. The combined findings from these studies were published on April 19 in the New England Journal of Medicine by Joseph T. Doyle, Thomas R. Dawber, William B. Kannel, A. Sandra Heslin, and Harold A. Kahn. On enrollment in these studies each subject was given a medical examination. No symptoms of coronary artery disease were initially found in 4,120 men. These men were reexamined from time to time for a number of years. Symptoms of coronary artery disease (as well as death from this disease) were found far more frequently among those who smoked cigarettes regularly than among those who did not smoke. The total death rate was more than twice as high among men who smoked more than 20 cigarettes a day as among men who had never smoked. Ex-smokers and cigar and pipe smokers had morbidity and mortality records similar to the records of those who had never smoked. Thus the findings in this study based on medical examination of subjects were in close agreement with findings in the other U.S. studies.

Although all the studies have shown essentially the same results, there are some interesting differences between the results in Britain and the United States. Lung cancer death rates are about twice as high in Britain as they are in the United States, chronic bronchitis is reported to be a common cause of death by British physicians but is seldom mentioned as a cause of death in the United States; death rates from coronary artery disease (as reported on death certificates) are far lower in Britain than they are in the United States. No one really knows the reasons for these differences. Speculations on the subject may be briefly summarized as follows:

Climate, the method of heating houses, exposure to air pollutants and occupational exposure to dusts and fumes have all been suggested as possible reasons why both lung cancer and chronic bronchitis appear to occur more frequently in Britain than in this country. Differences in smoking habits have also been suggested as a possible factor. Doll and Hill have studied the length of discarded cigarette butts in England and Wales, and Ernest L. Wynder of the Sloan-Kettering Institute for Cancer Research and I have made similar studies on this side of the Atlantic. The average length of the butts was found to be 18.7 millimeters in England and Wales (where cigarettes are quite expensive), compared with 27.9 millimeters in Canada and 30.9 millimeters in the United States. Therefore British smokers consume more of each cigarette and so receive a higher amount of nicotine and tobacco tar than Canadian and U.S. smokers do.

Diet has been suggested as a possible reason why death rates from coronary artery disease appear to be higher in the United States than they are in Britain. This apparent difference may be at least partly due to difference in diagnosis of the cause of death. Death can result from the combined effects of heart disease and lung ailments, particularly in older people. In the case of heart failure in a person suffering from a lung disease it is sometimes difficult to decide which to record as the principal cause of death. Thus the apparent high death rate reported as due to chronic bronchitis in Britain may be related to the comparatively low death rate reported as due to coronary artery disease in that country. Be that as it may, the Doll and Hill study showed less of a relation between smoking and coronary artery disease than did our U.S. study. On the other hand, Doll and Hill found a very high relation between smoking and death from chronic bronchitis.

In recent years considerable attention has been given to the chemical composition of tobacco smoke. A great many compounds have been identified, most of which are present in very small amounts. Some are distilled out of the tobacco and others are products of combustion. Included are numerous poisons (such as nicotine), various agents that are highly irritating to mammalian tissues, several carcinogenic (cancer-producing) compounds and some carcinogenic compounds (materials that increase the potency of carcinogens). Most of this material is suspended in small particles, which together with carbon monoxide, air and other gases constitute tobacco smoke.

Ernest Wynder and his various collaborators have shown that tobacco-smoke condensate, or tar, produces cancer in mice and rabbits if applied repeatedly to the skin over a long period of time. A number of investigators have confirmed these findings. The cancers so produced in rodents are of a type known as epidermoid carcinoma. (A synonym is squamous cell carcinoma, because the cells tend to be flattened, or squamous.) Different strains of animals vary in susceptibility, some being highly susceptible and others highly resistant.

Many investigators who have tried to produce lung cancer in rodents by exposing them to tobacco smoke have not succeeded in doing so. This may be because of two serious difficulties. Whereas a human smoker takes in smoke through his mouth, mice and other small rodents breathe through their noses, and in rodents this organ has developed into a remarkably efficient filter for preventing particulate matter from being drawn into the lung. Moreover, mice are sensitive to the acute toxic effects of tobacco smoke.

Several years ago I exposed mice to cigarette smoke under such conditions that they were forced to breathe smoke of approximately the same concentration as that of smoke taken in by human cigarette smokers. Unfortunately many of my animals went into convulsions and died within a few minutes. The remaining animals lived only a short time. By reducing the concentration of smoke the animals can be kept alive, but under such conditions it is doubtful whether or not their lungs are any more heavily exposed to the particulate matter of cigarette smoke than are the lungs of a nonsmoker sitting in a small room with several heavy smokers.

Nevertheless, by subjecting mice to tolerable concentrations of tobacco smoke Cecilie and Rudolph Leuchtenberger and Paul F. Doolon of the Children's Cancer Research Foundation in Boston have succeeded in producing various changes in the lining of the bronchial tubes of mice. These changes are similar to changes found in the bronchial tubes of human cigarette smokers. So far no cancers have been produced in mice thereby. This is consistent with the finding that lung cancer rarely occurs in human beings who are only slightly exposed to tobacco smoke.

During smoking the tissues first exposed to tobacco smoke are the lips, the tongue and the muccous membrane of the mouth. Some of the components of tobacco smoke (including known carcinogens) fluoresce under ultraviolet light. Robert C. Mellors of the Cornell University Medical College has shown that this material penetrates the cells of the lining of the mouth. The type of cancer that arises in this tissue is epidermoid carcinoma—the same type of cancer that is produced when tobacco tar is applied to the skin of experimental animals. Furthermore, the amount of tar required to produce epidermoid carcinoma of the skin in mice is roughly comparable to the exposure of a heavy smoker who develops epidermoid carcinoma of the lip or mouth.

In study after study a high degree of association has been found between smoking of all types (as well as the chewing of tobacco) and the occurrence of cancer of these tissues. It is hard to escape the conclusion that this association reflects a direct causal relation. This does not preclude the possibility that other factors (such as host susceptibility or exposure to other carcinogenic materials) are involved in at least some cases.

What has just been said of smoking in relation to cancer of the lips, mouth, and tongue also applies to cancer of the pharynx and cancer of the larynx. The situation is slightly different in cancer of the esophagus; this passageway is exposed to ingested tobacco-smoke condensate but not directly to the smoke. The strong association between smoking and epidermoid carcinoma of the esophagus, however, would seem to point to the same conclusion.

When inhaled, tobacco smoke travels down the trachea to the bronchial tubes of the lungs. All but a few cases of lung cancer originate in the lining, or epithelium, of these tubes. This is remarkable tissue, well worth describing here. Normally it consists of just two layers of cells that rest on a thin mat of tiny fibers called the basement membrane. This membrane separates the epithelium from the underlying tissue. Directly on top of the basement membrane is a layer of small, round cells with relatively small nuclei. They are called basal cells. On top of the basal cells is a single layer of cells known as columnar cells (because from the side they look like columns) interspersed with a few goblet cells (which look like little wine goblets). The goblet cells secrete a sticky fluid onto the surface. This is augmented by fluid secreted by glands located below the basement membrane. Protruding from the top of the columnar cells are short, hairlike cilia, which constantly move in a whiplike manner. This causes fluid on the epithelium to move up through the bronchial tubes and the trachea into the mouth, where it is either swallowed or expectorated.

The cilia and the fluid perform an extremely important function in cleansing the lungs. Small particles of dust or smoke that settle on the surface of the bronchial tubes are trapped in the fluid and, together with the fluid, are moved up and out of the lungs.

It has been shown by Anderson C. Hilding of St. Luke's Hospital in Duluth, Minn., by Paul Kotin of the University of Southern California School of Medicine and by others that tobacco smoke inhibits the movement of the cilia to such a degree that the flow of fluid is slowed down, if not stopped altogether. This allows an accumulation of tobacco-smoke products and whatever other material happens to fall on the lining of the bronchial tubes. Smokers and nonsmokers alike—particularly those living in cities with polluted air and those engaged in certain occupations—inhale dust of various types, and some of the dusts contain carcinogenic substances.

For a number of years I have been cooperating in an extensive study of human lung tissue with Oscar Auerbach, a pathologist at the Veterans' Administration hospital in East Orange, N.J., and with Arthur Purdy Stout of the Columbia University College of Physicians and Surgeons. Some of our findings can be summarized as follows.

At the East Orange Veterans' Hospital and at a number of hospitals in upstate New York the lungs are routinely removed at autopsy. The trachea and bronchial tubes are dissected out of the lungs and systematically divided into 208 portions, each of which is embedded in paraffin. A thin section of tissue is cut from each of these portions, mounted on a glass slide, and stained with a suitable dye for microscopic examination. Independently, under the supervision of Lawrence Garfinkel of my staff, an interviewer is sent to the home of each patient to obtain information on his or her occupational history, residence history, and smoking habits. We do not include a case unless this information can be obtained. All told, we have studied tissue from the bronchial tubes of more than 1,000 individuals.

In each of our studies microscope slides from a number of different patients have been put in completely random order by the use of a table of random numbers. They are then labeled with a serial number that gives no clue to their identity. All the slides are studied microscopically by Auerbach and samples of them are checked by Stout. After the slides are examined, the serial numbers are decoded so that the microscopic findings can be analyzed in relation to other information about the subjects.

Three major types of change occur in bronchial epithelium: hyperplasia (an increase in the number of layers of cells), loss of ciliated columnar cells and changes in the nuclei of cells. Hyperplasia is the usual reaction of surface tissues to almost any type of irritation, either chemical or mechanical. A familiar example is the formation of calluses on the hands. We found some degree of hyperplasia in 10 to 18 percent of slides from nonsmokers, in more than 80 percent of slides from light cigarette smokers, and in more than 95 percent of slides from heavy cigarette smokers. Extensive hyperplasia (defined as five or more layers of cells between the basement membrane and the columnar cells) was frequently found in heavy cigarette smokers but rarely in other subjects.

Loss of ciliated columnar cells was observed in nonsmokers but far more frequently in cigarette smokers, and the frequency of this observation increased with the amount of cigarette smoking. The implication is that foreign material tends not to be removed, and thus can accumulate where the cilia have been destroyed.

An important finding was the occurrence of cells with atypical nuclei. The nuclei of cancer cells are usually large, irregular in shape and characteristically have many more than the normal number of chromosomes. A few cells with nuclei that have such an appearance are occasionally found in the bronchial epithelium of men and women who have never smoked. Presumably they result from somatic mutation or some similar process. In nonsmokers the frequency of such cells does not increase with age.

Large numbers of cells with atypical nuclei of this kind were found in slides from cigarette smokers, and the number increased greatly with the amount of smoking. In heavy cigarette smokers we found many lesions composed entirely of cells with atypical nuclei and lacking cilia. Fewer such lesions were found in light cigarette smokers and none were found in nonsmokers. Among heavy cigarette smokers the number of cells with atypical nuclei increased markedly with advancing age.

In our latest study of bronchial epithelium we matched 72 ex-cigarette smokers, 72 men who had smoked cigarettes regularly up to the time of their terminal illness and 72 men who had never smoked. None of the men had died of lung cancer. Within each of the 72 triads, the 3 men were the same age, had similar employment histories and similar residence histories. Somewhat more changes were found in slides from ex-cigarette smokers than in slides from men who had never smoked. The important finding, however, was that the cellular changes, particularly the occurrence of cells with atypical nuclei, were fairly rare in ex-cigarette smokers compared with men who had smoked up to the time of their terminal illness. The study indicated that the number of cells with atypical nuclei declines when a cigarette smoker gives up the habit. This probably occurs slowly over a period of years.

The location of lesions is also significant and correlates with an observation one can make by passing cigarette smoke through glass tubing. Some years ago I found that when smoke was passed through a tube with a Y-shaped bifurcation, more tar precipitated where the tube branched than elsewhere. Acting on this lead, we have studied changes in bronchial epithelium in relation to bifurcations. There are numerous such points in the bronchial tree, because the tubes divide and redivide into smaller and smaller tubes. We found that lesions composed entirely of cells with atypical nuclei occur far more frequently at bifurcations than elsewhere.

In order to determine the significance of these changes we studied the bronchial epithelium of men who had died of bronchogenic carcinoma. Carcinoma is defined as a tumor, composed of cells with atypical nuclei, that originated in the epithelium and has penetrated the basement membrane and invaded the underlying tissue. Once such an invasion has occurred, the tumor grows—often to considerable size—and spreads to many parts of the body. In men who had died of lung cancer we found large numbers of cells with atypical nuclei, as well as many lesions composed entirely of such cells, scattered throughout the epithelium of the bronchial tubes of both lungs. In a few instances we found tiny independent carcinomas in which the tumor cells had broken through the basement membrane at just one small spot. These carcinomas looked exactly like many of the other lesions composed entirely of cells with atypical nuclei, except that in the other lesions we did not find any cells that had broken through the basement membrane. We are of the opinion that many, if not all, of the lesions composed entirely of atypical cells represent an early, preinvasive stage of carcinoma. This is a well-known occurrence in the cervix of the uteri of women and is called carcinoma in situ.

Judging from experimental evidence as well as from our findings in human beings, we are of the opinion that carcinoma of bronchial epithelium originates with a change in the nuclei of a few cells; that by cell division the number of such cells gradually increases; that finally lesions composed entirely of atypical cells are formed; and that occasionally cells in such a lesion penetrate the basement membrane, producing the disease known as carcinoma. Apparently the process is reversible up to the time the cells with atypical nuclei break through the basement membrane.

Where does the inhalation of tobacco smoke fit into this picture? There appear to be three possibilities:

1. It may be that exposure to tobacco smoke induces changes in the nuclei of cells. This would account for the increase of such cells both with the amount of smoking and with the number of years of smoking. It would not, however, in itself account for the finding of a decrease in the number of such cells when a cigarette smoker gives up the habit.

2. It may be that exposure to tobacco smoke simply increases the probability of changes taking place in the nuclei of cells as a result of exposure to inhaled carcinogenic agents other than those in tobacco smoke. The inhibition of ciliary movement by tobacco smoke may be the major factor

involved in such a relation. Again this would not in itself account for the decrease in cells with atypical nuclei following cessation of cigarette smoking.

3. It may be that exposure to tobacco smoke produces a change in the local environment of bronchial epithelium so as to favor the survival and reproduction of certain mutant cells that have atypical nuclei of the type observed, as opposed to the survival and reproduction of normal cells. On this hypothesis the development of cancer results from natural selection under conditions of greatly altered environment. It is unnecessary to assume that tobacco smoke causes mutations, since a few cells with atypical nuclei are sometimes found in the bronchial epithelium of nonsmokers. This hypothesis suggests that normal cells are best adapted to an environment free of tobacco smoke, whereas cells with atypical nuclei are best adapted to an environment that includes smoke. The hypothesis thus accounts for the decline in the number of cells with atypical nuclei on the cessation of cigarette smoking.

I favor the last of these three hypotheses. It appears to account for all the findings, whereas the other two hypotheses account for only some of them. The three hypotheses are not, however, mutually exclusive.

To account for the association between cigarette smoking and certain other diseases, such as lung infections and coronary artery disease, other plausible mechanisms exist. On inhalation, air and any smoke it may contain passes through bronchial tubes of decreasing diameter, which finally deliver it to the tiny sacs called alveoli. The alveoli have thin walls supported by fibers of connective tissue. These walls contain capillary tubes through which blood flows from the pulmonary arteries to the pulmonary veins. During its passage through these capillaries the blood releases carbon dioxide and absorbs oxygen. At the same time carbon monoxide, nicotine and other impurities that may be present in the air or smoke are absorbed into the blood.

The small bronchial tubes are subject to being plugged with mucus. This frequently occurs in infectious diseases of the lung, with the result that secretions and bacteria are trapped in the alveolar spaces, thereby producing pneumonia. In cigarette smokers the interior diameter of the small bronchial tubes is considerably reduced by hyperplasia, so that the opening is very small indeed. In addition we find that smoking results in increased activity of the glands that secrete mucus into the bronchial tubes. This combination almost certainly increases the likelihood of the tubes being plugged by mucus. In my opinion this is enough to explain the finding that death rates from infectious diseases of the lung are considerably higher among cigarette smokers than among nonsmokers.

The occlusion of a bronchial tube by mucus (or by a spasm) often traps air in the alveoli to which that tube leads. If the person then happens to cough, the pressure of the trapped air can be increased to such a degree that the thin walls of the alveoli rupture. Coughing, excess mucus, and reduction in the diameter of the small bronchial tubes increase the likelihood of such rupture.

Recently we have studied the alveoli in relation to cigarette smoking. We found extensive rupturing of the walls of a great many alveoli in the lungs of heavy cigarette smokers, a considerable amount in lighter cigarette smokers and very little in nonsmokers. The rupturing of the walls is usually accompanied by a fibrous thickening of the remaining alveolar walls, together with a fibrous thickening of the walls of the small blood vessels in the vicinity. This probably results from the mechanism outlined above, since cigarette smoking produces coughing as well as hyperplasia of the bronchial tubes and increased secretion of mucus.

Ruptures in the walls of the alveoli destroy the capillary tubes located in the walls. If many are destroyed, far greater pressure is required to force the same quantity of blood through the remaining capillaries. All the blood must pass through them each time it circulates through the body, and the right ventricle of the heart has to supply the pressure. As a result the work load of the heart is increased in proportion to the degree of destruction of the alveoli.

Since oxygen is supplied to the blood through the capillaries in the alveoli, destruction of this tissue reduces the oxygen supply on which all the tissues of the body depend. In smokers this is compounded by the inhalation of carbon monoxide, which combines with hemoglobin more readily than oxygen does. This combination is enough to account for the shortness of breath often reported by cigarette smokers.

Beçause of its great activity heart muscle requires an abundant supply of oxygen. The inhalation of tobacco smoke increases the work load of this muscle and at the same time reduces the quantity of oxygen available to the muscle. In addition the action of nicotine on the nervous system produces a temporary increase in the heart rate and a constriction of the peripheral blood vessels, which in turn produces a temporary increase in blood pressure. This also puts an added strain on the heart. Since a normal heart has extraordinary reserve powers, it can probably withstand these effects of smoking. A diseased heart may not be able to do so.

Autopsy studies (including a study of young men killed in the Korean war) have shown that the great majority of American men have at least some degree of atherosclerosis of the coronary arteries that supply blood to the muscle of the heart. Atherosclerosis consists of the progressive development of plaques (composed largely of cholesterol) within the walls of these relatively small blood vessels, which thereby reduces their interior diameter. This in turn reduces the supply of blood to the heart muscle. Eventually it may completely cut off the supply of blood to a portion of the heart muscle, and this portion dies. Moreover, blood clots often form in diseased coronary arteries. This can also shut off the blood and cause death of heart tissues. The common symptom of a stoppage in coronary blood flow is a heart attack.

As described above, cigarette smoking decreases the quantity of oxygen per unit volume of blood. Atherosclerosis of the coronary arteries tends to reduce the volume of blood delivered to the heart muscle per minute. Therefore if a person with atherosclerosis of the coronary arteries is also a cigarette smoker, his heart muscle receives far less than the normal supply of oxygen per minute. At the same time, because of the effects of smoking, a heavy work load is placed on his heart muscle. In my opinion this combination of conditions is sufficient to account for the finding that the death rate from coronary artery disease is higher in cigarette smokers than it is in men who never smoked, that the rate increases with the amount of cigarette smoking, and that it is lower in ex-cigarette smokers than it is in men who continue to smoke cigarettes.

Not only the heart but also all other organs of the body require oxygen obtained through the alveoli of the lungs and distributed by the blood. Thus a reduction in oxygen supply resulting from smoking may have a serious effect on any diseased organ, and in some instances it can make the difference between life and death. Perhaps this accounts for the finding that death rates from a multiplicity of chronic diseases are slightly higher among cigarette smokers than among nonsmokers.

I shall touch only briefly on two other diseases that appear to be significantly associated with cigarette smoking: gastric and duodenal ulcers and cancer of the bladder. In our first study cigarette smokers, compared with nonsmokers, had four times the relative death rate from the two kinds of ulcer and twice the death rate from cancer of the bladder. Doll and his associates in England recently performed a controlled clinical experiment demonstrating that smoking is indeed harmful to patients with gastric ulcer. Eighty patients who were regular smokers were divided at random into two groups, one allowed to continue smoking, the other advised to stop. Among the 40 patients who continued to smoke, the ulcers healed at a significantly slower rate than they did among the 40 patients who cut down on their smoking or stopped altogether. The mechanism by which smoking evidently retards recovery is unknown. It may be due to indirect effects, such as the effect of nicotine in the bloodstream, or to direct action of ingested tobacco smoke on the lining of the stomach.

As for cancer of the bladder, it is well known that exposure to carcinogenic agents can produce cancer in parts of the body remote from the tissue to which the agent is applied. For example, prolonged exposure to beta-naphthylamine often produced cancer of the bladder in workers in aniline dye plants. Conceivably some agent in tobacco smoke works in the same way, but until the problem is thoroughly investigated, judgment should be deferred.

After reviewing the evidence, the mildest statement I can make is that, in my opinion, the inhalation of tobacco smoke produces a number of very harmful effects and shortens the life span of human beings. The simplest way to avoid these possible consequences is not to smoke at all. But one can avoid the most serious of them by smoking cigars or a pipe instead of cigarettes, provided that one does not inhale the smoke. An individual who chooses to smoke cigarettes can minimize the risks by restricting his consumption and by not inhaling.

The individual solution to the problem apparently requires more willpower than many cigarette smokers have or are inclined to exert. I am confident, however, that more generally acceptable solutions can be found. There is good reason to suppose that the composition of tobacco smoke, both qualitative and quantitative, is a matter of considerable importance. Until several years ago the mainstream smoke of most U.S. cigarettes contained about 35 milligrams of "tar" per cigarette, of which about 2.5 milligrams was nicotine. The smoke from filter-tip cigarettes now on the market ranges in tar content from as low as 5.7 milligrams per cigarette to nearly 30 milligrams and the nicotine content from .4 to 2.5 milligrams. It is apparent that by selection of tobacco and by means of an effective filter, the nicotine and tar content of cigarette smoke can be markedly reduced. Some filters are selective in their action. For example, Wynder and Dietrich Hoffmann have recently found that a certain type of filter, which passes a reasonable amount of smoke, removes almost all the phenols. This may be important since the same investigators have reported that the phenols in cigarette smoke strongly inhibit the action of cilia in the bronchial tubes, and that some phenols increase the action of known carcinogenic agents. Furthermore, by various processes it is possible to alter the chemical composition of the smoke before it reaches the filter.

Considering this, I believe that extensive research should be undertaken to determine the effects of various constituents of cigarette smoke and to find means of removing those that are most harmful. Until this has been accomplished it seems advisable to reduce the total tar and nicotine content of cigarette smoke by the means now available.

CLINICAL EVIDENCE OF THE EFFECTS OF SMOKING

Mrs. NEUBERGER. Mr. President, a few minutes ago the Senator from Utah had printed in the body of the RECORD an article—from the Scientific American magazine—about the effects of smoking. I ask unanimous consent that my remarks appear in the RECORD following those of the Senator from Utah, so that I may comment further on the article.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mrs. NEUBERGER. Mr. President, for at least 10 years the American tobacco industry has conducted a campaign to discredit the findings and conclusions of responsible scientists regarding the health hazards of smoking. To each succeeding discovery closing the link between smoking and disease, the industry's spokesmen have replied "Not proved."

Perhaps the most frequently voiced quibble of the tobacco industry is that the evidence relating smoking to disease has been merely statistical—not clinical. Although responsible statistical studies are as probative as the most carefully controlled laboratory experiments, the tobacco industry, by incessant repetition of its charges, has succeeded in averting public acceptance of the evidence.

Dr. E. C. Hammond, director of the statistical research section of the American Cancer Society, and his associates have now produced the clinical evidence that the tobacco industry has hitherto found lacking. In the July issue of the Scientific American, Dr. Hammond presents clinical proof of the ruinous transfigurations in human lung tissue caused by the inhalation of cigarette smoke.

Dr. Hammond's article, which also summarizes the present status of knowledge on the physiological effects of smoking, contains as compelling an indictment of tobacco as any material yet printed in this country. I suggest that all who yet doubt the lethal qualities of tobacco smoke read this article.

SENATOR WAYNE MORSE AT SALT LAKE CITY, UTAH

Mr. MOSS. Mr. President, on July 28 the senior Senator from Oregon [Mr. MORSE] came to Salt Lake City to address the Democratic State convention. He delivered a very eloquent and excellent address.

I point out that the senior Senator from Oregon performed something of a physical feat in coming to Salt Lake City at that time. He left Baltimore at 12:50 a.m. Saturday and arrived in Salt Lake City at 5:25 a.m. the same morning. He then not only had breakfast with the party leaders and with other visitors in Salt Lake City, but he also addressed the convention, held a lengthy press conference, appeared on television, and at 6 p.m. the same day he was aboard an airplane headed back to Washington. He landed at the Baltimore airport at about 3:40 in the morning.

That sort of devotion to an assignment deserves notice. The important thing to which I wish to invite the attention of Senators, and which I ask unanimous consent to have printed at this point in the RECORD, is the remarks made by the senior Senator from Oregon in Salt Lake City to the convention.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS OF SENATOR WAYNE MORSE, AT THE DEMOCRATIC CONVENTION, SALT LAKE CITY, UTAH, JULY 28, 1962

Senator Moss, my friends in Utah, and fellow Democrats, there is never a time when I am not most eager to visit Salt Lake City, to visit Utah, to enjoy the company of my good friend and colleague, TED MOSS, and to talk to a convention of Democrats. This is one time when I can do all those things at once. So this occasion is a great pleasure.

We Democrats have our job cut out for us this year. It is to break down for the first time since 1934 the so-called tradition that the party in power loses votes and seats in a nonpresidential year. I am here today to tell you that we can break that pattern and that we need to break it if the welfare of the American Nation and the American people is to be served.

The Democratic administration of President Kennedy has sent to Congress the messages and recommendations necessary to the carrying out of the great bulk of the 1960 Democratic platform. He has done about as much as any President can do to persuade individual Members of the Congress of both parties to help put those recommendations into effect. We all know that while we obtained the Area Redevelopment Act, and an outstanding housing bill in the 1st session of the 87th Congress, most of the rest of the domestic program is bottled up somewhere in Congress.

It is interesting to note that in nearly every case where a rollcall has been taken that failed to carry for the Democratic majority, it was not a rollcall on the merits of the issue involved, but on a procedural device. We did not get a clear vote in the Senate on the medical issue—we got a vote to table it when it was offered as an amendment to another bill. We did not get a clear vote on the establishment of a Department of Urban Affairs, we got a vote on bypassing a Senate committee in order to speed up action in the House. And we have never gotten a vote in the House of Representatives on medical care, aid to elementary and secondary education, reestablishment of the GI bill for veterans, the Youth Conservation Corps, and the wilderness bill, among others.

Why? Because the Rules Committee of the House of Representatives is one of the last oligarchs of American politics.

There is no test for candidates for the House of Representatives more important than the test of whether they are ready and willing to vote to bring the Rules Committee back under the dome of the Capitol, and make it the servant rather than the master of the House of Representatives.

Let me say that I expect Democrats to be judged as harshly on this issue as Republicans. It does our party no good to elect Democrats who give lipservice to the principles and platform of our party, and then take the expedient escape route of establishing a Rules Committee which will bury the legislation necessary to effectuate our principles and platform.

But every Democratic candidate, and officeholder, also has the obligation to take the issues to the voting public. I shall do it in Oregon, you will be doing it in Utah, and I expect President Kennedy to do it across the length and breadth of the Nation.

The American people need an education on what is involved in the medical care issue, to take one major example. They need to be told just where and how the opponents of medical care under social security are deluding the elderly by holding out the promise that the Kerr-Mills program will assure decent medical care in their later years.

Those of us who voted for the Kerr-Mills bill did so because we considered it an addition to the social security approach, not a substitute for it. We recognized that taxes paid to finance the Federal portion of the Kerr-Mills program are just as compulsory as are social security taxes, and so are the State taxes needed to finance the State share of Kerr-Mills. We knew that those who do not want to apply for the hospitalization benefits under social security do not have to do so, any more than they are compelled to apply for Kerr-Mills medical care.

The great difference is that under an insurance program, benefits are accrued as a right, which the beneficiary may exert, or not. This means that there is no pauper's oath, no means test for the recipient or for his relatives, as so many States require under the Kerr-Mills program. As for socialized medicine, public welfare is pure socialized medicine. What is to stop Utah, or Oregon, or any other State from upping its public assistance under Kerr-Mills to the point where virtually any citizen over 65 may obtain medical services, including those of a doctor, paid for by the State? The answer is, nothing. And the taxes to pay for it will be compulsory.

I should mention that only 24 States have any Kerr-Mills program at all, so we are talking about less than half the country when we talk about its benefits at all.

What the American Medical Association is counting on is that State governments can be more easily influenced, to use the polite word, and lobbied, to use the not-so-polite word, into restricting their public welfare to a tiny handful of desperate old folks. I think that society has a higher duty than that. Sometimes we exercise these social obligations through a fraternal group, perhaps through a church, or perhaps through one level of government or the other. In our latest version of hospital insurance under social security, we have provided that it can be administered in large part through nonprofit agencies already in the field, including Blue Cross.

All we are seeking through the Anderson-Javits proposal is hospitalization insurance that will be available to all elderly people who want to make use of it. That is all the bill provides. They may have a private insurance policy which they prefer to use and if so, the equal benefits provided will be reimbursed without the beneficiary coming directly under social security.

Let the Democratic Party remember that respect and honor for our fathers and mothers is not the invention of Franklin Roosevelt or the New Deal, but of the Ten Commandments. We have a personal responsibility, and we have a social responsibility. For too long we have met the first and not the second.

So I say that the Democratic Party must keep faith with this tenet of our platform, and our candidates must keep faith with it.

A second major domestic issue which Democrats must take to the people this fall is that of conservation of our natural resources. Like my own State, Utah has water problems. Oregon has a water surplus in one-half of the State and a shortage in the other half. You have the need everywhere in Utah to utilize water not once but many times over. It serves to irrigate, to produce power, to serve living needs, to serve industrial needs, to provide recreation, and to provide sewage disposal. This means that the same drop of water must be used for many of these purposes, not just for one.

Reuse of water requires abatement of pollution. It requires storage of runoff. It requires the kind of program we began in 1956 and tried to expand in 1959. You have a contest this year for the U.S. Senate in which Democrats seek to replace one of the Senators who voted in 1959 against the expansion of the water pollution control program. I hope he will be replaced by a citizen of Utah who recognizes that water supply is a test not of a city, a State, or even a nation, but of a civilization.

There has never been a civilization that progressed beyond the point to which it conserved its water supply. Two thousand years ago, China was a dominate civilization of humankind. It was forested; its plains and woodlands were covered with grass and trees. As its population expanded, it decimated these resources, and with them its water supply was decimated. Today, the scientists from the West who have visited Communist China tell us that the most grievous crime against the land by the Communist rulers of China has been the further depletion of woodland, grass, soil, and water which has reduced the water table of China even further than it was when Mao Tse-tung came to power, and it was too low then. Writing in the New Leader, Valentin Chu, a native of Shanghai, tells us, and I quote: "After many centuries of exploitation, by a vast farming population, China has very little natural vegetation left. Forests make up one-tenth of its total area. The water-holding capacity of the soil is therefore extremely poor, and excessive runoff is a major cause of floods. Another major cause is the breaching of dikes. The Yellow River, the world's siltiest, deposits enough sediment on its delta to fill up one-and-a-half Empire State Buildings daily. For hundreds of miles it flows between dikes on a riverbed high above the surrounding countryside, with the silt raising the bottom continuously. A single breach can empty the entire river on to the flat, densely populated Yellow Plain as far as the eye can see, sometimes inundating the region for as long as a year. * * * When too much water goes to one place, there is bound to be too little elsewhere.

"Each year," he continues, "since the Communists came to power in 1949, the total area of farmland affected by natural calamities has risen steadily. * * * What China is now facing is no common natural disturbance, affecting a few provinces for a short time. It is a nationwide exhaustion of the land and the people, the cumulative result of 12 years of abusing nature and human nature."

While the Communist plans for reforestation have fallen through, deforestation of what remains of woodlands in that unfortunate country has continued rapidly. Mr. Chu continues: "While forestation surged up and died off, deforestation seemed to progress systematically. Forest fires and the incidence of tree diseases have increased. Artificial deforestation has also been on the increase, especially since 1958. Farm cooperatives and communes have set their cattle to graze on saplings, and have chopped down roadwide trees and whole forests for timber or to 'open virgin land.'"

"During the 1958 steelmaking campaign many mountains were stripped bare for fuel. A commune in Kwangtung closeshaved 13 forest-covered hills in one swoop. Timber industries in forest areas * * * competed with each other in cutting down big and small trees without replanting. Even saplings were not left to protect the soil, which soon became barren. Since the 1958 great leap, the Chinese have been too busy making steel, digging canals and fighting calamities to worry about reforestation. But deforestation is continuing at an even faster pace, reducing the soil, extending the erosion area, heightening excessive runoff of rainwater, and insuring severe damage from floods and droughts for generations to come. * * * The entire hydrologic cycle in China is now upset by faulty water conservation and deforestation. Communist China has unwittingly changed nature."

Needless to say, the change has not been for the better, for we have read nothing but bad news from China about famine and the desperate flight of Chinese into the western conclaves of Hong Kong and Macao.

I recite this unfortunate history of a part of the human race because it is a lesson that should not be lost upon the United States. For every time we have legislative action to preserve the soil, the water, and the forest resources of the United States, you hear it said that this is a budget-busting expenditure that the taxpayers cannot afford.

My answer is that the American people cannot afford not to conserve our soil, our water, and our forest resources. It would also point out that few modern nations follow the kind of budget we do that places such conservation expenditures on the debt side of their national budgets.

It is nothing less than a national calamity, in my opinion, that the United States still follows budgeting practices which no business corporation follows, which few large cities follow, which States are increasingly dropping, and which has long been abandoned in Europe. That is the practice of listing as operating expenses investments in capital improvements. Reforestation, water pollution control, soil conservation, and indeed, most forms of conservation, are the capital improvements of a civilization. Yet they appear in our national budget as undistinguishable from operating expenses.

Our 1960 Democratic platform calls for a capital budget for the Federal Government which will follow the practices of corporations in separating capital investments from operating expenditures. I mention this partly because I have been advocating this kind of addition to our present budget since 1947. It would simply show the American people how much of their tax money was going for investments which would increase our wealth, increase our Nation's tax base, and repay themselves to the Treasury, and would separate those expenditures from the expenditures of defense, and for other operating expenses which do not repay themselves.

One of the most interesting accusations made against the Democratic Party today is that we are the party of deficits. Sometimes you even hear it said that the European nations we have so long financed have found the secret of progress and prosperity, and that while their indebtedness is small, ours is mounting. Well, let me point out that a lot of this has to do with budget practices. Most of these European countries have a capital budget, which separates their capital expenditures from their operating expenses, and does not include as deficit their capital investments in education, in conservation, and in other wealth-producing activities.

That is why many of them show a balanced budget while we show a deficit. It is a matter of bookkeeping. Yet the Democratic platform is not calling for any form of bookkeeping which is not practiced by any corporation in the country.

I need not mention to residents of Utah the importance of conservation as it relates to recreation. In Oregon, recreation is replacing agriculture, and running a close second to lumber as the primary industry of our State. A national park is an investment in recreation and relaxation, and it means a substantial income for the community in which it is located.

TED MOSS has pending a bill to create a Canyonland National Park. His bill is a recognition of the rising need among the American people for recreational opportunities, and of the wealth-creating capabilities of our national parks. These facilities are needed not only by the community in which they are located for the business opportunities that result, but by our population for the opportunities for water and outdoor recreation they afford. I hope that the Senate will have a chance to adopt the Moss bill this year before adjourning, because it will be in the public interest to do so.

Let me repeat that there is no higher obligation of Democrats and the Democratic Party than the preservation, the conservation, of both our human and natural resources. But in international affairs, we also have a historic obligation.

It is that we recognize and respect the rights of human beings everywhere to aspire to a better life and to a better living standard. We have seen the former colonies of Asia and Africa secure their independence and take their rightful place in the community of nations. We have no special obligation to them; we have no obligation beyond that of a Christian nation that we are our brother's keeper, and that which our history teaches that we turn our backs upon aggression only at the risk of our own safety and well-being.

So as a member of the Senate Foreign Relations Committee, I remind you that the United States turned its back on the League of Nations and paid the price of World War II; and today, we are the primary and no longer the secondary target of World War III. To the extent that we recognize that the rule of law must now be extended to international affairs, we will save ourselves. To the extent that the people of Utah recognize the foresightedness of its great statesman and honored colleague of mine, the late great Elbert Thomas, we will follow his advice and his example. This Nation of Americans has no designs upon its neighbors or on the rest of the world. We ask only that others contribute to the cause of world peace what we are willing to contribute. This means the recognition of the rule of law in world affairs. It means that we appreciate the parallel between our own history of the winning of the West and the history of international justice. For where there is no peace officer, the law of the claw prevails.

Our party, dating back to Woodrow Wilson, is the harbinger of world peace through the rule of law. Those who fear the United Nations must stand in fear of the entire world. For let them never forget that the United Nations is nothing but the reflection of the world which exists today. Yes, we could withdraw from the U.N. But we cannot withdraw from the human race. We cannot withdraw from the world in which we were born and in which we find ourselves placed, for better or for worse.

Let Democrats in every State of this Union remind our fellow citizens that the world will include the Congo, and Katanga, and Communist China, and the Soviet Union, and Yugoslavia, and Poland, and Cuba, and Latin America, and Laos, and Israel, and the multitude of other nations, no matter whether we belong to the United Nations or not. The United Nations is not the world forcing itself upon us, but our own recognition of the world that exists outside our own borders. That world will not disappear nor improve itself merely by our withdrawal from the one organization to which we all belong.

I suggest to citizens of Utah that the next world war will spare you any more than it will spare Oregon, or New York, or Chicago, or Washington, D.C. We will either find a means of preventing such holocausts in the future, or we will perish together, with the people of the Soviet Union and Communist China.

We find ourselves confronted in nearly every State with a minority of those who still believe that the United States lives alone in the world, able to predict our own future and to prescribe our own fate. Those who hold to this mistaken belief do not seem to realize that there is no destruction we can visit upon an enemy that the enemy cannot visit upon us. They do not understand that there is a vast number of people who are more interested in their daily bread than in communism as opposed to capitalism.

We have no alternative, as the party which holds the highest of elective offices in the United States, but to pledge ourselves and to carry out a policy of securing the peace of the world through the United Nations. Whatever its shortcomings and deficiencies, they will not be improved on outside the United Nations.

That is why I believe we should be acting on the situation in southeast Asia through the U.N.; why we should be urging a solution of the Berlin problem through the U.N.

These are conditions and situations to which our Republican friends have no alternatives except a resort to the kind of force that will be visited upon ourselves as surely as it will be visited upon our adversaries. Let us take these issues to the people. When they understand what is at stake, we will understand that the fate of the world is the fate of the United States, and that the effort we put forth to preserve the peace is put forth on behalf of ourselves as well as on behalf of humanity.

THE NATION'S ECONOMY—NEW YORK BOARD OF TRADE

Mr. JAVITS. Mr. President, later in the day I expect to speak at greater length concerning the state of our Nation's economy. Just this morning the Joint Economic Committee began hearings on this subject which is of the most profound concern to us all.

As a further contribution to this discussion I now ask unanimous consent to have inserted in the Record a letter which I have recently received from Mr. Philip F. Swart, chairman of the board of the New York Board of Trade, Inc. This letter is a cogent presentation of the views of a broadly representative and important group of New York business leaders. I believe that it deserves the careful attention of all of us in the Congress.

There being no objection, the letter was ordered to be printed in the Record, as follows:

New York Board of Trade, Inc.,
New York, N.Y., July 27, 1962.

Hon. Jacob K. Javits,
Senate Office Building,
Washington, D.C.

Dear Senator Javits: The New York Board of Trade, joining the President of the United States in the desire to "get the country moving again," commends the following program and principles, unanimously adopted by the board's committee on taxes and government economy:

1. An immediate tax cut of 10 percent "across the board" for individuals and corporations, but only if matched by an immediate expenditure cut of equivalent amount. To have a tax cut without an expenditure cut is to endanger the economy, not improve it. We don't get stronger by depleting the Treasury. If budget deficits were the way out, we should now be enjoying economic stability since we have had sizable deficits in 25 of the last 31 years. But we know from history what happens to nations that persist in living beyond their means.

2. Budget balance alone is not enough. What counts is to achieve it at the lowest possible level of expenditures and revenues. That is what releases the Nation's full productive energies. That is what imparts strength. That is what instills confidence.

3. The complete opposite of that is a deliberately created, substantial deficit piled on an already huge debt. A deficit does put more dollars into the economy. That is not of itself the equivalent of more purchasing power or more purchases. A deep-rooted anxiety, reaching out to the entire Western World, is not about the quantity of our dollars, but their quality. Quantity without quality places in jeopardy the savings bonds, life insurance policies, bank balances, and pension benefits of our own people. Adding deficit on deficit may get the country moving again—but in the wrong direction.

4. The road to tax reduction is in expenditure reduction. Expenditure reduction requires determination and forthrightness by all. Lip service and pious resolutions won't do it. Everyone must recognize that expenditure reduction may curb or eliminate advantages that certain groups, areas, or parties now unwarrantedly enjoy.

5. The President properly put it to the Nation when, at his inauguration, he said it is time for the people to ask: "What can we do for the Government?" Here are some of the things we can do if we are serious about having our economy advance:

(a) We must stop calling for, or condoning, the spending of money that we don't have.

(b) We must realize that today's promises become tomorrow's taxes. We must therefore turn a deaf ear to candidates painting rosy pictures of lavish "welfare" programs, and other spending that we can't afford.

(c) We must recognize that nothing impoverishes us, as a nation, more than to pay out a dollar without geting a dollar's worth in return. Featherbedding, or sloughing off of any sort, comes at a high cost to all of us. We must therefore instill or restore in ourselves an interest in work, a pride in work, a sense of responsibility about work. We must stop trying to get the most and give the least. Otherwise our economy and our jobs are imperiled.

(d) By the same token, we must insist that our elected representatives scrutinize every public program or activity, and measure it in terms of dollar's worth in results, efficient administration, and elimination of waste. The same rigid analysis, support, and yardsticks must be applied to public expenditures, as is expected of business in its expenditures. The space age is no excuse for a dollar of unneeded expenditure. Noteworthy areas that could pay off handsomely by this approach, without having the programs themselves suffer, are foreign aid, public welfare and assistance, the whole gamut of business activities engaged in by Government through about 700 agencies. Furthermore, priority should be assigned to the different expenditure requests to permit postponements or eliminations as need be. Congressional staff facilities should be improved to afford this sort of thoroughgoing, incisive review.

(e) We must not only welcome, but insist upon, tax reform. The tax structure lacks stability in its excessive reliance on the income tax. The income tax, in turn, leaves a great deal to be desired in simplicity, equity, certainty, and administrability. More important, we must get away from the present situation under which taxes, rather than common sense or good judgment, run our personal and business lives. The cost to the Nation in manhours devoted to taxes, instead of productivity, is too great.

Very respectfully,

Philip F. Swart,
Chairman of the Board.

PUERTO RICO'S 10TH ANNIVERSARY

Mr. JAVITS. Mr. President, I invite attention to the 10th anniversary of the establishment of Puerto Rico as a Commonwealth. That is one of the most important and interesting experiments in government with which we are associated by agreement between Governor Muñoz-Marín of Puerto Rico and the President of the United States. The people of the island will have a new opportunity to decide on their next step of either seeking statehood, or independence, or continuing their historic and important Commonwealth experiment in government. The entire nation will watch the contest, satisfied that it may look upon it with pride as a further evidence of the political maturity of Puerto Rico. I believe the nation will be heavily influenced by the record as well as by the campaign performance itself.

This has been a decade of progress for the industrious people of Puerto Rico. The success of their remarkable program of industrial development has enabled them to make great strides in reducing the poverty that once afflicted this beautiful Caribbean island and spurred the exodus of many Puerto Ricans to New York and other mainland cities. Puerto Rico provides an extraordinary demonstration of what American assistance can accomplish in an underdeveloped country in an atmosphere of freedom and democracy. Today, the country has a very high literacy rate and American industry, first attracted by tax exemption inducements, has been able to help create prosperity because of the capacity for fine work of the Puerto Rican people. Tourists are attracted in increasing numbers by the scenic beauty of the island, the mountain and beach facilities that are available to them, and the friendliness of the Puerto Rican people. Tourism is an important industry and it is growing.

Most important of all are the strong bonds of understanding that exist between the Puerto Ricans, who are American citizens, and other Americans. They rely on us in matters of foreign policy, and their sons have served loyally and with outstanding courage and skill in our Armed Forces. Puerto Rico is not only an important link in our hemispheric defense scheme but also an outstanding example of the kind of development that the United States can make possible.

Now, with the encouragement of the President of the United States, the people of this neighboring island will have a new opportunity to decide on the next step of seeking statehood or independence, or of continuing their historic and important Commonwealth experiment in government. Governor Muñoz-Marin, who has led Puerto Rico in the Commonwealth and has become known worldwide for his services, will contest the issue with Luis Ferre and other distinguished Puerto Ricans. The people of the United States will look with pride on this contest as further evidence of the political maturity of Puerto Rico and will be heavily influenced, I believe, by the result and the campaign performance itself.

And so, we salute Puerto Rico and our brother Americans on its 10th birthday. As the New York Times of July 25, 1962, said in an editorial entitled "Puerto Rico's Birthday":

> A generation ago Puerto Rico was one of the problem children of the Caribbean, although its problem was not violence or revolutionary tendencies but poverty. If the island had not been so poor, we would not have so many Puerto Ricans in the city of New York. We are having fewer such migrants now and presumably will have fewer still, for the little country is not so poor as it used to be. When it became a Commonwealth 10 years ago, its per capita income in current dollars was about $318. Today it is about $621.
>
> As a political device the Commonwealth experiment has worked out smoothly. The Puerto Ricans are citizens of the United States, although they do not vote for President unless they migrate to the mainland; they rely on us for their protection, and their citizens serve in our Armed Forces. On this, the birthday of the Commonwealth, we hopefully wish the island and its people well.

JAMAICAN INDEPENDENCE

Mr. JAVITS. Mr. President, yesterday marked the emergence of Jamaica as an independent nation and it is fitting that we in America extend our congratulations to the people of Jamaica and their new Premier, Sir Alexander Bustamente.

Relations between this country and Jamaica have always been cordial. Most recently this friendly entente has received further stimulus through the operation of a Peace Corps program to aid Jamaica's efforts to achieve economic improvement.

Jamaica needs our aid but she has a firm foundation to make good use of that help with her well-developed financial, educational, and political institutions and an advanced money economy. The major problem is underemployment and unemployment in relation to the current amount of economic activity.

America's aid to our neighbor to the south includes development loans and grants, the bulk of which are going toward accomplishment of the first two priority goals; housing and water supply. Other fields of aid include education, health, agriculture, and industrial development.

Here is a nation worthy of assistance, a country, small but indomitable, which cast off the shackles of slavery in the 19th century and has made steady progress through the decades to emerge today in the light of freedom.

I believe I speak the feeling of all the people of New York in extending them a welcome. Many of us have been to Jamaica for a visit or holiday. Our neighbor to the south has enormous potentials. She will be a great friend of the United States and also a great experiment in self-determination in the Caribbean. I am confident that she will have our help, support, and cooperation. We welcome her to the world community of free nations.

WHERE WILL IT ALL END?

Mr. GRUENING. Mr. President, a new nation has been born. There have been many in recent years. In 1960 there were 17 in Africa, 3 more in 1961, and in 1962, 2 more—Rwanda and Burundi. What bright Senators can tell where these two are or anything about them?

This time the new nation is in the Western Hemisphere—Jamaica.

"There is rejoicing," we are told editorially in numerous dailies. Under the heading: "A New Nation: Jamaica," the New York Times says:

> Today the world welcomes a new arrival in the island of Jamaica.

Says the Washington Post editorially—

> There is rejoicing in the Caribbean as Jamaica becomes the first of Great Britain's territories in that area to achieve independence.

Perhaps there is rejoicing in Great Britain, too. A new story in today's New York Times from Kingston, the island's capital, reveals that hitherto Jamaica has been receiving funds for schools, housing, and water systems from Britain's colonial development and welfare fund. This aid will now cease. Likewise, the payroll of some 1,200 British troops has been removed and shortly diplomatic and consular representation, with their attendant costs, formerly borne by the mother country, will be borne by the new Government.

The New York Times paints a realistic picture of this new nation's economy. It says:

> Life is not going to be easy for Jamaica. It is a very poor country, largely dependent on exports of bauxite and sugar and on the expenditures of some 225,000 tourists a year. The rate of economic growth since World War II has been gratifyingly high, but the population growth at 3 percent annually is also one of the highest in the world.
>
> So there is much poverty, much unemployment, a shortage of skilled labor and a relatively high cost of living. Emigration, formerly a traditional relief for the population pressure, has gradually been closed off and now Britain's Commonwealth Immigrants Act threatens to reduce one of the main outlets.
>
> The island is backward—

Says the Washington Post editorially—

> its population growing by giant steps and its prospects hampered by Britain's decision to limit immigration from the nonwhite Commonwealth areas.

It looks like a gloomy picture. But no. There is hope. In the same editorial the Post says:

> Jamaica is expected to participate in the Alliance for Progress.

And the news story previously referred to in the New York Times, says:

> Jamaica has opened negotiations with the United States for a loan for $2½ million. It is expected that the loan will be granted within the next few weeks.

Presumably, this is only the beginning. A nation so poverty stricken as Jamaica is alleged to be can scarcely repay loans, and doubtless loans will be followed by grants.

Time was when the leaders of nations seeking independence realized that independence brought its blessings but also its responsibilities and that the burdens of self-maintenance were obligations that would have to be borne. It has become customary of late in some government and other circles to equate the independence of these new mid-20th century nations with our own in 1776 and the statesmen of these emerging peoples with Washington, Hamilton, Franklin and Jefferson. No one mentions that the United States got no foreign aid.

Nowadays it is different. Whenever a new nation is born, simultaneously, as in the case of Jamaica—or maybe even in anticipation—arrangements are made for Uncle Sam to pick up the tab. The mother country is promptly relieved of this burden.

We advanced $10 million to Cheddy Jagan, the Premier of British Guiana, before that nation had even received its independence, and it was still a British colony. There was chaos and the colony has not yet become independent—but it still has Uncle Sam's $10 million—and is asking for more.

With the two score or more of new nations born in the last few years, and more to come, we can, on the basis of present and past performance, reasonably expect that Uncle Sam will be waiting, checkbook in hand. Meanwhile, our national debt is increasing, our balance-of-payments situation is not improving materially, and our gold reserves are dwindling.

The question no one has seemed to ask is: "Where will it all end?"

THE USE OF THE MAILS FOR COMMUNIST PROPAGANDA

Mr. LAUSCHE. Mr. President, from a constituent in Ohio I have received a copy of a Czechoslovakian publication known as Ceskoslovensky Svet. The constituent called my attention to the fact that this newspaper came to him from Czechoslovakia. How the sender got his address the writer does not know.

However, he asked me to have the article translated to see what is being written in Czechoslovakia and being sent through the mails free of charge to U.S. citizens.

Before I ask unanimous consent to include in the RECORD a translation of the article, I would like to read a few excerpts from it:

> The Fifth World Congress of Trade Unions which met at the close of the past year, pointed out that in the center of all tasks of the trade unions of the world lie the immediate tasks of the international labor movement in its struggle for peace, against imperialism and militarism, for the complete termination of colonialism, for the economic and social demands of the workers, against monopolies, in the defense and for the broadening of labor union rights and democratic liberties of the workers.

The article contains this further statement:

> The international class of workers and the broad masses of people, relying on the strength and influence of the Socialist and other peace-loving states, in their active and determined fight, will bring about the isolation of the aggressive circles. They have and will have influence on the termination of the feverish armament. They will force the imperialists to conclude an agreement on general disarmament, and they will prevent the outbreak of a new world war.

The point I wish to make is that gratuitously our Post Office Department is carrying articles in newspapers written by Communists. This article clearly is directed at our country. It is labeled as an imperialist nation, a military nation, a nation that does not want to ban nuclear tests, a nation that wants war.

My blood boils when I realize that we are subsidizing these writers when they use without charge our postal service in having this material sent to readers and citizens of the United States who did not ask for it. I do not know where their addresses are obtained. I believe we had better return to the system which was in vogue 2 years ago, that mail may be sent free of charge under the reciprocity agreement only when the citizen of the United States has asked for the particular material, and not allow our Post Office Department to force it unwillingly upon citizens of the United States.

I ask unanimous consent to have the translation of the article printed in the RECORD at this point.

There being no objection, the translation was ordered to be printed in the RECORD, as follows:

THE UNITY OF WORKERS IN THE STRUGGLE FOR PEACE, DISARMAMENT, AND BETTER LIFE FOR PEOPLE

(By Vaclav Pasek, Secretary of the Central Council of Trade Unions and member of the General Council of the World Trade Union Federation)

The whole world, and all progressive people, watch with the greatest interest the incessant struggle of the Soviet Union and of all other peaceloving and progressive states against the attempts to push humanity into another world war. Before all workers there is the task: To see to it that the peace be not just a quiet moment or a short recess between two wars, and that conditions are created under which the inflammation of a new world war be forever impossible.

The unity of the working people of the whole world is an important factor which plays and will play an outstanding part in this struggle. The history of the two recent wars showed that it is the toiling people who are most affected by wars and who are most burdened by the effects of wars.

The Fifth World Congress of Trade Unions which met at the close of the past year, pointed out that in the center of all tasks of the Trade Unions of the world lie the immediate tasks of the international labor movement in its struggle for peace, against imperialism and militarism, for the complete termination of colonialism, for the economic and social demands of the workers, against monopolies, in the defense and for the broadening of labor union rights and democratic liberties of the workers.

These are the basic demands which have to be fought for by a united action of all trade unions on the national and international level. The international fraternal relations between the unions of the world should be developed and strengthened. Tireless continuation in the struggle for an allover unity of action of the labor movement should become a common task of the workers of all continents. The opponents of this unity should be rebuked with determination and conviction, the reasons and effects of the position of all those who stand against it or break it should be exposed.

The solidarity of the workers of the whole world is an important weapon in the fight for the preservation of peace. The international class of workers and the broad masses of people, relying on the strength and influence of the socialist and other peaceloving states, in their active and determined fight, will bring about the isolation of the aggressive circles. They have and will have influence on the termination of the feverish armament. They will force the imperialists to conclude an agreement on general disarmament, and they will prevent the outbreak of a new world war.

Disarmament is today the most important problem of humanity. We can put a question. If a worldwide referendum could be staged concerning this problem, what would be the answer of the majority? It is easy to guess. It would be an overwhelming majority that would be voting for an immediate disarmament, and the unconditional destruction of all weapons. The majority of people would at once reject those who think that they can postpone disarmament by diplomatic ways and so to cheat the masses of workers. To those who think so, we should say that the cause of peace cannot be tied to a dress coat when human life is at stake. This dress coat must be torn and the tophat thrown away, because the majority of people still wear caps and do not live on dividends but on honest work, do not profit from wars but, on the contrary, war brings its plight, suffering, and unhappiness.

Struggle for peace, disarmament, against military bases, is today the unconditional and most important task of every man who does not want that human civilization be thrown back for hundreds of years, who wants to live and work in peace. This is a struggle which has to be conducted on the broadest possible base, because the majority of people, the fate of hundreds on millions are at stake. A world war should be averted by a common effort to achieve the unity of all workers of the world. This is supported by the fact that, on the side of peace there stands the Soviet Union and, along with it, the powerful masses of workers and other progressive people of all continents of the world. Step by step, these forces gain advantage over the old society and are able to stop everybody who intends to set new war ablaze. The cause of peace and the friendship of peoples will triumph and the plans of the aggressive powers will be foiled.

THE COMMUNICATIONS SATELLITE

Mr. DOUGLAS. Mr. President, during the initial debate on the satellite communications bill, I addressed certain questions to the junior Senator from Tennessee [Mr. GORE] concerning the probable quality of television programs under the corporation contemplated to be set up.

I ask unanimous consent that a letter to the editor, written by Russell Baker and published in the New York Times of August 2, 1962, subsequently expressing many of the same reservations, be printed in the RECORD at this point.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

OBSERVER

WASHINGTON, August 1.—Now that the novelty of Telstar has worn off, the best brains of American television will have to apply themselves to the problem of holding the European audience against the competitions of Soho, the Rue Pigalle, and the Via Veneto.

TELSTAR TROUBLE AHEAD

Obviously, you can get away with showing them Mount Rushmore, the Statue of Liberty, and the Chicago Cubs while they still are fascinated by the gadgetry involved. But can you hold them long enough to sell soap?

As domestic television found it necessary to progress from wrestling to "I Love Lucy," world television will have to grow out of the Mount Rushmore stage if it, too, is not to become another wasteland.

The challenge is grave, as the politicians say, but not insuperable. For example, what better solution than to fall back on the rich experience of nearly 20 years in our own country and beam the Europeans what Americans are shown? Anyone who has dozed an evening away in front of the electronic tube can probably dredge a usable script out of his subconscious.

Sunday programing would be harder. One immediately thinks of Lawrence E. Spivak interrogating David Susskind, but would the Italians really like it? Church services have to be considered, but domestic experience suggests that the most acceptable time for religion is after the late show. Baseball seems out of the question. Would the Italians really like it? Every politician from STROM THURMOND to JACOB JAVITS would be willing to talk for 18 minutes, but would the State Department permit it? And if it did, would the Italians really like it?

WILL IT SELL IN NAPLES?

The afternoon orbit is a cinch with a giveaway show. Housewives might compete for a trip to Rome. The Italians would like that. Viewer interest could be sustained by offering a trip to New York to any Italian who recognized the contest winner in Rome, provided he could convince the U.S. Immigration authorities of good moral character and no intent to take up residence.

Everybody will have strong feelings about what commercials should be shown in Europe. In view of the anticipated advertiser pressure to get in, it might be necessary to establish a nonprofit commission to select commercials particularly illuminating of American life.

The danger here is that irrelevant questions of taste will be allowed to interfere with the accurate portrayal of American life. The high national incidence of stomach hyperacidity, for example, may be a revealing fact about American life that the Pecksniffs would withhold from Europe because of esthetic reservations about digestive-tract diagrams on TV screens.

So, too, the commercials for sewer-cleaning services might be ruled out by the squeamish despite their clear message that clogged sewer drain is an omnipresent factor in American life. The rule of thumb on taste should be: If Americans can take it, so can the Italians.

GOOD TASTE MISPLACED

On the other hand it might be misleading to spread abroad the picture of love in America that engrosses so many TV commercials.

Take the typical detergent ad as an example: Husband is cold, indifferent, even hostile to young wife. One day in the laundry room while sighing over husband's perspiration-stained collar, young wife is surprised by a charming male housebreaker. Stay. There is no cause for alarm. He is merely presenting her with dynamic new miracle Sudso. "Darling," husband cries ecstatically a second later, "my shirts have never been so white. Those deep-down perspiration stains are gone." He embraces her hungrily. Love is saved.

Obviously, this is the sort of thing to be kept off Telstar on the ground that it spreads malicious distortions about why American man and his mate sulk and make up. Besides, what would the Italians think of us?

RUSSELL BAKER.

PROPOSED CHANGE IN THE CLOTURE RULE

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an article which appeared in the Washington Evening Star on August 2, written by J. A. O'Leary, be printed in the Record at this point in my remarks. Mr. O'Leary's article states that observers believe that the effort which will be made in January to bring about a change in the antifilibuster rule might succeed.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Washington Evening Star, Aug. 2, 1962]

Antifilibuster Move Planned at 1963 Session

(By J. A. O'Leary)

Advocates of a new rule to curb Senate filibusters are planning a drive to achieve that goal on the opening day of the next Congress in January.

They served notice of this intention after the Senate reached an agreement which ended a 5-day fight against taking up the satellite communication bill.

Similar attempts to write a new rule have failed on the opening day in other recent years, but some observers believe it might succeed in January 1963.

In another development yesterday President Kennedy made it clear that his administration is standing by the private enterprise method of handling the satellite communication problem, despite the drive by a small group of liberal Democrats for Government ownership.

At his press conference, the President said the pending bill was carefully drawn to preserve the responsibilities of the Federal Government, and he regarded it as the most effective way to handle the problem.

THREE PLEDGE HELP

Senators Douglas, Democrat of Illinois; Humphrey, Democrat of Minnesota, and Javits, Republican of New York, announced they would join in the January move for a new antifilibuster rule.

But Senator Douglas made it clear he was not critical of the Senators who held the floor for 5 days to prevent the satellite bill from being taken up.

On the contrary, Senator Douglas said, it ill behooves Senators who have always opposed a change in the rules and who have always voted against curbing debate on civil rights bills to denounce other Senators because they have discussed another subject for about 1 week.

He said that while he had not taken much part in the satellite debate he believes much of the discussion was "very helpful" in clarifying the issues.

PASS FIVE MAJOR BILLS

Once the filibuster against the satellite bill was ended by the agreement to put it off for a week, the Senate quickly passed five other major bills.

It completed and sent to the White House three appropriation bills carrying $48 billion for the Defense establishment, $5.4 billion for the Treasury and Post Office Departments, and $885 million for the Interior Department. These were the first money bills for the new fiscal year to be completed.

The Senate also took final action on a $3.7 billion authorization for the research and development projects of the National Aeronautics and Space Administration, and sent to the House a $232 million authorization program for the Atomic Energy Commission.

Meanwhile, the satellite bill was sent to the Senate Foreign Relations Committee for further hearings with the understanding it will be brought back to the Senate floor for debate not later than August 10. The committee is meeting at 2:30 o'clock this afternoon to make plans for the hearings, expected to start tomorrow morning.

TEN-YEAR EFFORT

For about 10 years the supporters of a stronger antifilibuster rule have been proceeding on the theory that on the opening day of a new Congress the Senate has the same right as the House to adopt rules for that Congress by majority vote. The House always adopts the rules for each Congress, but the Senate has proceeded on the doctrine that it is a continuing body and that its rules can be changed only on recommendation of its Rules Committee.

Up to now, Senate liberals never have been able to muster a majority to support their opening day contention, but the number voting with them has increased steadily.

On the last attempt in January of 1961 the new rules introduced for this Congress lost by only a few votes. They were referred to committee, 50–46, and never acted upon.

Two years earlier, in 1959, only 36 votes were cast for a rules change. This showed a gain of 10 votes in 2 years, and in 1961 a switch of 3 additional votes would have provided a majority for a new rule.

NO UPSET IN 35 YEARS

As the rules now stand, it requires two-thirds of those present and voting to break a filibuster by curbing debate, and this percentage has not been achieved in 35 years.

One of the changes advocated by a group headed by Senator Douglas would permit a majority of the entire Senate—51 Senators—to limit debate after it has continued for 15 days.

Another proposal sponsored 2 years ago by Democratic Senator Anderson of New Mexico and Republican Senator Morton of Kentucky would change the requirement from two-thirds to three-fifths. With all Senators voting, this would mean 60 could limit debate.

COMMUNICATIONS SATELLITE BILL FILIBUSTER

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed at this point in the Record an article entitled "Trouble in the Filibuster's Wake," written by Doris Fleeson, and published in the Washington Evening Star of August 3, 1962. I do not agree with all the statements made by Miss Fleeson, but I think she opens up some very interesting questions for thought and consideration.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Washington Star, Aug. 3, 1962]

Trouble in the Filibuster's Wake—Mansfield's Accord With Republicans on Farm Bill Is Viewed as Risky

The Senate has won some surcease from its satellite communications sorrows but is nowhere near the end of its troubles with the issues raised.

A major one concerns the price paid by Democratic Majority Leader Mansfield for conservative Republican consent to sending the satellite bill to the Foreign Relations Committee for further study of its international implications.

Senator Mansfield is understood to have made a gentlemen's agreement with Senators Goldwater, Hickenlooper, Tower, and others not to take up the farm bill if they would help to expedite satellite legislation. To some Democrats the farm bill is of much greater importance than communications and they will not go along with Senator Mansfield on the question of ditching it.

Republican spokesmen are threatening their own filibuster should the farm proposals reach the calendar. They will find Democrats ready to join that issue with them.

The prophet in the situation is Senator Clark, Pennsylvania Democrat. He has steadily warned the Senate that it is operating under antiquated rules that, given certain circumstances, can easily be turned into fratricidal as well as party warfare of the worst kind. Today's mess, so apt to be repeated in this heated home stretch, proves his case.

The Senate can go ahead in the short term on piled-up appropriations and noncontroversial bills ready for action. This will help serve orderly government but disposes of nothing on which factions within the Senate disagree.

Democratic Whip Humphrey has called for top level and searching testimony before Foreign Relations to answer the misgivings of filibusterers against the present satellite proposal. With Chairman Fulbright safely renominated in the Arkansas primary, which is tantamount to election, it should be possible to do the job fairly quickly.

A difficulty is that the White House has committed itself out of disinclination to cross swords with Chairman Kerr of the Space Committee. Senator Kerr, as ranking Democrat on the Finance Committee, is expected to reciprocate on the trade bill and taxes, both of which President Kennedy ranks much higher on his priority list than the satellite bill.

It may be difficult, therefore, to get the frank expressions from the Messrs. Rusk, McNamara, and Robert Kennedy that are looked for. The first committee move of opponents of the bill will be for open hearings. These would receive wide coverage and create interest in amendments certain to be offered.

It is unclear why Senator Mansfield chose to press the satellite bill at this time. Possibly Senator Kerr pressed him for action now while Kerr still held the power of life or death for the President's most favored measures. It may simply be that the Montana Senator decided on it as the vehicle for demonstrating the strong leadership he has been accused of lacking.

This is only one of many uncertainties Senators are discussing as they face renewal of the satellite battle.

FRYINGPAN-ARKANSAS PROJECT—REFUSAL BY SENATE OF YEA-AND-NAY VOTE

Mr. PROXMIRE. Mr. President, yesterday the Senate passed a bill to authorize $170 million for the construction of the Fryingpan-Arkansas project. I, together with the distinguished Senator from Delaware [Mr. Williams] strongly protested that bill. We were very much opposed to it, particularly feeling that it is foolish to spend so large a sum of money to increase the fertility and productivity of land already in production, at a time when hundreds of millions of dollars are being spent to take land out of production.

The reason why I am speaking today on this particular issue is that although three times yesterday I requested a yea-and-nay vote, we were unsuccessful in securing such a vote. The absence of a quorum was suggested in an effort to bring enough Senators into the Chamber in order to secure a yea-and-nay vote, but the effort was unsuccessful. We had the complete cooperation of the leadership.

Under these circumstances, it is possible to get a yea-and-nay vote only if a Senator is willing to keep talking and to insist on having live quorums, even if that takes 2 hours or 2 days. Then we can have such a vote.

I wish to make it clear that in the future I shall insist on yea-and-nay votes on measures of such great importance as the Arkansas-Fryingpan project, a project which will create a financial drain on the taxpayers of my State and will be an injustice, in my opinion, to the farmers of Wisconsin.

Under such circumstances, I believe it is only fair that all Senators be recorded on measures of this kind. I say this with regret. The reason why I did not insist on a yea-and-nay vote yesterday was that a number of Senators on both sides of the aisle said it would not be fair to have one because some Senators could not be present and most Senators did not expect that there would be a yea-and-nay vote on a measure of that kind.

The reason for my statement this morning is to make it clear that in the future, even if Senators wish to be absent when projects of this kind, costing large sums of money, and having a strong impact not only upon our economy but on the taxpayers and farmers, are brought up, I shall ask for yea-and-nay votes.

THE PROPOSED TAX CUT

Mr. PROXMIRE. Mr. President, there has been much discussion about a tax cut; but in connection with such a proposal, I think too few of us realize the tremendous drain which would be imposed on the Treasury in order to have a tax cut which would really be substantial enough to stimulate the economy.

In order to provide $1 more in the pockets of people earning $5,000 a year, it would be necessary to have a 2-percent tax cut, which would be a $4 billion tax reduction—$4 billion to get $1 more into the pockets of the people so that they might buy more.

It is clear to me that that kind of effect upon the American consumer will not result in a substantial increase in national income or a stimulation of the economy.

Also, a reduction in the corporate income tax of 1 percent would cost the Treasury $500 million. I think these figures should be kept in mind when we discuss tax cuts, because there is no question that while a tax cut may stimulate the economy, it will also have a direct and inevitable impact on the national debt and the deficit.

FORMER PRESIDENT EISENHOWER'S CATTLE

Mr. DIRKSEN. Mr. President, under date of August 3, 1962, I have received a letter from Mr. Bryce N. Harlow, former secretary to President Eisenhower, which I wish to read into the RECORD:

THE PROCTOR & GAMBLE
MANUFACTURING CO.,
Washington, D.C., August 3, 1962.

The Honorable EVERETT M. DIRKSEN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DIRKSEN: Perhaps you noted the two recent columns by our esteemed friend, Mr. George Dixon, who asserted, more or less whimsically, that one of General Eisenhower's cattle is or was a gift from Mr. Billie Sol Estes. You may also recall his assertion that when Mr. Estes came under Senate scrutiny the gift animal was slaughtered and consumed at the Eisenhower farm in an effort to conceal the general's relationship with Mr. Estes.

I suspect Mr. Dixon had tongue in cheek in making these comments, and on that presumption these comments probably ought to go unanswered. I find, however, that on July 5 the first of the columns in question was placed in the CONGRESSIONAL RECORD. The unavoidable result is that General Eisenhower stands charged in the official record of the Congress of receiving this Estes gift.

Now that Mr. Dixon's second column has again associated General Eisenhower with Mr. Estes, it might be well to spread the actual facts on the record to avoid possible misunderstandings in future years. I have taken it upon myself to obtain these facts, General Eisenhower being presently out of the country.

The facts, I can assure you categorically, are these:

First, not one of General Eisenhower's cattle is or was a gift from Mr. Billie Sol Estes, whether from Mr. Estes alone or as a member of a group of donors.

Second, no animal has been slaughtered at the Eisenhower farm since October 9, 1961. The animal slaughtered on that date was born on the farm.

Third, no such Estes gift having been received by General Eisenhower, obviously none of the Eisenhower cattle was slaughtered and consumed to conceal a relationship with Mr. Estes.

I intrude upon your time respecting this matter because of your years of close association with General Eisenhower and because I know you would not want the RECORD open to misunderstanding in respect to a matter of this kind.

Sincerely,

BRYCE N. HARLOW.

Mr. President, the letter requires no further comment from me. I ask unanimous consent that the articles written by my whimsical, delightful friend, Mr. George Dixon, dated July 4 and July 18, be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the CONGRESSIONAL RECORD, July 5, 1962]

GOP VISITS TO THE OLD FARM

(Extension of remarks on Hon. MELVIN PRICE, of Illinois, in the House of Representatives, Thursday, July 5, 1962)

Mr. PRICE. Mr. Speaker, under unanimous consent to extend my remarks, I offer for the attention of my colleagues an interesting article from the typewriter of the well-known columnist, Mr. George Dixon, which appeared in the Washington Post of Tuesday, July 3, 1962:

"WASHINGTON SCENE: VISIT TO THE OLD FARM

"(By George Dixon)

"GETTYSBURG, PA.—All us big Republican leaders were gathered here at the farm of former President Dwight D. Eisenhower, and I was looking for the Black Angus that was given Ike by Billie Sol Estes, when former Vice President Richard M. Nixon arrived.

"I was distracted from my quest of the Estes gift cow because I wanted to see if Mr. Eisenhower and Nixon knew each other by sight.

"I had reason to be uncertain about this because a few days ago one of my Washington correspondent colleagues asked Ike, 'Who do you think will win the race for Governor in California?' and Ike replied: 'Whatsisname will beat Brown.'

"Ike and Dick seemed to recognize each other, however, because they shook hands without first studying the name badge that all us GOP leaders were required to wear. Many of the rest of us took a sneak peek at a badge before offering a hand. After all, a grand old leader of a Grand Old Party can't afford to give a big 'Hello' to a mere follower entitled only to a small one.

"It was like old times being back at the Eisenhower place. Gentle nostalgia assailed me as we drove down the avenue of trees, all bearing small, tasteful plaques with the name of the donor. All the plaques, save one, bore the names of gift-givers not immediately connected with the Eisenhower family. The lone exception was attached to a fence surrounding the guest house, which lies between the mansion and the barn. This plaque bore the uxorial legend: 'This fence was taken from the home of Mamie Doud Eisenhower, Lafayette Street, Denver.' However, I couldn't spend the day reliving the scenes of my political childhood, because we were at Ike's place to revitalize the Republican Party—and we only had 3 hours in which to do it.

"Ike revitalized it first. He said that having us here was a heart-warming experience. Having a wormy heart, I applauded madly.

"I wanted to sneak from the big conference tent and inspect the Black Angus that Billie Sol Estes bestowed upon Ike away back when Estes was not so widely known.

"Nixon had replaced Mr. Eisenhower at the battery of microphones—the significant event was on a tentwide hookup—and I fancied Dick was staring at me as if daring me to cut and run.

"Nixon disclosed he is campaigning hard to be Governor of California.

"'I practice the piano every morning,' he said. 'and every day I jump into the swimming pool—with my clothes on.'

"If you doubt that Nixon opened his remarks with those exact words, please write the Republican National Committee, 1625 I Street NW., Washington 6, D.C., for a transcript. Phone: National 8-6800.

"Republican National Chairman WILLIAM E. MILLER said we should have broad participation, although at this meeting only males were participating.

"Senate Republican Leader EVERETT MCKINLEY DIRKSEN began by saying: 'A minority leader's lot is not a happy one—I think you can find that in Gilbert and Sullivan.'

"I'm not sure you can.

"DIRKSEN challenged my credulity further by asserting: 'I used to use a slogan against the Democrats that consists of six words, the six words are: Idle hands, idle acres, and idle dollars.'

"I counted and recounted. Always came out seven.

"As we left the tent, Host Eisenhower remarked to a senatorial friend that he was having trouble keeping farm help. The friend suggested that Secretary of Agriculture Orville L. Freeman might be available before long.

"Ike did not seem to find it uproariously funny."

[From the Washington Post, July 18, 1962]

WASHINGTON SCENE—PLAYING WITH FIREARMS

(By George Dixon)

I have decided not to shoot myself five times with a .22-caliber long-barreled rifle. I don't want to put Senator JOHN L. MCCLELLAN, of Arkansas, to the bother of clutching a fowling piece to his side to demonstrate I couldn't have done it.

Time was when a "guy" could "scrag" himself with a firelock and bring in only the police, or maybe a sheriff's posse. Now he's in danger of involving himself with a congressional committee.

This is enough to make a chap stop and think. It is especially thought provoking to me because I am essentially a considerate type, and I would hate to think I was responsible for making Senator McClellan stand up before his Senate investigations committee, and all those photographers, with a breechloader rammed into his midriff.

Another thing about it gives me pause. I don't like to see our Senators playing with firearms.

I presume you saw the picture in the papers of Chairman McClellan with the muzzle of a shooting iron pressed into his flesh and his arms straining in their sockets in efforts to reach the trigger. If you didn't, you missed a picture that I would hitherto have considered almost as improbable as former President Eisenhower posing beside the Black Angus given him by Billie Sol Estes.

McClellan's demonstration was doubly captivating because sometimes whole days go by on Capitol Hill without the chairman of a committee getting the drop on himself with a .22 long rifle.

McClellan explained to the photographers—who probably would have played along with him, even without an explanation—that the rifle was identical with the one that killed Henry H. Marshal, an official of the Department of Agriculture, on June 3, 1961, and that Marshal could not possibly have shot himself five times with it.

It was clearly up to McClellan to arrive at this deduction because, unannounced in the public prints, every law-enforcement agency in the land has been secretly disbanded. The local, State, and county police in and around Franklin, Tex., where the murder or suicide took place, had been exchanged for cotton allotments, and the FBI had been merged with the Peace Corps and sent to Nigeria to write postcards.

If I'd only been on my toes, and put two and two together, I might have been the only non-Senator with advance knowledge that all the "cops" in the country, except members of the McClellan committee, had been plowed under. Horace McMahon, who plays Lt. Mike Parker in TV's "Naked City," visited me, and I took him to lunch in the Senate dining room. The professorial Senator Paul Douglas, of Illinois, joined us for lunch and told Horace there was nobody like him left.

That should have tipped me off.

The abolition of all types of lawmen was withheld from the American people because it was classified, along with certain details of strategy in Custer's Last Stand.

(Parenthetical note: You may not believe that about Custer, but it was classified by the Pentagon until Chairman John E. Moss, of the House subcommittee investigating unwarranted secrecy in government, forced its declassification.)

I was too preoccupied to decode the awful truth from Senator Douglas' encrypted message to Actor McMahon, because of new intelligence that just had come to me in the case of the Billie Sol Estes gift cow to former President Eisenhower. I learned why spokesmen for Ike were insisting with such apparent candor that there was no Estes Angus on the Eisenhower farm at Gettysburg.

There isn't—now.

Estes wasn't known very far beyond the environs of Pecos when he and "a group of Texas admirers" presented the prize Angus to the then Chief Executive. But when the McClellan investigators made the name of Billie Sol a national byword, they also doomed the proud cow.

The beast was slaughtered at Ike's place and eaten.

KELSEY, KEFAUVER, AND KENNEDY

Mr. GRUENING. Mr. President, today President Kennedy honored Dr. Frances O. Kelsey, of the Food and Drug Administration, by awarding her the highest civilian award authorized. Dr. Kelsey is worthy of such an award for her courageous stand against intense pressures to permit the licensure for sale of the disastrous drug thalidomide, which has tragically resulted in the birth of deformed children.

The President does well to honor Dr. Kelsey for her devotion to duty. But here in the Senate there is one who deserves equal commendation today. I refer to the able and distinguished senior Senator from Tennessee [Mr. Kefauver], who has fought an equally valiant fight in the Halls of Congress not only to protect the American public from untested, dangerous drugs, but also to bring within their economic reach drugs of proven medicinal worth. On this day, when Dr. Kelsey is being honored, it is only fitting that tribute should also be paid to Senator Kefauver. I wish him to know that I, as one Senator, will be by his side, fighting for the enactment of legislation which will prevent any possibility that the American public will ever be used as guinea pigs for the greater profit of drug manufacturers.

It is my sincere hope that Dr. Kelsey's efforts have been entirely successful. I hope that time will not reveal that, despite her watchfulness, some of this dreadful drug was actually used in this country by physicians, unbeknown to their patients, and without their consent.

It is also my hope that the new Secretary of Health, Education, and Welfare in particular will take immediate steps to make certain that the left hand of his Department knows what the right hand is doing. We have a right to expect that when representatives of that Department appear before Senate committees, they are sufficiently knowledgeable of the President's program to present that program clearly and concisely, and not to agree to provisions gutting that program. The President can expect no less. I hope that a new drug bill, along the lines recommended by President Kennedy, will be speedily enacted.

I ask unanimous consent that an article relating to the work of Dr. Kelsey, appearing in the Washington Daily News for August 6, 1962, may be printed in the Congressional Record at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Washington Daily News,
Aug. 6, 1962]

A Medal to Dr. Kelsey—How Letter Resulted in Exposé of Drug

(By John Troan)

One wintry day 18 months ago Dr. Frances O. Kelsey was thumbing through the British Medical Journal and spotted a letter from a doctor about a drug called thalidomide.

Tomorrow, the chain of events set off by this accident of reading will be climaxed at the White House when Dr. Kelsey receives from President Kennedy the highest award a Federal employee can get.

Called the "President's Distinguished Federal Civil Service Award," it will be conferred for her key role in keeping off the U.S. market a drug that turned out to be a deformer of babies.

In her unauspicious office, on the second floor of a rickety World War II barracks building that also houses a medical museum, Dr. Kelsey recalled the day it all began.

SIX MONTHS

She had been with the Food and Drug Administration (FDA) only 6 months. She had disposed of one new-drug application, seeking approval of a cathartic. She was working on her second—a case dealing with thalidomide, a mild sedative that already had become a bestseller in Europe.

It was February 1961, and she was sitting in on an FDA hearing—regarding a drug she can't even recall—when a messenger brought her a copy of the British Journal.

The doctor leafed through the journal. Suddenly, her eyes fastened on a letter from a physician suggesting thalidomide might be causing a peculiar kind of neuritis—an undesirable effect not previously suspected.

The rest is history. For 13 months, Dr. Kelsey—with the support of her FDA superiors—staged a legal delaying action that kept thalidomide off the U.S. market. Last March, by which time mounting evidence established the drug was unsafe, even experimental use was halted.

DID RIGHT THING

The aftermath has left the shy Dr. Kelsey quite bewildered. But it also has convinced her she did right when she decided on a change of career in her senior year at Montreal's McGill University.

"I first wanted to be a zoologist," Dr. Kelsey relates.

"We always had cats and dogs around our house" (she was born in Canada 48 years ago), "and I was always interested in animals. In fact, I'm still a cat fancier."

Dr. Kelsey finished college as a zoology student but a course she took in her senior year veered her into pharmacology—the science of how drugs work and what they do. She stayed on a year to earn a master's degree in this field.

She then went to teach at the University of Chicago, where she not only got a doctor's degree in pharmacology but also became an M.D. It was there, too, she met her husband, Dr. F. Ellis Kelsey, now a special assistant to Surgeon General Luther L. Terry.

Sudden fame, which has brought Dr. Kelsey hundreds of laudatory letters, hasn't changed her. She prefers to be regarded as a plain jane rather than a glamor gal.

When she isn't tied down by her job, she likes to play tennis.

And as if the world didn't know it by now, she adds with a twinkle: "I also like to read."

THE PLIGHT OF THE RAILROADS

Mr. BUTLER. Mr. President, the ability to make things appear to be other than what they really are is no longer the exclusive property of those skilled in the use of mirrors and sleight-of-hand. The same results are being attempted with mere words—taking a given set of facts and presenting them in such fashion as to make them appear to support conclusions that are contrary to those facts.

One of the most remarkable demonstrations of this is currently underway. It involves the railroad industry and is designed—believe it or not—to convince the Congress, and the public as well, that railroads are not really ailing at all but are, in fact, highly prosperous.

Precisely what is hoped to be gained by those attempting to create this illusion is not entirely clear. What is clear, however, is that it threatens to lull both Congress and the general public into a false sense of security regarding this indispensable artery of transportation, to the great detriment of the Nation as a whole. For that reason, it is important, I believe, that we set the record straight as to those matters which have been grossly misrepresented.

It has been suggested, for example, that bookkeeping methods used by railroads fail to show accurately their true financial condition; that simple changes in the profit and loss statement would magically convert a railroad from a deficit operation to one that is highly profitable. This is a claim that should appeal especially to shareholders in the bankrupt New Haven Railroad, for it suggests that the company may not be bankrupt after all; that it only appears to be so on paper because some vaguely defined "improper" bookkeeping methods are being used.

Actually, of course, the accounting methods by the railroad industry are those prescribed and policed by the Interstate Commerce Commission. They are entirely consistent and compatible with standard methods and practices followed by industries of all kinds throughout the Nation in appraising their financial positions.

Next we are told that railroad financial ills are nothing more than "misleading railroad propaganda"; that in fact railroads in recent years have enjoyed the highest prosperity and net income in their history.

In reality, of course, railroad net income has declined sharply in every year since 1955. Following are the figures based on reports by the Interstate Commerce Commission:

	Millions
1955	$959
1956	908
1957	765
1958	630
1959	608
1960	473
1961 (partly estimated)	406

The railroads' total net income in that 7-year period was $4,749 million. This was actually $735 million below the amount earned in the 7 years immediately preceding the depression of the 1930's—and in that period the purchasing power of the dollar was nearly double what it is today. In fact, stated in dollars of constant value, the railroads' net income in 1961 was barely one-fourth of what it was in 1929.

The attempt to make this anemic performance seem healthy is based largely on a single statistical table appearing on page 196 of the Interstate Commerce Commission's 1960 Annual Report to Congress. Among other information presented, the table relates railroad net income to the nominal or stated value of railroad capital stock—common and preferred—outstanding in the years 1949 through 1959. But it is significant that the ICC itself did not suggest that such a relationship constitutes a proper measure of the profitability or lack of profitability of a railroad's operations.

And indeed it is not a proper measure. For a rate of return based only on capital stock outstanding completely ignores the major part of shareholders' equity in railroads, namely, the part represented by capital surplus and by earnings withheld from shareholders for reinvestment in plant and equipment. Such amounts, whether accrued by railroads or any other business enterprise, are as much a part of shareholders' equity as is stock outstanding—and through 1959 they aggregated for the railroad industry over $11.2 billion.

Thus, instead of $7.5 billion, which represents only the nominal or stated value of railroad capital stock, the total shareholders' equity in railroads in 1959 was actually $18.7 billion. On this proper basis of comparison, the ratio of railroad net income to shareholders' equity in 1959 was a mere 3.25 percent. In 1960 it dropped to 2.52 percent and in 1961, to about 2.16 percent.

Since World War II, the railroad industry has been studied probably more often, more thoroughly, and by more qualified authorities, both within Government and outside, than any other industry in history. Almost without exception, these studies have confirmed that the industry is in deep and steadily worsening financial distress. Not one study has ever supported the capricious theory that the railroads' rate of return should be measured by the amount of their capital stock outstanding.

The inescapable fact is that railroad earnings have been and continue to be grossly inadequate to support necessary railroad modernization and improvement.

Conservative estimates place railroad capital improvement needs at about $2 billion a year, and only about one-third of that amount is obtained through annual depreciation allowances.

Where are railroads to get the remaining two-thirds?

In a prospering industry, it could be obtained by borrowing or from the sale of capital stock. The availability of funds from either source, by railroads or any other industry, depends largely upon the record of earnings or the prospect of earnings. The best evidence that railroad earnings have been grossly inadequate is that both sources have been largely denied to most railroads for many years, just as they are today.

The only remaining alternative is to finance needed capital improvement directly out of earnings—and this railroads have done by holding down dividends to their owners. But even if railroads used every penny of current net income; even if they paid no dividends, or set nothing aside for required sinking funds, the total amount available for capital improvements would be little more than half the amount needed to provide adequately for the future.

Such an approach would not only be grossly unfair to shareholders, it would also be tantamount to "taking the gas pipe." For if railroads paid no dividends or accrued no sinking fund charges, what little credit they now have, and what little appeal they hold for investors, would entirely disappear. Yet this is the dead end road which a poor and worsening credit position and inadequate depreciation allowances have forced more and more railroads to travel.

It is easy enough for those having no responsibility for obtaining the money to criticize railroads for not having more and better equipment and for not giving better service. I for one am confident that no one more earnestly desires and strives to do these things than those responsible for railroad operations. However, their task is greatly complicated, not helped, by irresponsible self-serving statements, such as those to which I have referred, which seek only to confuse rather than clarify.

Making things appear to be other than what they really are can be entertaining, but the sleight-of-hand technique should be left to those whose business it is to entertain. When it is used to distort and bemuddle our thinking on a subject as vital to the national welfare as transportation, the results can be disastrous.

OPPRESSION OF CAPTIVE NATIONS BY SOVIET UNION

Mr. SCOTT. Mr. President, at this time I would like to pursue a little further the question of the significance of Captive Nations Week. On July 6 of this year I joined many of my colleagues in the Senate in calling on President Kennedy to issue a Captive Nations Week proclamation, and thus to follow a tradition initiated by President Eisenhower in 1959. The July issue of World presented, side by side, the core of both President Eisenhower's 1960 and President Kennedy's 1962 proclamation. I now ask unanimous consent that these two excerpts be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PRESIDENT EISENHOWER

"Whereas many nations throughout the world have been made captive by the imperialistic and aggressive policies of Soviet communism; and

"Whereas the peoples of Soviet-dominated nations have been deprived of national independence and individual liberties; and

"Whereas the citizens of the United States are linked by bonds of family and principle to those who love freedom and justice on every continent; and

"Whereas it is appropriate and proper to manifest to the peoples of the captive nations the support of the Government and people of the United States for the just aspirations for freedom and national independence;

"I invite the American people to study the plight of the Soviet-dominated nations and to recommit themselves to support of their just aspirations."

PRESIDENT KENNEDY

"Whereas there exist many historical and cultural ties between the people of these captive nations and the American people; and

"Whereas the principles of self-government and human freedom are universal ideas and the common heritage of mankind;

"I invite the people of the United States to observe this week with appropriate ceremonies and activities and I urge them to give renewed devotion to the just aspirations of all people for national independence and human liberty."

Mr. SCOTT. Mr. President, I would now like to ask every Senator to scrutinize closely with me these two statements to see whether or not they contain an indication, some slight hint, at our changed attitude toward Soviet colonialism. Upon examination, we must conclude that there is indeed a hint present. The 1960 message makes explicit the name of the captor—the Soviet Union—and the nature of the crime, whereas the 1962 declaration fails to mention the offender and the offensive act. Whose feelings are being protected?

That the Soviet Union oppresses its captive nations cruelly, that justice in any meaningful sense is absent in these nations, that the Soviet Union has a long record of aggressive actions and broken promises—these are not unproven and unsupported theories, but clear historical facts. Why then are these facts absent in the 1962 message? The message does not satisfy me nor anyone else who supports the real purpose of the Captive Nations Week. Has the administration finally arrived at the abysmal position of ignoring the facts because of fear of embarrassing the enemy?

WANTED: THE "UNCOMMON MAN"

Mr. WILEY. Mr. President—

> The true test of civilization is not the census, nor the size of cities, nor the crops—no, but the kind of man the country turns out—

Once stated Ralph Waldo Emerson.

In a special article for This Week magazine, former President Herbert Hoover also reflected thoughtfully that—

> The future of America rests not upon mediocrity, but upon constant renewal of leadership in every phase of our national life.

On August 10, Mr. Hoover will celebrate his 88th birthday.

For the occasion, America will pay well-deserved tribute to this distinguished citizen—himself a most "uncommon man"—for a lifetime of unstinting service to his country.

I ask unanimous consent to have Mr. Hoover's article entitled "The Uncommon Man" printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE UNCOMMON MAN

(By Herbert Hoover)

"The true test of civilization is not the census, nor the size of cities, nor the crops—no, but the kind of man the country turns out."—Ralph Waldo Emerson.

In my opinion, there has been too much talk about the common man. It has been dinned into us that this is the century of the common man. The idea seems to be that the common man has come into his own at last.

Thus we are in danger of developing a cult of the common man, which means a cult of medocrity. But there is at least one hopeful sign: I have never been able to find out who this common man is. In fact, most Americans, and especially women, will get mad and fight if you try calling them common.

This is hopeful because it shows that most people are holding fast to an essential fact in American life. We believe in equal opportunity for all, but we know that this includes the opportunity to rise to leadership—in other words, to be uncommon.

Let us remember that the great human advances have not been brought about by mediocre men and women. They were brought about by distinctly uncommon people with vital sparks of leadership. Many of the great leaders were, it is true, of humble origin, but that alone was not their greatness.

It is a curious fact that when you get sick you want an uncommon doctor; if your car breaks down you want an uncommonly good mechanic; when we get into war we want dreadfully an uncommon admiral and an uncommon general.

I have never met a father and mother who did not want their children to grow up to be uncommon men and women. May it always be so. For the future of America rests not in mediocrity but, in the constant renewal of leadership in every phase of our national life.

PUBLIC RIGHTS SAVED BY UNLIMITED DEBATE IN THE SENATE

Mr. YARBOROUGH. Mr. President, time after time in the history of the U.S. Senate, the right of full debate has saved the rights, property, and privileges of the American people. Such full debate gives an opportunity for the people to become acquainted with the issues, and slows up odious measures whose bad features have not been presented to the public.

Those Senators fighting the effort to steamroller the space satellite giveaway monopoly bill through the Senate, have been subjected to considerable public abuse lately. However, only 5 days' debate were consumed in the past month on the issue of monopoly and antimonopoly control of the space satellites so that the matter has not really developed into a full-fledged debate.

It should be fully discussed before this great heritage is filched from the American people. An informative article by Milton Britten, Scripps-Howard staff writer, was printed in the Washington Daily News for Monday, August 6, 1962. Its lesson should be remembered by all of the American people. Note there that three Senators held up a bill, originally drawn by President Wilson's administration, but amended in compromise, that would have taken away the Nation's waterpower sites. The resolute action of three Senators, led by Senator Robert La Follette, of Wisconsin, saved this great resource for the people and a subsequent filibuster by Senator George Norris, of Nebraska, and a threatened filibuster by him, saved the same heritage until the TVA could be created.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the informative article from the Washington Daily News under the title, "If They Protect the People's Rights, Are All Filibusters Bad?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IF THEY PROTECT THE PEOPLE'S RIGHTS, ARE ALL FILIBUSTERS BAD?

(By Milton Britten)

This is a "devil's advocate" piece about filibusters.

The "extended educational campaign," as last week's filibuster was called, against the communications satellite bill got a bad press, as most of them do, because the technique is defensible only within carefully defined limits.

Its only real claim to defense depends on the essential virtue of the motive that inspired it—a highly subjective standard.

However, it can be argued that not all filibusters have proved bad.

Thus, it may be claimed that several States would not now be enjoying the prosperity they do without the filibuster, which was used in Congress to pave the way for creation of the Tennessee Valley Authority.

DIRTY WORD

The southern bloc has made filibuster a dirty word for most Americans. They have used it against Federal intervention in the civil rights field and earlier in this session, to kill a literacy test bill.

However, moderates and liberals, as well as diehard southerners, have in times past used the filibuster to preserve what they believed to be the public interest.

One filibuster, considered an outrage at the time, preserved a natural resource policy that led to Federal operation of the World War I munitions plant at Muscle Shoals as a nitrogen fertilizer producer. This became the keystone on which TVA was finally built.

That filibuster made last week's abortive skirmish look like a nursery pillow fight.

At the end of World War I private power interests were backing a Senate bill, which would have empowered the Federal Government to lease navigable waters for hydroelectric power production, with no preference given public bodies, no effective Federal regulation, no charge for the use of public waters, no meaningful provisions for recalling the leases.

CONTRAST

In contrast, the House had passed a bill drawn by President Wilson's administration that would have also permitted 50-year leases, but would have given preference to public applicants, provided careful review of their use by a Federal commission, and would have also permitted the Federal Government to develop power sites on its own initiative.

The contrasting bills went to conference. The compromise that emerged would have, in effect, removed from U.S. jurisdiction most of the Nation's waterpower sites.

(The criterion: The United States would have jurisdiction only over rivers already navigable for steamboats. This would have removed Muscle Shoals.)

The House overwhelmingly adopted the compromise: 263–65. It was still pending in the Senate, however, on the last day of the 65th Congress. Also stacked up were some $3.6 billion in appropriation bills.

The Senate went into session at 10:30 a.m., March 3, 1919, with President Wilson waiting hopefully in an adjoining room to sign bills as they were rushed through before the scheduled adjournment deadline.

But at 2:30 a.m. on March 4, Senator Robert La Follette, of Wisconsin, gained the floor and he kept it for 3½ hours. A filibuster was on to block the conference report. Two like-minded men joined him; Senator France, of Maryland, relieved him at 5:30 a.m. and then Senator Sherman of Illinois, took over until the Senate adjourned at noon.

FROM BOOK

In his book, "The Conservation Fight: From Theodore Roosevelt to the Tennessee Valley Authority," Judson King wrote: "Whatever the judgment of history upon the wisdom of this filibuster. * * * Except for it, the compromise waterpower bill would have passed and under the tremendous pressure of the moment it might have been signed immediately. The waterpower policy approved by both President [Theodore] Roosevelt and President Wilson would have been ditched.

"The States would have taken over, and many priceless waterpower sites over the Nation probably would have passed into private possession."

Some 5 years later, Senator George Norris, of Nebraska, "father" of the TVA, needed only to threaten an end-of-the-session filibuster to block another conference report that would have authorized lease of the Muscle Shoals property.

TVA CREATED

By the filibuster and the threat of it, therefore, source development stalled battlers for integrated giveaways of natural resources until, in the early thirties F.D.R. asked for and got creation of the TVA. It has since proved one of democracy's most dramatically successful experiments.

Thus, it might be argued, last week's brief legislative delay involving another and vaster natural resource—the communications potential of outer space—may contribute at least to more careful scrutiny and improvement of the pending bill.

It has already resulted in the bill's referral to the Foreign Relations Committee, which should have been closely consulted in the first place.

Filibusters are an aggravating lot, particularly if they read Sears, Roebuck catalogs in lieu of debating the matter to which they object (not the case last week). But history sometimes gives them pretty good marks on their efforts.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

PACIFIC NORTHWEST POWER PREFERENCE

Mr. MANSFIELD. Mr. President, I ask that the unfinished business be made the pending business.

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

AMENDMENT OF THE ATOMIC ENERGY ACT OF 1954

Mr. MANSFIELD. Mr. President, I move that the pending business be temporarily laid aside, and that the Senate proceed to the consideration of Calendar No. 1639, Senate bill 3491.

The motion was agreed to; and the Senate proceeded to the consideration of the bill (S. 3491) to amend the Atomic Energy Act of 1954, as amended, and for other purposes.

Mr. MANSFIELD. Mr. President, I may say that this bill is being taken up after its clearance by both sides and with the members of the Joint Committee on Atomic Energy.

Mr. PASTORE. Mr. President, so far as I know, there is no objection to the bill. It is noncontroversial. We have held considerable hearings, and I think the bill is satisfactory to both the Republican members and the Democratic members of the Joint Committee.

Mr. President, Senate bill 3491 is a Joint Committee omnibus bill which makes miscellaneous amendments to the Atomic Energy Act of 1954. The amendments may be grouped into four general categories:

First. Sections 1 through 3 of the bill amend the regulatory provisions of the Atomic Energy Act by authorizing the establishment of one or more Atomic Safety and Licensing Boards, and by modifying the AEC regulatory procedures in other respects.

Second. Sections 4 through 7 of the bill amend the indemnity provisions of the Atomic Energy Act, so as to extend Government indemnity to contractors of the U.S. Government for incidents occurring outside the United States.

Third. Section 8 of the bill incorporates into permanent law the boilerplate clauses on "advanced planning and design," "restoration and replacement," and "substitutions," which in the past have appeared each year in the annual AEC authorization acts.

Fourth. Sections 9 through 12 of the bill make minor changes in several sections of the act, to correct certain drafting errors or omissions.

Under section 1, the Commission is authorized to use an Atomic Safety and Licensing Board in lieu of a hearing examiner to conduct hearings and make decisions in atomic-energy licensing cases. The licensing of atomic reactors involves very complicated technical and scientific determinations. A study by the staff of the Joint Committee on Atomic Energy in 1960–61 pointing up the need for technical expertise in making these determinations, and the committee considered the problem during hearings in 1961 and again in 1962. The Atomic Safety and Licensing Board will consist of two persons with technical backgrounds and one person "skilled in the conduct of administrative proceedings." The Commission is given wide flexibility in selecting members for the Board, in deciding in which cases to use the Board, and in deciding on the amount of authority to be delegated to it. The Commission may also utilize the Board in an advisory capacity on rulemaking and other regulatory functions. It is the belief of the Joint Committee on Atomic Energy that the use of an Atomic Safety and Licensing Board, if properly implemented by AEC, will further improve the AEC regulatory process.

Section 2 of the bill relaxes the mandatory hearing requirement in section 189 of the Atomic Energy Act. Under existing law, a hearing must be held on the application for a construction permit and on the application for an operating license. Under the terms of the committee's amendment, a hearing will be required only on the construction permit, which is really the critical point in reactor licensing—the point at which the suitability of the reactor site is determined. This amendment in no way limits the right of an interested party to intervene and request a hearing at some later stage, nor does it affect the right of the Commission to hold a hearing on its own motion.

Section 3 of the bill relaxes the requirement for referral of license amendments to the Commission's Advisory Committee on Reactor Safeguards. It is the committee's hope that by relieving the very capable Advisory Committee on Reactor Safeguards of the responsibility for reviewing minor amendments, this distinguished group may be able to devote its full attention to safety questions of more far-reaching importance.

Sections 4 through 7 will extend the indemnity provisions of the Atomic Energy Act to cover contractors of the United States who are engaged in activities outside the continental limits of the country. The primary purpose of these amendments is to protect contractors of the AEC who are engaged in the nuclear submarine, nuclear rocket, and remote military reactors program. Under the terms of the amendment, these contractors will be eligible for $100 million of Government indemnity, with a comparable limitation of liability for incidents occurring outside the United States. This is in contrast to the $500 million indemnity which the AEC now makes available to licensees and contractors of the Commission for incidents occurring within the United States.

Section 8 of the bill incorporates into permanent law a number of standard provisions which appear each year in the AEC authorization act.

Sections 9 through 12 merely correct minor drafting omissions, and are not intended to have any substantive effect on the Atomic Energy Act.

In connection with section 9 of the bill, Mr. President, on page 8, line 4, where the words "11b.(2)" appear, the reference should, instead, be to "11v.(2)." This is an error in the bill as prepared for printing, and the proper reference should be included in the bill as passed by the Senate. I ask unanimous consent for this purpose.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PASTORE. Mr. President, this bill is in keeping with the Joint Committee's continuing effort to keep the Atomic Energy Act up to date with new developments in the field of atomic energy. The bill has been reported from the Joint Committee without any dissenting vote, and I urge its passage by the Senate.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 3491) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Atomic Energy Act of 1954 is amended by adding thereto the following new section:

"SEC. 191. ATOMIC SAFETY AND LICENSING BOARD.—

"a. Notwithstanding the provisions of sections 7(a) and 8(a) of the Administrative Procedure Act, the Commission is authorized to establish one or more atomic safety and licensing boards, each composed of three members, two of whom shall be technically qualified and one of whom shall be qualified in the conduct of administrative proceedings, to conduct such hearings as the Commission may direct and make such intermediate or final decisions as the Commission may authorize with respect to the granting, suspending, revoking or amending of any license or authorization under the provisions of this Act, any other provision of law, or any regulation of the Commission issued thereunder. The Commission may delegate to a board such other regulatory functions as the Commission deems appropriate. The Commission may appoint a panel of qualified persons from which board members may be selected.

"b. Board members may be appointed by the Commission from private life, or designated from the staff of the Commission or other Federal agency. Board members appointed from private life shall receive a per diem compensation for each day spent in meetings or conferences, and all members shall receive their necessary traveling or other expenses while engaged in the work of a board. The provisions of section 163 shall be applicable to board members appointed from private life."

Sec. 2. The second sentence of subsection 189a. of the Atomic Energy Act of 1954, as amended, is deleted and the following is inserted in lieu thereof: "The Commission shall hold a hearing after thirty days' notice and publication once in the Federal Register, on each application under section 103 or 104b. for a construction permit for a facility, and on any application under section 104c. for a construction permit for a testing facility. In cases where such a construction permit has been issued following the holding of such a hearing, the Commission may, in the absence of a request therefor by any person whose interest may be affected, issue an operating license or an amendment to a construction permit or an amendment to an operating license without a hearing, but upon thirty days' notice and publication once in the Federal Register of its intent to do so. The Commission may dispense with such thirty days' notice and publication with respect to any application for an amendment to a construction permit or an amendment to an operating license upon a determination by the Commission that the amendment involves no significant hazards consideration."

Sec. 3. Subsection 182b. of the Atomic Energy Act of 1954 is amended to read as follows:

"b. The Advisory Committee on Reactor Safeguards shall review each application under section 103 or section 104b. for a construction permit or an operating license for a facility, any application under section 104c. for a construction permit or an operating license for a testing facility, any application under section 104 a. or c. specifically referred to it by the Commission, and any application for an amendment to a construction permit or an amendment to an operating license under section 103 or 104 a., b., or c. specifically referred to it by the Commission, and shall submit a report thereon which shall be made part of the record of the application and available to the public except to the extent that security classification prevents disclosure."

Sec. 4. Subsection 11o. of the Atomic Energy Act of 1954 is amended to read as follows:

"o. The term 'nuclear incident' means any occurrence within the United States causing within or outside the United States, bodily injury, sickness, disease, or death, or loss of or damage to property, or loss of use of property, arising out of or resulting from the radioactive, toxic, explosive, or other hazardous properties of source, special nuclear, or byproduct material: *Provided, however,* That as the term is used in subsection 170l., it shall include any such occurrence outside of the United States: *And provided further,* That as the term is used in section 170d., it shall include any such occurrence outside the United States if such occurrence involves a facility or device owned by, and used by or under contract with, the United States."

Sec. 5. Subsection 11r. of the Atomic Energy Act of 1954 is amended to read as follows:

"r. The term 'person indemnified' means (1) with respect to a nuclear incident occurring within the United States and with respect to any nuclear incident in connection with the design, development, construction, operation, repair, maintenance, or use of the nuclear ship Savannah, the person with whom an indemnity agreement is executed and any other person who may be liable for public liability; or (2) with respect to any other nuclear incident occurring outside the United States, the person with whom an indemnity agreement is executed and any other person who may be liable for public liability by reason of his activities under any contract with the Commission or any project to which indemnification under the provisions of section 170d. has been extended or under any subcontract, purchase order or other agreement, of any tier, under any such contract or project."

Sec. 6. Subsection 170d. of the Atomic Energy Act of 1954 is amended by adding before the period at the end of the second sentence thereof the following proviso: ": *Provided,* That in the case of nuclear incidents occurring outside the United States, the amount of the indemnity provided by the Commission shall not exceed $100,000,000."

Sec. 7. Subsection 170e. of the Atomic Energy Act of 1954 is amended to read as follows:

"e. The aggregate liability for a single nuclear incident of persons indemnified, including the reasonable costs of investigating and settling claims and defending suits for damage, shall not exceed the sum of $500,000,000 together with the amount of financial protection required of the licensee or contractor: *Provided, however,* That with respect to any nuclear incident occurring outside of the United States to which an agreement of indemnification entered into under the provisions of subsection 170d. is applicable, such aggregate liability shall not exceed the amount of $100,000,000 together with the amount of financial protection required of the contractor. The Commission or any person indemnified may apply to the appropriate district court of the United States having venue in bankruptcy matters over the location of the nuclear incident, except that in the case of nuclear incidents occurring outside the United States, the Commission or any person indemnified may apply to the United States District Court for the District of Columbia, and upon a showing that the public liability from a single nuclear incident will probably exceed the limit of liability imposed by this section, shall be entitled to such orders as may be appropriate for enforcement of the provisions of this section, including an order limiting the liability of the persons indemnified, orders staying the payment of claims and the execution of court judgments, orders apportioning the payments to be made to claimants, orders permitting partial payments to be made before final determination of the total claims, and an order setting aside a part of the funds available for possible latent injuries not discovered until a later time."

Sec. 8. Section 261 of the Atomic Energy Act of 1954 is amended by adding thereto the following new subsections:

"c. Funds are hereby authorized to be appropriated for advance planning, construction design, and architectural services in connection with any plant or facility not otherwise authorized, and for the restoration or replacement of any plant or facility destroyed or otherwise seriously damaged, and the Commission is authorized to use available funds for such purposes.

"d. Funds hereafter authorized to be appropriated for any project to be used in connection with the development or production of special nuclear material or atomic weapons may be used to start another project not otherwise authorized if the substituted project is within the limit of cost of the project for which substitution is to be made, and the Commission certifies that—

"(1) the substituted project is essential to the common defense and security;

"(2) the substituted project is required by changes in weapon characteristics or weapon logistic operations; and

"(3) the Commission is unable to enter into a contract with any person on terms satisfactory to it to furnish from a privately owned plant or facility the product or services to be provided by the new project."

Sec. 9. Section 109 of the Atomic Energy Act of 1954 is amended by striking out the words "11p.(2) or 11v.(2)" and substituting therefor the words "11t.(2) or 11aa.(2)".

Sec. 10. Subsection 145f. of the Atomic Energy Act of 1954 is amended by striking out the comma after the word "investigation".

Sec. 11. Section 152 of the Atomic Energy Act of 1954 is amended by striking out the word "allowances" in the first paragraph thereof and substituting therefor the word "allowance".

Sec. 12. Subsection 161n. of the Atomic Energy Act of 1954 is amended by striking out the words "145e." and substituting therefor the words "145f.".

PACIFIC NORTHWEST POWER PREFERENCE

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendments, as modified, of the Senator from Arizona [Mr. Goldwater].

COOPERATIVES OFFER EMERGING NATIONS A PRIVATE WAY

Mr. McCARTHY. Mr. President, I ask unanimous consent that there may appear at this point in the Record an article written by Jerry Voorhis, who has been the executive director of the Cooperative League of the U.S.A. The article is entitled "Cooperatives Offer Emerging Nations a Private Way," and appears in the spring issue of the publication Business and Society.

There being no objection, the article was ordered to be printed in the Record, as follows:

Cooperatives Offer Emerging Nations a Private Way

(By Jerry Voorhis)

(Note.—The former U.S. Congressman from California has been for some years executive director of the Cooperative League of the U.S.A.)

In no country on earth are there as many different kinds of cooperative or mutual enterprises as exist in the United States. Three-quarters of all the farmers in our country are member-owners of one or more cooperative businesses. Electric cooperatives, almost unknown in the rest of the world, have nearly 5 million member-owners to whom they deliver close to a billion dollars of electric energy each year.

Cooperative health plans, again almost unknown in other countries, provide most of the medical care needed for hundreds of thousands of American families. There are more than 12 million members of credit unions in the United States. Except for Canada, rural Germany, the West Indies, and perhaps rural Japan, the credit union movement is only starting in most of the countries in the world. Consumer cooperative shopping centers in American cities are now growing at a rapid rate.

Yet many Americans don't know precisely what a cooperative enterprise is. A few think it is a form of socialism. Some think it is something farmers do—but no one else. Others believe, falsely, that forming a cooperative business is a way of avoiding taxes.

What then is a cooperative?

It is a form of business enterprise which is owned by the customers of the business. Usually a cooperative is brought into being, capitalized, and organized by a group of people who feel some unmet need and set out to supply it for themselves. They form their own cooperative business for that purpose. Clearly, therefore, cooperatives are privately owned, nongovernmental institutions. They are far from being socialistic because socialism means, by definition, ownership by the state; whereas the very essence of true cooperatives is their voluntary character and the initiative of the people in forming them.

NOT PROFIT ORIENTED

But neither are cooperatives of the same character as profit-oriented businesses. In such businesses the owners or investors seek to sell their wares or services to other people and to realize a profit from so doing. Cooperatives on the other hand, being owned by their very customers have no incentive for profit taking. They exist instead to supply goods or render services to their owner-customers at the most economical net cost consistent with fair dealing. They do not ordinarily accomplish this by price cutting. Instead they allocate and pay each customer his proportionate share of earnings, based upon his use of or purchases from the cooperative.

Americans will probably hear more about cooperatives in the years ahead than they have in the past. For, especially in the newly developing countries cooperation is one of the most acceptable words and concepts. To people who want to avoid communism and also to throw off colonial exploitation the cooperative form of economic organization offers a practical middle way.

Cooperatives flourish best and grow fastest where a deep need for their benefits and help is clear to everyone.

And so in countries where peoples are fighting their way out of poverty and sometimes oppression, "cooperative" and the word "cooperation" are good, strong, meaningful words—words that become rallying points for people who want to be free and at the same time raise their standards of living.

SOME QUICK EXAMPLES

A few quick examples: Under her official 5-year plan, India seeks so broad a development of cooperatives that they will comprise one-third of the entire economy of that country. India has for decades had a nationwide pattern of agricultural cooperative credit societies. So she does not start from scratch.

In Indonesia the very constitution of the nation calls for making cooperatives a major element in her economy. Partly at least this is prompted by the desire to put an end to the control of outsiders and money lenders. A structure of multipurpose cooperatives has been built. The question is whether it is big enough and strong enough to stem the tide of Communist influence and to survive political controversy.

One of the finest accomplishments of the American occupation of Japan was the development of a truly democratic structure of cooperatives, particularly among Japanese farmers. Today those cooperatives are the backbone of Japanese agriculture. The magazine of the federation of agricultural cooperatives has the largest circulation of any periodical in Japan.

In almost every newly free nation of Africa, the development of cooperatives, particularly credit cooperatives and cooperatives to market farmers' crops, is a principal hope and a principal reliance for a better day. In the Cameroons marketing cooperatives have eliminated middlemen, captured the full market price for farmers, led to new cropping practices and better quality, and even brought about a new interest in education and the building of schools.

QUICKENED LATIN INTERESTS

In Latin America, with Puerto Rico as an example of what can be accomplished, there is quickened interest in all kinds of cooperatives with the hope that they can become a mainstream in the development of the economies of South and Central America. For example, the whole pattern of life of many of the mountain Indian people in Peru is being changed for the better through the organization of credit unions, largely by Catholic priests.

But the foregoing examples are by no means the whole story. It is one thing to declare in a 5-year plan that "cooperatives shall be developed to a point where they comprise a third of the national economy". It is quite another thing to arouse the peoples' faith and interest and to provide the education and technical guidance to a point where this policy will become reality.

The task of developing viable, beneficial, economically strong cooperative institutions requires skilled, trained leadership such as exists in few of the new countries. It requires some capital—probably more than most of these peoples can themselves supply. And it requires the overcoming of suspicion and distrust of what may seem to be a new and untried device.

There are increasing numbers of inspiring success stories about development of cooperatives in many parts of the world. But there are also instances of failure and the dashing of premature hopes. And the reasons for such failures—and here we can generalize for almost all the new countries—where they have taken place have been these: lack of good management, lack of trained leadership, inadequate education of members, and lack of capital; in approximately that order.

The fact is that cooperation in many forms and expressions has been part of the life of mankind from the very beginning of civilization.

Indeed man cannot live without some degree of cooperation with his fellows.

COOPERATION EQUAL MUTUAL AID

Cooperation is another word for mutual aid. And mutual aid lies at the root of every worthwhile human institution—the family, the clan, the tribe, the town meeting, the State, the Nation, the school, the church, the village council.

In most of the newly developing countries, very old forms of cooperation and mutual aid exist. In some of them, experience with cooperation is very much older than in the West.

But there is considerable difference between the ancient and traditional forms of cooperation in the villages of the world and the modern cooperative as a form of economic organization and institution.

The likelihood of success in developing cooperatives on a broad scale in most of these countries will therefore depend upon the degree to which the indigenous local community organizations are used as the base upon which to build.

For this will put the cooperative, in the minds of the people, in a familiar framework. Suspicion and distrust of the untried can thus be overcome. And this is essential as a first step.

INTELLECTUALS COMMITTED

There is no question about the fact that most of the intellectual leaders of the newly developing countries are deeply committed to the development of a strong cooperative sector in their economies. Where feeling against colonialism and capitalism runs high, as it does in most of these countries, cooperatives are the only acceptable form of voluntary, privately owned enterprise. They are therefore, in the minds of these leaders, the one alternative to state ownership. The only question is whether the social gap between the intellectual leaders and the masses of people can be bridged in a reasonably short time.

Cooperatives to be useful and successful must be economic enterprises that are formed by, partly at least capitalized by, serve the needs of, and are controlled by—the people who need them. Unless they feel a sense of responsible participation, success is unlikely.

Outside leadership can help. Many a Catholic priest, some Protestant missionaries and a few technical assistance workers have helped develop cooperatives and credit unions in many parts of the world. As long as the priest or technician is present to stand as sponsor, to assure honest dealing, to give guidance, all will probably go well. If he is removed, the enterprise is in danger.

Basically what must happen is a building of association in the minds of people between the modern cooperative and their traditional forms of village organization and cooperation in their daily lives.

TRAINING CRITICAL

Thus education and training are of primary and critical importance. And they must precede—in any case parallel—the organization of functioning economic institutions. One kind of training is needed for the trainers who will train others. Another kind is needed for the leaders of the cooperatives. Still another kind, less extensive, of course, is needed for the members of the cooperatives.

Most of this education and training must be done in the new country itself. It cannot be accomplished on anything like the needed scale by transporting large numbers of people to the United States or Denmark or any other of the so-called advanced countries. One of the best examples of what can be done within a country and by and for its own people is found in South Vietnam. There exists there today an institution known as the Cooperative Research and Training Center. This center is the result of the careful, wise, understanding work of one American coupled with the intense desire of the Vietnamese leaders to develop cooperatives as a major tool for their economy. The American, Carl Hutchinson by name, went to Vietnam at the request of its Government and was chosen and sent by the Cooperative League of the U.S.A. Mr. Hutchinson was for years educational director of Ohio Farm Bureau.

During the first half of the year 1961, this Cooperative Training Center in Saigon was providing a 1-year course for 39 cooperative leaders, had completed 4-month courses for 63 managers, 27 bookkeepers, and 34 field agents, and had given to 596 cooperative members a 2-week training course.

It was planned in the course of the next year to provide 60 2-week conferences for some 3,000 group leaders in the villages of Vietnam. The leaders who have been naturally chosen by Vietnamese villagers will be given training in cooperatives.

This is the kind of grassroots education which is needed in almost all the newly developing countries if cooperatives are to make the contribution they should to their economic and social life.

This is not, however, to say that for a certain number of the top leaders in these countries training abroad is not desirable and probably necessary. Each year for the past decade and more, several hundred people from the newly developing countries have been brought to the United States partly at least because of their interest in cooperatives. A wide variety of agencies, mostly departments of the government, have brought them. The cost has run from $9,000 to $20,000 for each of these persons.

U.S. JUNKETS TOO SHALLOW

But their experience here has in few cases justified either the expense or the time spent. They have traveled about the country, spent a day or two or three with some of our cooperatives, received a general impression of our country and its great variety of cooperative enterprises—and gone home.

What should be provided for these people is a training course that will benefit them and their countries after they return home. Seeing this the Cooperative League started several months ago to develop an international cooperative training center on a selected university campus in the United States. At such a center carefully planned courses, including several weeks of practical observation with the kind of cooperatives most necessary for their country could be provided for cooperative leaders from the new countries. In the course of time, we might begin to complement the remarkable work of this same sort that has been carried on for so many years at St. Francis Xavier University in Nova Scotia.

CANNOT STOP WITH TRAINING

We cannot, of course, stop with training and education. In some countries there is already enough experience and knowledge to make possible the launching or expansion of cooperative enterprises. But there is seldom enough capital or enough technical know-how to put such enterprises on the road to assured success. These should be supplied by countries like our own and through our own cooperative institutions. The relationship should be so far as possible on a people-to-people basis rather than a government-to-government one. But most of the money will have to come from technical assistance funds of governments.

NEED SELECTED TASK FORCE

There should be selected task forces of highly competent cooperative executives in this country to work with similar people in Latin America, for example, in carefully selecting projects of special merit and need in the different countries. But once such projects have been agreed upon, redtape should be cut to the bone and our cooperative organizations should be authorized to stand sponsor for and to handle the dispensation of necessary funds to carry them out.

Such projects might be the sending of credit union organizers to Bolivia or Peru. Or assistance to the already established cooperative housing organizations in Chile, or the support of the work of a certain remarkable young priest in Venezuela who is striving to develop a model pattern of cooperative organization in his section of that country. Or to go around the world, the project might be the building of 10 fertilizer plants in Pakistan to be owned by the agricultural cooperatives there. Or a cooperative college in east Africa.

In some of the newly developing countries cooperatives are already key factors in the political struggle—nongovernmental institutions though they are.

HATTA AND SUKARNO

For example, one of the master keys to understanding of Indonesian politics at present lies in these facts. Mohammed Hatta, former Vice President of that country, wrote into its Constitution a provision for promotion of credit, marketing, supply, and production cooperatives as one core of the nation's economic progress. President Sukarno is a political rival of Hatta. Before Sukarno took over the almost complete power he now holds, cooperatives were growing very rapidly indeed. They were performing great services to the people—quadrupling in some cases the returns to agricultural producers over what they formerly received when they sold their crops to middlemen—usually Chinese.

By 1958, 15,000 cooperatives had been organized, from a start with only about 1,000 in 1950. The villagers were voluntarily putting their small savings into their credit cooperatives each week, to a total of very substantial sums.

VICTIM OF POLITICS

But because cooperatives are so closely associated with his political rival, Hatta, Sukarno has tried to retard, if not stop their progress and has advocated a taking over by the state of many functions which have been performed so well by the cooperatives. It is probable that should the Sukarno government fall, the resentment of people who found cooperatives good, will be a main reason. And there are many people in Indonesia who await the day when a change in government will take place so progress in building cooperatives can again be resumed. The naturally peaceful, gentle, trusting Indonesians are a people adapted very well indeed to the employment of cooperatives. It will be a major tragedy, thus far all too little heeded, if political prejudice bars their way.

It should be evident that from the viewpoint of the West, the development of strong cooperatives in the new countries should be a matter of high policy. In none of the Western countries, however, has this been the case—thus far. But in the United States, there are strong indications that with the coming of the Kennedy administration, this coolness toward aid to cooperatives has changed to a rather intense interest.

In fact on June 23, 1961, the Department of State issued a press release quoting Henry R. Labouisse, Director of the International Cooperation Administration, as saying that "greater emphasis on the development and assistance of cooperatives in underdeveloped countries will be among the major objectives of the administration's new foreign aid program."

THE TOP IS NOT ENOUGH

Unfortunately, however, decisions at the top are not enough. Neither the heads of governments and the intellectual leaders of the new countries, nor the foreign aid programs of the United States and other Western countries can bring good cooperative institutions into being simply by deciding to push a program for their development. Training and education, careful selection of projects and programs to be developed, and the furnishing of more capital—all these are going to be required if the rich potential for freedom which lies in cooperative ideals and practices is to be realized.

PASSING OUT OF SUBSISTENCE STAGE

The needs and opportunities for the development of self-help, mutual and cooperative institutions in the new countries are almost unlimited. Without them, land reform programs are likely to leave the farmers to whom land is allotted little better off than before. For the farmers—and 80 percent of the people of these countries are farmers—are right now passing out of the stage of subsistence, direct-consumption farming and into an agricultural economy which produces for markets, sometimes far away.

Unless marketing, credit, supply, and service cooperatives are organized to enable these farmers to control their own economic destiny, this transition will be tragic. With wise and courageous development of cooperatives, it can be the dawn of a new and better day.

THE MUTUAL AID VALUE

And there is one more value—intangible perhaps, but probably the most important of all. Between people who have experienced the use of mutual aid, there does exist an intangible but very real relationship of understanding and confidence. This is true wherever these people are, whatever the color of their skin, and whatever their economic condition. It is a force for good in the world which can bridge national boundaries and out of which can grow the substance of the peace which mankind must achieve.

DIGEST OF REMARKS BY DR. ARTHUR R. UPGREN ON ECONOMIC PROBLEMS

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a digest of remarks by Dr. Arthur R. Upgren, Frederic R. Bigelow professor of economics; director, bureau of economic studies, Macalester College, St. Paul, Minn., which summarizes the economic progress which has been made in the United States and raises some questions and problems which have not been satisfactorily solved.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

DIGEST OF REMARKS OF DR. ARTHUR R. UPGREN, FREDERIC R. BIGELOW PROFESSOR OF ECONOMICS; DIRECTOR, BUREAU OF ECONOMIC STUDIES, MACALESTER COLLEGE, ST. PAUL, MINN.

The people of the United States have been solving a great many important and difficult economic problems. They are not always aware of this. Therefore, the problems which have been solved deserve this enumeration:

1. Achieving a thoroughly satisfactory control of inflation.
2. Achieving a thoroughly satisfactory control of the national debt.
3. Maintaining adequate immediate liquidity of the financial system.
4. Reducing substantially the declines in postwar business cycles.
5. Achieving economic recoveries following postwar recessions and achieving them in much larger measures than the declines in the recessions.
6. Fair establishment of a guide for wages.
7. Fair but precarious management of reasonable equilibrium in the international balance of payment.

The economic problems which are not satisfactorily solved at this time include:

1. Achieving higher rates of employment and reducing unemployment.
2. Achieving more satisfactory rates of economic growth.
3. Creating a national urge on the part of labor to increase productivity and to reduce featherbedding.
4. Securing that more satisfactory level for business profits which will enlarge investment in plant facilities to promote from capital greater gains in our productivity.

These problems are discussed in order of their presentation above.

I. ECONOMIC PROBLEMS SATISFACTORILY SOLVED IN THE POSTWAR YEARS

In a free society it is probable that no problem is at any time completely satisfactorily solved. A free society will have creaks and jerks but as with human health, the total result promotes a healthier economy. The result may be as satisfactory as can be expected in a dynamic free enterprise society. It is in this sense that the following, first group of problems is judged to have been satisfactorily solved.

The fact that these problems are judged to have been satisfactorily solved in the postwar period will not be readily accepted by some people. They persist in giving support to the views which Artemas Ward stated as follows:

"It ain't so much what the American people don't know that hurts, as it is what they know that ain't so."

As an illustration there are many people who think inflation is still a very serious matter despite the fact that we have been doing 90 percent better in stopping it. At most colleges including mine, a 90 percent gives the student an A, ability to enter any graduate school, and probably a Phi Beta Kappa key thrown in. Another example is the national debt. There are so very many people including editorial writers who state and state again that the national debt, like inflation, is soaring to new high levels. The fact is, as we shall see below neither the price levels nor the national debt is soaring. These are some of the things which some of the American people know and "that ain't so."

1. Achieving a thoroughly satisfactory control of inflation: The rate of inflation or increase in the price level (consumers prices and cost of living index) was almost 10 percent a year from 1940 to 1948. From 1948 to 1962 this increase has been at a rate considerably below 2 percent a year. Here we have been doing about 83 percent better. In the past 4 years the rate of increase in prices has been about 1 percent a year or almost 90 percent better than from 1940 to 1948. The index does not allow for improvement in quality so even if the index should continue to rise at the rate of 1 percent a year, the index would require 72 years, or two generations to double. Surely, we can all agree in the following two propositions: (A) qualities improve at a faster rate than 1 percent a year; (B) we, the American people, would not accept or want the older qualities of goods at prices that would not be increased at all. We want better goods and for that we should be prepared to pay a better price.

Here in brief, without elaboration, are the methods by which we had stopped inflation almost completely by 1952 and by which we have kept the price level under reasonably satisfactory control for the past 10 years (this is by no means a short period).

A fairly satisfactory balancing of the budget in the postwar years. The "cash consolidated budget," probably the significant budget for considering inflation forces, has had a net deficit of less than $15 billion since 1946. This budget measures total cash out payments and total cash receipts in the total of the Federal Government's relations with the public.

While the better known administrative budget has had larger deficits in the postwar years, even here, relative to the size of the economy this deficit has not been unduly large. In fact, the deficits for the 10 postwar years in which there have been deficits, have amounted to $51.5 billion and the surpluses in the 6 years in which surpluses have been recorded, added up to $17 billion. Thus, the net deficit has been $34.5 billion, 1947–62 inclusive (fiscal years). Thus, the net deficit has not averaged as much as $2.25 billion a year for the past 16 years. This is not a very substantial figure in relation to the gross national product, which in these years has averaged about $450 billion. In fact, the deficit amounted to about one-half of 1 percent. This is the relation of the average annual deficit in the 10 postwar years to the average annual level of our GNP in the same period.

It is true that a better performance in the budget is desired but there certainly has been no evidence of the recklessness so widely charged.

2. Achieving a thoroughly satisfactory control of the national debt: With respect to the national debt, the figures alone tell a story. The national debt on December 31, 1945, was $278.7 billion. However, in the last bond drive about $20 billion more was borrowed than was needed. Approximately this sum was used to reduce the debt in the first 6 months of 1946. As a result we may take the postwar debt at $260 billion. For the past year the average debt has been about $299 billion. (The debt increases in the second half and is frequently reduced in the first half of the year.) Thus the increase in the debt from 1945 to 1962 has been 15 percent in this 16½-year period. This is an increase at a rate of less than 1 percent a year.

Against this increase of 16 percent in national debt since the end of World War II every other form of debt has increased from 216 percent for corporate debt to 600 percent for house mortgage debt.

This is not in criticism of the much higher rates of increase in all forms of private debt. That increase in debt is a completely necessary accompaniment to economic growth. We have, however, managed the national debt since the end of the war in satisfactory condition. A much better performance should have been achieved during the war. Perhaps that unsatisfactory war-time fiscal performance has thoroughly alerted us as a nation to reasonable carefulness in the postwar period. It may be added that while service on the national debt requires about 10 percent of the Federal budget and net of returns from interest on the national debt into tax revenues and cash receipts, about 6 percent, this burden is not unduly large. Furthermore, the national debt ranks along with total commercial bank deposits, savings and demand deposits, as a source of absolutely necessary financial liquidity for satisfactory lubrication for satisfactory performance of the American economy.

The figures for the growth in the national debt which have now been given reconcile satisfactorily with the figures given above for the net deficits of the postwar years.

3. Maintaining adequate immediate liquidity of the financial system: In the 1930's and in the war years following an enormous financial and banking liquidity was built up up in the United States. This was the result of devaluating the dollar, which increased the price of gold, which attracted to the United States a sixfold increase in this basic monetary reserve in 10 years from 1934 to 1944. The large stock of our reserves produced basic liquidity but not inflation. This came in the war years and immediately after. The cause was financing a large part of the cost of the war at the commercial banks. These banks in the war years acquired $100 billion of U.S. securities. This lifted the deposits from a prewar level of $80 billion to $180 billion at the end of the war. Here was the increase in the money supply which caused inflation.

This increased liquidity of the banks has facilitated an excellent record of bank lending since the end of the war. This liquidity will suffice us until 1970. Thereafter, we will have the liquidity problem anew domestically just as we are facing a liquidity problem internationally.

4. Reducing substantially the declines in postwar business cycles: In the postwar period we have had four economic recessions. These have ranged from 1 percent to 3¾ percent recessions. None have had a duration of more than 12 months and the last two were 8 months. The recoveries have been due to the great forces of the automatic economic stabilizers. The recoveries have been quick and substantial. In fact, the recoveries have ranged from 3 to 6 times the amount of the decline and in the same length of time as that in which the decline occurred. The stabilizers are adequate enough to preserve a reasonably stable economy for the remainder of the decade.

5. Achieving economic recoveries following postwar recessions and achieving them in much larger measure than the declines in the recessions: As pointed out above our recoveries from recessions have been very much greater than the extent of the decline in the recession. This has been largely because the families of America maintain consumption throughout the recession, thus necessitating a quick recovery. As soon as there has been substantial liquidation of inventories, these recoveries have been greatly reinforced by the wage-increased incomes flowing to labor. As a result of the automatic increase in rates of labor pay which originate in 2 or 3 years and customary wage increases so widely granted.

6. Fair establishment of a guide for wages: The guide for wages is now being fought out in labor negotiations, now requiring recognition for restraint in demands for labor (as we had in the price of steel). The guide for wages was well stated in the Economic Report of the President for January 1962, page 189:

"The general guide for noninflationary wage behavior is that the rate of increase in wage rates (including fringe benefits) in each industry be equal to the trend rate of overall productivity increase. General acceptance of this guide would maintain stability of labor cost per unit of output for the economy as a whole—though not of course for individual industries.

"The general guide for noninflationary price behavior calls for price reduction if the industry's rate of productivity increase exceeds the overall rate—for this would mean declining unit labor costs; it calls for an appropriate increase in price if the opposite relationship prevails; and it calls for stable prices if the two rates of productivity increase are equal.

"These are advanced as general guideposts. To reconcile them with objectives of equity and efficiency specific modifications must be made to adapt them to the circumstances of particular industries."

This report is in complete harmony with statements made by President Eisenhower during his administration. The Council of Economic Advisers, both Republican and Democratic, also place the rising average per worker productivity for the country as a whole at 2.6 percent. Thus annual wage increases must be held to an approximate 2½-percent annual increase. This is the view of the economist. It is a more conservative view than that of the businessman as indicated by the actual wage increases credited up to 1962. It is, of course, much more conservative than the demands of labor so that the education task ahead is to enlighten labor that any group in labor demanding a higher rate of wage increase is demanding the right to take a part of the product for themselves and to take it away from other groups in our society. If a wage rate increases more than the national average gain in worker productivity, then other groups including fixed income groups are able to buy a lesser amount of product. This is because of the excess of the labor demanded. Many wage increases over productivity gains will bid prices up to deprive the fixed income and other groups receiving lower rates of income of the goods which the high wage increasing demands of the powerful groups are able to buy with that excess of their pay over the national contribution of all labor to an average rising national productivity.

7. Fair but precarious management of reasonable equilibrium in the international balance of payment: The international liquidity problem is a separate problem and it is of serious proportions. Our balance

of trade is reasonably adequate running more than $5 billion favorable balance in 1961 and 1962. Our balance of payments has not been so satifactory. This is because we spend abroad for military purposes, we make grants abroad and businessmen invest more abroad so that the excess of these payments over the amount of the net balance of trade requires gold to be shipped, or dollar balances to be granted. The loss of gold has lowered our central bank liquidity from a gold reserve ratio of 90 percent in 1941 to less than 35 percent at the present time. Consequently, it is imperative that we encourage still larger exports or reduce payments abroad. These two objectives can be reached by that labor restraint in wage demands which will permit a favorable cost structure here to enlarge exports and to ask the countries of Western Europe, now eminently able to do so, to take over military expenditures and grants to foreign countries in part. Labor costs are rising somewhat more rapidly abroad. However, the U.S. gold stock at $16½ billion today, is somewhat less than foreign quick claims upon us amounting to $18 billion in gold and dollars and practically no liabilities such as we have. We must tread very carefully in this area and develop new financial cushions to meet balance-of-payment shocks before they arise or occur.

II. ECONOMIC PROBLEMS WHICH ARE NOT SOLVED AT THE PRESENT TIME

1. Achieving higher rates of employment and reducing unemployment: This problem has been so widely discussed only mention of it is needed here. Whatever remedies are now being seriously considered must be strengthened within 3 years because in 1965 we shall have 1 million more young people reaching each year the age of 18 than have been reaching that age in the first half of this decade. That 1 million increase is now destined to continue each year for at least 15 years. This problem of economic growth to increase employment adequately and to reduce unemployment requires far more consideration than is yet being given to it.

2. Achieving more satisfactory rates of economic growth: Our rate of economic growth has not been satisfactory to yield high employment and to reduce unemployment in terms of our gross national product (GNP). The one component which has not increased in the past 5 years is business investment in new plant equipment. Present step to encourage this must be very greatly enlarged. "Investment credits" of the size now proposed are helpful in a small way. So is the completed increase in depreciation allowances. A better improvement would be the gradual abolition of the corporate income tax. This abolition over a 16-year period or at an annual rate of about 6 percent would reduce revenues about $1.5 billion. Even this could lead to increased investment by business in new plant facilities—and these are certainly needed—in an amount of $2.5 billion a year. The resulting total economic expansion would produce tax revenues fully adequate to offset the loss of tax revenues from this gradual abolition of the corporation income tax.

It is because business investment is the present weak component in GNP and the only weak component and because expansion in terms of productivity requires large increased plant investment, that this recommendation becomes appropriate at this time. The education required is for labor to recognize that possible gains in national output will reward labor far more than any gain which labor could derive by increased income tax exemption.

3. Creating a national urge on the part of labor to increase productivity and to reduce featherbedding: It has been so widely understood that increased productivity alone cannot benefit the members of our society and particularly labor, that labor should direct an affirmation of methods of exploring improvements in productivity and eliminate featherbedding and eliminating present demands for a shorter workweek.

4. Securing that more satisfactory level for business profits which will enlarge investment plant facilities to promote from capital greater gains in our productivity: From 1950 to 1960 the total compensation of all employees in the United States increased $139.5 billion. In the same 10 years the total tax revenues of all governments, Federal, State, and local increased $71 billion. In the same decade total corporation profits fell $100 million. The increase in total pay of labor was 80 percent.

The increase in tax revenues was 125 percent. Even if slightly different years are used the increase in corporation profits was less than 10 percent. The total amount of corporation profits is not large and the increase in corporate profits which would represent a genuine stimulus to business investment in improved and better plant equipment, would be insignificantly small, even judged as a cost to labor, a small price to labor for the continuing resulting gains in productivity in which labor shares so generously.

CONCLUSION

The foregoing sketches, in brief in some instances, are what could become the agenda for a present-day report on the performance of the American economy since the end of World War II with views suggesting the agenda for the future.

THEY DON'T THINK MUCH OF SCHWARZ DOWN UNDER

Mr. YOUNG of Ohio. Mr. President, the increased activity in the last few years of what is commonly referred to as the radical right, or the rightwing lunatic fringe, and the publicity given it has proven to be a virtual gold mine for a few opportunistic rabble rousers. These circuit riders of the new anti-Communist evangelism have discovered that spreading their messages of prejudice and hate can be a very profitable occupation.

One of the foremost among them is Fred Charles Schwarz, a part-time doctor from Australia, who in the United States has become a plain medicine man. The cure-alls of this witch doctor are fear, suspicion, hate, and hysteria. He is a flamboyant fakir.

Schwarz recently announced that he is bringing his show known now as the Christian Anti-Communist Crusade to my home city of Cleveland, Ohio, where he will stage a 5-day anti-Communist school. These so-called schools are in reality exercises in revivalist emotion and hysteria rather than exercises in logic and understanding. His teachers are for the most part extremists of the radical right who see Communists under every bed. Also associated with this witch doctor may be a few retired high-ranking military officers who want our Nation to wage preventive war tomorrow, if not today—plus some plain old-fashioned rabble rousers.

President Eisenhower, on leaving the Office of Chief Executive, delivered a sort of farewell address, which contained a grave warning to his fellow countrymen. He stated the fact that our Nation is threatened from within by an enormous and insidious power—the combination of a huge number of officers in our Armed Forces and retired officers, and powerful industrialists and retired industrialists. He termed this "a military-industrial complex." Some of its rightwing leaders are urging preventive war against the Soviet Union. If they could muster the full force of this complex, they might start such a war, despite the fact that it should seem unthinkable to any American for us to unleash our jet bombers and missile power upon Soviet cities, airfields, and missile installations and engage in a day of infamy such as we suffered at Pearl Harbor. He stated that this segment of our population wields "the power of fantastic billions of dollars, developing an influence that is felt in every city, every statehouse and every office in the Federal Government." It is well for us to be vigilant against any alliance of war-minded military, of eccentric ex-military leaders, along with a war-oriented segment of big business.

Attorney General Mosk, of California, who is well acquainted with the activities of the lunatic rightwing fringe in that State, has aptly referred to the Schwarz movement as patriotism for profit. In 1961, his record year, Schwarz collected a total of almost $1,300,000. Through appearances this year, such as he has scheduled in Cleveland, he hopes to boost this record. Pretty good for a fellow who arrived in this country in 1953 with just $10 in his pocket.

In Cleveland, he recently addressed more than 2,000 persons who paid $1 each to hear this demagog of the right deliver a 2-hour address. His take at the gate—as they say regarding prize fights—was $2,000 or more. Hawkers sold anti-Communist literature at 25 cents a pamphlet. In addition, a radio station broadcast his address—this under sponsorship of a so-called chairman of the Northern Ohio Freedom Forum.

This director, according to a newspaper report, "cued the audience to applaud, shout, and whistle to make it sound like 10,000."

It is interesting to note that in his own country of Australia, Schwarz has been virtually ignored when he tries the same promotional stunts that have been reaping big rewards for him in the United States. In Sydney, Australia, a city of over 2 million people, his meeting resulted in only $70 in receipts. No wonder he prefers to ply his trade in our country.

Mr. President, this man and his sponsors had the temerity to ask the Cleveland Board of Education to excuse junior and senior high school students from school to attend his classes, so called, next October. It would be inexcusable and an injustice to public school students attending important classes to require that they waste valuable time listening to an Australian demagog, now in this country plying his profitable rabble rousing.

I hope that Walter L. Davis, president of the Cleveland school board, and William B. Levenson, as leader of the public school system, will unhesitatingly reject any suggestion that students be excused from classroom work to listen to the pseudopatriotic lectures of the Christian anti-Communist crusade, so called, led by Dr. Schwarz.

Our public schools are dedicated to the search for truth and to teach the youth of America to think. I denounce this as an attempt to apply pressure on our youth and to indoctrinate them with unreasoning hysteria. The next project of the present-day witch hunters could well be, and probably will be, to censor history books and other textbooks and try to direct what courses are to be given in our public schools. In many communities throughout the Nation they have already tried to accomplish this.

Administrators of our public school system would do well to keep in mind the statement made by Dr. Robert Hutchens as president of the University of Chicago. Some self-appointed vigilante, evidently fearing that Communists were infiltrating the parent-teachers' association and university faculties, asked, "Dr. Hutchens, is it really true that you teach communism in the University of Chicago?" He responded, "Yes, lady, and we teach cancer in our medical school."

Unfortunately, Dr. Schwarz and his instructors have very little to say against the threat of aggression from the Soviet Union and Red China. They retreat from emphasis on opposition to the grave Communist aggressions from the Soviet Union and Red China. Instead, they prefer to denounce Communists at home, where they are weakest and well under control. They try to create the suspicion that many of our neighbors are Communists or Communist sympathizers.

In an ominous voice, this unscrupulous demagog, Fred Charles Schwarz, opened his recent address in Cleveland stating that he was repeating the words of Nikita Khrushchev, "Tomorrow the Red flag will fly over the United States." Of course, he is resorting to the big lie. He could not prove where and when Khrushchev made that boast, if he ever did. In his meetings, he spends most of his time denouncing Communists he claims are boring from within. Of course, no one in the audience asked the speaker regarding the recent report of the Federal Bureau of Investigation on the decline of the Communist Party in the United States.

The report stated that the Communist Party in the United States has lost 90 percent of its membership since reaching its numerical strength peak 18 years ago. The FBI report is that there were 80,000 Communists in the United States in 1944. The Soviet Red army was crushing Hitler's supermen in Europe, and in America there was some slight tolerance for homegrown Communists, I am told. It happens I was overseas in Italy at that time. At present, the FBI estimates the numerical strength of the Communist Party has nosedived and is between 8,000 and 10,000 in our entire country. At most, there is 1 Communist in the United States for every 18,000 noncommunists. The odds in favor of free institutions being 18,000 to 1.

Suppose 80,000 people were witnessing a Big Ten football game in Columbus, Ohio, or watching the Cleveland Browns in the Cleveland Municipal Stadium. The chances are that 4 would be Communists and 79,996 would not. What can we do to prevent these four from harming the rest of us? We have on our side the city and State police, the FBI, and the Army, Air Force, and Navy—never forgetting the Marines. Shades of Valley Forge and Iwo Jima. Do we need Robert Welch and Fred Charles Schwarz to gallop to our aid? Do they claim that we no longer are the land of the free, or the home of the brave? Personally, I consider that we in the United States have been too hospitable to this rightwing demagog from down under. It is evident he is held in low esteem in Australia.

In addition to Fred Schwarz, other rightwingers are haranguing the American people, preaching the doctrine of suspicion against their fellow Americans. Such persons as Billy James Hargis allege Americans should look carefully at their neighbors for fear they are harboring Communists, and that the American way of life and our political system will go under unless buoyed up by suspicion and hate.

They propose repeal of the income tax, and to get the United Nations out of the United States and the United States out of the United Nations. They would destroy our NATO alliance and, incidentally, impeach a loyal and distinguished American, Chief Justice of the United States, Earl Warren.

Mention the word "negotiations," and they cry appeasement.

They propose, in fact, to repeal the 20th century. Whoever does not swallow their brand of Americanism, they say is a Communist.

I am reminded of a couplet:

> Last night I saw upon the stair
> A little man who wasn't there.
> He wasn't there again today—
> Oh, how I wish he'd go away.

Some Fascist-minded people say communism comes from socialism, which they claim in turns stems from liberalism which comes from democratic ideas written in our Declaration of Independence by Thomas Jefferson.

Mr. President, not one nation which has achieved a reasonable measure of economic well-being and social justice has been taken over by Communists. Except for those satellite nations, which should really be termed "colonies," where the Soviet army has imposed Communist regimes, communism has moved to power only in nations whose governments were oppressive and reactionary, where people were jobless and hungry, and where they had given up hope that their problems could be solved by the governing authorities. The answer, therefore, to any Communist challenge, is more democracy, more progress—not less.

Speaking of the radical right, J. Edgar Hoover, Director of the Federal Bureau of Investigation, whose own anti-Communist record is beyond reproach, warned that "attributing every adversity to communism is not only irrational but contributes to hysteria and fosters groundless fears. The way to fight it is to study it, understand it and discover what can be done about it. This is neither the time for inaction nor vigilante action."

Mr. President, there is plenty of room in the United States for responsible conservatism. However, groups such as the Christian Anti-Communist Crusade do not seek to conserve anything. Instead, their purpose is to confuse, to incite, to destroy. They are at odds with the purposes which are our strength and our hope—democracy and freedom.

Attorney General Robert F. Kennedy said, in speaking of Robert Welch and his associates of the John Birch society, so called:

> "I think that they are ridiculous, and I don't think that anybody should pay too much attention to them. I think that they make no contribution. * * * To the fight against communism here in the United States. * * * In fact, I think, if anything, they are a hindrance."

It is high time that these purveyors of fear and outspoken exponents of the big lie be denounced and rejected as conscienceless demagogs of the right, and mercenaries profiting by preying on the fears of the unwary.

Free discussion is the lamp that lights democracy.

Dr. Schwarz and those who think as he does have every right to expound their views, much as I or anyone else may disagree with them. However, they do not have the right to have school children advised to listen to them, nor to be excused from classes for that purpose. I hope that their request of this nature in Cleveland will be denied.

The people of Cleveland are becoming more and more aware of Dr. Schwarz and his organization. Thanks to the efforts of courageous journalists such as Forrest Allen, of the Cleveland Press, they are well informed as to its true nature. Mr. Allen on July 12, 1962, wrote an excellent column on Dr. Schwarz entitled "They Don't Think Much of Schwarz Down Under." I ask unanimous consent that this excellent article be printed in the Record at this point.

There being no objection, the article was ordered to be printed in the Record, as follows:

They Don't Think Much of Schwarz Down Under

(By Forrest Allen)

Fred Charles Schwarz used to be a man of medicine in Australia. In 1953 he shifted to the greener pastures of the United States and became a medicine man. His principal nostrums ($1 per admission, 25 cents per pamphlet) are hate and suspicion.

Schwarz is not the sole peddler of these patent medicines in the United States. But currently he's the loudest and Cleveland is doomed to hear considerably more of him before quiet is restored.

Schwarz is the Australian psychiatrist who is running the Christian anticommunism crusade. He is going to stage a 5-day anticommunism school in music hall, and his sponsors have asked the school board to excuse junior and senior high school pupils from class so they can attend.

Through such appearances as he has scheduled here he hopes to boost his 1961 collection record, which totaled $1,273,492—as compared with the modest $23,356 when he first came to the United States in 1953.

Schwarz never took on very well in Australia, I was told there earlier this year. And his blatant promotion of himself in this country hasn't boosted his Australian popularity.

In newspaper circles down under, in fact, Schwarz is described as "Australia's gift to America—in return for Harry Bridges."

In the country of his birth, education, and present citizenship, Schwarz makes little impact, has no influence, and doesn't receive much attention on his visits there. He returns every year and made one of his visits in April.

I called an Australian editor and asked how he was received. In his hometown of Brisbane a ballyhooed meeting brought out 1,500. In Sydney he conducted a long, dull meeting before 200. His Sydney collection was $70, it was announced—not enough to pay meeting expenses.

While his gross and net take in 1962 may exceed last year's, it is my hunch that the sun is setting on the multimillion-dollar pickings for Schwarz and his fellow drumbeaters. I think the reason for their comedown is found in the product they peddle—hatred.

To me, it is highly ironic that Schwarz dubs his fundraising campaign "Christian." In His Sermon on the Mount, Jesus said:

"Ye have heard it said, thou shalt love thy neighbor and hate thine enemy: but I say unto you, love your enemies and pray for them that persecute you."

Schwarz revives the old preachments of the days of rampant McCarthyism. "Suspect thy neighbor and hate thine enemy." And if your neighbor doesn't daily demonstrate hatred for Russia, Red China, Castro—you don't just suspect him, you hand him over to the authorities.

This country grew great and strong on more solid, more truly Christian fare. We don't need narcotics to give us courage or to show us the way to our destiny.

Mr. YOUNG of Ohio. Mr. President, I hold in my hand a program of a so-called Central Ohio School of Anticommunism. It represents a residue of the debris of that period some years back of pointless suspicion, fear, character assassination, and ruined careers.

What I have here is a red, white, and blue program of the Central Ohio School of Anticommunism, so called, which Fred Schwarz inflicted upon Ohio in November 1961. Of course, an important part of the program is the registration form, which commences with the following statement, "Enclosed is a Check or Money Order for Blank Dollars."

From November 6 through November 10, he directed a full course, so-called, for a $20 donation, a night course for a $10 donation, and a 1-day course for a $5 donation—the word "donation" presumably being used for purposes of evading payment of taxes. Then, to add prestige, no doubt, to the sort of gathering he hoped to have, he provided that ministers, teachers, policemen, students, firemen, and servicemen be admitted for half price. The language of his circular evidently made a slip by stating "half price" instead of "half the donation."

Dr. Fred Charles Schwarz, president of the Central Ohio School of Anticommunism, has evidently changed the name of his traveling troupe of havoc criers to the Christian Anti-Communist Crusade.

Now, referring to this fancy program of the Central Ohio School of Anticommunism, I note that an advisory committee is printed in red and blue letters. Senator John Bricker is listed as a member.

Then, as a member of the faculty, I note the familiar name of my colleague and friend, the junior Senator from Connecticut [Mr. DODD]. In the list of members of the faculty there is this statement:

> THOMAS J. DODD, U.S. Senator, Member of Senate Internal Security Committee and vice chairman of the Committee of the Judiciary.

As the distinguished Senator was first elected to the U.S. Senate in 1958, at the same time Ohio citizens elected me, and is seventh in seniority of the Democratic membership of the Judiciary Committee, I was somewhat surprised to read in this program that he is "vice chairman of the Committee on Judiciary." Doubtless, the distinguished senior Senator from Mississippi [Mr. EASTLAND], chairman of the Senate Committee on Judiciary, would also be surprised were he to read this.

Reading the program, it is to be noted that Dr. Schwarz delivered many of the addresses, and on one evening only our distinguished colleague, the junior Senator from Connecticut was listed for an hour and a quarter's address on the subject "America's Internal Security."

Frankly, I do not know whether or not my distinguished senatorial colleague is to be listed as a member of the faculty of the Christian Anti-Communist Crusade of which Dr. Schwarz is president. The same Dr. Schwarz, as executive director, appeared to be the governing figure in the Central Ohio School of Anticommunism.

I do take issue, however, with a statement made not many months ago in Cleveland by our colleague addressing a forum called Project Responsibility, before an audience of 375 individuals from the greater Cleveland area. According to a Cleveland newspaper, the distinguished junior Senator from Connecticut [Mr. DODD] asserted at this meeting:

> Enlightened men and women are deeply disturbed, not by the mysteries of the cold war, but by the clear, simple, demonstrable fact that our policy is failing and we are losing.

Of course, my colleague and friend has the right to express his opinion in Cleveland—or anywhere else—on the foreign policy of this administration in connection with the cold war that is being waged against us, but I respectfully differ with his statement—if the newspaper accurately quoted him. I hope it did not.

It is my considered judgment that the foreign policy of this administration—when we are confronted with Communist aggression from the Soviet Union or Red China—is bold, firm, resolute, and determined. I assert that we are winning the cold war and not losing it. The Kennedy administration is pursuing a firm no appeasement policy in Berlin, in South Vietnam, and throughout the world. I respectfully differ from any statement—if made—that "our foreign policy is failing and we are losing."

Also, in the same newspaper it is stated, referring to this recent meeting, that—

> DODD, a member of the Senate Foreign Relations Committee said: 'Our task now is to stop losing [the cold war]. Our task is to start the tide running in our favor."

My colleague has every right to entertain these views, which are certainly opposite to the views I hold. He has every right to come into my State and make the statements he is quoted as having made—if he did make them. On the other hand, I definitely do not concur in the statement he is quoted as having made that "we have become so fearful in this that we are practically immobilized" in response to a questioner who asked how we are to "get off dead center and active in this."

The real danger to our Nation is the continued and continuing aggressive threats from Communist Russia relentlessly waging a cold war against us in Berlin, southeast Asia, Cuba, and virtually every corner of the globe. This at all times poses a danger to the free people of the world who are our friends and allies, and to all Americans.

The Communist dictators of the Soviet Union and Red China are constantly seeking to throw us off balance by forcing one crisis after another—first over Berlin, then, if that quiets down momentarily, in South Vietnam, then possibly in South America, or in the China Sea. Yet, those who agree with Fred Charles Schwarz largely ignore this real danger which might suddenly blow up into a shooting war. Why frighten our people over the threat of communism where it is weakest, and ignore that threat from Communist Russia and Red China where it is strongest?

ADDRESS BY SENATOR SCOTT AT 27TH ANNUAL NATIONAL CONVENTION OF THE CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed at this point in the RECORD my statement on the occasion of the 27th Annual National Convention of the Catholic War Veterans of the United States of America.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HUGH SCOTT ON THE OCCASION OF THE 27TH ANNUAL NATIONAL CONVENTION OF THE CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA

The Catholic War Veterans of the United States of America will hold their 27th annual convention in Philadelphia beginning August 14. Elaborate preparations have been made to make this 27th convention one of the largest ever held by this organization. It is anticipated that the extensive program planned will attract more than 7,000 members of the Catholic War Veterans and its auxiliaries. I assure them a warm welcome from Philadelphia, the City of Brotherly Love and the Cradle of Liberty.

The convention committee has set up an agenda calling for a full schedule of committee meetings that will study and prepare resolutions for action by the entire body. Hundreds of resolutions have already been received covering many phases of American life including "veterans affairs," "youth welfare," "Catholic action," "Americanism," "membership," and many other subjects in which an organization of war veterans is vitally interested.

At various times throughout the convention, prominent Americans are scheduled to address joint sessions of the Catholic War Veterans and its auxiliaries. These men, all outstanding in their particular field, will bring to the Catholic War Veterans and through them, to all veterans and Americans, messages on national security, veterans affairs, international relations, and other vital subjects.

Although the convention will have many serious aspects, varied and interesting recreational events have been arranged for the members of the organization, their wives and families. Among the programs planned are a tour of the historical sites, visit to the tomb of Bishop Newmann, buffet luncheon at Valley Forge Park. Throughout the week there will be other interesting activities and ceremonies including a parade on Friday evening and on Saturday morning a pontifical high mass. Closing events of the week-long gathering will include the commander's banquet on Saturday evening to be followed by the convention ball.

The Catholic War Veterans of the United States came into existence in the year 1935, when it was founded by a former Army chaplain, the Right Reverend Monsignor Edward J. Higgins, L.L.D., of Astoria, Long Island, N.Y. Recognizing a need for a militant veterans organization composed of Catholic men and women who served their country in time of war, Monsignor Higgins founded an organization that has grown throughout the years and now has posts in more than 40 States.

Over the past quarter of a century the Catholic War Veterans has been a bulwark against many of the tyrannical "isms" that constantly threaten our country and its freedoms. Since its beginning the Catholic War Veterans have brought their greatest force against the evils of communism and its insidious designs to destroy Christianity and create a godless world. For the 27 years that this organization has been in existence it has steadfastly supported and protected the traditions that have made America the great country that it is.

As well as fighting relentlessly against communism the Catholic War Veterans have been active on other fronts sponsoring such programs as Americanism, Catholic action, leadership, membership, and veteran's affairs. In addition, through its publications and other media of communication this organization has encouraged active civil defense programs, educational activities, and youth programs as well as the establishment of scholarships.

In the field of veteran's affairs the Catholic War Veterans has always exerted its influence. Each year the organization has sponsored or lent its support to legislation that would be beneficial to veterans, their widows, or dependents. Through welfare and rehabilitation officers located throughout the country it has assisted countless veterans in obtaining benefits under the laws of the Veterans' Administration. The Catholic War Veterans have maintained a strong and active hospital program giving comfort to our thousands of hospitalized veterans. These and many other programs stand as a tribute to the Catholic War Veterans on this, its 27th anniversary.

The Catholic War Veterans have received the acclamation of numerous Government agencies, business groups and patriotic, veteran and fraternal organizations. It has the approbation of the present Pope, John XXIII, and all Popes from the date of the founding of the organization. It has been lauded by every President of the United States and by numerous legislators and other statesmen.

Article II, section 1, of its constitution best describes the aims and purposes of this great organization:

"This organization of Catholic War Veterans is established to promote zeal and devotion for God, for country, and for home:

"(a) For God: To promote through aggressive organized Catholic action a greater love, honor, and service to God; an understanding and application of the teachings of Christ in our everyday life; recognizing the wisdom of the church in all matters of faith and morals.

"(b) For country: Through a more vivid understanding of the Constitution of the United States of America and through active participation in the promotion of its ideals of life, liberty, and the pursuit of happiness, to develop a more zealous citizenship; to encourage morality in Government, labor, management, economic, social, fraternal, and all other phases of American life; to combat aggressively the forces which tend to impair the efficiency and permanency of our free institutions.

"(c) For home: To promote the realization that the family is the basic unit of society; to aid in the development of an enlightened patriotic American youth; to assist all veterans and widows and dependents of deceased veterans.

"(d) These objectives are encouraged without regard to race, creed, or color."

As they celebrate this anniversary, the Catholic War Veterans can look back upon a history of accomplishment and to the future with a feeling of confidence.

I am sure all their many friends join in wishing for them the best convention in their history and continued success in working for their high ideals.

SELF-DETERMINATION IN GERMANY

Mr. SCOTT. Mr. President, as this Congress hopefully draws closer to adjournment, I think it is essential that it consider an important segment of our foreign policy.

Within the past few weeks we have again heard Premier Khrushchev propose that French, British, and American troops withdraw from Berlin and be replaced by troops from the smaller nations of the NATO and Warsaw Alliances.

The administration is to be complimented for continuing the policy of previous administrations that the presence of allied troops in West Berlin is not negotiable.

Now we have again reached the point in our relations with the Soviets when Khrushchev is "beating the drum" for a separate peace treaty with Communist East Germany unless some solution for the Berlin situation under Russian terms is found. East Germany Communist Leader Ulbricht has been summoned to the Kremlin, and there are indications of new Communist provocation in Berlin.

Mr. President, the solution to Berlin is obviously not to be found in Berlin. This country, as did France and England, pledged to preserve the freedom of the people of West Berlin pending the reunification of Germany in peace and freedom. In June of 1961, at the conclusion of the President's meeting with Khrushchev in Vienna, the United States, in answer to another Soviet demand for a solution of the German problem under their terms, emphasized that the "U.S. Government continues to believe that there will be no real solution of the German problem, nor any real tranquility in Central Europe, until the German people are reunified in peace and freedom on the basis of the universally recognized principle of self-determination." It is my hope, Mr. President, that the administration will call for free elections in all of Germany.

Self-determination, Mr. President, is a familiar term used daily in the halls of the United Nations, in the remote islands of the South Pacific and in minute outposts of the new Africa. The Soviets are constantly spreading their gospel of "self-determination" throughout the free world and yet we find millions of captive people denied this God-given right under the shadow of Russian occupation troops and their satellite stooges. There is no better example of Communist hypocrisy in speaking of "self-determination" than the living example of the Russian rule of East Berlin and East Germany.

Vice President JOHNSON, at the time of his historic visit to Berlin in August of 1961, said at the Berlin City Hall:

> Self-determination, this word which the slavemasters fear like no other, will come also to those to whom it is now denied.

At the time Gen. Lucius D. Clay appeared on my television program, on Sunday, May 27, as in the past, he advocated that the United States should announce our position that free elections, adequately supervised, be held in all of Germany. General Clay said:

> Actually, the commitment made at Potsdam was that there would be established a single government of Germany and that it would be a freely elected government. Until that comes about, the Soviet Government is not living up to the Potsdam agreement.

Of course, it is not living up to the Potsdom agreement. It has not lived up to any agreement with the United States, if it was to its advantage to do otherwise, since it was recognized by this Government in 1933.

Why now, Mr. President, on this date should we ask our Government to again call for "self-determination" for all of Germany? Is it any more proper now than it was 2 months ago, or 2 years ago? No, the propriety of the right is based on agreements of long standing, entered into by the Allies and the Soviet Government. These agreements were won with the efforts and lives of many. They were made at a time when the Soviets needed our aid, needed our alliance and feared our power. No, it is no more right now than it was then except for the passing of the years and the unquestionable living proof that given the chance East Germans will escape from the slavery of Communist domination.

Mr. President, I feel that the problem of Berlin, the problem of access rights, the existence of the immoral "wall of shame" is again reaching the boiling point and will reach the crescendo of another crisis.

I have never, Mr. President, adopted the belief that the Soviets would go to war over Berlin just for the sake of Berlin per se. But what a wonderful lever the Communists have to use provocation especially graduated to undermine the Western position in West Berlin and to attempt to split the NATO Alliance.

Give the Soviets the chance and they will use Berlin as their diversion when they wish to move elsewhere on their board of Communist worldwide strategy.

Within the past week we have reports of increased Soviet air activity in the air corridors from West Germany to Berlin. American planes and lives are at stake when such provocations take place. No doubt we must and will take action to protect our rights. But what will be the next Soviet-Communist move? Will the Soviets or East German Communists stop new convoys along the Autobahn at the Helmstedt checkpoint? Will the Communists Vopos detain U.S. Army personnel in East Berlin?

Will the Soviets jam the air to ground radio facilities? We cannot, Mr. President, read the Communist mind. But we can expect provocation whenever the Soviets desire to divert our attention from another tentacle of the Communist octopus. The Reds takeover of China in 1948 at the time of the Berlin airlift should be a living reminder of this type of strategy. The second Berlin crisis in 1958 was again coupled with the Chinese Communist probe against Quemoy and Matsu. The diversionary tactics of the Soviets in Berlin have left clear historical marks on the world map.

I do not mean to imply that the threat of signing a peace treaty nor the actual signing between the Soviets and the German Communists regime would set off a new Berlin crisis. I do not wish to imply that I am naive enough to hope that any action we might take can sway the Communist leaders from their planned strategy of salami tactics, but I do feel that by our action through the Allied Powers, now charged with the security of Berlin, we can spell out the hypocrisy of the Communist position. "Self-determination," Mr. President, is or should be a strong argument with our friends in Africa and the Middle and Far East. Their battle cry of "self-determination" rings in the ears of every ex-colonial power. Who should, more consistently, endorse the position of this country in that cry than the newly independent countries of the world? Will they do so? We ought to find out.

It is unnecessary, Mr. President, at this time to delay the Senate with the legal basis for the holding of free elections in all of Germany. That right and that agreement is a matter of record. But is it necessary, Mr. President, to point out why such a renewal of treaty agreements would be to the best interest of the United States and the free world?

Such a renewal would, as I have mentioned heretofore, gives the Soviets another opportunity to live up to their treaty obligations. It would give the newly formed countries of the world an opportunity to express their continuing belief in "self-determination" for all people. It would enable this country to reassure our friends throughout the free world that we have not forgotten the agreements entered into as a result of hard-won victories. It would reemphasize the U.S. position so ably represented in other areas of the world that each people of their own free will should determine their own destiny and their own form of government.

I cannot help but feel, Mr. President, that the people of the NATO Alliance might need reassurance that we do have an interest in a free Europe, that we do have the determination of protecting not only our own interest but their interest as well. I do not intend to direct my remarks at what I feel have been failures in recent foreign policy and the effect they have had on the NATO Alliance but we would be tagged with political blindness if we did not heed the warnings that are on the international horizons that there is concern, real or imaginary, that the United States and its military relationship with NATO has taken a definite turn not necessarily favorable to West European desires. Perhaps it has not, Mr. President. The next few months should indicate to some extent what the new military strategy of the United States holds for Europe and NATO.

The Soviets, I am sure, have some indication, based on the change of tone of how we would meet a Soviet probe or overt act in Europe. But one thing is clear, we have stood fast that we will not negotiate our rights in Berlin. We will, I hope, meet the Soviets with firmness. We will, I hope, reassure our European friends that we are beside them and will reinforce them in their demands for self-determination. There are elements in Europe which hope for a weak U.S. stand, not only to advance the Communist cause but to undermine present strong pro-American and pro-Western governments. A weakness in U.S. relationship with its NATO Allies only plays in the Soviet scheme of things. The dangling carrot of expanded Eastern trade could be most tempting to a country that had doubts of our determination to maintain a free Europe.

Let us not make the mistake of impeding the growth of NATO power but rather to strengthen and continue this partnership. Let us call upon the Governments of France and Great Britain to join us in calling upon the Soviet to live up to the tenets of the Potsdam Agreement and grant under adequate supervision the opportunity for the German people of self-determination.

Now is the time to remind the Soviet of past agreements. I sincerely hope that before a new crisis develops, the administration, by acting, will point out the hypocrisy of the Soviet Union to the whole world. An appeal for the realization of self-determination by the German people is in order.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SCOTT. I am very happy to yield to the distinguished senior Senator from New York.

Mr. JAVITS. I assume that the Senator has completed his prepared statement.

Mr. SCOTT. I have finished with my prepared statement.

Mr. JAVITS. First I should like to state to the Senator that I believe he has conferred a distinct service upon us today by making his address. I believe that there are all too few of us, even in the Senate, alert as we are to what is occurring in the world, who realize as keenly as does my distinguished friend from Pennsylvania the fact that the Berlin crisis remains a crisis pregnant with danger for all mankind.

I hope that his words will rouse others of us to similarly inquire into the situation in order to realize this portent of danger.

If we were to classify dangers qualitatively, rather than quantitatively—obviously quantitatively Communist China is our greatest problem—I believe there is no greater danger in the direction of war than Berlin.

Therefore, the mere fact that the Senator from Pennsylvania has expressed his views so eloquently is in itself significant.

The Senator has made a second very important point, and that is, that it is not enough for us to react. The Senator has given us a position which the United States can espouse. It is a position of forward motion, of assertion; not reaction. For that, too, the country is very grateful to the Senator from Pennsylvania.

The Senator calls attention to the fact—and this is too often forgotten—that the Soviet Union is the one that has defaulted on its obligations; not that the United States, France, and the United Kingdom have stayed too long in Berlin. They have stayed that long because the Soviet Union has not honored the Potsdam Agreement.

The Senator bears upon one point which I do not believe any of us can ever cease to assert, and that is that no agreement is better than a bad agreement. I would hope very much to have the Senator express his view on that point. There is altogether too much feeling in the country and in the world generally that we must find some basis of agreement with the Soviet Union. A basis for what? To excuse the Soviet Union from what the Senator has so eloquently pointed out as its own default and its own imposition upon the world? We have lived that way for a long time, and we may have to live that way for a long time to come. As the Senator says, the sooner Mr. Khrushchev understands that fact, the better it will be for all concerned.

Mr. SCOTT. I thank the distinguished Senator from New York. I appreciate what he has said, and I agree with it.

Again, I think we have an opportunity to stress what the Senator from New York has taken the lead in stressing so many times, on and off the floor of the Senate; namely, as he says, no agreement with the Soviet Union is a great deal better than a bad one.

I have tried here to speak objectively, with the realization that much of our foreign policy transcends the period of any administration. What I fear and what I am most concerned about is the feeling one gets in Washington that many persons, some of them new to positions of responsibility in various Government departments, appear to favor a policy of accommodation to the Soviets; they appear to feel it is somehow bad judgment, or perhaps even bad taste, or perhaps is not socially good form, to admit the existence of an enemy.

Certainly there is an attitude now in some quarters that we ought to be so accommodating to the Soviets that we should not raise such unhappy questions as the fact that the Soviet Government does not keep its agreements except when it is in its own interest to do so; that we ought not, perhaps, to be going around saying there ought to be free elections in the captive nations of the world, although that is what they live and hope for, and why they listen to their radios in continued, not-yet-abandoned belief that perhaps the great United States of America still believes what it said it believed in past years. It concerns me that there seems to be in Washington nowadays a feeling that we ought not to engage in a dialog which implies that we have a Communist enemy abroad. I disagree with this viewpoint. I feel firmly that we should not provoke the Soviet Communists by exacerbation or by unnecessary friction; but I do not equate that with the necessity for reminding all the world, including all those who live in slavery, that freedom is a better deal for all the world; that it is the Russians who maintain slave states; that it is the Russians who broke their word; that it is the Russians who deny free elections; that the Russians cannot be trusted, even by their Red Chinese allies; that if truth is the strongest weapon, we should be making the maximum use of the truth.

What I do find is a feeling: "Well, let's not push the Soviet too hard on the business, for example, of the inspection of nuclear weapons tests. Let's try to find a reason for saying we will not insist on inspecting Russian soil any more. Let us claim, instead, that we have developed new instruments which can detect what goes on in Russia, without our having to go into Russia." If we can sell the American people on that phony hypothesis, then the next step is to say that we do not have to go into Russia because we have wonderful new inventions which will tell us what is taking place in Russia. Then the Russians will not have to let us enter their country.

In the first place, I do not believe we have any such inventions. In the second place, the Russians are conducting their tests in areas which are subject to frequent earthquakes, or temblors, as they are called. We do not have evidence which would warrant us in saying that we can tell what is taking place in Russia without our going into Russia to see it. We should not withdraw or abandon our own protections and protective devices or our own defenses in any system of a ban on nuclear weapons unless we have an adequate, reasonable, and protective system to determine what the Russians are up to.

I anticipate that we are getting from sources in the executive branch a kind of trial balloon. I have seen trial balloons. After 20-some years, I can tell a trial balloon when I see one, before it leaves the rooftop. The trial balloons are up. They are getting ready to condition the American people right now into believing that it will not be necessary for the United States to go into Russia to inspect. We will be told, "It will not be necessary. We have wonderful new inventions that will tell us what is taking place."

I believe that is false. I say it is misleading. I say it now, before someone comes along and says it as a fact, and then has his statement reprinted in his favorite stooge columns, so as to promote the ascension of the trial balloon by the addition of his own hot air.

Mr. JAVITS. I do not wish to expand the ambit of my discussion with the Senator from Pennsylvania so as to include nuclear testing. That is a subject upon which we may or may not be able to agree. Therefore, I would not wish to intrude that subject into what I think has been a most significant contribution by the Senator from Pennsylvania. I know the Senator will join with me in that feeling.

Mr. SCOTT. I do not undertake to associate the Senator from New York with the views which I expressed after the completion of my prepared speech, because I know the Senator will want to be heard on that subject in his own time.

Mr. JAVITS. I thank the Senator from Pennsylvania. I wish to end my colloquy with him by pointing specifically to one sentence in his remarks which I hope and pray will sound as a tocsin to all the American people. The Senator from Pennsylvania said—and I hope he will forgive me for repeating his words, but I think they are absolutely critical and historic:

> Mr. President, I feel that the problem of Berlin, the problem of access rights, the existence of the immoral "wall of shame" is again reaching the boiling point and will reach the crescendo of another crisis.

Mr. President, it is easy enough to call crises when they come. What we need are Senators who can call crises before they come. I think this is one that is so clearly written on the wall that all Senators should be grateful to the Senator from Pennsylvania [Mr. SCOTT] for his very timely, seasonal word of warning and for his definite, constructive ideas as to the direction which our policy must take.

Mr. SCOTT. Again I thank the Senator from New York. I believe that a crisis is developing in Berlin. I believe we should meet it with some preplanning. We should meet it with foresight. We should recognize it as a part of a worldwide Communist conspiracy to control and dominate the world.

I again say that I think the administration is entirely right in the strength and resolution which it demonstrates in keeping our forces in Berlin. I would not want to be understood otherwise.

RADIO CLEAR CHANNELS

Mr. HART. Mr. President, on July 2, 1962, the House of Representatives adopted House Resolution 714 dealing with radio clear channels. This "sense of the House" expression was specifically directed at a September 13, 1961, decision of the Federal Communications Commission which proposed duplication or breakdown of 13 of the existing 25 I-A AM radio clear channels by adding another station to each of these channels, thus destroying a substantial portion of their present and potential usefulness. This Commission decision also deferred action on the question of whether power in excess of 50 kilowatts should be authorized for use on radio clear channels. In a broader sense, this action by the House points the way toward the possible establishment of a long needed national clear-channel policy.

The skywave service of stations operating on clear channels is the only AM radio nighttime service available to over 25 million Americans, who live in nearly 60 percent of the Nation's land area. These are the people who live in the thinly populated sections of the country. It includes all of upper Michigan. And even though the Communications Act of 1934 specifically directs that all Americans, to the maximum extent possible, be provided with good radio signals, it is freely admitted by all that nighttime service to a substantial portion of millions has been entirely inadequate for four decades.

The reason for this inadequacy is that the Commission has destroyed by duplication too many of the original 40 clear channels and the skywave service of the remaining clear channels lacks sufficient signal strength satisfactorily to reach the great distances required to bring service to these people. There is one way and one way only that nighttime AM radio service to these rural and small town millions may be improved. That is by increasing the signal strength through the use of power in excess of 50 kilowatts on a sufficient number of I-A clear-channel stations.

The addition of any number of AM stations to the national scene will not begin to solve the problem. For instance, the number of AM stations licensed to operate on a full-time basis has doubled during the past 15 years without appreciable reduction in the areas or populations which depend solely upon clear-channel stations for nighttime radio listening. This is no reflection on any class of radio station. It is simply a physical fact that radio signals at night behave differently than during the daylight hours.

It should be noted too that additional millions depend upon clear-channel stations for any choice of radio nighttime programs—not to mention the millions of car radio owners who live or travel in remote regions and who also depend solely upon this service for radio listening. Radio clear channels adequately powered furthermore, have great present and potential military and civil defense value.

It is clear that this problem has gone unsolved too long. This is particularly true since the problem may now easily be solved without harm to anyone, and with nothing but good coming to the American scene, through the use of adequate power on a sufficient number of clear channels. The Commission has done a good job of bringing daytime radio service to most Americans. It should now solve the nighttime problem.

I should add, Mr. President, that clear-channel stations are generally noted for sound public service programing and tasteful entertainment.

Hopefully, congressional resolutions will insure improved nighttime service to rural America. I would hope that the FCC quickly authorize the power increases necessary for this improved service—taking care, of course, to protect other stations from interference. I am told this is not a major problem.

It should be noted that practically all countries around the world, on a rapidly expanding basis, are using higher power for the same reasons that the United States should use it.

One basic reason given by the Commission for delaying the use of adequate power on radio clear channels is the existence of an old 1938 Senate resolution—Senate Resolution 294, 75th Congress, 3d session. This resolution opposes such an authorization. It is clearly apparent, however, that the conditions which lead to the adoption of this Senate expression in 1938 are nonexistent today, a fact that the House of Representatives recognized in the language of House Resolution 714. This resolution suggests that the FCC is free to authorize the use of power in excess of 50 kilowatts on clear channels where the use of such power is in the public interest including the bringing of much needed improvement in nighttime radio signals to remote rural regions.

A second feature of House Resolution 714 urges a 1-year moratorium on the Commission's September 1961 decision in the clear channel case in order to give all class I-A clear-channel stations an opportunity to file with the Commission an application to go to higher power.

It is my hope, Mr. President, that the Commission would comply with this House resolution. I would hope it would authorize the use of power sufficient to bring improved service to rural America and that a substantial number of clear-channel stations will take advantage of the opportunity to serve their country better by applying for such an authorization.

I would call your attention also to the fact that the initial legislation leading to House Resolution 714 was introduced and supported strongly by, among others, two distinguished Members from Michigan, the Honorable John D. Dingell, and the Honorable John B. Bennett. It is noteworthy too that similar legislation has been introduced in the Senate by the distinguished Senators from Georgia and Indiana [Mr. Talmadge and Mr. Capehart].

ADDRESS BY VICE PRESIDENT LYNDON B. JOHNSON ON THE 10TH ANNIVERSARY OF THE COMMONWEALTH OF PUERTO RICO

Mr. HUMPHREY. Mr. President, it is my distinct pleasure to bring to the attention of my colleagues in the Senate, the speech delivered by Vice President Lyndon B. Johnson on the 10th anniversary of the Commonwealth of Puerto Rico. I ask unanimous consent that it be printed at this point in the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

The Commonwealth of Puerto Rico: Land of Challenge and Promise

(Remarks of Vice President Lyndon Johnson on the 10th anniversary of the Commonwealth of Puerto Rico, July 25, 1962)

Governor Muñoz, distinguished guests, and fellow citizens, it is my great honor and privilege to be with you on this memorable day and to bring to the people of Puerto Rico the cordial greetings and heartfelt congratulations of the President of the United States, John F. Kennedy.

The letter from President Kennedy which Governor Muñoz has just read is an important expression of the respect and affection in which the people of this Commonwealth are held. President Kennedy's letter is, even more, a historic reaffirmation of our belief in the self-determination of peoples, exercise with the acceptance of the responsibilities of freedom. Puerto Rico stands as a shining example of this principle.

For President Kennedy, Governor Muñoz, myself—and all of us here—it is matter of great pride and satisfaction that on the 10th anniversary of the Commonwealth of Puerto Rico we can be looking ahead with such complete confidence to the future.

The Commonwealth which Puerto Ricans have created on this island in these 10 years stands as a world example to mankind of what a people can achieve by the strength of their spirit and the sweat of their brow under freedom.

The problems of Puerto Rico are the problems faced by most of the world's people: problems of limited area, dense population, low productivity, one-crop economies, outworn agricultural methods. To all the tens of millions afflicted by these curses, Puerto Rico shines as a beacon and inspiration—a proof that transformation is within their power under freedom.

What imaginative, practical, hard-working Puerto Ricans have wrought here offers the challenge and promise that a people determined to raise themselves by their own bootstraps can do so. Land of Challenge and Promise: that is Puerto Rico.

The enduring historic importance of this 10th anniversary of the Commonwealth is that Puerto Rico by its own achievement offers a roadmap for a completely successful revolution to be carried out by completely peaceful means. The lesson is greatly important but impressively simple. There must be leaders, yes. But the basic requirement of this revolution is that if it is to be truly complete, truly successful, and truly peaceful, it must embody the total determination of the people. The Commonwealth has endured and succeeded because Puerto Ricans were totally determined that it should endure and succeed. The promise of freedom can neither flourish nor survive anywhere without such a commitment by the people.

The way of freedom is never an easy way—for the large or the small, for the old or for the young. But we choose freedom not because it is easier but because it is better. It is better to bear the responsibilities of freedom, heavy as they are, than to be burdened by oppressive shackles of systems which permit no freedom for the body or the soul.

Freemen must commit both—both their labor and their spirit—and this you have done totally with matchless and marvelous vigor in the Commonwealth.

I am proud tonight to salute you for your example. Ten years ago, the Preamble to the Constitution of the Commonwealth of Puerto Rico set forth these objectives:

"We consider that the determining factors in our life are citizenship in the United States of America and the aspiration continually to enrich our democracy through the individual and collective use of its rights and prerogatives; loyalty to the postulates of the Federal Constitution; the coexistence in Puerto Rico of the two great cultures of the American hemisphere; the desire for education; the faith in justice; the devotion for a full, laborious, and pacific life; loyalty to the value of the human being regardless of social position, racial differences, and economic interests; and the hope for a better world based on these principles."

The United States from its own constitutional beginnings has consistently reaffirmed the belief of its citizens in this principle of self-determination of peoples, so eloquently stated in this passage from your own Constitution.

Throughout our mutual history there have been remarkable links between this Caribbean island and the North American mainland. As you well know, it was your first Governor, Ponce de Leon, sailing from your shores, who was the discoverer of Florida. During our Revolutionary War vessels commissioned by our Continental Congress more than once found security and a friendly welcome in the harbors of Puerto Rico when hard pressed by the enemy. And none of us, whether living on this island or on the mainland, can ever forget that of the 60,000 Puerto Ricans who fought with such valor in Korea, only 6,000 were draftees—the other 54,000 were volunteers.

Puerto Rico is no less notable in the annals of peace. I believe Puerto Rico accomplished a diplomatic and political feat unparalleled in history by twice establishing under other flags autonomy on terms drawn up by Puerto Rico; and again, under the U.S. flag in 1952. Both times this was accomplished by no force other than intelligence, logic, and good will.

What has been achieved during the 10 years completed today fully affirms your faith in yourself—and the faith all the people of the United States have in you also. But more than that, in these 10 years Puerto Rico has kept faith with its heritage and with the hopes of its neighbors throughout the hemisphere. As President Kennedy has indicated, your Operation Bootstrap helped blaze the trail for the Alliance for Progress. It was only logical that President Kennedy should choose as U.S. Coordinator of the Alliance for Progress Puerto Rico's own Teodoro Moscoso. And I would also mention proudly that constructive contributions to our hemisphere policy in planning and enactment are being made by a man with us today, Deputy Assistant Secretary of State, Arturo Morales Carrion.

The greatest of all your resources are your people. I am proud that this generation of Puerto Ricans is playing a broader role in the affairs of the world and the shaping of history. I am sure that role will grow far greater in many fields throughout the years to come.

I would like to recall the commencement address Governor Muñoz delivered at Harvard University 7 years ago. He said on that occasion:

"In the Declaration of Independence of the United States, the young Republic was dedicated to the rights of life, liberty, and the pursuit of happiness. In Puerto Rico we are trying, in our modest setting, to bring to a harmonious success, for the good of our souls and bodies and for the observation of our fellow citizens of such parts of the world as may care to look, Operation Bootstrap—the right of life; Operation Commonwealth—the right of liberty; and Operation Serenity—the pursuit of happiness with some hope of really catching up with her."

The right of life—the right of liberty—the pursuit of happiness—these are the common aspirations of men everywhere—whatever their heritage, their present circumstance, or their future horizon. Governments may speak in many tongues but these aspirations are the common language of the souls of mankind. This we must not forget.

The perils of our times are many. The trials of our times are great. But the promise of this century of freedom is the greatest promise ever known to man on this earth. It must be our continuing total determination to commit ourselves to fulfillment of that promise everywhere—and especially in this hemisphere.

A new day has risen over this island in this past decade. By the light of what we see here, we can believe that the morning sun will shine brightly over all the lands of the Americas. We can believe that the tide of democracy and self-determination is running in—not out—in this hemisphere and that this will be the beginning of a century of fulfillment for all who call themselves Americans, North or South.

"THE CHESSBOARD"

Mr. WILLIAMS of New Jersey. Mr. President, we often spend much time in this Nation discussing ways in which we can interest our citizens in major issues before local, State, and National Governments. The Democratic Club of Maywood, N.J., has come forward with a very ingenious and apparently a very successful way to accomplish this. As the enclosed article from the Record—Hackensack, N.J.—of June 28, 1962, describes it, speakers are given time at a public gathering to debate major issues; then the members of the audience are asked to give their reactions on a ballot. The originator of the program, Mr. Thomas L. Costello, has given a further description in a letter to me:

> Eight of the twelve speakers will remain a permanent core of this program, which we expect to move from place to place: hence the name, The Chessboard. Included in this number are a congressional candidate, two freeholder candidates, two mayoral candidates, and other promising young men. We hope a program of this type will be well-received.

To judge from the first meeting, the idea seems to appeal to the audience. Of the 38 persons at the meeting, 30 sent back signed ballots.

Mr. President, it seems to me that the example set by the Maywood Democrats might be followed elsewhere. I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM MEDICARE TO POSTAL RATES, DEMOCRATS RUN FORUM ON BILLS

MAYWOOD.—If you haven't made up your mind about the King-Anderson bill, you might be interested in the result of an opinion survey conducted last night in this community.

Following a debate on the controversial measure, a small audience assembled in Borough Hall was asked to vote for or against its passage.

Fifteen feel it should be adopted. Thirteen feel otherwise. One abstained.

The signed ballots will be sent to U.S. Senator HARRISON A. WILLIAMS, Democrat, of New Jersey.

It was all part of a program conceived by Thomas L. Costello and sponsored by the Democratic Club. Costello unsuccessfully sought the nomination for Congress in the Seventh District.

In addition to medicare, the pros and cons of State and national issues were discussed. These included the McClellan bill to prohibit areawide transportation strikes; Senate bill 159 on fair trade; Presidential tariff agreements; a bill to increase postal rates; and a State sales or income tax.

Each speaker was limited to 5 minutes. Some said this wasn't sufficient to air the issues fully.

J. Emmet Cassidy, candidate for Congress in the Seventh District, argued in favor of medicare.

THREE SOURCES

He said senior citizens have only three sources to pay for sickness: private income, private insurance, and children.

Those 65 and over covered by social security would be eligible and would have the freedom to choose doctors and hospitals.

"And don't let the American Medical Association tell you anything else," he said.

Dr. Marshall F. Driggs, an internist at Englewood Hospital, claimed the bill would not help those most in need.

"The working man will have to pay for his benefits," he said. "The private enterprise system, such as Blue Cross, can do the job, and there's nothing growing faster."

FAVORS KERR-MILLS

Driggs said he favors the Kerr-Mills and suggested it be given a worthwhile trial.

Passage of the King-Anderson bill, he added, would injure what he termed a personal relationship between the doctor and his patient.

With respect to the State sales tax issue, Costello recommended the establishment of a State lottery.

"By setting up off-track betting centers, millions would pour into the Treasury and would drive bookmakers out of business," he said.

FAIR SOLUTION

Marc Joseph, of Englewood Cliffs, defeated Democratic Assembly candidate, said the imposition of a sales or income tax is the only fair solution to the problem.

He said New Jersey is one of two States without such a tax. Its imposition would be equitable, based on the ability to pay, he asserted.

Teaneck Councilman John K. Walsh claimed the way to erase the Post Office Department deficit is to increase postal rates.

He said it would mean an additional $520 million in revenue and would help the Department be self-sustaining.

A hike in postal rates will not correct the situation, according to Michael Ramundo of Oakland, Democratic Freeholder candidate.

He said its passage would hurt specific industries, especially publications.

Third-class mail, he continued, is an important sales media for small business and an increase would force a number of publications into a loss.

TARIFF BILL

On the bill which would grant the President greater power to reduce tariffs, Dr. Bennett Mazur of Fort Lee, Democratic Freeholder candidate, urged passage.

He said it would enable the United States to compete with the European Common Market and thus benefit Americans.

Charles J. Sakany, Jr., Democratic mayoral aspirant in Closter, said passage could mean mass unemployment. He argued that some industries would not be able to compete with producers elsewhere, especially in Western Europe where there is a pay differential.

Favoring the McClellan bill on area-wide transportation strikes, Frank Connors said the legislation is necessary to avoid financial losses. He serves on the Borough's Transportation Committee.

Paul R. Huot, Democratic mayor of Ramsey, said such legislation would weaken the power of collective bargaining.

Taking the pro position on the fair trade bill, Joseph Murphy, past Democratic mayor and council candidate here, said the measure would protect the consumer and assure him of an item of quality.

Arthur Uscher, seeking a council seat on the Democratic ticket, said the bill would restrict certain basic freedoms.

"This bill would, in effect, put a tremendous amount of power in the hands of big companies," he said.

Herbert Goodwin, club vice president and council candidate, was moderator.

MIGRANT PUPILS MISS SCHOOLING

Mr. WILLIAMS of New Jersey. Mr. President, of the many migratory farmworker problems, none are more harshly inconsistent with American ideals than the grossly inadequate educational opportunities available to these citizens. Their educational needs are so severe that former Secretary of Health, Education, and Welfare, Abraham Ribicoff, has, without exaggeration described them as "the most educationally deprived group in the Nation."

The educational deprivation of migratory farm families results from a complex of factors, such as the migratory way of life, residence requirements, and various cultural barriers. Nevertheless, efforts on Federal, State, and local levels would indicate that the problem is not insoluable. One of the most remarkable and encouraging manifestations of such efforts is the migrant education workshop currently meeting at Adams State College in Colorado. The purpose of this workshop, which is attended by educators throughout the country, is the creation of a model plan for States to follow in enrolling migrant children in school wherever they are.

Because of my work with the Subcommittee on Migratory Labor, I have a real interest in this type of activity, and I am pleased that the workshop and the problems it must resolve in developing its education plan are given an excellent review in a New York Times article by Donald Janson, entitled "Migrant Pupils Miss Schooling," which appeared on July 22.

The article is, I believe, of particular interest and merit because of its informative exposition of a problem which is the subject of legislation currently pending in the Congress. This legislative measure is S. 1124, which was one of five migratory farmworker bills passed by the Senate during the last session of the Congress. Now before the House Rules Committee, S. 1124 would provide Federal funds to assist States in developing improved programs of education for migratory farm children and adults.

Mr. President, I ask unanimous consent that the Times article appear in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIGRANT PUPILS MISS SCHOOLING

(By Donald Janson)

ALAMOSA, COLO.—Twelve-year-old Anthony Ortega's black eyes flashed.

"It's hard," he said, recalling his long hours in the potato fields last fall.

"But," he added, breaking into a dimpled grin, "my father gets a check."

In October Anthony and his father, Praxcedes, and older brothers will leave their "home base," the nearby village of San Luis, and join the migrant stream again to pick potatoes in other sections of southern Colorado's San Luis Valley.

Anthony is one of more than 100,000 American children who accompany their parents from community to community and State to State each year in search of agricultural employment.

TOTAL EARNINGS BELOW $1,000

Even with their children laboring all day in the fields when the crops are ready to be harvested, annual family earnings of migrants are less than $1,000.

Mr. Ortega breaks no law in pressing his youngest son into stoop labor. The child labor law applies to farmwork only during regular school hours. Many schools in this 7,500-foot-high valley close for "crop vacation" in the fall.

While the Ortegas may go only a hundred miles to find work, many of the Nation's 400,000 domestic migrants travel thousands, moving from one crop to another for months at a time before returning to their home base.

Many of their children stay "home." For those who go along, it means very little schooling. This summer Anthony is attending makeup classes, but he is one of fewer than 3,000 migrant children in the country who have an opportunity to go to a State-supported summer school.

By the time migrant children drop out of school for good, their average achievement is below the fourth-grade level, the minimum standard for literacy in the United States.

Educationally, they are the most deprived group in the Nation. Frequent moves force them to fall further and further behind in their studies. When they do seek to enter school during pauses in their travels, they sometimes are rejected.

There are other reasons why their schooling gets short shrift. Parents need their earnings. Language can be a formidable barrier for children who learned only Spanish at home. Some localities fail to enforce school attendance and child labor laws. Transportation may be lacking to and from their temporary, isolated shacks on farms outside of town.

FUNDS AND LAWS CITED

Many communities plead insufficient funds to provide school facilities for migrants. Since the children are not residents in the States in which they travel, compulsory attendance laws usually do not apply to them.

As a result, these children remain in the migrant stream as adults, earning less than federally established minimum wages on the days they do work because minimum wage laws do not apply to farm labor. For lack of educational opportunity they seldom acquire job skills and fail to rise above the disheartening life of the migrant. Frequently they wind up on welfare rolls or become involved in crime and delinquency.

Educators from throughout the country have been meeting at Adams State College here on the Rio Grande since Monday to see what can be done to change the plight of this ragged army of boys and girls. By the time the migrant education workshop ends July 27, the experts hope to have drawn up a model plan that could be followed by States to get the children into school wherever they are, if only for a week at a time.

Alfred M. Potts of the Colorado Department of Education, director of the workshop, outlined some of the key planks in the program.

Essential, he and the 70 other participants believe, is State or Federal financing of education for migrants.

A Senate-passed bill now in the House Rules Committee would provide Federal funds to school districts, through the States, to pay much of the costs of educating migratory children during both regular school terms and special summer sessions.

House opposition to the bill, 1 of 10 pending measures introduced by Senator Harrison A. Williams, Jr., Democrat, of New Jersey, to aid migrants, follows the reasoning expressed in the Senate by Barry Goldwater, of Arizona, and John G. Tower, of Texas, both Republicans.

"We are opposed to the passage of this legislation," they said in a minority report of the Committee on Labor and Public Welfare, "because it represents still another step in a series of attempts to interject the Federal Government into the educational systems of the States and local communities."

The bill guarantees that State and local agencies shall have sole responsibility for developing and carrying out their migrant education programs.

School districts, usually dependent upon local property taxes for financing, can seldom afford the added burden of educating here-today-gone-tomorrow children. During peak local harvest seasons, the number of school-age children in a community may increase as much as 200 percent.

Seven States, including New York and New Jersey, operate summer schools for migrants. But George E. Haney of the U.S. Office of Education, said that even some of them find local school districts refused to apply for aid on the ground that such a summer session would make a special-privilege group of the migrants.

He said nine States, including New York and New Jersey, have laws providing State aid for educating migrant children during the regular school year.

Most comprehensive, he said, is the law passed last year by Colorado. Under it, the State pays for the rental of extra space, hiring of extra teachers, and transporting the migrants in regular sessions. It pays all costs of special summer terms.

And very important, in the eyes of the workshop experts, it states that for purposes of education the residence of the migrant child shall be the school district "where he is receiving shelter and the necessities of life" from the day he arrives there, regardless of the State where he has permanent residence.

The law requires the local school boards to enforce attendance of migrant children during regular terms and encourages them to operate special summer sessions where there are summer concentrations of migrant families.

As in the few other States that have taken similar action, success is dependent upon reaction of the local boards and school authorities. Some wait for the migrant parents to bring their children in. Others go out and get them.

Lynn Dulmon, principal of the Liberty Elementary School of Rocky Ford, Colo., is one of the latter. His section of the Arkansas River Valley in southeastern Colorado produces world-famous melons, as well as vegetables and sugarbeet. Hundreds of Texans of Mexican ancestry arrive annually to harvest them, bringing their families along.

"We go out and beat the bush to find them," Mr. Dulmon said, "because they don't find us. By seeking them out and welcoming them we get 90 percent of the children. If we didn't, we'd get zero."

Mr. Dulmon said he had found that the migrant children had as much capacity to learn as anyone else if given the opportunity. This summer he logged 4,000 miles in home calls to make sure they were aware of the opportunity. He knows every shack in his 30-mile-long stretch of the valley.

An aid to finding newcomers quickly, he said, is the practice of Colorado principals of mailing notices to the next school district the migrant family plans to visit. These notices also give school authorities enough information about the migrant pupil so he can be assigned to the proper grade or classes.

The workshop may recommend interstate cooperation of this type. To a limited extent it exists now.

Besides the Colorado residence and attendance regulations, the workshop also favors special preparation of teachers for handling students of different cultural backgrounds. Many of the domestic migrants in this country are Negroes, Indians, Puerto Ricans, mountaineers and citizens of Mexican ancestry.

Another suggestion is that any new State laws for aid to migrant education include provision for placing an expert on migrants in the State department of education. He would work with local districts to see that they were well aware of the availability of funds and the need to get migrant children into school. Only Colorado and Oregon have full-time coordinators now.

PRESIDENTIAL LEADERSHIP AND A TAX CUT

Mr. JAVITS. Mr. President, I have a fairly long speech to deliver on what ought to be done about our domestic economy. I do not wish to take the time of the Senate to have a quorum call, so I respectfully suggest that the attachés on both sides of the aisle might wish to advise any Senators who they think would be interested that I have begun to speak.

The Joint Economic Committee has today started a series of hearings on the condition of the domestic economy and what ought to be done about it. I am very proud to say that, in association with a number of other Senators, led by the distinguished senior Senator from Connecticut [Mr. Bush], on this side of the aisle, these hearings were requested. I think they will be very important to the country. It is because I think the hearings will be most helpful if we have a thesis against which to match the testimony which is adduced in the hearings that I should like to set forth my own views of the economic situation which we face, and what ought to be done about it. There will be ample opportunity in the days ahead to develop and implement the thesis which I am about to lay before the Senate.

The title of my remarks today is "Presidential Leadership and a Tax Cut." I should like to emphasize that what I shall have to say has equal pertinence to Presidential leadership itself and the separate issue of a tax cut as representing, in the amount of money, a way in which to deal with the dangers which are seen to confront us in economic terms.

Mr. President, while the indexes, including the most recent reports on employment, would not seem to warrant pessimism, nonetheless the whole country is deeply concerned about the state of the domestic economy, which is moving sidewise in such a way as to present a clear and present danger of another recession.

Mr. President, at this point I should like to make two observations. One is that this morning our committee received testimony from as fine a panel of experts on this subject as I have ever heard. They generally agreed that we are in danger of having a recession; but, generally speaking, they expressed two conflicting points of view in regard to what to do about this situation, which, in my opinion, is most likely to be an issue in the fall campaign. They also confirmed the fact that, although the indexes generally indicate an upward movement, it is not as much of an upward movement as we should hope to have at this time. In fact, when one of our committee members pointed out that in July the indexes had generally lagged, the answer of the economists was that that was probably nothing but part of the normal rise and fall or the normal flow of the indexes. They stated that generally there was an upward projection; nevertheless, they agree that the upward rise indicated by the indexes is not as much of an upward rise as we should expect; and they also point out that overhanging the minds of the public is the fear of another recession, or perhaps worse than that. I think there is agreement that the danger of a recession will be the No. 1 political issue in the fall campaign.

One of two points expressed was that the way to deal with this danger—and I think there is general admission that it does exist; and the committee received testimony on this point by an able witness for the Meat Cutters Association—is to buttress aid in such fields as medical care for the aged, and education, and to enact aid to education bills and bills to open new opportunities for our youth, including the beginnings of a Civilian Conservation Corps or an organization relatively like it, and to provide new opportunities for housing, especially urban renewal. That was one point of view; and it also involved incurring the budgetary consequences which would follow.

The other point of view was expressed most eloquently by Mr. Ellis, the economist for the Du Pont organization. His view is that the best way to insure against a new recession is to provide more attractive opportunities for American business, in terms of the expectation of profits from engaging in new ventures, so that business will be able to recoup. When asked whether these views can be reconciled—whether they are mutually antagonistic or whether they are mutually accommodating one to the other—the answers were that they are mutually accommodating one to the other and that they do not mutually exclude each other. I believe that is a fair way to characterize them.

Mr. President, in this exposition of my own views, I shall endeavor to accommodate these two points of view. I believe that both have some validity, and I believe that both can fit into a true antirecession program, for although the indexes may show that we are making advances—although not beyond our normal rate of advance for a number of decades, and very definitely we need a greater rate than that—it clearly appears that an erosion of confidence alone could bring on a recession.

So, Mr. President, in my opinion, one of the first things required, in view of the fact that erosion of confidence, certainly of business confidence, is a very material factor in our economic situation, is that under these circumstances we have a right to expect purposefulness and clear direction at the top. But, instead, we are plagued and, on occasion, bewildered by the vacillation of a President who has as yet failed to come to grips with this paramount domestic problem.

The distasteful fact is that the attention of the American people is being focused on a tax cut alone by the agonizing indecisiveness of the President in this matter. Moreover, the extraordinary way the President is seemingly transferring his leadership on this tax cut issue to committee chairmen only dramatizes his indecision. Instead of telling the Nation what is needed, the President seems more interested in telling the Nation what committee chairmen, of his own party, will approve. The President cannot expect to gain the confidence of Congress and the Nation with such a display of inadequate leadership.

Mr. President, if I can serve no other purpose, as a member of the opposition, at least I can point out that I think the President should be impressed with the fact that the Nation cannot be expected to follow his leadership if he gives the impression that the committee chairmen of either body of Congress can veto what is essentially the President's program for the Nation.

The attention the White House has given to the consideration of a tax cut has given the impression that if the application of the tax cut magic gets the go-ahead from committee chairmen, the economy will spurt forward. This is a dream unsupported by reality. And in the very center of this "Midsummer Night's Dream" is a Congress bedeviled by internecine warfare among its Democratic Members. The failure of administration leaders to settle family differences is preventing Congress, as a body, from moving forward to help resolve the economic problems at hand. The best example of that is the fact that here we are at the end of the session, but still we do not have the tax bill before us, and the Senate has not yet passed on the trade expansion bill, which is still pending in our committee.

The hard fact is that the President and his administration have not begun to sense the nature of the total effort required.

Here let me point out that I want the President to succeed as President of the United States, because his success is bound up with the success of the country. But, as will be noted as I continue with my remarks, I have very practical suggestions to make about what can be done. My suggestions may not be to the liking of the President; and perhaps they may not even be good or sound, although I believe they are, or otherwise I would not make them. Nevertheless, I say with humility—and I am not trying to be any bigger than I am as a Senator from one of the largest States—that I hope one thing the administration will sense from this expression of my own views and from the expressions of the views of many of the rest of us is that if there is an erosion of confidence—and I think there is no question about that—the way to restore confidence is by purposefulness; and I point out that even if defeat is encountered, the important thing is to let the people of the country know what the purpose is, and why, rather than "run all over the lot" looking for clues as to what should be done. Certainly the President should not let his program be interpreted by the chairman of one congressional committee or another. Much as I respect and admire my colleagues who are the chairmen of our committees, I make this statement strictly in a policy sense.

As recently as a press conference on Wednesday last, the President could only say that he was waiting for July figures, which will be available August 10, to decide if we are economically on a plateau "or in more serious difficulty." I quote those words from the President's remarks. And the President's prescription for dealing with the domestic economy is to give him the power to make a tax reduction himself—an unprecedented request for a transfer of power from Congress to the President—and for the standby public works and the youth opportunities bills, including a skeletonized civilian conservation corps. It is my view that no such prescription will be adequate; and an inadequate prescription for the existing economic fears will only aggravate them.

The country has not started moving forward, as the President has, quite frankly admitted—and I think we must admire that frankness—notwithstanding his 1960 campaign promises. And it will take Presidential leadership, not only of the Government, but also of the private sector, including management, labor, investors, and farmers, each making a contribution, to get us moving forward and to give us a true antirecession program.

The truth of the matter is that the present administration, as I see it, is nothing but a warmed-over New Deal. The New Frontier, without the promised boldness, has not begun to function with new ideas, except as to the admirable proposal of the Peace Corps, with which I thoroughly agree. Other than that, there are no new ideas which were promised to the American people.

As I said a minute ago, I want the President to succeed as President and I believe that Republicans, being first Americans, want the same thing. Therefore, I feel it my duty, while stating there is a default in leadership, to state also what leadership must do to reestablish its authority and direct the Nation along the right path.

I hope and pray that the President of the United States will take encouragement from statements like this from our side of the aisle and from others on the other side of the aisle, and reestablish his authority and direction over the Nation and its purposes.

It is often said that the Republican Party is the party of business. If that means that it has the confidence of business, then it can turn this asset to enormous usefulness for our people. I propose that it should use the confidence of business for the purpose of giving leadership to the operation of business in the public interest. Both at home and abroad our posture requires the operation of business in the public interest on the highest priority. It can be a decisive factor at home in avoiding a recession, about which there is so much concern now, and abroad in decisively winning the cold war, where the absence of the effective utilization of the resources and personnel of the U.S. private economy is one of our greatest deficiencies. This offers a tremendous opportunity which Republicans should embrace in observance of the principle enunciated by President Eisenhower that our party should win because it deserves to win.

I divide my views into three parts: First, what the Government ought to do; second, what labor ought to do, under the leadership of Government, in my opinion, with a fair chance of realizing that objective; and, third, what management ought to do, also under the leadership of Government.

Now, subject No. 1, what the Government ought to do:

As to a tax cut, an effective effort for economic advance does not involve just any kind of tax cut, but an incentive tax cut having the components to stimulate investment and consumption where needed most. Also, such a tax cut would have to be accompanied by administration action in abandoning negative, wasteful, and bureaucratic procedures on the part of executive and regulatory agencies, so that laws will be administered in the interest of economic growth and free competition. It calls for a thorough reevaluation of antitrust policies so that they may serve the national interest in growth and modernization, rather than to carry out abstract principles derived from a preceding and obsolescent era of U.S. economic development.

Furthermore, the disarray in the congressional majority, so vividly shown in debate on the satellite communications bill and in the vote to kill medicare for the aged, must give way to order. Expenditures have to be reappraised in the light of the desire for a tax cut.

I see in the Chamber the distinguished Senator from Wisconsin [Mr. **Proxmire**]. I pay tribute to him—even though he and I do not always agree on the need for cuts—for the indefatigable, and, in my opinion, almost unbelievable, study and work he has given to detailed appropriations, making him an extremely hopeful instrument for the Senate in view of the study and care which he has given to these matters.

The expected new foreign-aid program and the manpower retraining and distressed areas programs need to be imaginatively implemented and supplemented.

Other things the Government can do: Defense procurement policies, especially as to competitive bidding on negotiated contracts, which represent, it is my understanding, well over 80 percent of the total $25 billion in hard goods procurement engaged in by the Armed Forces, need to be especially reviewed and modernized.

Even greater efforts to modernize equipment of American industry need to be encouraged. For example, the President has just caused to be issued by the Treasury Department new depreciation schedules in two parts, one containing the specific depreciation figures for specific items of equipment; the other creating guidelines where items are not specifically set forth.

I refer to the Internal Revenue Code of 1954, as amended, and as in force on January 3, 1961, section 167, depreciation, as a very general rule with respect to depreciation allowances. Hence, American industry, which is now having the benefit of it—and I think this is all to the good; I think it is a great thing which the administration has done in modernization and revision of the depreciation schedules—nonetheless has no assurance that there is any new policy on the part of our Government beyond the schedule itself.

In addition, the schedules which now have been changed to give a benefit for buying new equipment may be changed back again tomorrow, or next month, or next year, to take away that benefit, because the rulemaking power determines completely what shall be the rates of depreciation.

As a matter of fact, one criterion in the law is contained in the two words "reasonable allowance." The law states that:

> There shall be allowed as a depreciation deduction a reasonable allowance for the exhaustion, wear and tear (including a reasonable allowance for obsolescence) of property used in the trade and business,

And so forth. I think it would be useful to have incorporated as a part of my remarks at this point in the **Record** the whole section 167; and I ask unanimous consent to have it incorporated at this point in the **Record**.

There being no objection, the section was ordered to be printed in the **Record** as follows:

SECTION 167. DEPRECIATION

(a) *General rule*

There shall be allowed as a depreciation deduction a reasonable allowance for the exhaustion, wear and tear (including a reasonable allowance for obsolescence)—(1) of property used in the trade or business, or (2) of property held for the production of income.

(b) *Use of certain methods and rates*

For taxable years ending after December 31, 1953, the term "reasonable allowance" as used in subsection (a) shall include (but shall not be limited to) an allowance computed in accordance with regulations prescribed by the Secretary or his delegate, under any of the following methods: (1) the straight line method; (2) the declining balance method, using a rate not exceeding twice the rate which would have been used had the annual allowance been computed under the method described in paragraph (1); (3) the sum of the years-digits method; and (4) any other consistent method productive of an annual allowance which, when added to all allowances for the period commencing with the taxpayer's use of the property and including the taxable year, does not, during the first two-thirds of the useful life of the property, exceed the total of such allowances which would have been used had such allowances been computed under the method described in paragraph (2). Nothing in this subsection shall be construed to limit or reduce an allowance otherwise allowable under subsection (a).

(c) *Limitations on use of certain methods and rates*

Paragraphs (2), (3), and (4) of subsection (b) shall apply only in the case of property (other than intangible property) described in subsection (a) with a useful life of 3 years or more—(1) the construction, reconstruction, or erection of which is completed after December 31, 1953, and then only to that portion of the basis which is properly attributable to such construction, reconstruction, or erection after December 31, 1953; or (2) acquired after December 31, 1953, if the original use of such property commences with the taxpayer and commences after such date.

(d) *Agreement as to useful life on which depreciation rate is based*

Where, under regulations prescribed by the Secretary or his delegate, the taxpayer and the Secretary or his delegate have, after the date of enactment of this title, entered into an agreement in writing specifically dealing with the useful life and rate of depreciation of any property, the rate so agreed upon shall be binding on both the taxpayer and the Secretary in the absence of facts or circumstances not taken into consideration in the adoption of such agreement. The responsibility of establishing the existence of such facts and circumstances shall rest with the party initiating the modification. Any change in the agreed rate and useful life specified in the agreement shall not be effective for taxable years before the taxable year in which notice in writing by certified mail or registered mail is served by the party to the agreement initiating such change.

(e) *Change in method*

In the absence of an agreement under subsection (d) containing a provision to the contrary, a taxpayer may at any time elect in accordance with regulations prescribed by the Secretary or his delegate to change from the method of depreciation described in subsection (b)(2) to the method described in subsection (b)(1).

(f) *Basis for depreciation*

The basis on which exhaustion, wear and tear, and obsolescence are to be allowed in respect of any property shall be the adjusted basis provided in section 1011 for the purpose of determining the gain on the sale or other disposition of such property.

(g) *Life tenants and beneficiaries of trusts and estates*

In the case of property held by one person for life with remainder to another person, the deduction shall be computed as if the life tenant were the absolute owner of the property and shall be allowed to the life tenant. In the case of property held in trust, the allowable deduction shall be apportioned between the income beneficiaries and the trustee in accordance with the pertinent provisions of the instrument creating the trust, or, in the absence of such provisions, on the basis of the trust income allocable to each. In the case of an estate, the allowable deduction shall be apportioned between the estate and the heirs, legatees, and devisees on the basis of the income of the estate allocable to each.

(h) *Depreciation of improvements in the case of mines, etc.*

For additional rule applicable to depreciation of improvements in the cases of mines, oil and gas wells, other natural deposits, and timber, see section 611. (Aug. 16, 1954, 9:45 a.m., e.d.t., ch. 736, 68A Stat. 51; Sept. 2, 1958, Public Law 85–866, title I, sec. 89(b), 72 Stat. 1665.)

Amendments

1958—Subsection (d) amended by Public Law 85–866, which inserted "certified mail or" preceding "registered mail".

Effective date of 1958 amendment

Amendment of subsection (d) by Public Law 85–866 as applicable if mailing occurred after September 2, 1958, see section 89(d) of Public Law 85–866, set out as a note under section 7502 of this title.

Taxable year deductions to be taken, see section 461 of this title.

Mr. JAVITS. It seems to me it would be very useful if there could be developed some new statutory approach and some new statutory direction from the Congress.

I digress for a moment in that regard. For example, one of the great matters to which is attributed the extraordinary recovery of Germany is this. I am not one of those who believe that the recovery was quite the miracle which it is represented to be. The fact is, first, that the Germans were recovering from literal prostration in terms of the destruction of their country, I think quite deservedly under the circumstances of World War II. Second, they are a hard working people, an extraordinarily hard working people, accustomed to labor standards very different from our own. Third, and perhaps determinative, they had no defense expenditures, since they were being defended by us and our allies. Hence, they did not have the enormous drain on their economy which is represented by the equivalent of a $50 billion defense bill on the part of the United States.

Nevertheless, there was a phenomenal recovery, and it was attributed very heavily to their depreciation policies, which were extremely liberal for the acquisition of new equipment, where as much as much as 50 percent of the cost could be charged off in the first year.

We are all acquainted with the Swedish method, by which the purchasers of equipment can take their own choice as to how quickly they can charge the equipment off to depreciation, the tax collector feeling that the sooner it is charged off, the sooner there will be charged a tax on earnings.

I feel a change in the statutory base of depreciation is necessary, notwithstanding the welcome revision of the depreciation schedules, which also could be a constructive contribution which could come from the Government.

Finally, Mr. President, I think we have to make even greater efforts than we have yet made to expand foreign trade. This is quite apart from the expected new trade expansion bill. It seems to me, for example, that we should undertake prompt action to revise, to implement, and to upgrade even further the export credit guarantee program of the Export-Import Bank, so that it can serve the needs of smaller businesses, which have the greatest potential for export expansion.

Mr. President, I digress again to refer to our splendid hearings of this morning. I hope my colleague from Wisconsin [Mr. PROXMIRE] found them to be as tremendously interesting as I did. He was present, as I was.

It seems to me, Mr. President, the hearings demonstrated three things: First, that the growth of the U.S. economy at the normal rate of 3 percent per annum is inadequate, not because it is organically inadequate, but because it is inadequate to the international responsibilities of the United States as the leader of the free world. The point is that, being responsible, as we now are, in a very heavy way for the economic stability of the whole free world, we have to provide far more expansion and growth than was necessary before, when we did not have to carry that major responsibility. That is evidenced by our military expenditures and by our aid expenditures. We have a responsibility for a stable currency, since the dollar has succeeded the pound as the standard currency of the world. We also have responsibility as to the maintenance of the whole economy, any weakening of which immediately has repercussions on all mankind, wherever mankind may be located in the free world. That is point one.

The second point is that these ideas, which I started to enunciate when I began these remarks, with respect to labor on the one hand and management on the other hand, as to what is needed to reassure our economy, are not irreconcilable.

It is a fact that we must build up consumption in our own country. There are many areas in which we are backward. Education is a very marked one. There are certainly some phases of the youth opportunities bill which should be passed. It is a fact, as has been pointed out by the splendid economists who appeared this morning, that we are lagging in youth opportunity in terms of employment in the whole economy.

It is a fact that, notwithstanding a fine record on construction, we are still far behind in terms of what we ought to have in respect to decent, safe, sanitary, pleasant accommodations as homes for the American people, and that enormous progress can be made along those lines.

It is a fact that, whatever may be said for the Kerr-Mills Act or any other measure, people who are older do not have medical care consonant with the opportunities for longer life which are now available, through the brilliant successes of medicine, and that this is attributable to economic reasons. This is something which really should hurt every one of us. It is intolerable in our society that we should allow people to die sooner than they should or to become ill merely because they do not have the means and we do not have the wit to develop an organization to deal with that problem. That is one aspect of the problem.

On the other hand, Mr. President, the idea that greater profits would encourage greater investment and greater enterprise on the part of business is also valid. But greater profits, Mr. President, do not necessarily come from higher prices. Indeed, the history of the American mass production system is precisely to the contrary. Prices have been reduced, and luxuries have been brought within the means of everyone. One of the most striking examples is the small motorboat, which has become very accessible to the most modest American family, and has made the yacht completely obsolescent. That is a good thing, Mr. President, in terms of progress and the satisfaction which our citizens derive from their country.

There are great possibilities in respect to broadening markets, both in numbers of people and in areas. A great possibility exists not only in the United States, where we have made such progress in regard to the standard of living, but also abroad, where there is a market of unfathomable consequence to the development of American and free world industry generally.

We know, considering the absence of needed technical assistance and the fact that we have not adequately put the private enterprise system into the whole development of oversea areas which need development, that there are many techniques of technical assistance from private industry which would make our technical assistance activities in government, in the United Nations, and in the Peace Corps look picayune, considering the potential of industry. Those have not begun to be implemented or exploited.

Our concepts of credit are primitive, almost, in their attitude toward what needs to be done for world development. We are still talking in terms of 10- or 20-year credits, when probably the world needs 50-year credits, provided they are substructured with proper assurances—let us say an investment code or other document—for investment, when finally made. This is the kind of enterprise which we have the right to expect from a dynamic American administration, whatever may be its party, with its eye on the ball—which is the development and peace in the world.

Finally, it has become almost a tragic axiom that American industry is not only undermachined, in terms of modern machinery, but also dangerously obsolescent, and is getting more so every day. We must work out—and again we must have the wit to do it—techniques which will automate American business and enable it to compete with any business in the world, at the same time not taking the toll out of the backs of the workers, who should not bear it. There is no reason why they should, in our society.

Mr. President, those are the avenues and aspects in which the greatest potential exists for our country, which are the challenges to the kind of leadership I have described. Taken within that frame of reference, Mr. President, an incentive tax cut, in my opinion, is needed. I support one, to take effect sometime before January 1, 1963. Therefore, the bill should be passed in this session of Congress.

However, it would be a grave mistake to consider that a panacea or a guaranteed cure-all for our economic dangers. It is only one element in a required cohesive program.

An incentive tax cut is not just another way to achieve deficit financing; rather, we need a structural tax change to encourage investment risk and consumption in major items such as new equipment, hard goods, and construction. It should:

First. Give business the incentive to invest more in plant modernization and product innovation.

Second. Strengthen the weakest sectors of demand in our economy—that of the lowest income groups.

I do not know that too many Americans realize that even those who have a net income per year of $2,000 or less are also paying a basic 20-percent income tax rate.

Third. Restore the rewards for individual entrepreneurial and investment risk.

Fourth. Prepare the base upon which sound expectations of relatively permanent future tax policies can be built by business and the consuming public.

In carrying out these principles, an incentive tax cut should be tailored to cost about $5.5 billion in revenue—including the $1 billion estimated cost of the revised investment credit provision in the tax bill about to be reported to the Senate. If one adds to this the estimated $1.5 billion cost of the new equipment depreciation schedules, the total tax cut would come to about $7 billion.

I propose the following guidelines for such a tax program:

First. Eliminate all income taxes of those earning less than $2,000 a year. This would involve a Federal revenue loss of about $500 million.

Second. Reduce the burden of other taxpayers, with emphasis on those earning between $2,000 and $5,000 annually, to the extent of about $2.7 billion in revenue.

Third. Reduce the maximum tax on the top personal income brackets from the present 91 percent to 65 percent. This would account for a loss of $300 million in revenue.

Fourth. Lower the corporate income tax from the present 52 percent to 50 percent, thus incurring a revenue loss of about $1 billion. By putting a statutory base under the recently issued depreciation schedules and adding the investment tax credit, in effect an incentive tax cut of $3.5 billion for business would be established.

Mr. President, I make two observations on the tax-cutting program I have just laid out. First, it demonstrates what we mean by "using our heads."

For example, it would be possible to eliminate the income taxes of those who are earning less than $2,000 a year by accepting a revenue loss of only $500 million. At the same time it would be possible to answer another group of serious complaints by eliminating the 91 percent and 65 percent brackets and suffering a revenue loss of $300 million.

With a tax take of approximately $76 billion to $78 billion a year, those would be pretty minor losses compared with the great burst of satisfaction to those in the lowest and highest income levels in the community.

As to corporate income taxes, I know that there has been a great deal of talk about reducing corporate income taxes from 52 percent to 47 percent. In my view it is unnecessary. What we are seeking to do is to give business encouragement. We can give it the necessary encouragement without accepting the additional revenue loss of $1.5 billion. We would give it the two-point tax break, which would take $1 billion. We would have a right to add to that the already-taken reduction in taxes attributable to the new depreciation schedules, as well as the contemplated income tax credit which would give business an aggregate tax break of $3.5 billion. That is appreciable and, in my opinion, all we would need to do.

That would be my program for government, providing not only a tax cut, but an incentive tax cut, and the other actions which I have described.

Labor has a very important role to play in this connection. With respect to labor, it seems to me the desirable point is to secure cooperation to effectuate automation and remachining of the U.S. industrial plant without taking it out of the backs of American labor. Such action would involve—

First. The development of methods for adjustment assistance and retraining so that workers do not suffer from job shifts due to two factors; namely, the factor of being relieved of work temporarily because of automation, and the need for retraining. I would be generous in that regard. I think we can well afford to be generous, as any businessman will state. When we have a one-shot expense—that is, one which occurs but once—when related to a continuous economy which goes on and on, no matter what is paid, it is within the reasonable bounds of business judgment. It always works out to be cheaper than haggling about the one-shot initial cost. That is one of the lessons of business management which I think we should learn with respect to the need for automation.

Second. I think labor should support proposed legislation to deal more effectively with strikes which bring about nationwide economic paralysis, or endanger public health, safety, or the national interest. This legislation is necessary, since the tenets of the Taft-Hartley law, devised for that purpose, are demonstrably inadequate.

There are many ways in which that can be done. They range all the way from my suggestion for seizure and operation to the extent required by the national health and safety, to the suggestion of the Senator from Oklahoma [Mr. MONRONEY], with relation to the strike which affects one of our great airlines now, and which would apply to labor generally what in my opinion would amount to the mandatory arbitration provisions of the Railway Labor Act. But whatever may be the ground the Congress chooses, I think it is greatly in the interest of labor and in the interest of stimulating the economy to arrive at some basis for legislation which would assure the American business world that an irreconcilable labor conflict does not mean that everything stops.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. LAUSCHE. I wish to comment on the last thoughts expressed by the Senator from New York. I agree with what he has said. My hope is that hearings will be started on the bill which would require mandatory arbitration of labor-management disputes in commercial enterprises engaged in carrying the public. My fear is that while we are talking about action now, when the strike is ended, we may forget the need to enact legislation on this vital subject.

Mr. JAVITS. Mr. President, the Senator from Ohio and I might not agree on the specific legislation needed. He knows how much I respect his views and my affection for him personally. But certainly we do agree—and I am delighted to hear my colleague make the statement he did—upon the need for a better approach than we have.

When I was a Member of the House of Representatives several years ago, I was one of the few Members of my party who voted against the Taft-Hartley bill. It was a subject of great interest to me that one of the reasons which I gave for my vote was quite surprising to most people. That reason was that the provisions to deal with national paralysis strikes in the Taft-Hartley bill were entirely inadequate. Labor thought the provisions were too strong in some respects. Probably they were. I did, too. But in some respects the bill was much too weak, and the provision to which we have referred was one of them. It seems to me that we waited an inordinate amount of time in order to tighten up on that issue, both in the interest of labor and in the interest of the Nation.

Mr. LAUSCHE. My view has been that with relation to public utilities, rates are regulated and a different rule is justified from that which normally applies to industry in general with respect to labor-management disputes. Under existing law we are without any means to cope with the paralysis that has resulted from the strike on the two airlines which have been licensed by the Government to operate. Rates are controlled, and sometimes the lines are subsidized. I feel that some measure is necessary to stop the recurrence of that type of problem. I thank the Senator.

Mr. JAVITS. I thank the distinguished Senator from Ohio for his very pertinent observation.

The third helpful thing that I think labor could do in the situation would be to bring about an end to any vestiges of bias and discrimination in apprenticeship programs, hiring opportunities, or union membership.

It seems to be that that offers a great opportunity for labor, which is liberal in its views as to the relations between people of different races, creeds, and color. I hope very much that it will be availed of. I think labor could be greatly helpful in giving even a stronger basis for the economic prosperity of our country.

If the President will activate the mechanism to carry out the public interest in wage and salary negotiations—as he said he would; I think that is a very constructive point—and couple this with the advisory guidelines laid down by the Council of Economic Advisers and the program which I have promulgated here, then I am confident we will have an adequate program to stabilize wages and salaries and help our sluggish economy on the road to progress.

What about management? I think the President would find that Presidential leadership in that area would pay him much more handsome dividends than he has had in that area so far. In respect of management I advocate the following:

First. Acceptance of the responsibility for lessening the impact of technological change through open reporting to employees, adequate leadtime, adequate adjustment assistance, within the means of particular companies, and worker retraining; liberal—I emphasize the word "liberal"—severance pay and the use of early retirement mechanisms; also working with employee representatives to meet individual problems; assigning to workers displaced by automation of priorities for new job placement, coordinating closely with public employment services; and timing changes to cushion potential layoffs with the expansion of operations and normal job attrition.

Second. Management can give full and effective participation in the programs of foreign aid and trade through the investment of capital, manpower, and technical skills. I interject at that point to say that in the course of my congressional career I have been responsible for a great majority of the private enterprise amendments to foreign aid bills.

I have not yet seen business knocking down the door of the Government to break in. I call attention to it as I call attention to the fact that Government should enlist business in its own interest and in the interest of world peace, since that is our objective. The first time I have seen business moving in this regard is in the activities attributable to the Alliance for Progress, which we encouraged here by an amendment which will give the agency called Comap, in the Department of Commerce, some resources and some personnel. That is a fine thing. However we have not even begun to exploit these possibilities. Much as I wish to encourage Government to open the door, I believe that at the same time we ought to insist on business knocking on the door very loudly and clearly.

Third. Establishment of a permanent mechanism through which private sector economic decisions and governmental policies can be coordinated.

I have myself called for the establishment of a Peace Production Board. The President has sponsored his Labor-Management Advisory Council. Whatever it may be technically, certainly it is agreed that coordination is essential. Business must get over its fear of working with Government, and Government must help business get over its fear of Government.

Fourth. A major effort to eliminate job and training discrimination based on race, creed, color, age, or sex.

The challenge before the private sector and the Government in terms of our international and domestic economic positions is great. It can only be resolved through an adjustment of attitude and practices on the part of both.

I conclude with this observation:

The crabwise movement of American economy perhaps may best be shown by a comparison with that of the European Economic Community. The United States still accounts for more than one-half of the free world's annual production and still commands a gross national product nearly three times greater than the European Economic Community's. But economic power does not reside in sheer weight alone. It resides in the kind of forward thrust which can be clearly demonstrated by some basic statistics in constant 1954 dollars about the EEC but cannot be similarly demonstrated about us. Between 1954 and 1961 the members of the EEC increased their annual gross national product 91 percent faster than the United States. During the 1954–60 period EEC exports and imports of goods and services increased 80 percent faster than U.S. trade—so that by 1960 EEC trade in goods and services stood at $84 billion annually as compared to $49 billion for the United States.

The key to our appreciation of what is happening, however, resides in this: since 1954 U.S. expenditures for new producers' durable equipment underwent some severe fluctuations, but were at a level of $22.7 billion in 1960, as compared to $20.8 billion in 1954.

That was hardly any advance at all in that period of tremendous international growth. Let us contrast that with what took place in the European Economic Community. Such expenditures increased over this period, rising by 66 percent to $18 billion annually in 1960.

So that, notwithstanding the relatively smaller size of their economies—something like one-half of ours—they nonetheless have improved their situation so that they are very close to us in their expenditures in reequipping, automation, and new equipment. Preliminary estimates for 1961 show no diminution of the widening gap in progress in trade and production between the United States and the European Economic Community.

Our antitrust laws, our tax structure, and our industrial plant have been aging for half a century. Seventeen years ago they still sufficed to catapult this Nation through the vacuum of world destruction after the Second World War, to unprecedented heights of prosperity. But, for too long, these heights isolated us from the surging reality of progress gathering strength in the very nations we taught and aided. Now the exigencies of our time demand a reappraisal of our laws and a rapid renewal of our plant, for, to a shocking degree, the United States has lost the mastery of using the genius of the free enterprise system to achieve national goals.

In all of these areas we have much to learn from our erstwhile pupils in the European Common Market. We should look into why in the EEC business expenditures for new producers' durable goods have steadily risen to 10 percent of the gross national product while in the United States they have dropped to less than half that rate.

Directly related to success in economic expansion is a required, active effort by the U.S. private sector at the request of and with the cooperation of the Federal Government, to throw its tremendous potential of capital and skills into the economic development of the free world. Demand for manufactured goods as well as for food products which the U.S. economy produces so abundantly is a direct factor in the living standards of the purchasers. The per capita income of the more than 1 billion chronically poor inhabitants of the world, now taking some $6 billion of U.S. exports, varies between 5 and 10 percent of the per capita income of the peoples of Western Europe. The latter now also take about $6 billion of our exports. Thus, the potential inherent in rising living standards among the less developed countries is clear. It is essential that the American businessman and worker pull together in the creation of an economy which will produce goods of a quality and at a price able to sustain demand at home and abroad. Only this kind of production can support the free world leadership position of the United States.

Let us give our private sector the opportunity to work and the freedom to breathe. I do not think that it will be long before our endemic unemployment problem will be a thing of the past and our competitive abilities reach into the markets of the world, restoring the economic momentum which had swept the United States into its position of peace leader of the free world.

I look toward the inspired leadership of the President in that direction.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. PROXMIRE. In the first place, I believe that the Senator has made an unusual, praiseworthy, and brilliant analysis of our economy. We have too few speeches of this caliber, of this breadth, and of this sweep. It is a tremendously useful contribution to the Senate that a man of the outstanding attainment and intelligence and understanding of the Senator from New York should participate in a discussion of this subject.

I have been a Member of the Senate for 5 years, and on few occasions have Senators undertaken to make an overall appraisal of our economy; not in bits and pieces, but an overall appraisal, and not only with criticism, but also a statement of serious and constructive suggestions. Therefore, this is indeed a very fine speech which the Senator from New York has delivered. I should like to raise certain questions, but I hope the Senator understands that I am perfectly sincere in what I say about the quality of his speech.

Mr. JAVITS. If the Senator will let me interrupt at this point, I should like to say that it would not be Senator PROXMIRE, of Wisconsin, if he did not have some points of his own to make.

Mr. PROXMIRE. In the first place, the Senator from New York spoke about the erosion of confidence in President Kennedy, which, he feels, is a very serious economic problem throughout our country. I have been critical of the President on occasion with respect to some of his policies, but I honestly cannot accept the statement at all of the Senator from New York. I feel that President Kennedy is not only popular, but that our people have confidence in his ability and understanding and intelligence, and willingness to take advice. I should like to have the Senator from New York indicate some instances which demonstrate this lack of confidence. I would certainly challenge him if he said that the stock market is such an indication. If that is not it, where is there any indication of what the Senator has said with respect to the President?

Mr. JAVITS. When the Senator says the people have lost confidence in the President, I think that statement would defy the experts. In the sense that the surveys all show that although there has been some percentage diminution in the amount of support he can count on from the people, the amount is still very substantial—I think it is well over two-thirds. It is not 79 percent; it could be 69 percent; but the percentage is still very large.

I was talking about the erosion of confidence on the part of those who make the economy tick in terms of management, and in terms of investment. I think the best evidence of that, if the Senator from Wisconsin will bear with me, is the generally endemic feeling that is reflected, and as recently as this morning. There was a pattern of economic thinking, right across the board. Interestingly, they sat almost from left to right as they faced us, first those representing labor, then the academic people—two of them—and then the management man. Everyone of them agreed that there was a real sense of uneasiness in the country, whatever the indices showed; a feeling that we were facing every session.

Second, I think the President himself has indicated his feeling on that score by the way in which he has been casting about for a decision on the question of a tax cut, and the fact that he himself said, "Well, we are worried, too. We will see what the indices show for July"—as currently as that. I think that is calculated to reflect what he himself detects; namely, a spirit of uneasiness throughout the country.

Finally, I think it is true that the indices did not reflect what was expected by the President's own advisers. For example, the gross national product figure is disappointing, and they admit it. Again, that is a very important confirmation of the feelings of those who have had uneasiness.

Then, too, there is a considerable amount of unused capacity in the country, which shows that there is a lag in demand compared with the anticipation of business, considering the increase in our population and the expectation of demand to be built up in order to meet the anticipated demand.

Finally, and very importantly, there is uneasiness abroad. We are a world country. We are no longer an insulated nation. We have had a run on gold. We have very materially lost reserves. I am not afraid of that. I do not believe the Senator from Wisconsin is afraid of it. Neither of us feels that the loss of gold is too important. I cite that factor only as a thermometer for the evaluation of the world as to our economic condition. I think there is a note of uneasiness throughout the world as to our economic condition, which is reflected by the gold situation and by the fact that our domestic condition has not attracted a return of funds here, whether it is due to interest rates or some other cause.

Let us remember that we paid lower interest rates for a long time and that we had no difficulty retaining short-term funds in this country because of the superior security which people all over the world, who had money to move around, saw in the United States.

Now it is said that we are competitive in the world and what is happening indicates it more and more. Our security factor has absolutely diminished in its importance in terms of those who have the opportunity to shift funds from one place to another in the world. That no longer compensates for lower interest rates.

Perhaps the Senator from Wisconsin, who himself is an economist and an eloquent spokesman for lower interest rates, realizes that in a developing world the cost of money must go down. I could not agree more with the Senator than in that view. I should have said that myself when I spoke of new concepts of credit. I think the Senator from Wisconsin himself will see the significance of the security factor in securing lower interest rates.

It is rather to be deprecated that, as we stand today, we must compete in interest rates. So the security factor is no longer what it used to be.

Right off the top of my head, since the Senator from Wisconsin has asked me a challenging question, those are at least some of the specifics which back up my own assertion.

Mr. PROXMIRE. I think the answer of the Senator from New York suggests that the alleged lack of confidence is because we have had a diminution in the expansion of the economy; it is because the gross national product is not increasing at quite the rapid rate which the Council of Economic Advisers expected and on which they predicated their hope, but the falloff in the economy is not because of any lack of confidence in the President, at least the Senator has not adduced any evidence—and I admit it is hard to do so—but I challenge him because when any Senator of the caliber of the Senator from New York attacks the leadership of the President of the United States, I feel there ought to be some real evidence. I just do not believe there is any evidence, as was indicated this morning by Mr. Ellis, who is an able economist for Du Pont. He is certainly an able spokesman for business. He said we must expect fluctuations. Fluctuations in the economy are inevitable. If we are to have freedom, we must expect the economy to go down as well as up.

The Senator from New York used the term "agonizing indecisiveness" in respect to the President's not deciding whether he will ask Congress for a tax cut. The Senator from Wisconsin thinks the action of the President in this respect is the essence of prudence. If the Senator from New York were the President of the United States, before he decided to have a tax cut he would want to consult every bit, every scrap of information he could get. There is nothing more cloudy than the economic crystal ball. The economic forecasters were badly wrong last year when they predicted we would have the kind of expansion they expected. They have been wrong frequently in the past. Under those circumstances, why does it not make sense for the President of the United States to take as much time as he possibly can take to consult all the indicators; to wait as long as he can before he makes the fateful decision to ask for a tax cut, especially in view of the fact that the Gallup poll has indicated that the people of America are very undecided on a tax cut, particularly when some leading Senators and leading Members of the House of Representatives have indicated that they are opposed to a tax cut. Men of great wisdom, like Senator PAUL DOUGLAS; like Senator HARRY BYRD, chairman of the Committee on Finance; like Senator ROBERT KERR, the second-ranking Democratic member of the Committee on Finance; like Representative WILBUR MILLS, chairman of the House Committee on Ways and Means, are against a tax cut, or are very undecided about whether there should be one. Under those circumstances, for the President to stick his neck out and say, "I am for a tax cut, and I am going to fight all out to get it; I am not going to wait to try to persuade the people to support it; but based on my own judgment," would be bad economic and political judgment; it would be imprudent and might result in his inability to have a tax cut passed. I think that would have very dangerous consequences upon the economy.

Mr. JAVITS. I think the two factors which have made me feel the indecisiveness of the President are, first, that he was widely advertised as waiting for the indicators of last month. If this is as portentous a decision as it is, I think one would hardly expect the President, especially in view of what the Senator from Wisconsin says, to be sitting in his front parlor, waiting for the very last set of indicators, and then being unable to make the momentous decision that we should or should not have a tax cut.

Second, I believe the American people are rather proud of a type of leadership which will say to the country, "This is what we ought to have. Even if two committee chairmen are against it, and much as I love them—they are both good friends of mine—I will go out to the country and fight for a tax cut."

I might state one other factor which I believe has caused an erosion of confidence, whether justified or not. There is not the feeling in the country that the President went all out, with everything he had, to have passed the medicare bill, for example. I think it is rather singular to contemplate that there were 21 votes on the President's own side which were not available for the medicare bill. Let us remember that that bill had nothing in it with respect to civil rights. It did not have any built-in or ingrained reason why southern Senators should have voted against it.

I am well aware that most Republican Senators voted against the bill. I make no briefs about that. My thinking is different. But any votes the President got on the Republican side were just so many to be added to those which we expected the President to control.

The tax bill has been widely advertised. It has been pending for months and months. It has now been turned into a tax bill which will not provide an increase in revenue, but which will result in revenue diminution. As a matter of fact, its major provisions, in terms of the President's alleged leadership, have gone down the drain.

It seems to me that when the President is operating with such large majorities, his capability of delivering on the programs he has laid before the country is another aspect about which there can be uneasiness in regard to his real command of the helm.

So I return to the proposed tax cut. The President's first point of view in that connection was to wait until the indexes for July were available. But this decision is too important to be subjected to any such standard of values. Next, the President took the position that he would check with the committee chairmen, to ascertain what they think about a tax cut—instead of telling the country what the President thinks is needed, and then fighting for it; and if the chairmen of the committees do not favor it then and there, they might be persuaded and won over. But the important thing is to see to it that the people of the country understand the President's view.

So I think those factors have definitely contributed to this situation.

Mr. PROXMIRE. Mr. President, will the Senator from New York yield?

The PRESIDING OFFICER (Mr. HICKEY in the chair). Does the Senator from New York yield to the Senator from Wisconsin?

Mr. JAVITS. I yield.

Mr. PROXMIRE. It is a fact that the problem of Presidential pressure and how much to use is extremely difficult of solution. Many persons, in fact, I think perhaps the Senator from New York would agree, that most of the business community seemed critical of the President for using too much power in connection with the steel dispute. However, I think the President was 100-percent correct in that instance, and I believe the steel people were wrong. The President acted with decision, and he got results. I believe that is one of the reasons why the business community feels as it does about the President and why the business community has hardened its attitude and its opposition against the rest of the President's program.

But at Madison Square Garden the President took the medicare issue on national television and did so in the personal presence of 20,000 persons in New York. He appealed for medicare in a very stirring and emphatic way—something no other President has done, within my experience.

Some Members of Congress have said their arms were twisted all the way up to the shoulder by the President's pressure in connection with this matter. I think the President did about all he could in connection with this particular issue; and I think it is very difficult to criticize the President for not being able to control the Democratic Party at this time, in view of the fact that our party has been divided for years on many domestic issues. Certainly the President has tried extremely hard to get these measures through; but it is very difficult for him to do so without alienating many members of his own party.

Mr. JAVITS. But I point out that it is possible to be decisive at the wrong places and at the wrong times. For example, in connection with the steel price increase, I think the President massed a battery of very large guns when he blew down what, at that particular time, was a rather light target.

Mr. PROXMIRE. But no one expected the President to be successful in reversing that action. However, he was successful.

Mr. JAVITS. But the President scarcely waited an hour before he expressed what he believed to be the national will.

Incidentally, I agreed with him about that, even though I disagreed with him in regard to the advisability of then and there rolling up all the tremendous armament of the Government to blow it down. In other words, one of the qualities of leadership is to know when to fire one's weapons. The Senator from Wisconsin knows from his service, as I do from mine, that one of the most important command decisions for the commander of a company to make is when to commit his reserves. That requires timing, too. So even if the President gets "A" for effort, he must also have correct timing.

The fact is that the President has all that power and franchise; he has a great many powers, and he can confer a great many benefits; but he also has the responsibility of delivering at the correct time.

Mr. MILLER. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. MILLER. I should like to say that, so far as I am concerned, I believe that the phrase "agonizing indecisiveness" is a very excellent one, and I subscribe wholeheartedly to it. However, I suggest that the Senator from New York is, if anything, being a little bit charitable when he uses that phrase and when he ties it in with indecisiveness in regard to making a tax cut.

If I correctly detect the real problem here, I believe it has been compounded by what might be called ruthless decisiveness in the refusal to cut back Federal spending in order to make room for the tax cuts which are needed in order to get the country moving. It is common knowledge that advisers who have the President's ear have been trying to persuade him to make tax cuts without reducing the expenditures, and have been sending up trial balloons in an effort to determine how the public will react and how Members of Congress will react to, let us call it, the sophisticated theory that we can have tax cuts without making room for them by cutting back on spending. I may be a little old fashioned, but that does not sound like "sophisticated" economics to me. Instead, it sounds like hogwash, for we know that it is impossible to have meaningful tax cuts and at the same time to preserve the purchasing power of the people's money unless there is an equivalent cutback in spending.

So this is the problem the President faces. He has been listening to some of his advisers who think that "sophisticated economics" can be passed on to the American people; and they are trying to "sell" the President on the idea that we can have a tax cut without cutting back on Federal spending.

But the "ruthless decisiveness" took place last year; and the Senator from Wisconsin is one of those who has been aware of that, because he has been sounding off—although not often enough—on the excessive spending of the "New Frontier." But the decision has been made not to cut back on Federal spending, but to increase the spending.

Mr. President, there cannot be tax cuts unless there is a decrease in spending, in my book. The sampling has been undertaken in an effort to determine whether the public will favor such a theory. I suggest to the Senator from New York that this "agonizing indecisiveness" is nothing but the testing, by means of a trial balloon, to see whether the American people will "fall for it."

Fortunately, as the Senator has pointed out, some of the key members of the Finance Committee and the Ways and Means Committee are not buying it; and I sincerely trust that their valuable and experienced opinion will prevail.

It seems to me that what must be done is to transfer this agonizing indecisiveness in regard to tax cuts into real leadership decisiveness in regard to cutting back spending, in order to make room for the tax cuts. Once this is done, there will not be any agonizing indecisiveness, because then the cards will fall together perfectly.

I thank the Senator from New York for yielding to me.

Mr. JAVITS. I thank the Senator from Iowa for his observations. I am sure he knows that I am not necessarily committed to some of his views on these matters. I do not believe we can really condition the making of an incentive tax cut on what we may save by reducing spending. Yet I do believe that under these conditions it is necessary to keep a tighter rein on expenditures than one otherwise would keep, and that there are areas in which savings can be made. I do not believe in broadsword cuts without selectivity. For example, those who favor making deep cuts in a welfare program do not favor making cuts in the appropriations for defense. In fact, instead of making cuts in the appropriations for defense, they want increased appropriations made for that purpose. For my part, I believe that some of the welfare programs are as essential to the national defense, in terms of the morale of the people, as are the big bombers—which will cost more than the appropriations the President requested.

So although I cannot agree entirely with the Senator from Iowa, I do believe that if we are to have an incentive tax cut, we must keep a tighter rein on expenditures than perhaps we would like to do. For that reason I voted for a cut in the HEW program.

Mr. PROXMIRE. Mr. President——

Mr. JAVITS. I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Let me say that the so-called erosion in confidence is based on the fact that the President has not yet asked for a tax cut, although he has indicated that probably he will ask for one next year.

My position is that it is prudent and wise for one who is going to go into this matter to obtain all the information and advice he possibly can, and consider all possible alternatives, and then make a fateful decision of this kind only on the basis of the best evidence available.

Now I would like to point this out to the Senator. The Senator said: "Here is the end of the session, and there is no trade bill or tax bill." Does the Senator have any real notion that Congress will not pass a trade bill, that it will not be a historical achievement, and that, together with the Peace Corps, will be a bright, unique, and constructive contribution to our country and our Government?

Mr. JAVITS. The Senator has asked me two questions. I will answer the first question first. I think the tax bill which is pending in the committee has been pretty well washed up. I think, therefore, whatever benefit we get in that regard will not represent affirmative aid to the economy of the major character which I contemplated when I referred to an incentive tax cut.

Mr. PROXMIRE. If the Senator will yield for a comment, I agree with him 100 percent. I was not referring to the tax bill at all.

Mr. JAVITS. As to the trade expansion bill, I think there will be a trade expansion bill, but I do not think it measures up to what I have said, because it is not strictly part of the New Frontier. I think it forces itself upon us by urgency of the European Common Market and its success, and the fact that we would have had to have a trade program. Incidentally, the Reciprocal Trade Agreements Act expired on June 30, 1962, so we had to have another bill.

But I do not want to detract from the President's activities in that regard. I think we will have a trade bill. I think we will have it before the end of the session. However, I say again, it is my judgment that a trade bill could have been gotten sooner and with greater impact on the economy in terms of the erosion of confidence, and that the President—although we can give him an "A" for effort—could have exercised a more effective leadership role in that regard.

However, that is not my main point. Nor is my main point the point which the Senator desires to wish on me as my main point, namely, that the tax proposal represents the erosion of confidence which I refer to. I think the erosion of confidence is the composite of everything that has occurred. It is not due to one thing. It is not due to the fact that the President has been indecisive about a tax cut. I think it started, in point of time, with the excessive means used in dealing with the steel price increase. I think that was a very serious clue to the American business community as to the temper of the President and what has been called decisiveness. I think it represented, to a degree, a lack of sophistication in terms of adequacy of the means and the purpose, which made a very serious impression on the American business community.

I think that event began the process of the erosion of confidence, which has been compounded by the other factors which I have discussed.

Also, I may say the Senator has not mentioned what was the main point of my speech, that we have not yet had any really major demonstration of what the New Frontier was going to do in order to get our economy moving. The only thing I was able to ascertain which could be clearly attributable to New Frontier initiative was the Peace Corps. In other respects I think we have had either no initiative or ideas, or they were carryovers from the previous administration and pretty much the general policy of the country. I have suggested, for example, a whole series of things.

The Senator from Wisconsin has been most gracious in what he has said about me. The Senator knows I reciprocate fully in my admiration for his diligence and his mind.

What I suggested was a whole kit of actions which could be done in government, in business, and in labor, which, when added to an incentive tax cut, could put us on that wonderful, hard road of moving the country forward.

I am talking about a composite of these aspects of the matter, and not one thing, the indecisiveness of the President on a tax cut.

Mr. PROXMIRE. With regard to the decision on the steel price, no President had been able to do it before. Steel companies had been able to increase prices automatically. Once one company decided to increase the price of steel, they all did by precisely the same amount. No President had had the power to stop it. President Kennedy did. It was an amazing achievement. I think almost everybody thought there would be no chance of getting the United States Steel Corp. to reverse its stand on the price increase, but it did.

The Senator referred to programs to get the economy moving. The Kennedy administration has a proposal to achieve this, for example, manpower retraining, youth opportunities, a public works bill, which I, incidentally, voted against but, nevertheless, there was a series of measures which were positive and which had a tendency to get the economy moving, in addition to the policies of tax reform and relief.

Mr. JAVITS. If the Senator will yield, those are essentially continuances of what had been done before. We had a manpower retraining bill before. We had a distressed areas bill. We had a youth program.

Mr. PROXMIRE. But we made very little progress on some of them.

Also, 4 years ago, when the reciprocal trade program came up, there was a terrific, knockdown fight. There was some question as to whether the bill would pass. This time we are going much further than reciprocal trade. Earlier some people thought it was impossible even to try to bring this proposal up, and they thought it possible that it might kill the whole Kennedy program. The President has handled the situation so well and has marshaled his forces so effectively that the bill has passed the House and is almost certain to go through the Senate. We are going to end up with a landmark trade bill which, 12 months ago, very few people would have thought possible.

Mr. JAVITS. As often happens in debate on the floor, naturally the Senator and I are not going to agree about the success of President Kennedy. Also, I would only say to the Senator, perhaps it would put our arguments in focus if I make my point, which is that in the game of being President of the United States, we do not pay for "place" or "show," we pay only for "win." That is the virtue and the strength of the Office.

I, myself, spoke of the Peace Corps. The Senator from Wisconsin prefers to add the trade bill. I think there probably are three or four matters which neither of us have thought of which could represent a leadership quotient. But I say, in summation, that the President, with the majority in Congress that he has, the tremendous support of the country in a program of moving the country ahead, came into office in a period when our indexes were high, and have gone higher, and yet, some of us have doubts—perhaps I could be excused for saying that the Senator from Wisconsin has entertained a few doubts—as to where the economy is going. This all relates to the Presidency's paying only for "winning," for being "first."

There is erosion of confidence for the reasons I have cited. The fact is that four witnesses before our committee this morning, from different fields of our economy, all seemed to have the same malaise; they were all trying to account for this lack of confidence.

Mr. PROXMIRE. And there was not one suggestion of a whisper of a shadow of a feeling of lack of confidence in President Kennedy. They did not consider the President's leadership—they advocated different steps to meet problems of the economy if it turns down at certain times—but there was no lack of confidence in the President or his leadership expressed, or that the major problem was due to inability on the part of the President.

Mr. JAVITS. I am sorry. Two people judge differently. I, on the other hand, got the distinct impression—though that is by no means my whole case—that the four men were worried about where our economy is going and fear a recession unless very determined means are taken to head it off. Indeed, the incentive tax cut idea is the one thing they all agreed on as being highly desirable and necessary.

Mr. PROXMIRE. Let me ask the Senator about the incentive tax cut. It is a good idea. I like the idea with respect to people making less than $2,000 and also with respect to the reduction from 91 to 65 percent.

However, I think perhaps the Senator would recognize that neither of those proposals would have a very serious economic effect. I think the proposals would have a desirable equity effect, but in terms of economic impact the $500 million tax cut for people making less than $2,000 a year would not be great. Very few people who are making less than $2,000 a year would buy a house, or buy a car, or make any other major investment or expenditure which would move the economy ahead very much. That money would be spent quite rapidly. I think it would be a good thing, but I cannot see that it would affect the economy seriously.

So far as the suggestion of a cut from 91 to 65 percent is concerned, I think the Senator recognizes that almost everybody who makes so much income that he is in that tax bracket, or could be, is able to get the kind of legal advice he needs and is able to arrange his efforts in such a way that he will not pay such a percentage, unless he is a ballplayer, a prizefighter or an entertainer, or happens to be caught by ignorance or lack of legal advice.

That part of the Senator's proposal is excellent, but from the standpoint of stimulating the economy I think the Senator would agree that it would be secondary to the other part, with respect to business, and particularly the tax cut for those who are making between $2,000 and $5,000 a year. The small cost of the 91 to 65 percent cut shows this.

If we consider the proposed $2.7 billion tax cut, as I calculate the figures it would mean about $1.50 more a week in the pockets of people who are making that much per year. With $1.50 a week more, very few people would buy a house, would buy a car, would buy a refrigerator, or do anything which would stimulate the economy very greatly. Is that not a correct assumption?

Mr. JAVITS. I cannot agree with the Senator on either of his premises, for this reason: In the first place, tax cuts are largely psychological. They make people feel a little more ample, that "this is the time to go forward." Beyond that, there is a facilitation of demand even in the lower income brackets, if not as a result of spending by those taxpayers then as the result of spending on goods, which has a material effect on the people with whom they do business. The people directly involved may not buy a house, but the tradesmen with whom they do business may buy houses. New equipment is responsive to new demand, and so on.

I think the most important part of the incentive tax cut idea, moving it into the lowest brackets and into the brackets above the lowest brackets, is in regard to a reestablishment of the feeling that there is a development in the economy, that there is spending power, that we can "move forward," to adopt the President's words.

I cannot agree with the Senator about the entrepreneurial practice. We are facing an issue of fact. I know we shall have very definitive evidence on that question.

I am a lawyer of some experience, as the Senator knows. I think I know a number of people who come into those tax brackets of from 65 to 91 percent. I will tell the Senator that there are many people who are in the upper levels of income, and that there is no way of avoiding the taxes, no matter how intelligent they may be tax-wise. This has a deleterious effect not so much as to what the Government takes, as the Senator knows from my figures—whether the figures are off $50 million or $100 million is immaterial, for they are in that magnitude—because the Government does not take so much in absolute money, but instead as representing a stop of a man's activity.

For instance, let us consider the case of a construction magnate in New York, who reaches a point, in the course of the year, when he says, "All right; what is the use of doing more? Why push myself? Why work late hours? Why get up early? Why go to Chicago, instead of staying home in Westchester County and playing golf? There is no use in doing so."

I am a person with some experience in that regard. New York is a very enterprising place and has a lot of people who are in that income group. I can testify to the Senator that this tax provision has an inordinate influence in terms of the creative mind and the drive and the push which are associated with American enterprise. I think it would be really a very helpful and salutary benefit to the economy if that incentive could be restored.

Mr. PROXMIRE. I say to the Senator from New York that anybody who is in that position has every incentive now for investing in an SBIC, so that he can get a very handsome tax advantage. He has every incentive to invest in an oil well, with respect to which the depletion is enormously valuable under these circumstances. He has an incentive to take a risk on capital gains, which would be of great benefit to people in that high income category.

The main emphasis I should like to leave is that the $5.5 billion tax cut which the Senator has proposed to the Senate today—which is only $4.5 billion, if he leaves out, as he did, the investment credit which is coming up—in respect to a $550 billion economy is only 1 percent, a drop in the bucket.

There was a tax cut in the United States in 1926, and 6 months later there was a recession.

There was a tax cut in 1929, and 6 months later there was the greatest depression the country ever experienced.

There was a tax cut in 1948, and a short time later the country experienced a recession.

The Senator said, of course, that the proposal is not to be considered a cure-all, but only as one part of a total package. I say that on the basis of the evidence we have seen there is no assurance that a tax cut will have a significant impact on the economy, when limited to only 1 percent of the gross national product.

If the Senator were talking about a $35 billion or a $40 billion tax cut, that, of course, would have a real effect. I am sure the Senator recognizes that could not be done.

Mr. JAVITS. I will say to my colleague that we have taken our fair proportion of the time of the Senate in discussing this problem. I should like to conclude my part of the discussion by using the words of Archimedes, who said:

> Give me a lever long enough, and a fulcrum strong enough, and single-handed I can move the world.

So in urging the establishing of what I consider to be a $7 billion tax cut rather than a $4½ billion tax cut, as a critical element of a package which is very much more inclusive than that, I speak in terms of a lever, which would get us going, which would give us the momentum, to which all other things can contribute.

Mr. PROXMIRE. One and one-half billion dollars of that has already been effected, by the decision of the administration. Congress does not have to act in that regard. Congress would have to act only on $5½ billion of it.

Mr. JAVITS. I know, but it is cumulatively $7 billion in toto. Often one can accelerate a vehicle by giving it added push, when it is already on its way.

Mr. PROXMIRE. I do wish to ask the Senator one or two more questions. The Senator from New York has held the floor for a long time, owing in part to questions from the Senator from Wisconsin, but nevertheless, I should like to ask the Senator two or three additional questions. This is a rare occasion. It is quite important that we discuss the economy. I should like, very quickly, to touch on the other elements of the package.

The Senator mentioned a reevaluation of the antitrust laws. This seems to be the area in respect to which many businessmen are suggesting constructive action. If this would get the economy moving, it could have merit. It would seem to me it would be very helpful if Senators who propose that would come in with a bill.

Mr. JAVITS. I have done so.

Mr. PROXMIRE. Those Senators should introduce bills affecting the Clayton Act or affecting the Sherman Act.

Mr. JAVITS. I have. Will the Senator yield to me so that I may interject.

Mr. PROXMIRE. I know the Senator has presented such a bill.

When we consider the very important effects of antitrust legislation in this country over the past 70 years, and the great progress which has been made in this country over that period of time, as compared with the progress in Europe, which has not had the same attitude toward monopoly, I think we ought to be very careful about rejecting the antitrust laws, although I am sure that the Senator's bill has great merit.

Mr. JAVITS. I wish to say to my colleague, with respect to the antitrust laws, I think the antitrust laws and the antitrust policies are one of the most critical determinants of economic movement forward in this country today.

I do not think my colleague ought to dismiss the European experience quite so lightly. Let us remember that the most spectacular advance in the postwar years has been in Europe. Europe was devastated by two World Wars, but we were not. We can easily understand the relative lethargy, industrially, of Europe. Certainly the tremendous thrust forward of Europe since World War II is some evidence of the fact that a nation does not need our kind of antitrust laws in order to have economic health and activity.

Beyond that, the pressure of our world position is making our antitrust laws really archaic. Let me give the Senator only two examples.

Again I apologize for delaying any of our colleagues who want the floor.

One example is the oil business, in respect to which there is really a very grave fear that the Communist activity, which now supplies 9 percent of Europe's oil—and in some countries could become an indispensable element of the operation, so as to give the Communists a real grip on the throat of industrial activity in a particular country—could be very much better dealt with if we had a different concept of antitrust laws.

Today we have extracted from the Defense Production Act even that section which gave to the Attorney General the authority to allow some kind of combination when it was needed in the national interest. That is out of the law. I have been trying to put it back in, as the Senator knows from our work on the Committee on Banking and Currency.

The second aspect of the antitrust laws which is so important is this: Everybody agrees that private enterprise must be brought into the newly developing areas. In order to divide the risk, the consortium idea is the best idea that anybody has ever thought of. That was done with brilliant success by international agencies with very little industrial participation—but some—in India and Turkey. Here, again, is an area in which business constantly runs afoul of the antitrust laws. In the field of economic warfare and the development of underdeveloped areas, the antitrust laws, as presently administered, are archaic. What I have said is not in criticism of administrations. Business felt that the Brownell administration and the Rogers administration were fully as tough on them as is the Kennedy administration and the Loevinger administration.

I am not standing here—and I know the Senator is not—as an apologist for business to secure for business relief from the antitrust laws. All I say is that as the antitrust laws are handled today, there is not a positive aspect to them. They hurt small business. They hurt our economic warfare activities. They hurt our development of the newly developing areas of the world. We must have some new antitrust policy which is consonant with the modern day. Of all the possible contributions to our economic life, aside from the question of national strikes, which I think is critically important, I believe that problems related to the antitrust laws are more important than anything else, including a tax cut.

Mr. PROXMIRE. The Senator from New York has made a strong and eloquent case on the question. But the fact is that we can explain German, French, and Italian recovery in all kinds of ways without saying that it was based so heavily, as the Senator seems to emphasize on, first, depreciation procedures; and, second, antitrust laws.

As the Senator well knows, the fact is European countries had the ideal situation in which to move ahead. Those countries had an ample supply of skilled labor and high education. They had a consumer desire for products which were not available. They had the capital from America. They had all of those things, and while they have moved ahead more rapidly than we have, they are still far, far behind us in terms of their productivity or even their satisfactions. If we should talk about television sets, automobiles, refrigerators, and like consumer satisfactions, those countries have a great way to go. They will expand more rapidly in the future in those areas.

I think we must recognize that certain pains have gone along with the development in those countries. Their inflation has been far more severe than inflation has been in this country. They have suffered. To say that we should follow a somewhat different depreciation policy, and that the European way is the best way, we would make a mistake.

I think it would be much wiser for us to go back to 1890 and consider comparative development since then. Europe was at least the economic equal of us at the beginning of that period. We are now well ahead of the countries of Europe. We have done it on the basis of vigorous antitrust prosecution, insistence on competition, and tax laws which have been sensible with respect to depreciation, although I agree that depreciation reform has been helpful.

I do not wish to delay the Senator longer except to ask him two questions. The first question pertains to the price we would have to pay to obtain a tax cut. The Senator has indicated that he thought expenditures should be readjusted. He has supported a number of economy efforts on the floor of the Senate. I ask him if it is not true that his proposal would really undermine business confidence both here in America and abroad in Europe? As the Senator has suggested, we would vote a tax cut which would amount to a $7 billion cut. Last year we had a $6 billion deficit and expect a $4 billion deficit this year, without a tax cut. If even in prosperity we cannot come closer to balancing the budget than a $10 billion deficit, might that not be a factor that would be very important to business confidence?

Mr. JAVITS. I cannot agree with the Senator for two reasons. First, a tax cut would not mean an increase in deficit. It might mean a very much smaller deficit when we extend the experience over a period of more than 1 year.

For example, history has shown such a result in 1954.

Second, the best evidence of what is thought by the business community is that the business community thinks exactly to the contrary. The U.S. Chamber of Commerce has come out for a tax cut even larger than the one I have proposed. The AFL–CIO has also done so.

If my memory serves me correctly, the other day we had a report from a rather conservative public banking institution in Europe. I think it is the Bank for International Settlements. I may be wrong about the source, but it is the same type of source which also carried out the same general point of view that the chamber of commerce has carried and that the AFL–CIO has carried. Whatever may have been their differences as to the terms of the tax cut, I might point out to the Senator the idea of a budget deficit is, in these relatively prosperous European countries, apparently much better understood and accepted than in ours. The question is the aggregate of economic activity. What people want to know is not only what the deficit of a country is—because, after all, a country can pretty much control its deficit, depending on how that country taxes itself—but the question is, What is the total aggregate of the country's worth? The worth of a country is attributable not only to its fixed assets but also its earnings, to use a business term. It is the business turnover that we are trying to generate by an incentive tax cut. I am not for a tax cut that would simply put money into the pockets of people so they can spend it. I am for a tax cut that would apply with the greatest selectivity at the point where it could do the most good in terms of engendering purchasing power which we want and the type of expansion which we want. That is my whole point.

Mr. PROXMIRE. There are times for a tax cut. There is no question about it. There are times when a tax cut would be beneficial to an economy. But at a time when we seem to be nearing the peak, when our gross national product is still moving ahead, as the Senator from Illinois [Mr. DOUGLAS], the only professional economist in the Senate, has said, we seem to be using up our ammunition at the wrong time.

Mr. President, I conclude by telling the Senator from New York once again that there is nothing tougher than having to do what he did this afternoon. He has come forward with a constructive and positive series of recommendations. There is nothing easier than to stand up, shoot at them, and try to knock them down. What the Senator has done, I think, has been helpful. I emphasize that I disagree with him with respect to Presidential leadership. The leadership has been constructive and effective. The country has a great asset in John F. Kennedy. He is leading the country very effectively. The Senator deserves a world of credit for the economic part of his remarks. It was a fine effort and the kind of historic speech which can be a real contribution to the country.

Mr. JAVITS. I am grateful to my colleague.

Mr. HUMPHREY. Mr. President, I deeply regret that I could not be present in the Chamber to hear all of the Senator's speech. I have listened with great interest to the colloquy between the Senator from Wisconsin and the Senator from New York, both of whom are strong advocates of their respective positions, and both of whom have agreed upon some measures and have honest disagreements over others.

First, let me say to the Senator from New York that it has been the position of the senior Senator from Minnesota for some time that a tax cut now would be a productive tax cut for our economy. I am more convinced than ever that a tax cut at a time when the economy seems to be doing fairly well would be an effective means of putting our economy in what might be called full power forward. In other words, the tax cut would provide the forward thrust which the economy needs.

My study of the question is not as a professional economist. Nevertheless, for several months the Senator from Minnesota has been conversing with well known and responsible economists, and members of the business community and the financial community who are knowledgeable on the subjects of fiscal and monetary policies.

I believe that the administration should advocate a tax cut. And I believe, even more so, that Congress should get in step with the realities of the time. The real problem here is not with the President, but, rather, with Congress. The President has indicated in previous statements his interest in and his support of a sensible tax cut, both corporate and individual. The President is having prepared recommendations to submit to Congress for action next year on basic tax reform, which includes reduction of tax rates, both corporate and individual.

The Senator from Minnesota has said that if the administration is committed to a tax cut next year, why not now? The effect would be greater now. We would relieve the uncertainty in the economic community if the tax cut were made now.

So what is the problem? The problem is that the word that comes from Capitol Hill, with the exception of a few of us who have spoken up on this subject, is that such a proposal would be rejected, and it would throw Congress again into a serious argument over basic economic policy.

I know that the answer will be, "Well, the President ought not to worry about what Congress will do." In this instance I say the President must worry about what Congress will do, because it will provide even greater uncertainty to the economic community if there is a basic conflict between the President of the United States and the Congress over tax policy.

If the Senator from New York will indulge me further, let me say this. On point No. 1, a tax cut now, my answer is "Yes." On point No. 2, the amount of the tax cut, I say that the amount must be sufficiently large so that it does have an immediate thrust or impact on the economy. In fact, I say most respectfully that a $5.5 billion tax cut, as advocated by the Senator from New York, with selective cuts, is to my mind, too modest. Many of the economists whom we hold in high regard, both in business and in Government, have suggested as high as a $10 billion cut. I made the proposal a week ago in the Senate that we provide a cut of $7 billion.

What would be the effect of a tax cut at this time? The Council of Economic Advisers estimates that the gross national product will increase by roughly two and a half times the amount of a tax cut. For example, a $10 billion tax reduction would result in a $25 billion increase in the amount spent by consumers and business for goods and services.

I believe that the Senator from New York has made a valid point so far as deficits are concerned. The deficit will be less if the economy moves at high velocity, if the production of goods and services can be stepped up. Even though the rate of taxation is lower, the amount of the revenue coming to the Government will over the long run be larger. If we can step up corporate profits, as a result of increased business activity, and if we can step up individual income, as a result of full employment tax revenue will increase sufficiently so as to have balanced budgets.

I would ask my friend from New York, for whom I have great admiration and friendship, to bear with me as I cite some of the things this administration has done to stimulate the economy. For example, there has been an improvement in agricultural income through the enactment of the farm program of last year with respect to feed grains and wheat. That had an effect on rural America, and it had an effect in the trade centers and in the distribution centers throughout rural America.

We have had the largest housing program authorized, larger than was ever authorized before by any Congress. Housing construction has been most heartening.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. HUMPHREY. The area redevelopment program which was enacted last year, while slow in getting underway, has had beneficial effects in many distressed areas. And it will be making an increased impact on the economy as time goes on.

Loans by the Small Business Administration have doubled, as is true also under the Farmers Home Administration. There is a great need for these loans. They are paid back with interest. SBA makes money. It does not lose money. These Federal loans of the Small Business Administration improve the economy and do not hold it back. Unemployment compensation has been paid to the tune of almost a billion dollars.

The minimum wage law passed last year has been beneficial in certain parts of the country.

All of this has had an impact on the economy.

What are some of the problems that we have had to face? Well, first of all, we had to face an inflated stock market. I do not believe anyone would deny that a major reason for the fall in stock prices was that the stocks had gotten out of balance in terms of yield and earnings. It was inevitable that stock prices return to normal.

The men who have responsibility in the stock market have exercised a great deal of statesmanship and solid, good business sense in trying to bring the market back into balance.

The Federal Reserve Board also lowered the margin requirements, and this has been helpful.

Then we have the problem of the hard core of unemployment due to automation and due to technological improvements, which, with the three recessions we have suffered since 1950, has left us with a larger body of unemployed.

If I were to criticize this Government—and in doing so I would include Congress also—I would say that our major weakness and limitation has been the fact that we have not really gone after the problem of unemployment with the vigor with which we should have attacked it.

Then there is the Common Market and the competition that we are receiving from overseas. That has had an impact upon our economy.

Then, too, the uncertainty of the tax policy has had an impact.

I am hopeful that in this month of August the administration will make it crystal clear that we are going to have a tax cut or that we are not going to have a tax cut. There should be no doubt about it. There ought to be a clear cut line, a clear-cut policy laid out by Congress and the administration.

I would add that the biggest tax cut that we have had since 1954 was the revised depreciation schedule as released in the month of July. This gave the effect of a billion-and-a-half-dollar tax cut or immediate tax relief for those who are investors in plant and equipment and machinery.

So, by and large, decisions have been made and action taken that have been worthy and workable and helpful.

If anyone wishes to help the President now to arrive at the next decision, the best way to do it is to have one voice after another in Congress speak up on the importance and the need for an immediate tax cut. I believe it is not only economically desirable; I say it is an economic necessity. It will help the economy remain strong and become stronger.

It will take us over any condition that might be called a lull in our economy, and it will help us maintain our forward momentum.

I am not saying that we are in a recession: To the contrary, I am saying we are not doing as well as we could; we are doing well, but not the best we can do. We need to step up this economy of ours. I would call to the attention of the Senate the most recent report on the profits of corporations in the second quarter.

That report, which was printed in the Wall Street Journal, shows that the profits of 478 firms, in the second quarter of 1962, rose 15½ percent from those of the 1961 period. Practically every single line of endeavor shows an improvement in the profit picture of the corporations. At the conclusion of my remarks, I shall ask unanimous consent that the items to which I have referred be printed in the RECORD. The Chrysler Corp. shows a profit of $11,900,000 compared with a loss last year of $15,700,000. The Ford Motor Co. had its highest profit since 1929; in fact, it was 28 percent above a year ago. Its profits were $268 million.

These are examples of the fact that there are, in many sections of the American economy, genuine prosperity and genuine health.

But I believe, if I understand the Senator from New York correctly—and this is where I disagree with the Senator from Wisconsin—that there are areas in the economy which can be improved considerably, and that a wise tax policy of selective cuts would lend itself to a forward movement and a great movement in what might be called the weaker sectors of the American economy. I agree with that position. I agree that it would be financially prudent to do so. The way to waste money is to fail to make decisions when they should be made. A recession will cost the economy much more than a tax cut. A recession will cause a deficit in the Government's budget far beyond what any tax cut will cause, because there are certain costs of the Government which cannot be avoided. The defense cost is not going down; it is going up. The cost of the space program is not going down; it is going up. The cost of the atomic energy program is not going down; it is going up. Many programs of the Government have fixed costs. Those costs are not going down; they continue to go up.

In this situation, the reductions which can be made are modest in terms of the total budget. A recession of 5 percent in the economy will cost far more than any tax cut that has been estimated or suggested by any responsible person in or out of government. A 5-percent drop in production and a 5-percent drop in employment in this country would cost far more than the combined suggestions of the Senator from New York and the Senator from Minnesota for tax cuts. So I do not believe we have the neat little choice of saying, "Let us do nothing." The fact is that we must do something. We did something with the depreciation schedule. We are planning to do something with the investment tax credit. I do not believe this is a cure-all, but I think it is a desirable proposal.

I further believe that the suggestion to reduce the high individual income tax rate by some appreciable amount, as was suggested by the Senator from New York, is worth while. It might well be reduced from 91 to 65 percent. Whether 65 percent should be the figure, or whether it should be 70 percent, or whatever it should be, is not the point. The fact is that there is an incentive factor which must be taken into consideration.

Finally, I agree that the tax policy is not merely economics; it is psychological. The psychological impact of a tax cut now cannot be overestimated. The psychological effect of a decision on tax policy cannot be overestimated. I am hopeful that Congress will stop acting as if, somehow or other, the only kind of economics we understand is that when we get deep in trouble economically, we must rely on public works; when we get deep in trouble, so that little money is available for anybody, we look around to see if we cannot have bigger deficits. That is what I call 1930 economics. We are living in a different age. We cannot afford to get into trouble. We cannot afford a slump in our economy. We cannot afford a 5- or 10-percent drop in the economy. We have fixed costs for our national security and our national survival. We cannot think in terms of sharply reducing the security budget or the defense budget of the country. Because we have huge fixed costs, we cannot fool around with an economic policy that is 30 years old.

As a liberal, I submit that the kind of economic policy we need is one that permits the fullest possible expansion of the private sector of our economy. I believe in public works programs, but they should be supplemental; they cannot possibly take up the gap of unemployment and of unused plant capacity. We shall have to rely, for the forward movement and forward thrust of the American economy, upon the American business community and the American consumer.

What are the facts about the American consumer? The consumer spends the money that he gets, 93 cents out of every consumer dollar is spent in the marketplace in the period of time in which that money is received. That is as standard as the fact that Christmas comes once a year.

It is just a pattern. I believe that if individual taxes are reduced, the money will be spent in the marketplace. If corporate taxes are reduced, the money will be invested. Why do I say so? Because the facts over a long period of time prove it. This is no longer a question of conjecture; it is not a question of theory. There is a long table of statistics which reveals unmistakably that when consumers receive higher income almost all of it goes immediately into spending for goods and services. This was true last year in the case of accelerated payment of dividends to holders of GI life insurance, it was true in the case of the 1954 tax cut; it has been true of every major economic policy that the Government has enacted which put extra money in the pockets of consumers and businesses.

I thank the Senator from New York for being so considerate as to let me comment upon his address. I am sorry that the Senator was so sharply critical of the administration; but I recognize the fact that sometimes such criticisms have a beneficial effect.

But we ourselves might well examine—and I do not mean the Senator from New York—the institution which is the U.S. Senate. I have found very little modern, liberal economic thinking in the fiscal policies of the Senate. It seems to me it is very hard to move this body, which is cloaked in tradition. I suggest that we take a good, hard look at what the realities are and what is needed in terms of economic policy, in order to give this country the economic potential of which it is capable. Today we are working at about 85 or 90 percent of our potential, when we ought to be working at at least 95 to 100 percent. That is the reason for my advocacy of a tax cut.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD editorials and articles relating to tax reform; new guidelines for tax depreciation and business assets as proposed by this administration; an article published in the New York Times of July 15, demonstrating that new depreciation rules are seen as aiding small businessmen; and certain other editorials and articles which advocate and support the concept of a tax cut now, and holding that such tax cuts would have a beneficial effect upon the economy.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, June 11, 1962]

NEW WEAPON AGAINST RECESSION

Too little attention has been paid to the administration's request for standby authority to reduce individual income taxes to combat recession.

Congress, of course, is jealous of its prerogatives to levy or cut taxes, and is understandably reluctant to consider any proposal, no matter how sound, that would affect its powers. But the proposal that is before the House Ways and Means Committee takes into account the rights of Congress by stressing the temporary nature of a reduction and providing a series of checks to prevent any abuse.

There is no more powerful antidote to recession than a cut in taxes. Yet this solution is seldom invoked. For one thing, a request for a tax reduction is always time consuming; it always seems much simpler and quicker to request additional expenditures. For another, there is rarely any unanimity on what taxes to cut, and by how much, so that the line of least resistance is to maintain the status quo.

The administration's proposal would get around the problem and make tax policy an effective contracyclical tool by injecting a measure of flexibility and speed that is now lacking. In essence, once the President decided that the economic situation called for a reduction in taxes to meet the objectives set out in the Employment Act, he would submit to Congress a request for a uniform and temporary cut in individual tax rate to a maximum of 5 percentage points below the permanent rate of 20 percent. The reduction would take effect within 30 days, unless it was rejected by a joint resolution of Congress; and it would remain in effect for six month, unless Congress decided otherwise. And if Congress were not in session, a tax cut could take immediate effect but would be terminated 30 days after Congress reconvened, and any further extension would require a fresh request.

This is a novel proposal, but it should not be rejected on that ground. Standby authority for temporary reductions would strengthen our defenses against an economic downturn by streamlining the most potent weapon in the Government's arsenal.

[From the Washington Post, July 23, 1962]

For a Tax Cut Now

When the postwar record of the economy is viewed in retrospect there is much of which to be proud. It has conferred upon the American people the highest living standard in the world and at the same time it has provided a substantive stimulus to the economic recovery and growth of the free world. But in recent years our rate of economic growth has been declining and at this time the economy is listlessly balanced on a high plateau. A stimulus is required to restore a healthy and vigorous rate of growth, and there is a remarkable unanimity of opinion among businessmen, labor leaders, and economists that the best stimulus available is a tax cut.

The compelling argument for a tax cut rests upon sound principles of economic anaylsis. If personal income taxes are cut while the current level of Government expenditures is maintained, the economy will be stimulated by the ensuing increase in the total expenditures for goods and services. It is important to bear in mind that the effects of a tax cut will be multiplied by successive rounds of expenditures so that a $1 tax reduction will, after about 6 months, result in a $2.50 increase in expenditures. In addition to this multiplier effect on the consumption side, there will be a powerful but not readily caculable stimulus to investment as the rising volume of sales presses upon productive capacity.

A token tax cut will not sufficiently stimulate the $550 billion American economy. What is required is a substantial reduction. The tax rates for all income brackets except the highest one should be reduced by 5 percentage points to increase after-tax income by $10 billion. The nearly confiscatory 91 percent rate for the highest bracket should be reduced to 65 percent, thus reducing tax revenues by an additional $650 million. This reduction for the highest income bracket, which has long been recommended by proponents of tax reform, will increase investment and diminish the efforts to establish tax shelters. In addition to the reduction in personal income taxes an across-the-board reduction in corporate income taxes by 2 percentage points would add $1 billion to business income which would be useful in financing the anticipated rise in the volume of investment.

In total these tax cuts would result in an $11.6 billion loss in Treasury revenues, but the personal-income tax reduction alone will increase the volume of total expenditures by $26.5 billion and the dynamic effects of these increases upon the volume of investment should add much more to the gross national product. Thus the fiscal deficit that is incurred will be sharply reduced as a rising level of economic activity generates greater tax revenues.

The administration, it will be recalled, planned a tax reduction for 1963 as a part of a broad program of fiscal reform. But it is now clearly evident that the stimulation of the economy must take precedence over reform. In any case, there is nothing in this proposal that should preclude tax reform in the future.

On countless occasions during the campaign of 1960, President Kennedy reiterated the necessity for getting America moving again. The time has come for injecting new vigor into the economy. The administration should advocate, with all the force that it can muster, an immediate tax cut.

[From the Washington Post, July 26, 1962]

Tax-Cut Alternatives

The discussion of a tax cut has been in the forum of public opinion for a little more than a month and it has already hardened along well-established ideological lines. Conflicting ideologies must always be aired in a democracy, but in this case there is a danger that in the heat of battle they may obscure the fundamental economic issues.

If one scans the political spectrum from left to right he begins with the proposal made by Mr. George Meany of the AFL–CIO. Meany voiced a vigorous opposition to either an across-the board reduction of personal income-tax rates or a cut in corporate income taxes. He recommended that a personal income tax cut be concentrated in the first individual income tax bracket. Moving toward the right, there are the suggestions by Ladd Plumley, president of the U.S. Chamber of Commerce, which would reduce the rate on the first $1,000 of taxable income from 20 to 15 percent and institute proportional reductions in all brackets taxed at rates between 15 and 65 percent. Plumley would reduce the maximum personal income tax rate from 91 to 65 percent and the top corporate income tax rate from 52 to 47 percent.

Should one choose between the Meany and Plumley proposals on purely political or ideological grounds? We think not, for there are economic considerations which transcend the traditional left-right schism in American political thought.

The primary purpose of an immediate tax cut is to inject a new vigor into the economy. That is why a proposal was recently made in these columns that was designed to stimulate both consumption and investment expenditures by reducing the maximum personal income-tax rate from 91 to 65 percent and cutting all other personal tax rates by 5 percentage points and reducing corporate income taxes by 2 percentage points.

Studies of consumers' behavior indicate that the propensities to spend vary inversely with income levels. Therefore, if the tax cut were concentrated in the upper income groups, as Mr. Plumley suggests, the impact upon the level of consumption expenditures would be smaller and the stimulus to investment weaker. Mr. Meany's proposal, which would benefit only those in the lowest income groups, is objectional on grounds of equity, and the hostility which it would engender among investment decisionmakers might defeat the purpose of a tax reduction.

The stimulation of the economy will work to the advantage of everyone, irrespective of income or ideology, and it would be unfortunate if the present discussion on how best to achieve that end degenerated into a sterile hassle over irrelevant ideological issues.

[From the Washington Post, July 17, 1962]

For a Tax Cut Now

(By Walter Lippmann)

On the question of a tax cut, with which the President is now wresting, the undecided issue is whether to ask for it this summer or to wait until next winter. The issue is as yet undecided for one reason only. There is some doubt whether in the few weeks that are left before adjournment, the chairmen of the two key committees, Representative Mills and Senator Byrd, will allow Congress to vote. The significant thing about their veto is that almost certainly the two chairmen will not have it next winter. For by that time, if as it now seems probable, our sluggish economy has begun to recede, tax reduction will go through Congress by acclamation.

The chance of a Mills-Byrd veto this summer, which is what causes the President to hesitate, is primarily due to the fact that as yet recession is only indicated and is not yet being experienced. Can the President induce Congress to act to prevent a recession, or are we doomed to wait for a recession and then try to reverse it? The fundamental question is whether we have a Government which can act with foresight, which can take the stitch in time that will save nine.

Since the Wall Street crash at the end of May there has been a sharp and rapid change of responsible and expert opinion. The crash altered those who watched the economy, causing them to ask whether the Kennedy recovery of 1961 was going to peter out before it went much further. There had been a very few who had predicted this last January when the administration, using what had proved to be erroneously optimistic estimates, adopted a restrictive and deflationary fiscal policy.

The unfounded optimism ended a few days after the crash. The business reports which have come in during June and the first half of July show that with a few exceptions, automobile sales and residential construction, the recovery is sluggish and is slowing down. Employment and industrial activity, profits, inventory replacement and capital investment are so sluggish that the recovery appears to be nearing its end. It would seem that by the onset of winter there will be a recession.

Professor Samuelson says that the peak of total profits was in fact reached at the end of last year and that the rate of unemployment, which has never gone below 5.4 percent, will from now on be rising.

We are not, let us repeat, as yet in a recession. But we are on the verge of one. This is the critically important time for the Government to act in order to stimulate the expansion of economic activity. The longer it waits, the stronger will the medicine have to be. It has already waited 6 months too long, and so it will need to use stronger medicine today than it would have needed last January. If it waits until the recession has actually begun, the chances are that the comparatively agreeable medicine of a tax cut will not be enough, and will need to be supplemented by more Government spending.

The reason for this is not complicated and it is of great significance to the question of whether to cut taxes now or to wait 6 months. The immediate effect of a tax cut is to stimulate consumer buying. If this takes place when industry is working somewhere near full capacity, the consumer demand will stimulate industry to modernize and enlarge its plant. This capital spending will sustain the recovery.

[From the Washington Star, June 8, 1962]

The Market and the Economy—Recovery Held Too Weak To Attain Full Employment Without Tax Cut

(By Sterling F. Green)

Unless the business recovery unexpectedly catches fire, the 1963 tax bill which President Kennedy plans to send to Congress later this year will call for tax relief totaling perhaps $5 billion a year for industry and consumers.

Tax rates from top to bottom would be cut in the broad program now being drawn up by the administration.

Secretary of the Treasury Douglas Dillon says the tax package is aimed as spurring maximum long-range economic growth. He says no decision has been made on how far to go in offsetting lower tax rates by broadening the base of the tax structure and closing loopholes.

Early tax reduction was not part of Mr. Kennedy's program to "get the economy moving."

The stock market's convulsions have reinforced a growing belief, however, that the business recovery—although steadily erasing old records for production and income—is not robust enough to carry the country to full employment on this upswing of the business cycle.

FAVOR SOLID TAX CUT

Most officials now are said to favor a solid tax reduction for business and consumers. It would be, in effect, a raise in take-home pay for workers, a source of fresh capital for investors and a boost in the after-tax profits of industry which would be available for reinvestment.

Estimates of the net tax relief are running as high as $7 billion. Five billion is more frequently mentioned, as being about the minimum cut which would make enough difference in consumers' paychecks to encourage purchases of new cars, homes and major appliances.

Reductions in the top income tax rate from 91 percent to perhaps 65 percent has been considered. At the other end of the taxable income scale, the basic 20 percent might be dropped to 16 or 18 percent.

The corporation tax rate of 52 percent probably would be cut to something below 50 percent. A range of 47 to 49 percent has been under discussion.

BAD NEWS WITH GOOD

Some bad news would accompany the good. A whole bundle of reforms is under consideration, to eliminate the patchwork of special concession and exemptions stitched onto the tax structure over the years for the benefit of special groups. But all taxpayers would come out ahead.

Such a tax reduction would mean at least 1 more year of budget deficit. Revenues presumably would be cut seriously in fiscal 1964, a year in which Government spending is expected to climb to $95 or $96 billion. The anticipated increase of about $3 billion from this year's budgeted outlays is mainly the result of built-in increases in the space and military programs.

Despite the prospective red ink, most administration advisers are said to be convinced that strong medicine is needed to fortify—if not to rescue—Mr. Kennedy's grand strategy for American growth in a world of heightened competition.

The primary goal is full employment. The basic approach is to forge an economic partnership, built on trade, with a prospering and economically unified Europe. Mr. Kennedy's first step, making possible the removal or reduction of tariff barriers between the United States and the Common Market, is on its way to enactment in Congress.

UNITED STATES MUST BE COMPETITIVE

But to trade, the country must be competitive. That means organizing factories and refineries, building new ones, bringing into production the 15 percent of plant capacity which now stands idle—and holding down wages and prices.

The Kennedy strategy is two sided. It involves:

First, enlisting the cooperation of labor and management in keeping wage settlements and price decisions noninflationary. The White House in January offered voluntary guidelines which, in the opinion of the President's Council of Economic Advisers, would keep wage increases within the bounds of the annual gain in output per manpower.

STEEL REBELS

Second, making it possible for business to amass the funds needed for modernization of the Nation's industrial plant. Tax incentives are being offered as an alternative to price increases which—in the administration's view—would simply discourage demand and price American goods out of the world's markets.

The first approach has run into grave trouble. Steelmakers rebelled at price restraint and set out to improve their profits in the traditional way—a price boost. Mr. Kennedy reacted angrily and forcefully to salvage his grand design.

Many businessmen felt he overreacted. The charge that Mr. Kennedy is antibusiness has gained wider acceptance; it apparently worsened the spectacular stock market break of 10 days ago and has contributed to the uncertainty evident in the market since then.

The second approach is faring better. The Treasury shortly will issue liberalized tax allowances for depreciation on machinery and equipment, and Congress seems likely to enact most of Mr. Kennedy's first phase tax revision program, built around a tax credit for big and little companies which invest in new plant equipment.

The administration is confident these measures will remove many of the financial obstacles to the cutting of costs and the improvement of efficiency. If so, they may incidentally make business less anti-Kennedy.

WHERE WILL SAVINGS GO?

There is no way to be sure, however, that the tax savings actually will be plowed back into the industrial economy. For any manufacturer, the best incentive to spend money is the promise of strongly rising demand. Such assurance is not evident in the moderately placed upturn now in progress.

Mr. Kennedy's advisers believe the obvious answer—and perhaps the only one since Congress would certainly reject massive Government spending as a stimulant when the economy was moving up—is tax reduction.

Their hope and expectation is that an initial deficit in the Federal budget would be more than offset in succeeding years by the rising tax collections generated by expansion of employment, income, and profits.

The accusation that the administration is buying votes with the tax cut, certainly will be made in this fall's congressional election campaign.

But on this question, at least, Mr. Kennedy is likely to find a majority of businessmen behind him. Last week, the Council of the U.S. Chamber of Commerce issued a study which said:

"Tax reduction and tax reform should take precedence over new spending programs as a means of stimulating the economy."

[From the Washington Post, July 12, 1962]

SOUND TAX REFORM

With the publication of its new guidelines for tax depreciation of business assets the administration has accomplished a sweeping fiscal reform that will confer enormous benefits upon the American economy.

For the past two decades American industry has operated under the severe handicap imposed by the regulations of the Internal Revenue Service's Bulletin F which were retrospective in spirit and frequently administered in an arbitrary or capricious fashion. Moreover, they made no provision for the rising costs of capital goods or the obsolescence induced by the rapid pace of technological change.

The new regulations are a most impressive example of modern fiscal craftsmanship for which Treasury Secretary Douglas Dillon and his staff deserve the highest praise. Their new guidelines, which establish flexible but objective criteria for determining the taxable lives of depreciable assets, forge a strong and significant link between the tax practices of business enterprises and their capital replacement policies. Firms which rapidly replace or augment their stock of capital assets will be entitled to commensurately larger depreciation allowances. By thus increasing the corporate cash flow, the new regulations should provide a powerful stimulus to investment. At the same time depreciation allowances will be reduced for those corporations whose reserves are excessive relative to the value of their assets.

The immediate impact of the new guidelines, which increase depreciation allowances by shortening the lives of business assets, will be a $1.5 billion corporate tax reduction. One may take exception to the administration's optimistic estimates of the short-term effects of this tax cut upon investment and the level of economic activity at a time when there is considerable excess capacity, but there can be little doubt that the longer term impacts will be salutary.

While the depreciation reform is a vital step in the right direction, Secretary Dillon ably demonstrated that it does not complete the task of placing American industry on an equal footing with foreign competition. There still remains a depreciation gap—the difference between the new depreciation allowances and the replacement costs of capital equipment—which can only be closed by the passage of the investment credit provision of the revenue act now pending before the Senate Finance Committee. President Kennedy underscored the importance of this vital legislation when he stated that—

"The reform announced today has been carried out as quickly as possible, and it goes as far as it is administratively possible to go to meet the investment needs of American business. I am hopeful that Congress will do its part by enacting the investment credit."

[From the New York Times, July 15, 1962]

EASED DEPRECIATION RULES SEEN AIDING THE SMALL BUSINESSMAN

(By Robert Metz)

Tax experts who have studied the Treasury's new maroon booklet that sets forth the number of years over which businessmen can offset the cost of machinery against earnings believe that the small businessman will be a principal beneficiary.

Under the old rules, laid down in Bulletin F, there were some 5,000 items of machinery and equipment listed, with their useful lives.

Larger businesses, with detailed records of purchases and sales of machinery, were often able to obtain faster writeoffs by convincing the Treasury that they wore out equipment at a faster rate than was prescribed. They could afford expert counsel to help them make their case. Small businessmen usually lacked both records and expert counsel.

AN EXAMPLE IS GIVEN

Maurice Peloubet, a certified public accountant, notes, for example, that a man with a small machine shop would be likely to benefit, since he uses a lot of equipment such as lathes, drill presses, shavers, and grinders. He therefore has quite a stock of depreciable equipment, but his records usually had not been sufficiently detailed to convince the Treasury that he had writeoff problems that needed correction.

On the other hand, the Treasury points out that, because of a lack of audit control over the small businessman, he often has taken shorter equipment lives than have big businessmen. And, since they were audited less frequently than were their bigger brothers, they often got away with it.

In many fields, such as railroading and printing, technological advances have made much equipment obsolete. Even the more favorable writeoff rates established by particular companies through negotiation with the tax agency over the years have proved inadequate. As a result, the Treasury has made its new composite rates even shorter, in many such areas, than had been negotiated.

Periodic reviews are to be undertaken by the Treasury to insure that the composite rates stipulated for the different industries keep pace with technological developments.

Taxpayers who have followed the more progressive policies on replacement of equipment may find that the new schedules will not permit them much added leeway. Still, progressive policies in the past have meant arguments with the tax agency, so these taxpayers will benefit, primarily, from the elimination of this controversy under the new schedule.

ELIMINATION OF CONTROVERSY

Furthermore, the Treasury has added another facet to the subject in its reserve-ratio tables. Under this very old accounting concept that has been incorporated into the depreciation rules, a businessman may be permitted even shorter lives than are prescribed in the tables.

The reserve ratio is the ratio of depreciation reserves to the purchase price of all depreciable property in a particular class. For a hypothetical company that is neither growing nor declining in size, this ratio always will be roughly 50 percent, because its assets will, on the average, always be half depreciated.

For a growing company, the ratio will be smaller than 50 percent—the faster the growth the smaller the ratio—because it will have a larger proportion of recently acquired assets that it has just begun to depreciate.

VARIATIONS ARE ALLOWED

The Government's program allows variations of several percentage points from the normal rate. Thus the company that is neither growing nor declining would not be challenged if its depreciation varied by several points on either side of 50 percent.

Similar leeway is given to growth companies, whose appropriate ratios may be 40 percent, 30 percent or some other percentage.

The Treasury is optimistic that this change and, in particular, the move to an objective test rather than an agent's judgment may bring to an end the long history of discord between business and Government over this aspect of taxation.

[From the Washington Post, May 28, 1962]

CORPORATE INCOME TAX RATE CUT COULD BE TONIC

(By Harold B. Dorsey)

Another spell of acute weakness in the stock market last week brought the decline in the stock-price averages to 16 percent since mid-March. This leaves little doubt in anybody's mind that investors' confidence has been hurt.

Price swings in the stock market in excess of 10 percent—whether up or down—often have an effect on business sentiment. Whatever the reason, statements by a fair number of business leaders in the past 10 days demonstrate a deterioration of confidence.

BIG STEEL LOWERS SIGHTS

The chairman of the United States Steel Corp. last week indicated that his company's expenditures for capital improvements this year would probably be $200 million less than anticipated in January. Sluggishness in the pace of new orders coming to the machine tool builders is attributed to a deterioration of confidence on the part of U.S. businessmen. Thus tangible evidence is beginning to accumulate that a deterioration in confidence is having an adverse effect on business decisions.

Unfortunately, there is also some evidence that deterioration may have started the process of breeding deterioration.

We can see an example of that behind Secretary of the Treasury Douglas Dillon's comment to a group of bankers in Rome 10 days ago that he was concerned about the increasing use of the various mechanisms of the U.S. capital market by European borrowers to raise funds for their own internal uses. Why don't these borrowers obtain their funds in their own backyards? Because they can get it cheaper here. Why is it cheaper here? Because we want an easy credit policy as part of the effort to stimulate our economy.

CAPITAL ATTRACTED ABROAD

Capital may be attracted to other countries for a wide variety of reasons. Maybe the combination of promised income and security is better abroad; maybe the growth prospects are better over there than they are here; maybe the various types of threats of profit margin squeeze—wage costs, tax costs, the Government interference, for example—seem less than they are here. Capital outflow—influenced in part by the confidence factor—tends to aggravate our international currency problem which, in turn, reduces confidence in the dollar.

This reminds us that there has been some weakening in the basis for hoping that the international currency matter could be patched up for a sufficient length of time to permit a correction of the fundamental causes of the balance-of-payments deficits. An important part of that basis was the anticipation that the recovery trend in our economy would be vigorous throughout the current year and that it might lead to a resumption of a dynamic growth for the economy.

On that basis, Dillon indicated at the Vienna Monetary Conferences last September that our national budget would be balanced for fiscal 1963. To the extent that there has been a change in the business prospects that will not permit a balanced budget for fiscal 1963, there has been a factual change in the basis for hoping that the currency problem could be patched up without too much difficulty. And this very same change has increased the threat of a capital outflow.

I have been asked frequently in recent weeks what steps I thought should be taken to counteract the deterioration in the confidence factor and to encourage an increase in the business capital expenditures which are the very source of growth in the standard of living and employment. No single step could possibly accomplish that objective.

The most dynamic stimulant, in my opinion, would be a cut in the corporation income tax rate to about 45 percent. Insofar as this tax is an element of cost, and therefore of price, a reduction in the tax would function first as a counter-inflationary pressure on prices. Where competition permitted it, there would be a widening of profit margins and an improvement in earnings, which would encourage larger capital investments in equipment.

PUTTING PEOPLE TO WORK

The building of that equipment would put more people to work, which would increase personal purchasing power and consumer demand for goods and services. A tax reduction would constitute tangible evidence that official Washington is not antibusiness in its attitude. It would probably cause a cessation of the extreme weakness in the stock market which is currently breeding a loss of confidence. It would increase the Government deficit for perhaps a year but favorable offsets should develop thereafter.

[From the Washington Star, July 27, 1962]

CHRYSLER TURNS LOSS INTO $11.9 MILLION PROFIT

DETROIT, July 26.—Chrysler Corp., which lost $15.7 million in the first half of last year, reported today a profit of $11.9 million for the first 6 months of 1962. The net was equal to $1.31 a share.

The turnaround came despite sub-par sales of $1,070 million which barely exceeded the $995 million total of the first half of 1961.

For the second quarter Chrysler reported earnings of $10.6 million, or $1.17 a share, on sales of $572 million. These figures compared with earnings of $6.2 million on sales of $563 million in the similar quarter a year ago.

The second quarter also showed improvement over the first 3 months of 1962, when the automaker earned $1.3 million on sales of $498 million.

The board of directors, meeting in New York, declared the usual 25-cent quarterly dividend.

In 1958, on an almost identical dollar sales volume, Chrysler lost $25.2 million in the first 6 months.

The corporation reported a rise in defense sales from $96 million in the first half of last year to $130 million in the comparable period this year. Worldwide car and truck sales were up 7.8 percent to 410,147 units, the company said.

Model-year production in United States and Canadian plants, which ends this week, will total about 813,000 cars and trucks, up 6,000 from the 1961 model year, the corporation said.

Today marked the end of the first year as president for Lynn A. Townsend, who succeeded L. L. (Tex) Colbert.

[From the Washington Star, July 27, 1962]

FORD'S FIRST-HALF PROFIT SET AT $268 MILLION

DETROIT, July 26.—Ford Motor Co. said yesterday it made $268.3 million in the first half of this year, its highest profit for the period since 1959, and 28 percent above a year ago.

Consolidated sales of $4,042,900,000 were the best since Ford revised its accounting system at the start of 1959. Figures this year include for the first time sales of Philco, acquired as a Ford subsidiary last December.

The first half earnings of $2.44 a share compared with $1.90 for the January-June period a year ago, after adjustments to take into account the recent two-for-one stock split.

For the second quarter Ford reported a profit of $140.6 million on sales of $2,043 million. This compared with $133.2 million profit on sales of $1,878,300,000 in the second quarter of 1961.

Chairman Henry Ford II and President John Dykstra said both sales and profits in the second quarter this year were adversely affected by a strike which occurred in June at the company's Walton Hills stamping plant near Cleveland.

Ford reported total worldwide vehicle sales of 1,705,502 units this year, up 200,000 from the first 6 months of 1961. Domestic factory sales were up 15 percent; sales of foreign subsidiaries rose 10 percent, highest for that period in the company's history.

Pontiac reported sales of 15,457 cars in mid-July compared with 9,934 in the similar period of last year. Buick said it sold 13,814 cars during the period, highest since July 1956.

Dodge said sales of 6,410 cars boosted the month's total to date to 11,667, up 16 percent from 1961.

[From the Wall Street Journal, Aug. 1, 1962]

PROFIT PLATEAU—EARNINGS HOLD NEAR PEACETIME RECORD, RISE 15 PERCENT FROM 1961 QUARTER—MOST FIRMS EXPECT TO RETAIN GAINS IN CURRENT PERIODS; EXCEPTIONS: STEEL, DRUGS—HOW 478 CORPORATIONS FARED

Corporate profits in the second quarter held close to the record peacetime rate achieved in the two preceding quarters, and seem likely to remain close to the same rate in the current 3 months.

These are the conclusions from the Wall Street Journal's quarterly survey of earnings results and prospects.

The results are those of the first 478 companies to report for the second quarter. They show net profits after taxes aggregating $2,719,344,000, a gain of 15.5 percent over the profits of the same companies in the second 3 months of 1961. (See table accompanying the end of this story.)

If this gain approximates that of all corporations in the United States, as has been the case in previous quarters, the Nation's total corporate profits for the quarter would be at an annual rate of $26.2 billion. This would compare with a rate of $25.9 billion estimated by the Government for the first quarter of this year, and with a rate of $26.5 billion in the final 3 months of 1961. That late 1961 figure was the largest on record except for that of one quarter early in the Korean war, when the annual net rose above $27 billion; and the average rate for 6 months to March 31, at $26.2 billion, was the largest for any peacetime half year.

THIRD QUARTER GAIN INDICATED

The expectation that profits will remain somewhere around the $26 billion-a-year rate in the third quarter is based on the prospect that a majority of important industries will again earn more than they did in the corresponding 1961 quarter. The gain for all industries together may not be up to the 15.5-percent improvement shown in the second quarter, because a few industries are likely to show substantial declines. But the annual rate estimated by the Government for last year's third quarter was $23.8 billion. A year-to-year increase of only 10 percent would be needed to produce a rate of $26 billion in the current quarter.

The second-quarter gain of 15.5 percent for 478 companies was not as large as the 28.3-percent gain from 1961 turned in by a similar group of 472 companies in the first quarter. But that was merely because this year's first quarter was compared with the 3 months when the 1960–61 general business recession was at its deepest. The Government put the rate of profits in that period at only $20 billion a year.

The second-quarter gains reflected general increases in sales. A second compilation, covering 146 companies which reported sales as well as earnings, shows profits up 17 percent—not far different from the results of the 478—and sales up 11.6 percent.

GAINS WIDESPREAD

Most industries shared in the second-quarter betterment over 1961. Out of 37 industries or groups into which the 478 companies may be divided, only 6 reported declines, and only 3 of these showed declines exceeding 5 percent.

These three were the moving picture group, with earnings down 7.6 percent because the new pictures of some companies attracted the public in smaller numbers than did last year's releases; the tobacco group, with net profits down 5.5 percent as a result of the expense of introducing new cigarettes by two producers; and the steel group, with earnings down 19.6 percent because of cost increases large enough to overcome the benefits of larger sales.

The steel mills may show an even greater decline from 1961 in the current quarter. An important factor in the second quarter's reduced earnings from a year earlier was a wage increase effective October 1. On top of that, further increases in costs as a result of this year's new labor contract took effect July 1. Thus, labor costs in the current 3 months will reflect a double increase over those of a year ago.

In addition, shipments of steel to customers probably will be lower, around 16 to 16.5 million tons as against 17.3 million in the 1961 third quarter. "If shipments are down, you can expect that earnings will be down too," says Alfred S. Glossbrenner, president of Youngstown Sheet & Tube Co. By contrast, second-quarter shipments were up a bit from a year earlier, between 17.5 and 18 million tons against 17.3 million.

Other industries which see the possibility of lower earnings in the current quarter than a year ago include building materials makers and drug producers. On the other hand, gains are indicated for auto makers, chemical companies, oil companies, and makers of electrical and farm equipment, among others. Expectations for some of these and for additional industries are set forth below:

All five auto producers reported better earnings for the second quarter than a year earlier, principally because retail sales of cars for the quarter were up 22 percent. Makers of automobile equipment naturally shared in the prosperity, and the two groups combined reported net income up a wide 42.9 percent. Another big gain is likely for the group as a whole in the present quarter, with the car manufacturers planning unit sales to dealers for the quarter as follows:

	1962	*1961*
General Motors	650,000	370,000
Ford	425,000	374,000
Chrysler	110,000	123,000
American Motors	70,000	68,000
Studebaker	12,000	16,000

Suppliers of building materials reported earnings up 11.6 percent from a year earlier in the second quarter, mainly as a result of a higher level of construction activity. Officials of most companies, however, are cautious for the current quarter. They foresee a tapering of homebuilding from the second-quarter rate, which would bring such activity down to or below that of a year ago. And they also are worried by weakness of materials prices because productive capacity exceeds demand. "Demand is there but people are giving products away," complains D. C. Fabiani, president of Crane Co., maker of plumbing ware.

The chemical group had increased sales and reported a 9.9-percent gain in earnings in the quarter. And it expects similar gains in the present quarter. Volume of business being done is greater than last year and, while the prices of some chemicals show weakness, others are strong. Allied Chemical, for example, recently raised the price of some grades of polyethylene, a big-volume plastic used in such things as squeeze bottles and utility wastebaskets.

Makers of drugs, which reported second-quarter earnings down 2.9 percent from 1961, say there's little reason for expecting gains in the current quarter. A special factor in the second quarter was that currencies of some countries where drugs are sold in large volume, principally Argentina and Brazil, were devalued. This action reduced the dollar worth of profits and bank deposits there. The makers also complain of recent price weakness in antibiotics, increased foreign competition, and a dearth of major new drugs. The companies depend heavily on bringing out new drugs to keep their sales rising. One executive says: "Like most companies, we're now awaiting Food and Drug Administration approval of an important new drug, but we can't be sure it will come in the third quarter."

Electrical manufacturers reported a combined increase of 25.2 percent in earnings for the second quarter, and seem likely to show an increase this quarter also, though it may not be as big in percentage because business strengthened substantially in the third quarter last year. Ralph J. Cordiner, chairman of General Electric Co., said recently the company "expects 1962 to continue to be a good business year."

Producers of aluminum earned 36.7 percent more in the second quarter than a year earlier and, with production up from a year ago and still rising, seem likely to show another wide gain in the current quarter. At the start of this quarter the primary aluminum industry was operating at 87 percent of capacity against 78 percent a year earlier, and Aluminum Co. of America is planning to start up a new production line, which would raise the industry's rate to 89 percent. The one possibility of trouble in sight at present is that Alcoa and Reynolds Aluminum are negotiating with the Aluminum Workers International Union, but the companies have already signed agreements with the United Steel Workers, representing a larger number of employees.

The outlook for the domestic oil industry is for somewhat higher earnings during the third quarter than in the like period of 1961, if prices for refined products hold fairly steady. If prices decline, as they did last summer in some areas, earnings gains would be reduced or eliminated. Demand for petroleum products in the second quarter was 3 percent higher than a year earlier, and this pace is being maintained. The outlook for international oil companies with large marketing facilities abroad is even better, with demand abroad strong and prices firm. Earnings of the oil group as a whole in the second quarter were up 4.5 percent from 1961.

In the paper and paperboard industry second-quarter earnings were up 12.5 percent. Alexander Calder, Jr., president of Union Bag-Camp Paper Corp., attributes his company's second-quarter gain to "generally better prices and improved product mix," that is, good demand for high-profit items. The third quarter he expects to be "substantially improved" over the 1961 period.

Rubber companies reported a gain of 2.4 percent from 1961 in second-quarter earnings. Foreign currency devaluations were costly to some of the group. In the third quarter, earnings are expected to be above those of last year, benefiting, as in the second quarter, from demand for tires on the larger number of new cars that will be produced.

The columns below show earnings for the second quarter of 1962 as compared with those of 1961, with percentage increases or declines by groups. Where individual company reports cover 3-month periods other than calendar quarters, the nearest comparable periods have been used.

Profits of 478 firms in 2d quarter rose 15.5 percent from those of 1961 period

	2d quarter 1962	2d quarter 1961	Change from year ago
Aircraft makers	$20,506,000	$17,072,000	+20.1
22 autos and equipment	595,367,000	416,629,000	+42.9
18 building materials	45,350,000	40,643,000	+11.6
10 building supplies	27,047,000	24,527,000	+10.3
8 cement companies	18,303,000	16,116,000	+13.6
12 chain stores	41,683,000	40,566,000	+2.8
4 apparel and clothing	9,399,000	7,789,000	+20.7
8 chain grocers	32,284,000	32,777,000	−1.5
22 chemicals	249,610,000	227,047,000	+9.9
16 department stores	50,172,000	38,808,000	+29.3
5 distillers	16,434,000	16,109,000	+2.0
13 drug manufacturers	37,255,000	38,383,000	−2.9
23 electrical equipment-electronics	114,352,000	91,334,000	+25.2
11 broad-line companies	106,175,000	84,246,000	+26.0
12 specialty companies	8,177,000	7,088,000	+15.4
8 farm equipment	59,767,000	55,439,000	+7.8

Profits of 478 firms in 2d quarter rose 15.5 percent from those of 1961 period

	2d quarter 1962	2d quarter 1961	Change from year ago
18 food products	59, 185, 000	56, 517, 000	+4.7
5 bakery products	10, 287, 000	10, 305, 000	−.2
3 dairy products	5, 146, 000	4, 928, 000	+4.4
10 general food products	43, 752, 000	41, 284, 000	+6.0
11 mining and metals	46, 205, 000	36, 095, 000	+28.0
3 aluminum companies	33, 899, 000	24, 802, 000	+36.7
8 copper and other metals	12, 306, 000	11, 293, 000	+9.0
8 movies and movie theaters	8, 928, 000	9, 663, 000	−7.6
12 office equipment	67, 450, 000	56, 351, 000	+19.7
14 petroleum products	601, 374, 000	575, 328, 000	+4.5
5 publishing companies	4, 140, 000	3, 706, 000	+11.7
23 pulp and paper products	62, 721, 000	55, 753, 000	+12.5
7 railway equipment	9, 210, 000	7, 661, 000	+20.2
6 rubber companies	24, 604, 000	24, 026, 000	+2.4
18 steel manufacturers	71, 107, 000	88, 400, 000	−19.6
10 textiles	30, 405, 000	19, 694, 000	+54.4
7 tobaccos	64, 334, 000	67, 971, 000	−5.4
23 tools and machinery	28, 810, 000	26, 401, 000	+9.1
124 other companies	228, 454, 000	192, 832, 000	+18.5
Total (434 industrials)	2, 537, 423, 000	2, 202, 428, 000	+15.2
21 railroads	49, 331, 000	21, 537, 000	+79.1
23 utilities	132, 590, 000	124, 301, 000	+6.7
Total (478 concerns)	2, 719, 344, 000	2, 354, 206, 000	+15.5

Mr. JAVITS. Mr. President, notwithstanding the fact that I have the floor, or at least I thought I did, I am glad to ask unanimous consent that the Senator from Minnesota may place these informative materials in the RECORD.

What the Senator has done is most interesting. I cherish, value, and appreciate the areas in which we concur. His support of the minority leader, and his own opinions as an outstanding, distinguished, and important Senator certainly endear him to me.

As to his campaign speech, I suppose that this is the season when all of us understand each other on that score; and just as I have felt very free to call attention to the campaign promises of the President which have not been fulfilled, I understand and stand by the remarks of the Senator from Minnesota, as he did with mine, in regard to making the best possible case for the progress which he believes has been made by the administration. But instead of bruiting that issue at this time—inasmuch as all of us will have an opportunity to do so this fall—I shall lay it aside for the moment.

I differ very materially with the Senator from Minnesota in regard to what has been done in the farm field, and perhaps in regard to what has been done in other fields, too. But I wish to emphasize the areas in which we are in agreement, and I thoroughly support the views of the Senator from Minnesota in regard to the psychological effect of a tax cut on the business community.

Mr. President, let me state the reason why we are talking about this matter at all—and quite apart from campaign promises, which for the moment I am willing to put in the same class as the Senator's very inclusive explanation of what the administration has accomplished. We must keep in mind, first, the fact that the present economic situation is such that a 3-percent growth rate is not adequate; and, second, we must realize the very serious effects of a recession on both our country and the entire world, and also that the development of a recession is so imminent that it is our duty to head it off if we possibly can. On that score, I find myself in very substantial agreement with the views of the Senator from Minnesota.

I point out that we have not sufficiently mentioned the endemic employment which exists in our country. It is now approximately 5½ percent. The President's economic advisers say 4 percent is acceptable. I do not like to see that much exist; in my opinion it should be less than that; and I believe that the Senator from Minnesota and other Senators believe as I do about that matter. However, somehow or other, notwithstanding the recovery that has been made, we still have that amount of endemic unemployment. When we also consider the 2½ million who are said to be working part time, and when we also consider the 1 million who cannot find jobs, we get the feeling that there is a real cancer in the economy, in terms of endemic unemployment. It is the confluence of all those challenges—the danger and the fear of recession, the international situation, and the unemployment situation—which enters into our attitude in regard to all these programs.

Much as I believe that we must have a tax cut—and that was the main burden of my remarks today—I also believe that, standing alone, a tax cut will not do the necessary job. Standing alone, it may do only what the Senator from Wisconsin says—in other words, may only add to the deficit.

It is the totality of the package—in terms of labor, government, and management—that must be considered in arriving at the determination of what lines of leadership must be exercised in order to have the necessary effect.

Mr. President, I should like to close this part of my remarks by repeating that the President is paid off only for winning in terms of success of the Nation. To come in second or third is not enough for the President. I want the President to succeed in the Presidency, because in that way the country will win success in attaining the objectives which we as a Nation are seeking to attain, it is in this spirit that I have spoken today.

I thank the Senator from Minnesota for his remarks, and I also thank the Senator from Wisconsin and the Senator from Iowa for their remarks.

Mr. MILLER. I thank the Senator from New York.

Mr. PASTORE Mr President, will the Senator from New York yield briefly to me?

Mr. JAVITS. Mr. President, let me ask whether the Senator from Iowa desires to obtain the floor.

Mr. MILLER. Yes.

Mr. JAVITS. In that case, I yield the floor so that the Senator from Iowa may be recognized.

Mr. MILLER. Mr. President, I have listened with great interest to the remarks of the Senator from Minnesota [Mr. HUMPHREY] about tax cuts. However, he did not refer to making any cuts in Federal expenditures. The Senator from Minnesota was not in the Chamber when, earlier today, I stated my conviction that we cannot have meaningful tax cuts without reducing expenditures sufficiently to make room for such tax cuts.

In view of the fact that the Senator from Minnesota did not say anything about reducing the expenditures, I wonder whether that was an oversight or whether it was intentional.

Mr. HUMPHREY. Mr President, will the Senator from Iowa yield?

Mr. MILLER. Yes, indeed.

Mr. HUMPHREY. I did say something about spending and about cutting back the spending.

I suggest, first, that there are certain fixed costs of Government; in fact, I believe they are increasing. For example, I refer to the costs of national security and the costs of outer space developments. Those costs will continue to increase sharply. There cannot be 100 percent American patriotism about who will first reach the moon and yet at the same time take an attitude which will obstruct that program. We are spending as much as $4 or $5 billion a year on that effort. In addition, we shall have to increase our spending in the field of atomic energy, because of the constant need for improvement in atomic weapons. We shall have at least to maintain our expenditures for the compensation of veterans and to meet the commitments the Government has made to the States and the localities. I see no way to make an appreciable cut in those expenditures of the Federal Government. We are obligated to interest payments on the national debt which we incurred in large measure in World War II.

I may add that we could make cuts in the Federal Government's expenditures for the farm program if we could get sufficient help from our Republican friends. But they like the feed grain program which requires that the Government purchase all the farmer's production. That costs us about $6 billion a year. We could get a little decrease in that part of the Government's expenditures if our Republican friends would be willing to end that gravy train.

However, in connection with the subject of making cuts in the Government's expenditures, we must realize that if a marked reduction were made in Federal expenditures this would be reflected in a drop in the gross national product, a drop in industrial production and an increase in unemployment; all of which would mean less tax revenue. I suggest that Senators who urge the making of cuts in the expenditures of the Federal Government start to list the areas in which such cuts can be made.

I hope the Senator from Iowa is not suggesting that cuts be made in the expenditures for old-age pensions or in the funds appropriated for aid to disabled veterans or for the highway program or for the health program.

Mr. MILLER. Oh, yes, indeed. If I may interrupt, I wish to state that I am very much suggesting that we make cuts in the last item the Senator from Minnesota mentioned. I suggest we reduce the expenditures for it to the amount the President requested.

Mr. HUMPHREY. That would save about $100 million, which may not be insignificant, but certainly will not balance the budget.

I think the time has come for some of the talk about cutting the cost of the Government to be pinned right down to specific cases.

There is only one way to cut the cost of the Federal Government in any substantial degree sufficient to bring the budget into balance, and that is to cut the costs of national security, atomic energy developments, and outer space research.

I am not ready to vote for that kind of cut and permit the Soviet Union to take the No. 1 place as a world power, in outer space, and in science. We have $9 billion devoted to scientific research, $50 billion to defense, $3½ billion to research in outer space, large programs, in the hundreds of millions of dollars, for our veterans which are needed, and, I may add, $8 billion for interest on the debt, much of that interest having been raised under the Eisenhower administration thanks to its high interest rate policy.

Mr. MILLER. And continued at the present time.

Mr. HUMPHREY. Interest rates have not gone up. They have gone down since the present administration has been in office.

May I pinpoint my suggestion: When my Republican friends talk about cutting costs, let them outline what costs and whom it is going to affect, because they cannot be anti-Communist on the public platform, and then talk about cutting costs in the Halls of Congress. They have to make up their minds. Are they willing to pay the bill to keep Mr. Khrushchev in his place, to keep him from dominating the world?

I for one am willing to pay the bill and go home and defend my action. I am still in the Senate. I have been up for three elections. I have not run away from the idea of spending, because I am not a spender; I am an investor in American freedom and in the American economy.

Mr. MILLER. If that is the position of the Senator from Minnesota, we may as well stop talking about tax cuts, because there cannot be meaningful tax cuts if they are going to make for an unbalanced budget. We know that, over a period of time, the result of deficit spending is inflation and shrinking purchasing power of the people's money. The only reason for having a tax cut is to put more purchasing power in the hands of the people; but if that purchasing power has shrunk as a result of inflation due to deficit spending, we will be on a treadmill. We shall be back where we started, and we shall merely have teased ourselves.

I may suggest that the Senator from Iowa certainly does not pretend to have the background of knowledge about the budget that the Senator from Minnesota has or that the President of the United States has. The Senator from Iowa has been around here long enough to see that hundreds of millions of dollars are being added to the President's own budget by the Appropriation Committees. This is one of the reasons why there was so much of an argument between the House and the Senate for some time this year. Perhaps the Senator from Minnesota does not think $100 million is very much money.

Mr. HUMPHREY. I did not say that.

Mr. MILLER. But the Senator from Iowa thinks it is a lot. It is one example that could be given where we are going to control the President's requests.

The Senator from Minnesota also knows that we passed a $700 million authorization bill for public works which was not even in the President's budget. I submit that it is not any small piece of change either.

The point I want to make is this—and I wish the Senator from Minnesota could agree, because I know we are shooting for the same objective; we want our economy to move on a solid basis—if we can cut taxes by $10 billion and generate $25 billion in additional national income, as the Senator from Minnesota has pointed out, why not cut spending on programs like the public works program and then have an additional tax cut which will generate additional national income? That would be done on a meaningful basis, and it would not be an inflated national income.

Will the Senator agree with that view?

Mr. HUMPHREY. Let me say we have had no inflation in the last 2 years. The wholesale price index has gone up one-tenth of 1 percent in 2 years. I do not call that inflation. We had the biggest peacetime inflation this country ever had, except immediately after World War II, under the "sound" money policies of the previous administration. That is when we had our big inflation and the record will bear me out.

Mr. MILLER. Mr. President, will the Senator yield on that point?

Mr. HUMPHREY. The Senator said the President did not recommend the public works bill. Of course he did.

Mr. MILLER. No; I said that was not in his budget——

Mr. HUMPHREY. In his original budget.

Mr. MILLER. That is correct.

Mr. HUMPHREY. My good friend has been around here long enough to know there have been supplemental messages.

Mr. MILLER. Yes. The Senator from Iowa knows there have been hundreds of supplemental messages under the New Frontier.

Mr. HUMPHREY. Since the Senator is interested in the recommendations of the President, I deduce—I judge from what he has said—that if we just go back to the health budget of the President, if we just follow the President's recommendation, the Senator from Iowa will become a loyal New Frontiersman. That day I want to see.

Mr. MILLER. The Senator from Iowa would have voted for some of the appropriation bills if that had been the case.

Mr. HUMPHREY. The Senator from Minnesota is not going to apologize for having voted for a little more money for health programs. I do not think the Government is going to go into bankruptcy because we have spent a little more money to stop the scourge of cancer. I am not going to apologize for having spent a little more money for heart research.

Mr. MILLER. The President of the United States is also interested in heart and cancer research. I do not think the President of the United States is any less concerned about those subjects than is the Senator from Minnesota.

Mr. HUMPHREY. I agree. I will just say he is a little too conservative on that subject.

May I suggest to the Senator from Iowa that if he will vote for the feed grains program, we can get the corn growers out of the Government business. That is what we have under the 1958 act—"produce all you want, and all you cannot sell, the Government will buy"—the great Republican program. If we can get rid of that monstrosity, we can save $8 billion. I urge the Senator to join with me in an effort to get rid of it.

Mr. MILLER. I thought the Secretary of Agriculture believed the emergency feed grains program was a smashing success.

Mr. HUMPHREY. The Senator from Minnesota was not talking about the emergency feed grains program. We had to have an emergency feed grains program because of the Eisenhower-Benson-Republican 1958 program. That was the No. 1 boondoggle, pork-barrel measure passed by the Congress, and I voted against it.

Mr. MILLER. May I ask who was in control of the Congress?

Mr. HUMPHREY. Let me tell the Senator who was in control of the Congress. The administration sent this measure down to a handful of Democrats plus a phalanx of Republicans and foisted it on the American people.

Mr. MILLER. The Republicans were in control?

Mr. HUMPHREY. No; the Democrats were in control, with a few of their allies, with a Republican President, and a Republican Secretary of Agriculture.

Mr. MILLER. What I am trying to get across here is the fact that I do not like to see arguments of this kind over tax cuts. As a tax lawyer, I have been in the business long enough, and I know how people would like to see tax cuts, but they have got to be meaningful, and they are not going to be meaningful unless we keep the purchasing power of the people's money up.

I know the President of the United States is acutely aware of that situation. That is the reason why he came out for a balanced budget for this fiscal year.

He also knows how important it is in connection with the international balance-of-payments problem.

So I do not criticize him for hesitating about tax cuts, but I do criticize him for not cutting back on spending to make room for some of these tax cuts.

The Senator from Iowa is not the one to make the suggestion as to where the cuts should come; the recommendations should come from the White House.

Mr. HUMPHREY. Madam President, will the Senator yield?

The PRESIDING OFFICER (Mrs. Neuberger in the chair). Does the Senator from Iowa yield to the Senator from Minnesota?

Mr. MILLER. I yield.

Mr. HUMPHREY. If the Senator is going to talk about where we ought to cut the budget, I suggest he ought to give us a bill of particulars. One cannot say, "I am for a new building," and not give us any idea how many rooms there should be inside the building or what the cost should be.

The point is that there is a chorus of voices to cut spending, which is traditional. Every 2 years the Republicans get on the idea of cutting the budget. When we come to them and ask, "Where?" they say, "Oh, no, that is not for me. That is for you. You be the doctor. You be the surgeon. I just like to get around and deliver the flowers."

They are not going to have that privilege. If they want to cut the budget, say where. Do they want to cut grandma's pension? Do they want to cut veterans' pensions? Say so. But do not try to be economizers and then go to the Democrats and say, "Now you tell us where you are going to cut."

Mr. MILLER. Madam President, if that is the position of the Senator from Minnesota may I suggest, if he is for tax cuts, he should come out with the cuts in spending he proposes, and if he cannot find the places to cut spending let us stop talking about tax cuts, because we are only teasing ourselves.

Mr. PROXMIRE subsequently said: Madam President, I wish to comment factually on the interesting and dynamic speech of the Senator from Minnesota [Mr. Humphrey]. He talked about how a $10 billion tax cut would practically pay for itself because there would be a $25 billion increase in the gross national product.

Economists are divided on the question. The economists to whom I have talked say that a $10 billion tax cut would mean a $20 billion increase in the gross national product. Anyway the question is considered, the fact is that it could not possibly pay for itself. There is agreement among all economists that there would be a net diminution in tax revenues. Even if we took the assumptions of the Senator from Minnesota, the fact is that a $10 billion tax cut, resulting in a $25 billion increase in the gross national product, would mean about a $4 billion subsequent increase in tax revenues, or a net decrease of $6 billion.

That arithmetic may be dull and tedious, but it is vitally important to the discussion, because I think any responsible assessment of the situation must recognize that if we reduce taxes, we increase the national debt. We increase the deficit, and we increase the burden on the taxpayer in servicing the national debt.

CHALLENGE ON MONETARY POLICY

Madam President, I do wish to call attention to a statement which I made this morning before the Joint Economic Committee, of which I am a member. We started our hearings, as the Senator from New York pointed out, on the state of the economy. I challenged any witness who appears to testify to try to justify the fact that we are following a high-interest rate, tight-credit policy at a time when the economy has been slowing down.

I ask unanimous consent that the statement be printed in the Record, at this point.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement of Senator William Proxmire Before the Joint Economic Committee on Tuesday, August 7, 1962

Mr. Chairman, on July 9 I wrote you suggesting that this committee hold hearings on the economy because I was deeply disturbed by the increasingly restrictive actions of the Federal Reserve Board at a time when our economy is standing still.

I challenge any witness to appear before this committee to justify the high interest rate economy slowdown policies of the Federal Reserve Board.

For the Federal Reserve Board to force up interest rates and reduce availabe bank reserves under present economic circumstances is sure to create further unemployment, especially in the home building and construction industries, which are highly responsive to changes in interest rates. Unemployment in construction has been seriously high for a long time.

Americans ranging from the U.S. Chamber of Commerce to the AFL–CIO have become so alarmed by economic stagnation that they have advocated a tax cut that would pile a huge deficit this year on top of last year's unbalanced budget.

Virtually every economist and business leader who has spoken out on the economy has expressed dissatisfaction with our present rate of growth, and concern that we may be about to drift into a recession.

Unemployment has continued at a seriously high level for more than 2 years and has failed to improve significantly during the past 7 months.

For the Federal Reserve Board to deliberately force up interest rates as it has been doing is to throw sand in the engine, when what we need is more fuel.

In 1929, we cut taxes at the same time interest rates were rising to high levels. This contributed to the worst economic crash in U.S. history.

Two significant effects occurred last week which have very profound implications for the problem into which this committee is inquiring.

On Friday it was reported that the Federal Reserve System had again tightened credit last week. This recent reduction in free reserves to $300 million is significant in that it confirms the suspicion of most analysts that the Fed is now committed to a tight-money policy. The indications of such a policy seemed to be clear in June, when for several weeks in a row the Fed reduced free reserves and maintained them at levels lower than had been reached since the tight-money policy prior to the last recession. This indication was confused by the temporary easing of credit that occurred in July. But now it is clear that the policy revealed by their actions in June does in fact reflect their basic outlook toward the need for credit restraint at this time.

It is thus particularly timely that this committee exercise its responsibility to provide the needed legislative oversight in this vital area. Monetary policy is too important to be left to the bankers. If there ever was a time for Congress to insure that the monetary policy is formulated and executed in the context of the public interest, it is now.

The chronically high levels of unemployment prevailing in this country and the chronic slowdown in our growth rates make it overwhelmingly clear that no monetary constraints whatsoever should be placed on economic activity.

Federal Reserve monetary policies could easily frustrate any attempt to stimulate the economy through a tax cut, in the same manner that proper monetary policies might possibly preclude the need for significant fiscal action at this time.

The second event that occurred last week which gives special meaning and timeliness to these hearings was the failure of the Treasury's attempt to float a new issue of long-term bonds. The Treasury was willing to sell up to $750 million worth of 30-year bonds which were priced to yield 4.19 percent. It is significant that subscriptions amounted to only $316 million. This fell far short not only of the $750 million that the Treasury was willing to sell, but it fell far short of the $500 million that the Treasury expected to sell.

This is a very strong indication that there is not the available liquidity at the long end of the market that many have talked about. If investors are not willing or able to take advantage of such attractive rates, they certainly must lack significant loanable funds which are seeking a place for profitable investment. The only other reason for the dismal failure of this recent attempt of the Treasury to attract long-term funds is that the investors feel that the rate of interest is about to go higher.

Either of these two possible explanations is very distressing in its implications. The deficiency of the availability of loanable long-term funds suggests that the restrictive policies of the Fed have already had an effect. In any case, it suggests that the Fed is in error if it feels that it must soak up a significant amount of excess liquidity at the long end of the market.

These recent events suggest why it is necessary for Congress to act quickly to prevent the misguided policies of the Fed from continuing to slow down the economy. It is my hope that these hearings, and further report will help to remedy this situation.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 296. An act for the relief of Hanna Ghosn;

S. 1174. An act for the relief of Dr. Kwan Ho Lee;

S. 1882. An act for the relief of Assunta Bianchi;

S. 2455. An act for the relief of Mrs. Elizabeth Lovic;

S. 2572. An act for the relief of the Merritt-Chapman & Scott Corp.;

S. 2614. An act for the relief of Mr. and Mrs. Alfredo Hua-Sing Ang;

S. 2675. An act for the relief of Yiannoula Vasiliou Tsambiras;

S. 2769. An act for the relief of Renato Granduc and Grazia Granduc;

S. 2807. An act for the relief of Mrs. Juliane C. Rockenfeller; and

S. 2844. An act for the relief of Alice Amar Froemming.

The message also announced that the House had agreed to the concurrent resolution (S. Con. Res. 76) withdrawing suspension of deportation of Ibannis Constantelias.

The message further announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H.R. 7600. An act to amend title 38, United States Code, to revise the effective date provisions relating to awards, and for other purposes;

H.R. 11590. An act to provide for the disposition of judgment funds of the Cherokee Nation or Tribe of Indians of Oklahoma;

H.R. 11952. An act to assure payment of just compensation for the use and occupancy of certain lands on Kwajalein and Dalap Islands, Trust Territory of the Pacific Islands, and for other purposes; and

H.J. Res. 693. Joint resolution granting the consent and approval of Congress for the State of Maryland, the Commonwealth of Virginia, and the District of Columbia to amend the Washington Metropolitan Area Transit Regulation Compact, and for other purposes.

HOUSE BILLS AND JOINT RESOLUTION REFERRED

The following bills and joint resolution were severally read by their titles, and referred, as indicated:

H.R. 7600. An act to amend title 38, United States Code, to revise the effective date provisions relating to awards, and for other purposes; to the Committee on Finance.

H.R. 11590. An act to provide for the disposition of judgment funds of the Cherokee Nation or Tribe of Indians of Oklahoma; and

H.R. 11952. An act to assure payment of just compensation for the use and occupancy of certain lands on Kwajalein and Dalap Islands, Trust Territory of the Pacific Islands, and for other purposes; to the Committee on Interior and Insular Affairs.

H.J. Res. 693. Joint resolution granting the consent and approval of Congress for the State of Maryland, the Commonwealth of Virginia, and the District of Columbia to amend the Washington Metropolitan Area Transit Regulation Compact, and for other purposes; to the Committee on the Judiciary.

KENNEDY THE POLITICIAN

Mr. MILLER. Madam President, in the July 25 issue of the Christian Science Monitor, the lead editorial, entitled "Kennedy the Politician," properly takes the President to task for his trying to blame the Republicans for the failure of some of his New Frontier programs to pass the Congress. Of course, Madam President, I use the world "blame" advisedly—in the sense that the President has used the word. Actually, I believe that some of these measures of the New Frontier have been poorly conceived and that their defeat—by Democratic votes as well as Republican votes—merits the praise of the voters. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

KENNEDY THE POLITICIAN

Mr. Kennedy is now talking frankly partisan language about his stalled domestic legislative program. He blames the Republicans for his lack of success. There was a long series of statements to this effect in his latest press conference.

Mr. Kennedy respects both logic and objectivity but in this case he seems to be taking leave of both. Why should he blame members of the opposition party for predictably voting against bills with which they traditionally disagree? He could more logically blame the voters. The voters gave him an insufficient number of Democrats who agree.

And how can he shrug his shoulders so fatalistically about the conservative Democrats while pointing such an accusing finger at the Republicans? Where is consistency?

Mr. Kennedy also argues that because Republicans oppose his program they are for inaction. He is for action. But in many cases enough Republicans agree with the broad aims of Kennedy domestic bills to pass them, if they had been drafted with more attention to the national need and less to Democratic politics and power.

But his frankly partisan approach to most of the major domestic bills provoked a frankly partisan answer. He knew that the conservative Democrats would vote with the opposition. Logic would suggest that his strategy was at fault, and not either the conservative Democrats or the Republicans. He misjudged the election returns.

This is all the more curious because at the start of his second year in the White House the President told reporters he was going to follow an entirely different strategy. He recognized the need for emphasizing national needs and deemphasizing party politics.

A few weeks thereafter he proposed a Department of Urban Affairs in a highly political manner. For whatever reason, perhaps a rising political self-confidence, his approach to Congress radically changed. With this more recent approach, Mr. Kennedy created his own frustration.

He has now explicitly described his plan for the coming congressional campaign. To the degree that it can be separated from recrimination over the past, it is a partial return to logic again. The President is tackling the real cause of his difficulty in the narrow decision of the voters. "The areas I'll be campaigning in are seats * * * where there will be a very clear choice between Republicans who oppose these programs and Democrats who support them. That's where I am going to go."

The voters will be there waiting. It remains to be seen whether they will consciously choose to base their vote on what kind of Congress they want to give Mr. Kennedy. (Many of them probably didn't, last time.) But they have this opportunity now and they should use it.

Meanwhile it is curious that Mr. Kennedy should be gauche about allocating blame for his plight, when he is supposed to excel at the political arts. It could be that he misjudges the future voting as well as the past. He may find that the same actions on his part which drove the moderate votes in Congress into opposition will cause the voters in November to prefer more conservative candidates.

CITIES SEEK STATE CONTROL

Mr. MILLER. Madam President, in today's Washington Evening Star there is a timely and informative article by the distinguished columnist, Gould Lincoln, on the subject of reapportionment of the State legislatures. Mr. Lincoln emphasizes in his article that—contrary to the erroneous belief or misplaced hope of some so-called liberals—the United States is a representative republican form of government rather than a representative democratic form of government. He also points out that in the State of Michigan the matter of reapportioning the Michigan Senate to put it, as well as the State house of representatives, on a population basis has degenerated into a political issue between the Republicans, on the one hand, who believe that one house should remain on an area basis, and the Democrats, on the other hand, who believe that both houses should be on a population basis.

I am pleased to say that in my own State of Iowa, the issue thus far has not been reduced to such a partisan political situation. Most Republicans and most Democrats have believed that one house should be on a population basis and one house on an area or geographical basis. A few Republicans and a few Democrats believe that both houses should be on a population basis, but, honest though their convictions undoubtedly are, I suggest that their position might well be altered if they would think through the differences between a representative republican form of government and a representative democratic form of government; especially insofar as those differences apply to a capitalistic, economic system upon which our country's property rights were founded and have expanded. It is my position, Madam President, that the capitalistic economic system can best be guaranteed and can best prosper under the representative republican form of government, which is deeply imbedded in the traditions and constitution of our Federal Government and in the traditions and constitutions of most of our State governments.

I ask unanimous consent that Mr. Lincoln's article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CITIES SEEK STATE CONTROL

(By Gould Lincoln)

In the ever-growing demands for redistricting and reapportioning State legislatures, the cry today—an ever-increasing cry—is to redistrict in a manner to give greater representation to large urban centers of population. The big cities have been beating at this door for a long time in some of the States. Their claim has been that their people are discriminated against in the matter of legislative representation in favor of the smaller rural areas. Recently the Supreme Court entered the battle. It apparently has determined it is a prerogative of the Court to determine the constitutionality of the legislative apportionments and districting systems of the States. Carried to an ultimate end, this may mean the Court will determine the constitutionality of the apportionment and districting for Congress, the national legislative body.

The apportionment and districting for seats in State senates, as well as in the State assemblies or houses of representatives, are now under attack in the courts in several States, including Michigan. There the battle has become largely a Democratic-Republican fight—although there, too, the urban centers, particularly Detroit, are alined against the rural districts in this contest for greater senate representation. The Michigan State Supreme Court, in a 4-to-3 decision with four Democrats approving and three Republicans dissenting, held the apportionment of the senate unconstitutional.

The Republicans in the legislature have obtained a stay of the State court's order to redistrict by August 20. The primary elections—for State nominations for the November elections—are being held today. So the issue is expected to go over until next year.

The State court's order will be appealed and the appeal carried to the Supreme Court. The issue may become intense, as it is carried into the campaign by the expected candidates for Governor, George Romney, Republican, and Governor Swainson, Democrat. A redrafted State constitution will be voted on next April. It provides for an apportionment of house seats on the basis of population, more nearly meeting the urban demands, and leaves to a bipartisan commission a reapportionment of the senate seats. The Democrats do not like this, either.

THE FOUNDERS' PRINCIPLE

If the Supreme Court is to determine that population must be the basis for State senate seats as well as for house seats, it is argued, the principle adopted by the framers of the Federal Constitution for the apportionment of Senators among the United States will be completely disregarded. Under that principle, population has no place in the decision. Each State is given two Senators. New York and California, the most populous States, have two Senators each, and so do Alaska and Nevada, although their populations are the least among the 50 States of the Union. In round numbers, New York's population is 16 million plus, California's 15 million plus, while Alaska's is 226,000 and Nevada's 285,000, both plus. The Founding Fathers' had good reasons for giving each State equal representation in the Senate, no matter what their size. Carried into the States, the same principle, which gives protection to the small, may be necessary. Certainly, it is not expected that the Supreme Court will start tampering with the constitutional provision that each State is to have equal representation in the Senate of the United States, although it is difficult to predict what the Court will do in the future.

REPRESENTATIVE REPUBLIC

In some of the States, the urban centers are today strongly Democratic; the rural areas, strongly Republican. The Democrats in Michigan are fuming because, although they have held the governorship for nearly 14 years, they have not been able to control the State legislature, particularly the State Senate. In the past, there have been Democratic Presidents when the Congress was controlled by the Republicans, and vice versa. And on some occasions, the Republicans have controlled the Senate while the Democrats controlled the House—and again, vice versa. The United States has managed to get along despite these separate controls, perhaps the better for them on numerous issues. In fact, this is the operation of a representative republic. And this is what the United States was intended to be by the framers of the Constitution—not a representative democracy as many of the so-called liberals would have it. The individual States are better off with a republican form of government, too, despite the clamor for a democratic form.

The Supreme Court opened the way for the present contests over the constitutionality of State systems of apportioning membership in their legislative bodies in a Tennessee suit. The Court, however, merely held the Tennessee apportionment unconstitutional. It has not yet set standards or guidelines. Presumably it will have to deal with other cases. At present 22 States are seeking to revamp legislative apportionments—some directed to do so by courts. Among them are New York, Wisconsin, Maryland, Florida, Georgia, and Alabama.

KENNEDY'S "CONSERVATISM"

Mr. MILLER. Madam President, one of the most interesting and appropriate articles I have seen in a long time appeared in the February 5 issue of the Wall Street Journal. Written by Alan L. Otten and entitled "Kennedy's Conservatism," the article points out that this administration has taken some steps which so-called liberals would have condemned a conservative administration for taking. These steps include the encouragement of high interest rates, for which the Democrats were criticizing the Eisenhower administration; the promotion of airline mergers by the CAB; and the deferral of an Executive order to bar racial discrimination in housing. This is not to say that Mr. Kennedy is a conservative—or, for that matter, a middle-of-the-roader, as some sympathetic writers would have the general public believe. These labels do not apply to people who support an economic theory of spending our way into prosperity, or a political theory of centralizing governmental control in Washington. But the article does point out that some so-called liberals have a double standard, and that the double standard has finally caught up to them. I ask unanimous consent that the article may be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Kennedy's "Conservatism"

(By Alan L. Otten)

WASHINGTON.—President Kennedy is proving this political paradox: A liberal administration can frequently, with almost no criticism, take conservative actions for which a conservative administration would be roundly denounced by liberals.

In a variety of fields, the President and his fellow New Frontiersmen are doing and not doing things for which their leading liberal-labor supporters would have long and loudly lambasted an Eisenhower or Nixon administration. Now, however, those groups criticize in muted mumblings, if at all.

Item: The administration, via an intricate legal ruling covering certain refunding operations, has gotten around the 4½-percent interest rate ceiling on long-term bonds—an approach former President Eisenhower's Treasury Department considered and rejected not only as bad ethics but also, for a Republican administration, bad politics. Reason: The Democrats surely would have accused the GOP of promoting high interest rates to benefit banks at the expense of taxpayers.

Item: The Civil Aeronautics Board is actively promoting airline mergers with an intensity far beyond any that a Republican-dominated board would have dared attempt.

Item: The President has said he will defer issuing an Executive order to bar racial discrimination in housing until he "considered it to be in the public interest"—a rather cavalier disregard of a firm campaign pledge that, shown by a GOP President, would have produced a throbbing threnody from liberal groups instead of the pianissimo plaints raised against Mr. Kennedy.

A PRAGMATIC APPROACH

It would be grossly inaccurate to suggest the Kennedy administration is a conservative one; it is not. Administration decisions are based not on a conservative philosophy but rather on a pragmatic approach—perhaps to meet a balance-of-payments crisis, perhaps to cut unemployment. Clearly, in the overall view, the Kennedy team can be expected to tend toward the liberal side

But it certainly is true that any Democratic administration has a certain amount of credit in the bank with labor, civil rights, and other liberal groups. Thus, it can draw on this credit to stifle criticism of certain actions, so long as its overall record satisfies. Too, liberal groups are inhibited from criticizing a sympathetic administration too severely, even for conservative actions they don't like, for fear of losing more than they would gain by turning voters against a beneficial regime. On the other hand, Republicans, beset by worries that a "business party" label hurt them at the polls, are inhibited for political reasons from taking conservative steps they might believe necessary on economic or other grounds.

The reverse is true, too. Republicans can frequently push through liberal actions that Democrats can't. By winning the votes of usually conservative Republicans who hesitated to oppose a Republican President, Mr. Eisenhower, for example, was able to create a Cabinet-level Department of Health, Education, and Welfare. It's unlikely such a department would have been okayed by Congress back in 1953 if Democratic candidate Adlai Stevenson had won the White House, as Mr. Kennedy's current difficulties in creating a new Department of Urban Affairs suggest.

Moreover, Mr. Eisenhower was able to draw Republican support, denied to Mr. Kennedy, for foreign aid appropriations, public housing, and Federal aid for school construction. But right now, a Democratic administration is in power, and certainly it is producing some decisions pleasantly surprising some conservatives—and shocking some Democrats. And yet, as a result of the political double standard, these Democrats are prevented from objecting too loudly.

Take the recent Federal Reserve Board decision to permit commercial banks to pay higher interest rates on savings accounts. Prior to January 1961, liberals fought any hint of such a move as likely to lead to generally higher interest rates, one of their time-honored hobgoblins. But Mr. Kennedy's Treasury Department, focusing on the balance-of-payments problems, worked closely with the Federal Reserve on this move and promptly endorsed the action when taken. So far, Democratic protests have been few.

The balance-of-payments problems has been used by the administration to justify an increased emphasis on channeling more foreign aid buying to U.S. manufacturers—a policy congressional liberals used to attack as an unworthy protectionist device. Now, silence.

Or, consider the administration's proposed balanced budget for the coming fiscal year (whether the budget's final results will actually produce a surplus is, for the purposes of this discussion, a side issue). There has been a minimum of the traditional labor and liberal protest that the Kennedy budget will prematurely choke off economic recovery. A similar proposal from a GOP adminstration at this economic juncture would certainly have provoked violent Democratic diatribes. This is the worst recovery we have seen," declares one union official, "but we can't say so publicly because of the administration in the White House."

Taxes are another case in point. Politically, it's long been considered bad strategy to propose tax help for business without including reductions for individuals. The Eisenhower administration for several years ducked business pleas for more liberal tax depreciation allowances. Treasury Secretary Dillon, however, already has ordered depreciation tax help for textile firms, and is promising similar benefits this spring for many other industries. Moreover, he's proposed that Congress enact a $1.8 billion investment tax credit for business. Even though the administration proposes to recoup much of the revenue loss by tightening other tax rules, most of which affect business, the depreciation changes and tax credit would be a definite gain for industry. What's more, Kennedy planners argue the tax changes are needed to help create new jobs by stimulating investment. A GOP administration taking these lines would have been bitterly berated by northern Democratic Congressmen, labor leaders, and others for favoring business over individuals, for moving to stimulate investment when the "true" economic problem is underconsumption. There's little of this criticism now, though.

PAY POLICY FITS PATTERN

Wage policy also fits into the pattern. Mr. Kennedy and his top aids—publicly and privately—are taking a line at least as tough as Mr. Eisenhower's on the need for labor to moderate its wage demands—and clearly encountering far less open labor criticism. Perhaps labor is holding its fire because it doesn't expect much followthrough. But certainly Labor Secretary Goldberg has been waving the Taft-Hartley law and the possibility of new antistrike legislation at his old steelworker union clients far more vigorously than did Ike's Labor Secretary Mitchell.

Other examples of the political paradox:

The Kennedy Atomic Energy Commission has "indefinitely deferred" plans to develop two experimental civilian power reactor projects—without the instant attack that would have been made against a Republican administration for curtailing Government reactor development.

The Pentagon is expanding a previously limited policy of offering higher profits to defense contractors for extra-good performances; Democratic lawmakers hail this as evidence of sound management rather than objecting to it as business favoritism.

Certainly a Republican decision to increase Pentagon and space spending to the levels Mr. Kennedy has planned would have provoked considerable left-of-center comment that the military and moon-shot money should better be spent for mental health or public schools. There's been remarkably little of that criticism of the present administration.

Nevertheless, there's a tempering factor in this paradoxical political situation. If Mr. Kennedy does not draw as much "liberal" criticism as a Republican President would for some "conservative" actions, neither does he get as much "conservative" praise.

RATIONALIZATIONS FOR RECKLESSNESS

Mr. MILLER. Madam President, four recent lead editorials in the Wall Street Journal merit favorable comment.

In the July 9 issue, under the title "Rationalization for Recklessness," the administration is sharply criticized for its irresponsible conversation about tax cuts without any consideration for their impact on the Federal deficits—albeit that such conversation might be considered "sophisticated" by those who are engaging in it. The Journal sensibly calls for tax cuts that are geared to sharply lower spending.

In the July 11 issue, under the title "A Warning From Mr. Roosevelt," the Journal recalls that in 1935 President Roosevelt warned Congress against "extravagant action" in developing the social security program, and said that if the program were too ambitious, its whole future would be endangered. The Journal then goes on to show what has happened to the social security program in the intervening years, running up to the present unfair medicare proposal of the President and how the cost of this program bears most heavily on the lower income groups and how the present generations are getting by for much less than their share of the cost, with future generations having to pick up the tab.

In the July 25 issue, under the title "Of Sails and Anchors," the Journal wasted no time in taking up the President's challenge that the people will choose either to anchor down or to sail. Of course, this was political talk and everyone should know that it was. The statement's assumed that we were not sailing and were lying at anchor. It assumed that the reason we are not sailing fast enough is that inaction by Congress in following White House spending programs was responsible. It did, of course, recognize that all the wind that blows from political speeches and fine phrases does not mean that there will be good sailing. Putting things in proper perspective, the Journal points out that what needs to be anchored down is the Government itself, so that freemen can sail.

In the July 30 issue, under the title "An Impractical Pragmatism," the Journal demolishes the self-proclaimed label of the Kennedy administration that it is "pragmatic" by pointing out the fallacy in its economic program of the greatest possible Government spending. Such a program does not mean economic growth, the Journal points out, because it results in a misallocation of resources—a defect that has characterized all planned economies from India to Russia. The key to economic growth lies in lifting the burden of Government in order to release the energies of a free people.

Madam President, I ask unanimous consent that the four editorials may be printed in the Record.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

Rationalization for Recklessness

Though President Kennedy hasn't decided whether tax cuts should be recommended for this year or next year, one thing is clear: The impact of any reductions on the Federal deficits hardly ranks as a major consideration within the administration's councils.

Any hope of responsible tax cutting must therefore rest with Congress or public pressure or both. Congress unquestionably has the power to force Government spending down to the level of revenues lowered by tax reductions. If it would do so, in this era of inflated and wasteful Federal spending, that might be the best reason yet for advocating sizable tax reductions.

Admittedly, the record is not encouraging. It is the Congress, as well as the successive administrations, that presided over 25 Federal budget deficits in the 31 years through 1961. It is the Congress which gave its blessings to the additional deficit of $7 billion—more than the whole Government spent a little over 20 years ago—in the fiscal year just ended. It is the Congress which has now increased the public debt limit to an untidy $308 billion.

Still, the very enormity of the Government's financial condition might jolt Congress into using the lever of tax cuts to impose restraint on the administration's spending. In the informed estimate of Senator Harry Byrd, the deficit this fiscal year will be $6 billion without tax cuts; with prompt tax cuts of the reckless sort the chamber of commerce proposes, it could be a startling $15 billion.

Certainly if there were a good many more Byrds in Congress there would be a return to fiscal responsibility. But even as it is, many Members must realize by now that the administration, far from eschewing deficits even in principle, shows every sign of embracing deficit financing as a way of life—and going to amazing lengths to rationalize it. And many on Capitol Hill, regardless of their politics or pet projects, must be able to see through those rationalizations.

For one thing, there is no evidence to support the administration theory that, in today's economic circumstances, tax reductions accompanied by increasing Government spending would rocket the Nation into a new superboom. Accordingly Congress has scant justification for assuming that lower taxes might actually mean higher revenues in a booming economy.

Plenty of evidence exists, however, to show what happens to nations that persist in living beyond their means both at home and abroad. The nations of Western Europe finally had to turn from inflation before they could prosper; even the politicians had to admit it had become enonomically intolerable.

If Congress wants an example both recent and close, it can look at Canada, which thought it could inflate itself into ever more buoyant prosperity. Instead, the tough logic of economics pulled it up short; it had to take drastic corrective measures, including Government retrenchment.

Nothing in the U.S. economy makes it immune from the consequences of constant Federal abuse. Why so many Government officials are incapable of seeing this is difficult to understand. How else can they interpret the warning signs, like the persistent foreign expectation of dollar devaluation? How can they possibly hope to eliminate the international payments deficit while piling mountainous domestic deficits upon deficits?

Most Americans, we believe, do realize that the Government rationalizations fly in the face of common sense. If so, maybe they should respond to the President's request for an economic dialog.

What the administration and Congress need to be told is that the basic fiscal issue is not as sophisticated as Government economic advisers like to say. Specifically, the need is for tax cuts that are not designed to deepen deficits but are geared to sharply lower spending.

It would not be the first time the people had raised their voice against flagrantly unwise budget policies. And if Congress is at all concerned about the Nation's economic health, it will listen.

A Warning From Mr. Roosevelt

When Franklin Roosevelt proposed establishment of the social security program in 1935, he was careful to warn Congress against "extravagant action." If the program were "too ambitious," the President said, its whole future would be endangered.

As the years have gone by, the program has certainly grown a great deal more ambitious, and now there's this enormous political pressure to push it into the field of medical care. The House Ways and Means

Committee is scheduled to take up the administration medicare bill this week.

Now we realize that any criticism of the 27-year-old American social security "institution" is regarded in some quarters as somehow suspect, if not downright unpatriotic. Nonetheless, it's time we paused to ponder the meaning of Mr. Roosevelt's words.

In terms of its later growth, social security got off to a slow start. Farmworkers, domestic employees, and a number of other groups were excluded from coverage. Benefits for the aged were to range from $10 a month to $85, and no payments at all were to be made until 1942.

But this initial design was soon altered. Even before the first social security taxes were collected, organized labor was pressing for a liberalization of benefits. In 1939, Congress responded by broadening the program to include dependents and survivors of the aged and, in addition, advanced the date of first benefits to 1940 from 1942. And so it has gone from that time to this, with benefits and coverage being steadily enlarged and expanded—especially in election years.

How has Congress provided for payment of these growing benefits? In the beginning the plan was to build a giant reserve fund, invested in Government bonds, so that eventually interest income would shoulder a large part of the benefit burden. Taxes were to start at 1 percent each on employees and employers, based on the first $3,000 of each employee's wages, and were to rise to 1½ percent in 1940, and then by stages to an "ultimate" rate of 3 percent by 1949.

But politicians aren't anxious to boost taxes on voters if they think there's any way around it. And with tax receipts running far ahead of benefit payments in the early years of the program, Congress couldn't see anything urgent about tax boosts at all. As a result the tax rate didn't rise to 1½ percent until 1950, a decade behind schedule.

Soon things began closing in on social security and its manipulators. With reserve funds shrinking fast, Congress found that both old and new benefits called for new taxes. So the maximum tax on each employee now is $150 a year, compared with the $90 that the lawmakers first thought would be the ultimate.

And the end isn't even remotely in sight. The reserve fund, in any real sense, is no longer any reserve at all. Its interest earnings each year now equal only about 2 percent of benefits. To keep the program stumbling along on a hand-to-mouth basis, even without the added burden of medical care, tax rates are slated to rise by nearly 50 percent in the next 5 years. It's certain there will be pressure for more benefits, whether medical care or something else. That's the way politicians have been using social security for 27 years.

If the pressures continue to bring action, even higher taxes than those now envisioned will be needed to keep the system from sliding into insolvency. Ironically, the taxes bear hardest on the lower income groups; as things stand now, earnings above $4,800 aren't touched. Yet the benefits, because they are taxexempt, are most helpful to the wealthy. To a person in the 20-percent tax bracket, $800 of social security payments is equal to $1,000 in taxable income. To a 60-percent-bracket taxpayer, the $800 payment is equal to $2,000—twice as much.

There are other inequities. Middleaged and older workers who entered the plan in its early years had the prospect of getting back a good deal more than they put in. But an average worker under 40 who enters the plan now, with tax rates so high and rising, has little prospect of receiving benefits worth even as much as the taxes he paid. Not to mention that the more inflation we have the less his benefits will buy.

As time goes on, the people at work will take on more and more of the burden of paying growing benefits to people already retired. Is there no limit to the load American's active work force will accept?

For the average American, even now, social security is a costly way of buying insurance. That's because a true insurance system operates with a reserve fund, a fund that generates interest income to carry much of the load. Americans, especially labor union leaders who negotiate pension fund agreements, are becoming increasingly familiar with this principle. Will there, at some point, be a public outcry against the high cost of social security?

There is another worry, and this is one that should have special significance for an administration who so often voices concern about the rate of economic growth. To speed growth, the Nation must have more savings and investment. And social security cannot help but divert funds from savings, since it takes over many burdens that otherwise would be carried by insurance. When savings go into regular insurance companies, they are invested in productive enterprise. When funds go to the Government, they merely fuel nonproductive Government spending. Is there no limit to the diversion of savings the Nation can weather?

Entirely aside from all the social implications of expanding social security, the economic questions must be considered now. For the financial planning of most Americans centers on social security, and the system should not be lightly sacrificed for political gain.

In these Democratic days in Washington, you'd think there would be someone willing to listen to Mr. Roosevelt's warning.

Of Sails and Anchors

In President Kennedy's view, the choice before the voters in November is quite clear: Democratic action or Republican opposition to action. The people, he told his press conference, "will choose either to anchor down or to sail."

We agree that the Nation does face a serious choice in its domestic policies, though we would express it a little differently. It is a choice between more Government or more freedom from Government for individuals and businesses. And we are far from sure that the Republicans, as the opposition party, will prove capable of presenting it in clear political terms.

Not that the Democrats will have an easy time. The President reasons that if they could pick up only a few seats in Congress they could swing enough votes to efface this year's defeats on such notable matters as farm and medicare legislation. But Mr. Kennedy realizes any gain would go against the historical trend in off-year elections, that his own popularity is declining, according to the pollsters, while GOP hopes are rising, and that no less than 21 Senators of his own party voted against his medicare plan.

Consequently he plans to campaign especially in genuine two-party swing areas, harping on the theme of Republican destructionism on everything he wants, from more public works to medicare.

How exciting people find the President's domestic programs is another question. Certainly the record on Capitol Hill does not suggest that the Members of Congress have detected any thunderous ground swell for them. And it would be a little surprising if there were, since most of the proposals have the tired air of the thirties about them, hardly even touched up.

In all this, we think, is an opportunity for an opposition party, if the Republicans concede they are that, to make a forceful case for a different approach. It is not enough to promise the same things with slight modifications.

The real answer to compulsory social security medical insurance for the aged is the rapidly growing voluntary insurance plus public assistance where truly needed. The only real answer to the farm problem is not the administration's proposed regimentation but a gradual return to a free market.

There is much more. It stands to reason that the key to greater economic growth is not expansion of the Government but expansion of the economy. The Government has demonstrated over the years that all its spending and deficits and controls cannot prevent or cure recessions, much less produce a major advance in sound economic growth.

The proper Federal function is to create the climate in which the economy can flourish. That primarily requires lessening the pressure the Government exerts on the economy through excessive spending and regulation.

The Republicans have often been timorous about making that case. But they should be able to remember that the idea of freedom from Government, so long applied in this country, is the most dynamic idea in political history. It ought to be worth a try as a political program in opposition to the dreary doctrine of Government expansion and compulsion.

What needs to be anchored down is the Government itself, precisely so that freemen can sail.

An Impractical Pragmatism

The Kennedy administration is often described as pragmatic rather than theoretical. If so, let us put theories aside for the moment and look at its economic policy in coldly practical terms. How effective is it?

First of all, it is true the policy is an unfinished work, since Congress has neglected to enact parts of it. As one of President Kennedy's closest aids, Theodore Sorenson expressed it on Howard K. Smith's television show the other night, "We have submitted to the Congress last year and this year an extensive program to stimulate the economy."

The President's legislative program includes farm controls, medicare, depressed areas, manpower retraining, youth employment, and discretionary Presidential authority to boost public works spending.

Mr. Sorenson apparently feels that if Congress had passed every last bit of the program, instead of only parts of it, the economy would now be booming. As it is, the officials regard the economy's blood as so tired that they are seriously thinking of asking Congress for tax cuts to build it up.

Yet if one examines the proposals to date, it is evident they have nothing to do with economic growth. Whatever else may be said of the farm plan that failed, its purpose was to regiment the farmer into producing less, not stimulate more output. And whatever the pros and cons of medicare on other groups, not even its advocates could very well claim it was a growth hypodermic.

Aid to depressed areas, unemployed youth, manpower retraining, public works—all these are by definition palliatives designed at most to soothe sore spots. They have no more connection with economic growth than did similar programs in the thirties, when all the considerable efforts of Government, year after year, were unable to significantly alleviate mass unemployment, much less lift the whole economy out of the mire of depression.

So, as a practical matter, blaming Congress for "inaction" doesn't get the administration far. Anyway, Congress has cooperated handsomely in the higher Federal spending and deficits which appear to be a key part of the administration's "growth" policy.

Spending has gone up many billions, and not just for defense and space, if even all those increases are justified. An imposing deficit was piled up last fiscal year, and another is in store this year. And yet the economy is said to be stagnating.

Since all this Federal medicine hasn't done the trick, the President is being urged to try much more of it, which seems rather curious advice. Outstanding "liberal" economists like Truman Adviser Leon Keyserling want him to quit temporizing and embark on a truly "expansionary" program.

That means the greatest possible spending Government officials can conceive, for any purpose anyone can dream up. The whole point, which is not without political overtones, is to spend, so as to put more people to work and put more dollars in people's pockets.

Assuming a willing Congress, such a program would certainly mean Government growth. But it could not mean economic growth because its premise is uneconomic.

A policy with the avowed objective of maximum Federal spending, directed from Washington, must cause a monstrous misallocation of resources. This defect has characterized every so-called planned economy in history and is glaringly plain in every one today from Socialist India to Communist Russia. Inevitably the wrong things are built and produced in the wrong places for the wrong needs.

The free-market economy's success is due above all to its practicality; it is simply the most effective means of channeling resources to productive and prosperous ends. The more its mechanisms are interfered with, the more impractical an economy is.

It would seem, then, that the administration and its advisers in and out of Government are barking up the wrong policy tree. The key to real economic growth lies where it always has, in lifting rather than increasing the burden of Government and so releasing the energies of a free people in a free market.

To figure it all out otherwise requires, we suggest, an extremely peculiar kind of pragmatism.

DEMOCRATS VERSUS DEMOCRATS IN TENNESSEE

Mr. MILLER. Madam President, in today's Wall Street Journal appears an article entitled "Democrats Call Medical Bill Key to Victory in Fall Elections, Based on Tennessee Vote."

It seems that in a Democratic primary in two heavy Democratic congressional districts, two Democratic incumbents were defeated by razor-thin margins by two younger Democratic opponents. The winners supported the Kennedy medicare bill. The losers opposed it.

I would be among the first to recognize that the clever play upon emotions which the proponents of the Kennedy medicare program are not above using could have accounted for the difference between winning and losing in these districts, especially when the incumbents did not have a real opportunity to get away from Congress to campaign among the people and tell them how unfair the Kennedy medicare program is.

But I am quite sure that if the voters are given an opportunity to become informed on this issue—and they will be during the fall campaign—they will not be casting their votes for a candidate just because he supports the Kennedy medicare program. Indeed, I suggest that they may well vote against a candidate because he supported this unfair program.

The Journal article points out that one of the incumbents who lost in Tennessee appeared to be hurt because he had supported the administration's proposal to withhold tax on interest. We may conclude from this that if that incumbent had opposed both the Kennedy medicare program and the Kennedy program for withholding taxes on interest he would have been reelected.

The other incumbent, according to the Journal article, was absent from his district representing it in Congress. This will not be the case in the fall election campaign.

I, for one, hope that the President and his Democratic campaign committee do not back down on their plans to make the President's unfair medicare bill an issue in the fall elections. If they can see in the Tennessee Democratic primary a result that will cause them to persist in making it an issue, then I will say that the Tennessee primary voters have done the Nation a great service—even though they may not have understood what they were voting about.

I ask unanimous consent that the article from the Journal be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS CALL MEDICAL BILL KEY TO VICTORY IN FALL ELECTIONS, BASED ON TENNESSEE VOTE

WASHINGTON.—Democratic leaders are generally convinced the subject of medical care for the aged is the party's best hope for a winning issue in this fall's congressional elections.

The surprise showing of two Democratic House candidates in Tennessee primaries has reassured party strategists who favor all-out advocacy of a medical aid program financed through the social security system. This was the course followed by challengers Wilkes T. Thrasher and Richard Fulton in their primary races against veteran Congressmen JAMES B. FRAZIER and J. CARLTON LOSER, both foes of the social security approach. Mr. Thrasher, 41 years old, defeated Mr. FRAZIER, 72, by an unofficial 323 votes for the Democratic nomination in the Third (Chattanooga) District, and Mr. Fulton, 35 years old, is leading Mr. LOSER, 69, by 80 votes in their disputed primary election in the Fifth (Nashville) District.

Because a compromise medical care bill was defeated last month in the Senate, there had been speculation that the issue was losing its appeal and that voters might be turning against the social security approach advocated by the Kennedy administration. But Democratic tacticians interpret the Tennessee primary results as confirming their belief that the medical care subject will help Democrats in their November election battles with conservative Republicans who reject the social security route.

"POLITICAL POTENCY" SEEN

"It certainly proves the political potency of the issue is still strong," asserts one jubilant Democratic chieftain. "And with President Kennedy taking it up this fall, we should be able to score some strikes with it."

Moreover, the defeat of Mr. FRAZIER may have the far-reaching effect of boosting next year's prospects for congressional approval of the administration's King-Anderson bill or some variation that retains social security-financing approach. Mr. FRAZIER is one of the 15 members of the 25-member House Ways and Means Committee who have opposed sending the King-Anderson measure to the House floor for a vote. His departure means two of the bill's foes will be gone next year, giving House Democratic leaders the opportunity to engineer replacements who are more sympathetic to the social security approach. The other departing member will be Representative BURR HARRISON, a conservative Virginia Democrat who is retiring. Should they be succeeded by two members favoring the social security route, the lineup against the King-Anderson bill would be reduced to 13 votes against, 12 for. In this event, the administration would be favored to pick up the extra vote needed to push the measure through the committee. Representative THOMPSON, Democrat, of Texas, who was among the opponents this year, has indicated he might be willing to soften his position and permit the measure to clear the committee next year and reach the floor for a showdown. That would leave only Chairman MILLS, Democrat, of Arkansas, Representative WATTS, Democrat, of Kentucky, and the committee's 10 Republican members opposing the bill and outvoted, 13 to 12.

AN UNCERTAIN CONVERT

However, Mr. THOMPSON cannot be counted on as a sure convert to the plan. He won renomination by a decisive margin in the Texas Democratic primary earlier this year by campaigning against the King-Anderson bill while a liberal Democratic foe favored it.

Moreover, there is some doubt that a medical care bill could clear the committee as long as Representative MILLS opposes it. Instead of being outvoted, it is believed Mr. MILLS would either propose some kind of compromise or switch enough votes to keep it bottled up.

To a great extent, of course, the medical care prospects for next year depend on the outcome of this year's House races. Should the Democrats hold their present 263–174 margin or perhaps gain a few seats, chances would improve for passage of a bill along King-Anderson lines in 1963. On the other hand, the loss of 10 to 20 or more Democratic seats would dim the chances for any kind of medical care legislation in 1963.

There seems little doubt the medical care controversy figured prominently in the primary election success of Messrs. Thrasher and Fulton in their dominantly Democratic districts. The medical care subject was the No. 1 issue in the Loser-Fulton battle because Mr. Fulton, a real estate broker, designed it that way. Mr. Thrasher, an attorney, stressed it along with several other campaign planks in his contests with Mr. FRAZIER, a 14-year veteran in Congress. In both races the upstarts received considerable assistance from labor unions and members of local "senior clubs" affiliated with the National Council of Senior Citizens. Two days before the election, the Railway Labor Political League withdrew its endorsement of Mr. FRAZIER because he opposed the Social Security route.

DOCTORS BACKED INCUMBENTS

The medical profession generally was strong for Messrs. FRAZIER and LOSER and many individual doctors worked for their renomination. In some instances notes were included with patients' bills urging support for the incumbents. Some doctors made speeches to civic groups, and Thrasher forces reported finding pictures of Mr. FRAZIER on the walls of some doctors' offices, "I've never seen such a militant group working so hard for a candidate," Mr. Thrasher remarked.

There were, of course, other issues that figured in both races. Mr. FRAZIER appeared to have been hurt by his support of the Kennedy administration's tax revision plans including the proposal for income tax withholding from dividend and interest payments. Mr. LOSER's absenteeism from his district hurt his campaign.

While Mr. Thrasher supported the administration's position on medical care, he did not run as a 100 percent New Frontiersman, stressing his disagreement with some of the measures advocated by the administration. But Mr. Fulton did run as a full-fledged Kennedy Democrat, telling voters he embraced the program laid out in the Democratic Party's 1960 platform.

THE KERR-MILLS ACT—WHAT IS SO BAD ABOUT IT?

Mr. MILLER. Madam President, in the Monday, June 25, issue of the Christian Science Monitor, the lead editorial, entitled "What's So Bad About It?" discusses the Kerr-Mills Act and some of the differences between the Kerr-Mills Act and the Kennedy medicare program. The editorial also brings out a thought which I think should be passed on to our people. The thought is expressed as follows:

> Has that society—

Namely ours—

> come so far from concepts of individual and family responsibility that it prefers to rely on a supposedly impersonal, but potentially political, Federal mechanism to do on an indiscriminate scale what State and local agencies can do with more precision and flexibility?

I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT'S SO BAD ABOUT IT?

Naturally, for its purpose, the staff report of the Senate Committee on Aging makes as bad a showing as it can for the operation of the Kerr-Mills Act, adopted by Congress in 1960 to assist States in providing medical care for the elderly.

The main function of the committee and its staff since its inception has been to provide arguments in favor of the Forand bill and now the King-Anderson bill for hospital care through the social security system.

The chief indictment hurled is that, in each of the 24 States thus far cooperating, the State giving Kerr-Mills aid requires the applicant to undergo a means test, an investigation of income and assets, before receiving assistance.

What is so wrong about this? The social security system applies means tests. Up to $4,800 a year, it collects its payroll tax according to what an employee earns and what an employer pays. If a beneficiary under 72 earns more than $1,800 a year he forfeits his payments.

Labor unions employ a kind of means test when they argue that because a certain company makes large profits it can pay a higher wage. Would they want a wage level established at which every firm in an industry could be assured a profit, with no questions asked about its management?

The proponents of hospital care on social security are asking the United States to set up a large and expensive bureaucratic system to assure benefits to every covered person, indigent or affluent, "as a matter of right." This could prove to be a luxury purchased at the cost of many sacrifices made as a result of the payroll deductions.

Particular exception is taken in the committee staff report to the fact that nine States "have recovery programs extending to the homes of people receiving help and collectible after death." Also to the fact that 12 States apply family responsibility provisions under which children, if able to do so, are expected to contribute to their parents' support.

Actually the relief lien is one of the most practical plans under which people in need but who own their homes can be given assistance while in possession and enjoyment of their homes. They can feel that to this extent they have provided by their own thrift for this need.

And is any injustice done by enforcing the lien after the recipients of the aid are gone? If they have no immediate heirs, no one is deprived. If children or other near relatives have been spared a serious expense, should the State pass along intact an inheritance to them while it waives its own claim?

These practices are not nearly so black as they have been painted. They are methods which may be ill administered on occasion; but so may a more massive "insurance" program. They are processes which have the imprint of commonsense and by which American society has done extremely well for those who depend upon it.

Has that society come so far from concepts of individual and family responsibility that it prefers to rely on a supposedly impersonal, but potentially political, Federal mechanism to do on an indiscriminate scale what State and local agencies can do with more precision and flexibility?

LACK OF PROGRESS IN THE ALLIANCE FOR PROGRESS PROGRAM

Mr. MILLER. Madam President, in yesterday's Wall Street Journal the lead editorial entitled "No Cause for Celebration" comments on the frustrating lack of progress in the Alliance for Progress program. The editorial criticizes the policy of our Government of encouraging development in the underdeveloped countries through socialism or state planning, which, unlike the capitalistic economic system, tends to stifle initiative and ignore the wants of the consumer.

I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Aug. 6, 1962]

NO CAUSE FOR CELEBRATION

No fanfare will mark the first anniversary of the signing of the Alliance for Progress charter this month. The reason candidly given by Alliance Director Moscoso is that there is little if anything to celebrate about a program facing obstacles that "are staggering and frustrating almost beyond endurance."

The Alliance, which is the Latin American facet of our bounteous foreign-aid efforts, has indeed suffered from excessive fanfare. But, as is the case in the rest of the underdeveloped world, that overselling is only symptomatic of more basic mistakes. The most basic of all, we believe, is a failure of economic understanding in Washington.

With or without U.S. aid, the obstacles to economic progress in a Bolivia or an India would be "staggering and frustrating." Mass poverty, illiteracy, sickness, lack of skills, populations growing so fast they eat up any gains—these are among the more notable impediments. They are not of America's devising and in their nature they are beyond America's power to cure.

Yet successive U.S. Governments of both political parties have tended to compound the difficulties of development. It is as though, in a magnificent irony, the American officials have sternly put aside the experience of the United States itself in developing from nothing to the richest economy in history. Instead they advocate a species of socialism or state planning that never yet has met the tests of economic development.

In part, of course, this defect is political. The United States sometimes, as in Latin America, aids a particular government out of fear that a successor government might be worse. Besides, it is easier for the U.S. administrators of aid to deal with governments than with people, and the two are by no means synonymous. Since the ends of economic development are not served, though, this seems shortsighted even as a political policy.

But in large part the direction of our aid is governed by economic theory. It has become a kind of gospel that underdeveloped nations must go in for planning on a scale not so far countenanced in this country. Our Ambassador to India, for example, is an advocate of planning and general aggrandizement of the "public sector," and he does advocate it in India.

Here is how one Indian commentator views Ambassador Galbraith's proselytizing; in an article for distribution in India, the eminent economist B. R. Shenoy observes:

"The logical basis of Professor Galbraith's conviction, which is widely shared in India, is simple. A country facing the problem of lifting itself from poverty and providing a better life for its people would be condemned to frustration 'without planning'; from the 'discontent' born of the tyranny of unrelieved poverty they might fall an easy prey to the promises of communism. This danger can be averted by a 'proper planning of its resources'."

Unfortunately, as Professor Shenoy notes, state planning is not the way to eradicate poverty. Its controls and bureaucracy stifle initiative; its emphasis is customarily on heavy industry projects. The realistic hope of development is first to encourage the buildup of agriculture and consumer-goods industries; in short, it is to set out to make the consumer king instead of the state, because in that way it is possible to generate the capital for internal development.

Whatever the possibilities for development in some of the backward areas, it is a strange business for the United States to insist on exporting statism, to the tune of scores of billions of dollars over the years and over the world, rather than the consumer revolution whose workability its own experience attests.

So long as that is the policy, we fear that neither the Alliance for Progress nor the rest of the foreign aid program will soon offer cause for celebration.

SOCIAL INJUSTICE IN INDIA

Mr. MILLER. Madam President, in the July 16 issue of the Wall Street Journal, tied in with the editorial to which I just referred, is an excellent article by B. R. Shenoy and Patrick M. Boarman entitled "Social Injustice in India," pointing out that one of the effects of the socialistic program in India has been an adverse effect on the economic growth of the country.

I should like to read a brief portion of that article. At the conclusion the article states:

> Statist policies have led to Himalayan concentrations of economic power in the Indian Government. All imports, most exports, and the bulk of investment resources are subject to state control and direction. This has endowed privileged groups of people—state functionaries—with arbitrary power (including police power) over the employment, the livelihood, and the well-being of virtually the entire nation.

For all these reasons the present policies being pursued by the Indian Government are likely to perpetuate social injustice.

I ask unanimous consent that the article be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Wall Street Journal, July 16, 1962]

Social Injustice in India—It's Increased, Not Eliminated, by the Efforts of Planners

(By B. R. Shenoy and Patrick M. Boarman)

(Mr. Shenoy is director of the School of Social Sciences at India's Gujarat University, while Mr. Boarman is associate professor of economics at Bucknell University.)

Concern for social justice dominates the practice of economic planning in India. The planners have set themselves the fourfold task of abolishing poverty, liquidating unemployment, increasing the rate of industrialization, and establishing a Socialist society.

In this society, so it is believed, economic power will be dispersed rather than concentrated, the distribution of income will be equitable, and talent will not be stifled for lack of opportunities and rewards. These objectives constitute a large part of the concept of social justice as currently understood in India.

But there is an ominously large gap between theory and reality, between wish and fulfillment. Will the methods now being used by the planners achieve social justice in any meaningful sense? In attempting to answer this important question, it is necessary to consider in some detatil the performance of the Indian economy to date.

What must be made clear, in the first place, is that a mere piling up of output, regardless of its appropriateness to actual consumer needs—whether the consumers in question live in India or in countries to which she exports—cannot abolish poverty. Even where full employment exists, a nation will remain poor if the bulk of its resources are used to erect great pyramids, forts, or palaces, as in some earlier civilizations, or are diverted to the construction of mammoth river valley and power projects, steel plants, heavy engineering products or heavy chemicals, as is the practice in many underdeveloped countries today.

Abolition of poverty means raising the living standards of the people. To raise living standards, economic activity must be geared to producing the consumer goods needed by the people. In the Indian case, the resources of the nation should be directed to the production of necessaries such as food and cloth. The urgency of the situation in India is reflected in the fact that the country's consumption of food grains is well below the nutritional norm of 18 ounces per head per day, while the consumption of cloth is deplorably substandard.

The method which experience shows is best calculated to insure progress in overcoming poverty simultaneously with the expansion of production is unfettered consumer sovereignty over production. When economic activity is subject to the sovereignty of the consumer, it naturally serves his needs, for his daily purchases in the market steer productive resources in directions appropriate to his preferences. If the sovereignty of the consumer over the economic system is tampered with, there is less guarantee that the consumption of the people will increase with increases in the national product. Typically, the consumption needs of the people are among the first things to be sacrificed in a statist economy, though statist slogans deify the "public good."

As a result of the acceleration of economic planning in India after 1955, the gross national product rose in 6 years by 22 percent. But per-capita consumption of food grains and cotton cloth fluctuated downward: The former was 15.7 ounces per head per day in 1954, but only 15.4 ounces in 1960; the latter was 14.63 meters in 1955 but only 14.36 meters in 1959.

How did this contrary movement in the people's standard of living and in the national income statistics come about? The answer is readily discoverable. Investment activity in India is guided in the first instance by the needs of the state (as determined by the planning commission), and only secondarily and partially by reference to the needs of consumers.

LIVING STANDARDS REMAIN LOW

In the second 5-year plan (1956–61), the public sector appropriated 58 percent (46 billion rupees) of the available investment resources for the production of capital goods, intermediate products, and social overheads. The corresponding figure in the third plan is 66 percent (80 billion rupees). A share of the remaining resources is also directed arbitrarily into capital goods production by virtue of the government's existing controls over securities issues and import licensing, and its power, in consequence, to control the establishment or expansion of most industrial undertakings. Because of the increasing divorce of production from consumer needs, the living standards of the people have remained at low levels despite substantial increases in the gross output of the economy.

Government control of investment means that justice to consumers will be indefinitely deferred, given the insatiable demands of the public sector. The outlay of 19.6 billion rupees for the needs of the public sector in the first plan was more than doubled in the second plan (46 billion rupees) and more than quadrupled (80 billion rupees) in the third plan.

Seemingly inherent in the statist economic system is a built-in investment accelerator akin to Parkinson's law. The larger the volume of government investment today, the larger it will be tomorrow. In Russia, after 45 years of planning, acute scarcities of meat, clothing, shoes, and housing persist because of the unabating demands of heavy industries, mammoth power and irrigation projects, rocketry systems, nuclear weapons, and space science. Though it may take less time for an industrial system to grow from sputniks to socks than from socks to sputniks, under planning, socks seem to receive too little attention all the time.

Social injustice is writ large in the trend of the Indian pattern of production. During the decade ending in 1960, the output of capital goods increased as follows: Machine tools, 2.2 times; commercial vehicles, 4.1 times; coal, 1.6 times; caustic soda, 9 times. By contrast, the output of consumer goods used by the lower and the middle income groups rose by much smaller multiples: Matches, 1.1 times; cotton cloth, 1.4 times; soap, 1.8 times.

WELL-TO-DO BENEFITS

The needs of the comparatively well-to-do people, a fraction of the population, have been very well looked after, however. The output of goods entering into their consumption, which are mostly curios to the masses, rose steeply: Electric lamps, 2.9 times; electric fans, 5.1 times; radios, 5.9 times; sewing machines, 9.6 times, and rayon yarn, 21 times.

Social injustice is reflected, too, in the price structure. The output of consumer goods in common use is abnormally restricted by the forced transfer of resources into nonconsumer goods industries. During the past 6½ years, the prices of nongrain foodstuffs rose by 48 percent, grains by 53 percent, and textiles by 28 percent. The prices of luxuries and semiluxuries, on the other hand, remained comparatively steady until recently, when some relatively slight increases occurred.

We have here a case of double injustice. The money incomes of those in the lower and middle income categories have risen but slowly, whereas the incomes of the remaining groups of traders, businessmen and industrialists—a thin upper crust of the community—have gone up much faster, perhaps by several times the rise in the incomes of the lower classes. Moreover, the poorer people are required to pay a substantially larger share of their increased income for their basic needs than the well-to-do classes pay out of their increased incomes for luxury and semiluxury commodities. This would seem to be a queer road to the goal of social justice.

MAXIMIZING OUTPUT

Social justice through the liquidation of unemployment demands maximization of output from the available resources. And since expansion of employment rests on the expansion of aggregate production, not in increases in the volume of investment alone, the aim of policy should be to maximize the size of the national product, whether this be intended for domestic use or for export.

There are two factors to be considered in selecting the appropriate socio-economic model needed to maximize the national product. There is, first, the prevailing pattern of production and the occupational pattern corresponding to it. Fifty percent of Indian national income is derived from agriculture and 70 percent of the population draws its living from this pursuit, with manufacturing industries accounting for less than 20 percent of economic activity. Peasant farming dominates agriculture, the number of farm families being 67 million and the average holding per family 5.5 acres.

The rest of the economy, too, has tens of millions of independent production units. Cotton textiles, which account for 38 percent of industrial activity, comprise 2 million hand looms, 80 to 90,000 power looms, and 478 large scale mills. This occupational structure cannot change or be changed overnight. It is a structure, moreover, which rules out control of investment and production by a central planning authority. This leaves the modernization of agriculture as the only effective alternative means of increasing production.

But even more fundamental issues must be faced if social justice in real terms is to be realized. Each consumer represents a unique and changing structure of values and demand. It follows that where the market consists of several hundred million consumers, output must consist of an innumerable and everchanging variety of wares.

Demand may be satisfied and production may be organized in manifold ways. The demand for wearing apparel, for instance, may be met from several varieties of cloth, and cloth may be produced in various ways. This necessitates on-the-spot attention to demand. Optimum results in production, as far as consumer satisfaction goes, are achieved by the voluntary cooperation of innumerable independent entrepreneurs via the market mechanism, not by statist planning. This is especially true with respect to those processes of production which serve for the direct satisfaction of the ultimate consumer.

During the past decade, the Indian Government has utterly disregarded both of these policy guides. To the accompaniment of high-sounding slogans and pretentious oratory, economic activity is regimented in ever greater degree. Unconscionably large amounts of investment resources are forced into the public sector and the nonconsumer trades as a result. Heavy industries are promoted at the expense of consumer goods industries and both are favored at the expense of agriculture, though it is in agriculture that production and employment potentials are the highest.

It is consequently no cause for surprise to learn that, despite phenomenal expansion of investment, Indian national income rose, from 1955 on, at an annual rate of but 2.9 percent; that unemployment rose from 5.3 million at the close of the first plan (1956) to 9 million at the close of the second plan (1961) and might be as much as 12 million at the close of the third (1966). Under policies of economic freedom, national income might have risen at an annual rate of 9 to 10 percent and unemployment, instead of mounting, might have declined and in due course disappeared.

LESSONS OF HISTORY

Indian experience confirms the lessons of history. Revolution in agriculture has nearly always preceded industrial revolution. Progress in lighter industries has nearly always preceded the development of heavy industries. The growth of agriculture provides a broadly based demand for the output of industry, and the growth of lighter industries provides an assured demand for the output of heavy industries. This pattern of economic development, in which one sector aids the progress of the others, makes for rapid but painless growth, because it avoids the colossal waste of resources which results from central planning of the Indian type.

These considerations suggest that the surest road to maximum economic progress and maximum social justice in an underdeveloped economy is the promotion of economic freedom coupled with emphasis on the development of agriculture and the consumer goods industries, with the heavy industries receiving attention thereafter.

The view that heavy industries "stimulate" development "all around" is a popular delusion. Genuine economic growth depends upon investment of savings in the most efficient sectors of the economy. Savings increase with income, not with the growth of heavy industries. Logic and experience show that in underdeveloped economies, incomes increase fastest where agriculture is modernized and the lighter industries promoted. Where the bulk of the underdeveloped economy's resources are diverted to heavy industry, economic and social progress will be retarded since the income and employment potentials of this sector are generally the lowest.

A major error is to suppose that a policy of economic freedom will lead to capitalist exploitation of the weak and hence to social injustice. This view, which is extensively held in India, is logically untenable and historically untrue. There is no better protection against exploitation—of workers by employers and of consumers by producers—than the ever-vigilant twin tribunals of the price system and competition. For they are continuously in session requiring competing entrepreneurs continuously to justify their prices, the quality of their goods, their wage payments and their other costs.

PROTECTION FOR EXPLOITERS

If the tribunals are supported by the rule of law—a prime responsibility of the State—the essential prerequisites are established for the realization of economic and social justice. On the other hand, tampering with the functioning of these tribunals or with the rule of law will expose the weaker sectors of the community to the forces of exploitation; where statist controls over economic activity predominate, the State, in effect, provides legal and police protection to the exploiters.

The economic aberrations and inhumanities of feudalism, colonialism, and monopoly capitalism cannot be attributed—as the advocates of interventionism and collectivism so often attempt to attribute them—to the competitive free market economy. The latter, as Prof. Lionel Robbins has pointed out, "is not a plan that has been tried and failed. It is a plan that has never yet had a full chance." The Erhardian system of West Germany (currently being copied in other European countries, in Japan, and elsewhere) represents perhaps the closest contemporary approach to a genuinely competitive market economy. And the success of the German experiment has been universally acknowledged, if not everywhere applauded.

It is unfortunate that the statist system, despite its false theoretical foundations and the mounting empirical evidence against it, should be in such great vogue in underdeveloped economies. For it is precisely in such countries, with their characteristic lack of savings and of technological know-how, that the need for a competitive free market—which alone can direct scarce resources to the maximization of consumer welfare—is greatest.

Statist policies have led to Himalayan concentrations of economic power in the Indian Government. All imports, most exports, and the bulk of investment resources are subject to state control and direction. This has endowed privileged groups of people—state functionaries—with arbitrary power (including police power) over the employment, the livelihood, and the well-being of virtually the entire nation.

For all these reasons, the present policies being pursued by the Indian Government are likely to perpetuate social injustice. There can be not better guarantor of genuine social justice than the policies of economic freedom such as have been applied in the Common Market countries and in Japan. In these countries, state planning is confined to its natural and exceedingly important role in the framework of the market economy of assuring the conditions which make such an economic system viable. Social justice pursued after the manner of the Indian planners becomes a will-o'-the-wisp which is always frustratingly in sight but never attained.

PUBLICITY OBSESSION OF KENNEDY

Mr. MILLER. Madam President, in the August 3 issue of the Des Moines Register, the distinguished columnist, Arthur Krock, has an article entitled "Publicity Obsession Weakens Kennedy?" in which Mr. Krock joins the list of the disenchanted, independent-thinking members of the press corps who are concerned over the efforts by the White House to unduly influence the free press in seeking to mold public opinion to conform to a preconceived image of what it should be. With his characteristic perception, Mr. Krock shows how the publicity obsession has made for lack of decisiveness and for inconsistency in statements by the President, such as the indecisiveness pointed out by the distinguished Senator from New York [Mr. JAVITS] earlier today. I ask unanimous consent that this excellent article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Des Moines Register, Aug. 3, 1962]

PUBLICITY OBSESSION WEAKENS KENNEDY

(By Arthur Krock)

MIDDLETOWN, R.I.—A participant in the great affairs of government has identified one root of President Kennedy's troubles as follows: "Indecision between hard choices of acts and policy, and an inordinate concern over how commentators will react to things done or contemplated." This personage has a rare and constant opportunity to observe Kennedy in the awesome process of making up his mind.

The Washington dispatches have told and are telling the story of indecision when they have not been telling of decisions revamped from the old ones which the President in 1960 vowed he would replace with fresh new ideas that would move the United States and the world into "forward motion" again. But what has not yet been established is whether the flaw of indecision is congenital that he first depressingly revealed when, at the point of landing in Cuba, he, withdrew from the anti-Castro expedition the U.S. military supply and transport he had given the invaders and his own chiefs of staff every reason to count on.

PRESIDENTIAL UNCERTAINTY

The President has ample time, and an abundance of the gifts of nature and fortune, to demonstrate that this flaw is not inherent. The highest interests of the United States and the world, not to mention the Democratic Party, require that he shall.

But successive displays of Presidential uncertainty, repeated firm avowals of fixed positions followed by open retreats, have surrounded him with an atmosphere of ineffectiveness in political achievement both at home and abroad.

AGGRESSION CONDONED

In matters of foreign policy, the President has asserted fidelity to the basic principle that the U.S. would never assist or even countenance annexation by external aggression or threat of it. Nevertheless the administration was the active agent in helping Indonesia to annex Dutch West Irian, to which it has neither an ethnic nor historical claim.

The administration has been the principal backer and banker of the U.N.'s bloody military intervention to forestall the Congo confederation system which the other leaders promised Moise Tshombe at Tananarive, then repudiated and now have been compelled to promise him again.

On the domestic front President Kennedy has frequently abandoned legislative provisions which he, or his spokesmen, or both, had constantly asserted were indispensable to the attainment of the objectives.

Two examples are the administration drafts of the measures for unconditional U.S. purchase of U.N. bonds and for setting up under Social Security the medicare system without allowing individuals the option to use private health services. But when Congress insisted on fundamental modifications of both measures the President readily found the indispensable was dispensable.

FALTERED UNDER THE SPOTLIGHT

It is old stuff for Presidents and their spokesmen to draw terrifying pictures for Congress and the people of the consequences of altering a line in an administration legislative draft, to use their unmatched publicity channels to aline public opinion behind them and, failing in the attempt, to consent to what they swore they never would. But few had faltered in the full view of audiences they diligently had assembled on promises to show how tenacious they would be in battle.

It is this very buildup of himself, beginning with the charges that lack of leadership and tenacity by Eisenhower had brought the nation to a standstill and damaged its world prestige, that has thrust Kennedy's faltering into glaring and adverse spotlight.

PRESIDENTIAL OBSESSION

This buildup by publicity has become a presidential obsession, and it is shared by the advisers who seem to have the most influence with him. A natural result has been concentration on what is written and broadcast about Kennedy personally and subordination of much more important considerations. These advisers, because an unusual number have been drawn from classrooms, are among the most articulate and communicative propagandists that have ever dealt with the press in Washington.

The paradoxical result has been that the President and they have become victims of their own drive for everfavorable publicity. Even his most responsible surveys before action, such as that dealing with tax reduction, are open to the impression that they are aspects of the indecision he has in other instances revealed.

LEGISLATIVE AND EXECUTIVE BRANCHES OF THE GOVERNMENT ARE INDEPENDENT

Mr. MILLER. Madam President, in the July 29 issue of the Des Moines Register, its noted Washington correspondent presents another aspect of the shortsightedness which has characterized the White House in recent months. This is, as Mr. Wilson states, that the President is supposed to impose party discipline to force Congress to do his bidding—in the same manner that the Prime Minister is supposed to be able to have the House of Commons enact a program. The White House forgets that in the American form of government the legislative branch is a separate and independent branch of the Federal Government—or at least it should be. I hope that the voters will make this very clear this fall by rejecting those congressional candidates who ask for their votes on the blind, unthinking excuse that they propose to rubberstamp everything the executive branch of the Government directs them to enact. I ask unanimous consent that the Register article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Des Moines Register, July 29, 1962]

Congress Complaints Against Kennedy

(By Richard Wilson)

Washington, D.C.—Congress can be and often is, balky and mulish, especially when driven too hard from the White House. The plain fact of the matter at this particular moment is that many congressional leaders have very little respect for White House officials, many years their junior, who are trying to sit in the driver's seat.

But this is not all. Congress as a whole lacks confidence in the methods and measures proposed, entirely aside from annoyance with the juniors in the White House who rehash and rerun old ideas as if they were brilliant new conceptions.

This is quite exasperating to oldtimers in Congress who have been through all this so many times before. The Kennedy people are trying their best to innovate. But they progress slowly through the various pre-natal stages and have not yet arrived at a maturity of ideas which could be described as truly modern.

It is absolute doctrine, for example, that a reduction of taxes and an increase in deficit spending, will produce magical results in the economy, though there is much modern evidence to the contrary.

It is absolute doctrine also that cradle-to-the-grave social security and medical care is the pattern of the future, though the new development in a modern industrial society is the large growth of private pension and medical care programs.

Now, it is coming to be Kennedy doctrine that the U.S. Congress is not representative of the people, is overburdened with conservative and rural representation and stands in the way of progress because of a hateful combination of Midwestern Republican and Southern Democratic Members.

CONSERVATIVE REPRESENTATION

In some circles it is accepted as divine truth that if there were a square deal in congressional representation there would be a vast upsurge in liberal sentiment in Congress. A detailed and careful study by the private publication, Congressional Quarterly, has exploded this myth.

What seems to be nearer to the mark about Congress, particularly the House of Representatives, is that it is under the control of its senior Members who have had many years of experience. They have dealt with many Presidents, considered many reforms, survived many crises. It is said of these seniors that they are inbred conservatives mainly from the South when the Democrats are in power, and for the Midwest when the Republicans are in power. This is considered in some way to be reprehensible.

These experienced Members are no less concerned with the national welfare than newer Members and no stupider.

President Kennedy has adopted an insupportable attitude toward Congress on the issue he chooses for a big national test, the medicare question. It is his contention that the Republicans and a handful of Democrats killed the bill; therefore it is necessary to replace the Republicans.

However, Kennedy passes over as not worthy of comment the central fact that Senator Robert S. Kerr, the wealthy Oklahoma Democrat, led the opposition to medicare. Kennedy has been showering Kerr with blandishments.

Nor does Kennedy comment on the opposition to medicare of the best man at his wedding, Senator George Smathers, Democrat, of Florida.

SEES ADDITIONAL CONTRADICTIONS

Kennedy's position is insupportable in other ways. He thinks that just a little swing toward the Democrats in the congressional election will change the whole atmosphere in Congress. This would change Senator Harry Byrd, Democrat, of Virginia, or frighten Senator Herman Talmadge, Democrat, of Georgia.

But, beyond all these contradictions, the most insupportable aspect of Kennedy's position is that he can impose party discipline, as in the House of Commons, to force Congress to adopt his programs. Congress is not and never was intended to be the instrument of the political party in power in the White House. It is a separate branch of the Government.

WRONG REMEDY AT WRONG TIME

All this grows from a misconception of the function of Congress, and of its real makeup. This should be borne in mind when President Kennedy starts to campaign this fall to defeat Republicans who opposed medicare and elect Democrats who will support it, presumably ignoring both the Republicans who support medicare and the Democrats who oppose it.

Kennedy is involved in many contradictions, not the least of which is that he is applying the wrong remedy at the wrong time. He has a better remedy, which is to submit to Congress sounder programs in the field of medical insurance, urban improvement and reform of the agricultural laws looking toward the ultimate restoration of a free market.

The President could make a start toward remedying his problem with Congress by submitting legislation which can be adopted rather than used merely to sharpen up political issues

BUSINESSMAN'S ROLE

Mr. MILLER. Madam President, two other excellent articles by Mr. Wilson merit attention. I refer to one entitled "Businessman's Vital Role Is Told," appearing in the July 18 issue of the Des Moines Register, and another entitled "Suggests Steps To Cut Spending Abroad," appearing in the July 22 issue of the Register.

The first article wisely points out that social services cannot exist long without flourishing business, and that until our Government faces up to the need to ease the cost-price squeeze of private business, to make meaningful tax cuts, and to restore margins of profit, private enterprise will not be able to create the job opportunities we need to have a sound economy, or, Madam President, to achieve the income upon which to pay the income taxes needed to finance the necessary progressive programs of our Government.

In the second article, Mr. Wilson calls for a serious, sustained drive to reduce expenditures for foreign aid, military assistance, and maintenance of U.S. troops abroad as a means of relieving our serious balance-of-payments deficit. I ask unanimous consent that these two articles be printed in the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Des Moines Register, July 18, 1962]

Businessman's Vital Role Is Told

(By Richard Wilson)

Washington, D.C.—The Government's tax cut—really a postponement—to stimulate new investment in plant and machinery by American business brings to attention certain realities which are not commonly understood. Maybe they never will be understood in this generation, heavily indoctrinated as it is by the common-man emotions so badly outdated by the sweep of events.

Every advanced and sophisticated government is vitally concerned with increasing the investment of risk capital by private corporations and individuals and with the modernization of plant and equipment.

Some governments are more concerned with these problems now than with the extension of social services, benefits, guarantees and cradle-to-the-grave security for the common man, the AFL–CIO notwithstanding.

Lavish social services cannot exist long without flourishing business, while the earth's tenants multiply and remultiply to demand more and more government services. Government cannot supply this demand except by taking the funds to supply it from those who work and invest. If everyday life were to be reduced to the simplicities of 200 years ago, where would the funds come from for national social services?

IN UNITED STATES, IT'S 74 PERCENT

The Socialist countries of Western Europe seem to understand this better than it is commonly understood in the United States. One proof of this is the eagerness with which the Socialist governments have extended to private enterprise tax benefits which are not yet available to American business.

In Sweden, for example, manufacturers can write off for tax purposes 100 percent of their investments in plant and machinery in 5 years. The same is true in Italy and, for all practical purposes, in Belgium. In France three-fourths of the cost can be written off in 5 years, and in Britain two-thirds.

Under the new guidelines announced by the Treasury the average writeoff in the United States in 5 years is expected to be about 60 percent. If the 7 percent tax credit for investment is passed by Congress, the average total writeoff from both sources would be about 74 percent.

Why are these tax benefits granted? They are granted to give industrial managers and investors the courage to lay out their capital because they know they can recover it through tax reduction at a fast rate. Over any long term in an established business the tax liability will still remain, for depreciation runs out finally and then there is none to charge against income. This too, may force industrial managers to make new investments for the improvement of their processes.

THEY NEED THAT FELLOW

But for the time being governments desperately need the expansion of private enterprise which can be brought about by the prospect of quick recovery of capital investment. Governments need the expansion so as to increase the standard of living and remove possible threats to the stability of the government.

So it comes back to the businessman again, that fellow who is accused of gouging the public, hogging profits, living it up at the club, and exploiting the common man. Governments have found that they cannot get along without this troublesome fellow. They need him to create more jobs and more national income and to manage the everyday working of the economy so that the national income will rise. In fact, governments are very interested in having him make a profit so that there will be a substantial tax rise from which to draw revenue to operate the government.

The next step is clear, if the Government will only take it. Business expansion is retarded by a steady decline in the margin of profit. The margin is squeezed by increasing costs of manufacture and doing business in which the cost of labor is the major factor. The same thing is happening in Western Europe.

It may be a long time coming but the Government is being forced by events to consider additional restraints on the power of labor organizations to force up the costs of labor. It will take more than exhortation from the White House.

[From the Des Moines Register, July 22, 1962]

SUGGESTS STEPS TO CUT SPENDING ABROAD

(By Richard Wilson)

WASHINGTON, D.C.—One of the ironies of modern times is that in order to reduce the flow of dollars abroad the Government has to spend more.

It costs money to buy American.

The Kennedy administration does not shrink from this, though there were other ways of reducing the gold outflow.

One of these ways was to reduce expenditures on dependents of servicemen abroad. President Kennedy reversed President Eisenhower's order for that purpose.

Another way is to reduce substantially both the numbers of U.S. troops stationed abroad and the volume of foreign economic aid.

Kennedy will not do either.

Instead, Secretary of Defense Robert McNamara is energetically trying to effect economies in the $3 billion spent abroad for military maintenance. He is ordering that supplies be bought in America at a higher cost, up to 50 percent higher, and shipped to troops stationed in some 25 localities scattered over the world.

It should not be assumed that the $3 billion is the total cost of our oversea commitments. This is merely the sum which has been spent in foreign countries for maintenance. The total cost runs far above $3 billion. McNamara is trying to reduce to a level of $1 billion the amounts spent in foreign countries for supplies, housing, and other support for our troops.

If he can do it, he will have importantly reduced the claims on America's dwindling gold supply. All of this illustrates the unaccustomed position America finds herself in.

It is a change which is widely noted among the Government's financial experts but little talked of elsewhere. Our policies have become subject to scrutiny by the international banking community. We have to pay attention to the opinions of bankers in Zurich and Basel. They can pull the plug on the gold supply which underpins the dollar as a world currency.

STRANGE PROBLEM FOR A PRESIDENT

The mighty United States with its once invincible currency has had to go hat in hand to the International Monetary Fund for permission to borrow from that fund, if necessary, to support the wobbly dollar.

President Kennedy cannot, as a matter of prudence, initiate domestic and foreign fiscal policies without regard for the reaction of bankers in Zurich, Basel, Bonn, Paris, and London. This is a strange and unfamiliar problem for a President of the United States in this century.

It is wholly due to huge expenditures for foreign aid and for defending the free world's outposts. As a trading nation we are not doing badly. The problem is that we pile on top of our advantageous export balance the immense foreign expenditures for which there is little return, and we end up with a big deficit in our international balance of payments.

It is a deficit that affects the stability of the dollar, for, potentially, those bankers in Zurich and Basel can arrange to have their credits at the Chase National Bank, and elsewhere, converted into demands for American gold.

Even as it is, the gold is flowing out (recently at a reduced rate) in a volume that seriously and immediately endangers the value of U.S. currency. The wise men of Wall Street are saying that the United States will inevitably have to devalue its currency though President Kennedy has made a public international political commitment not to do so.

PROPOSALS ON AID NOT ACCEPTED

Since the nature of the problem is so well known, it is surprising that more determined efforts are not made to reduce the volume of foreign aid. In the present atmosphere, even to suggest this tentatively arouses the suspicion that he who suggests it must be a secret member of the John Birch Society.

The reply of high administration officials on reducing aid is instantaneous: No, it cannot be done. There are too many Vietnams over the world. But it is recalled that at the inception of the Eisenhower administration in 1952 the stated aim was a steady reduction to the vanishing point of foreign aid; in fact, an administrator was appointed who had a long record of opposing foreign aid. The original Eisenhower objective was soon forgotten.

General Eisenhower recently suggested a reduction in military spending. Again the Kennedy answer was "No." Kennedy officials did not doubt that Eisenhower had in mind ground troops some stationed abroad.

COUNTLESS CASES OF AID WASTE

It is common talk in Washington that the foreign aid program is a mess. Countless examples of waste have been pointed out. Doubts on projects such as the Volta Dam in Ghana are usually resolved in favor of the project. The Kennedy brothers wanted, and still want, more hardheaded administration of the program; one administrator was removed because he was thought to be too easygoing.

Instead, however, of really serious and determined efforts to cut the volume of foreign aid, we are resorting to gimmicks like McNamara's current plan which cannot help but cost more money though it does alleviate the gold outflow problem.

What is called for now is a serious, sustained, Government-wide drive to reduce expenditures for foreign aid, military assistance and the maintenance of U.S. troops abroad.

The alternative in a year or two could easily be a practical devaluation of the already shrunken dollar which would automatically have an effect on the American standard of living.

THE NOMINATION OF THURGOOD MARSHALL

Mr. JAVITS. Madam President, tomorrow the Senate Judiciary Committee will resume hearings on the nomination of Thurgood Marshall to the Court of Appeals for the Second Circuit. This is the circuit, part of which I have the honor to represent. These hearings have dragged on since October of 1961, when Mr. Marshall was named by President Kennedy.

I urge the committee, in the name of justice and the national interest, to report favorably Judge Thurgood Marshall's nomination. The delays before the committee have left in abeyance the confirmation of the nomination of a jurist whose abilities, qualifications, and experience are beyond question.

The dalliance before the committee with this important judicial appointment is intolerable, and I feel the Nation should insist that this hearing tomorrow shall be the last one, and that the committee shall take action to report the nomination now.

I point out to my colleagues in the Senate two matters which are very important by way of comparison.

Judge William H. Cox, of Mississippi, was nominated June 20, 1961, and his nomination was confirmed by the Senate on June 27, 1961—7 days later. Mississippi is the home State of the chairman of the Committee on the Judiciary.

Judge J. Robert Elliott, of Georgia, who has attained national prominence in presiding over the current Albany, Ga., cases, was nominated January 23, 1962, and his nomination was confirmed by the Senate on February 7, 1962—2 weeks later.

Yet the reporting of the nomination of Judge Thurgood Marshall has now been delayed for 10 months. To what other conclusion can we come than that delaying tactics are being used?

My able colleague from New York [Mr. KEATING], a member of the Committee on the Judiciary, last week stated to the Senate that he was considering making a motion to discharge the Committee on the Judiciary from the further consideration of Judge Marshall's nomination. I wholeheartedly support Senator KEATING in this contemplated acmittee on the Judiciary from the further the ends of justice. I shall do all in my power to see to it that action is taken on this well-deserved nomination, if not by committee action, then by the Senate as a whole.

I pledge myself to a course of action such as that proposed by Senator KEATING and other Senators, and seasonably, so that the Senate will not adjourn sine die and cause Judge Marshall to be removed from the bench because of the lack of confirmation of his nomination. If such action is not taken by my colleague from New York and other Senators, I shall employ those techniques myself.

The Senate owes it to the country to vote on the nomination of Judge Marshall. I am confident that if it does, the nomination of Judge Marshall, who will make an exemplary judge, as he has already shown, will be resoundingly confirmed.

PACIFIC NORTHWEST POWER PREFERENCE

The Senate resumed the consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

Mr. MILLER. Madam President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MILLER. What is the pending question?

The PRESIDING OFFICER. The question is on agreeing to the amendments of the Senator from Arizona [Mr. GOLDWATER], as modified.

Mr. MILLER. Will the Chair please repeat the question?

The PRESIDING OFFICER. The question is on agreeing to the amendments of the Senator from Arizona, as modified.

Mr. MILLER. The amendments to Senate bill 3153?

The PRESIDING OFFICER. The Senator is correct.

Mr. MILLER. I thank the Chair.

Madam President, I wish to address a few remarks at this time to the bill, S. 3153, to which proposed amendments are now pending. The bill, according to its title, would "guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes."

Madam President, I oppose the bill. It is my belief that S. 3153 needs further consideration and study before the Senate is asked to act on this measure.

The bill makes no reference to construction of Federal lines from the Pacific Northwest to other regions. There is some doubt as to authorization for the construction of such lines, but this question was not considered by the committee. According to the Secretary of the Interior this legislation's purpose "is to assure consumers of electricity in the Pacific Northwest permanent priority to the electric power and energy now or hereafter generated at Federal plants in that region." To carry out this purpose the bill purports to establish a system of regional preference for all power now or ever produced in the Pacific Northwest for the benefit of all present and future electric consumers in that area as against consumers in the regions outside of that area.

This is unfair legislation and wrong in principle. Among the basic reasons why we believe this bill should not be acted upon by the Senate at this time are:

First. The concept of regional preference is incompatible with the best use of the Nation's power resources.

Second. Enactment of this legislation would serve as a precedent for similar priorities in other areas.

Third. The principle of this bill would lock in all present and future Federal power for all present and future consumers in the region of origin to the detriment of those outside the region.

I intend to comment on each of these points.

First. The concept of regional preference is incompatible with the best use of the Nation's power resources. In appearing before the Irrigation and Reclamation Subcommittee of the Interior and Insular Affairs Committee in the hearings on S. 3153, Mr. Joseph Swidler, Chairman of the Federal Power Commission said:

> We do say that in principle we are against preferences because they stand in the way of the best use of the Nation's resources for the benefit of the whole country.

On the same occasion Mr. Swidler said:

> Each time you provide for a preference, you have to provide for taking care of the other fellow too, so that I think you have here a problem of protecting the essential interests of the Northwest, while somehow, bringing the situation back to sound national principle.

FPC Commissioner, Mr. Charles R. Ross, as quoted by the Oregonian of Portland, Oreg., on June 15, took the same position saying:

> I think it could be very dangerous and would set a precedent for other areas. I don't like to see the local interest concept increased any more than it is.

According to the Portland Reporter of June 18 in an article entitled "Majority of FPC Opposes Regional Preference":

> The majority of the FPC are opposed to the regional preference clause in the bill now before Congress for protecting the Northwest against exporting of Federal power needed at home.
>
> These views were brought out late Sunday when the Commission was in Portland for the first time.
>
> Commissioner Charles R. Ross has been here since Friday and the four others, headed by Chairman Joseph C. Swidler, arrived Sunday for the start, Monday, of the Commission's tour of the Columbia Basin power facilities.
>
> Swidler indicated that he concurred with Ross who, Friday, told the City Club that water in the Columbia River belongs to the Nation, and it should not be limited to an artificial area.
>
> Though Commissioners Laurence J. O'Connor and Harold C. Woodward did not meet with the press with the others, it was indicated that they likewise did not approve of the regional preference principle.

The Administrator of the Rural Electrification Administration, Mr. Norman M. Clapp, in a speech to the American Public Power Association in San Juan, P.R., said on May 17 of this year:

> Yet we must not overlook the responsibility of the Federal Government to serve all regions. The taxes which develop Federal projects from which low-cost electricity is generated come from all regions. The ultimate benefits should be available with equal impartiality.
>
> To accept as permanent legal restrictions upon the free flow of Federal power benefits where the economic restrictions have disappeared would be an equally tragic mistake. It would not only violate the basic rights of American citizens to share in the development of their natural resources as a nation, but would also undoubtedly hamper the full utilization of the economies available to the consumer in the advancing technology of the electrical industry.
>
> We have long recognized the value of developing a free flow of trade and commerce among the States. The Constitution is expressly committed to it. The same values are to be found in the free flow of electricity from region to region. We cannot afford provincialism and parochialism in our power supply planning. We may need some temporary devices to cushion the adjustment from present patterns of marketing to the new ones soon to be available, but we must also plan ahead for the ultimate utilization of our power resources on a national—not regional—scale.

Second. Enactment of this legislation would serve as a precedent for similar priorities in other areas. At the committee hearings on this bill the chairman, the Senator from New Mexico [Mr. ANDERSON], in commenting on this point said:

> All I said is that it is a dangerous principle to start laying down that because water falls in a certain geographical area, that the people living in that State, no matter where they may be, have preference rights above what others might have gotten.
>
> I am telling you we would be in a very tough situation in the Colorado River Basin if we had to give Colorado 56 percent of all the water in the river and 56 percent of the power. There would not be much left for Hoover Dam, which would naturally dry up under those circumstances, and there might be people that would not regret that, but there are people in California who would, I am sure of that.

The Senator from New Mexico [Mr. ANDERSON] went on to say that should a "Chinese wall" be built around the Pacific Northwest by this bill, other areas would have equal claims to the construction of similar Chinese walls around them. He said:

> The statement was they did not want to build a Chinese wall around Montana, but obviously they want to build a Chinese wall of some nature. If you are going to put all these amendments in, there is not a reason why we should not have an amendment for Oregon, Washington, Idaho, if Idaho gets any power, and then we should go back and put a Chinese wall around Colorado River power that is generated at Hoover Dam.

Similar concern was also expressed by Senator J. J. HICKEY, of Wyoming, in the following exchange with Mr. Ed. Weinberg, Associate Solicitor of the Department of the Interior:

> Senator HICKEY. I have just one question. It has been suggested by the chairman, and the question is: Is it possible to so expand this particular legislation; for example, those of us who are in the Upper Colorado River Basin would have the kind of, whatever you care to call it, first preference or preference use or hold or claim on the percentage of power which is generated, for example, at the Flaming Gorge Dam?
>
> Could you prepare legislation which would give this special claim to Senator BURDICK's area in the Missouri Basin, to Senator ANDERSON in my area in the upper basin of the Colorado, as well as to the Pacific Northwest area, that is sought now by the Senators from Washington and from Montana?

> Mr. WEINBERG. As a matter of legal draftsmanship, it would be possible to prepare such legislation; yes.

Senator BURDICK, of North Dakota, also saw the potentiality of such a precedent for the Missouri Basin:

> Senator BURDICK. We have in the Missouri River Basin now not only hydropower, but we also have the possibility of thermal power.
>
> Mr. WEINBERG. Yes.
>
> Senator BURDICK. Would this preference for the region entitle the Missouri Basin to preference sometime in the future?
>
> Mr. WEINBERG. If there were similar legislation.

The concern expressed in the hearings by Senators ANDERSON, HICKEY, and BURDICK, has proved to be well founded. On July 17, Senator MANSFIELD, of Montana, introduced proposed legislation, S. 3558, which would guarantee Montana a first right to any power developed in that State. At that time he said, among other things:

> Montana is an upstream State; and, because of its developed and underdeveloped reservoir sites, it contributes a great deal in power generation and flood control downstream. Montana is a State which is just beginning to flex its muscles in its transition from a largely rural State to one with growing metropolitan areas and potential industrial development. Many of us see low-cost hydroelectric power as one of the major instruments in this development. Therefore, we have come to be sensitive about keeping a reasonable amount of the power generated at these large upstream projects for use within our own State, and not merely to permit the energy and benefits to flow downstream.
>
> This attitude may appear to be somewhat parochial, but I am sure that my colleagues here in the Senate find similar attitudes in each and every State. If they have a resource of which they are justly proud, they want to see that the major benefit is realized in their own immediate area. This statement is not being made without a full awareness of the problems that arise from regional development and cooperation. We live in a Federal system, and the interests of our sister States must be and should be considered.

This bill obviously will affect the regional priority bill now before us. Not only will it apply to Hungry Horse, already built and for which some preference has been granted to Montana, but also to authorized but unbuilt dams such as Libby and other projects now under consideration, including Paradise. It would also affect Federal hydroplants in the Missouri River Basin, including those outside of Montana.

Senator KARL E. MUNDT, of South Dakota, saw the implications of S. 3153 for the States of North and South Dakota in the Missouri River Basin. On July 13 he said:

> The principle of the public agency preference has been premised on the reasoning that since Federal power projects are financed by taxes collected from all regions, the power produced should be available with equal impartiality within as large an area as is economically feasible. S. 3153 violates this principle and attempts to give a priority call on Federal power to the immediate area in which that power is produced. If this new principle governing the utilization of Federal power is to be established for the Pacific Northwest, then it should also be established for every other Federal power-producing region in the United States. If the Senate moves to consider S. 3153 I intend to offer amendments granting all power users in North and South Dakota a first call on the power produced by our great hydroelectric projects on the Missouri River. (CONGRESSIONAL RECORD, July 13, 1962, p. 13533.)

Madam President, the distinguished senior Senator from South Dakota fulfilled that commitment by offering an amendment to the amendment offered by the Senator from Arizona in the Senate yesterday afternoon. To carry out this idea he has suggested an amendment to S. 3153 which would reserve to consumers in North and South Dakota the same protection as that accorded Northwest consumers.

The regional preference principle embodied in S. 3153 has brought forth other demands for similar protection. The Arizona Power Authority has asked Senator GOLDWATER to offer an amendment to the bill designed to extend the regional preference idea to Federal power produced in all major river basins. The Senator from Arizona took such action yesterday in offering the amendment which is now the pending business.

According to Senator GOLDWATER, the Arizona Power Authority contends:

> If regional preference as proposed for the Pacific Northwest is to become Federal policy, Arizona should be fully protected not only in the marketing of Glen Canyon power, but also in the future marketing of Bridge Canyon power as part of the central Arizona project.

According to his release—

> They pointed out that already under the marketing criteria of the Colorado River storage projects, the power produced and proposed for sale in Arizona can be withdrawn to meet demands in the upper division States of the Colorado River Basin.
>
> At the present time the large amount of the power generated at Federal hydroelectric plants located in Arizona is being exported to other areas. Areas of southern California, for example, that are completely outside the Colorado River Basin are major beneficiaries.

The Senator's release goes on to point out that under the proposed amendment:

> Power now being exported to these southern California areas would, upon expiration of present contracts be reserved for use by consumers in the basin of origin of which Arizona is a part. (Press release from office of Senator BARRY GOLDWATER, June 29, 1962.)

Still another request for similar protection was made by Representative GUBSER, of California, in a letter to Senator ANDERSON on June 18, 1962, in which he proposed establishing a regional priority for power produced in the Central Valley project in California—CONGRESSIONAL RECORD, June 18, 1962, page 10935. His proposal is that power from the Central Valley project should be subject to the same limitations as in sections 2, 3, 6, and 7 of this bill.

Representative HARRY R. SHEPPARD, Democrat, of San Bernardino, Calif., and dean of the California delegation in Congress, in a letter to Chairman ANDERSON warned:

> Policy which would be established by this legislation is not in the overall national interest and is certainly not in the best interest of my congressional district, as the attached editorial (the San Bernardino (Calif.) Evening Telegram of May 26, 1962) states:
>
> "Under such a national policy Colorado River power, now used extensively in California, could be withdrawn at the expiration of existing contracts and used exclusively in the area of the Colorado River."

Senator HRUSKA in a statement on the Senate floor on June 7, 1962, pointed out that the precedent set by S. 3153 could be detrimental to his State, Nebraska. That State has few if any hydroelectric Federal projects, but it now obtains Federal power from other States. Senator HRUSKA said:

> Most outstanding authorizations and appropriations for such projects as these were made upon the basis of justifications which included multipurpose uses and benefits which were regional in character. There certainly would be a distortion of such original authorization and appropriation to modify the course of benefits at this late date in any given situation. Naturally, if such benefits are now to be confined closely in a geographic way, there will be a great reluctance on the part of many Members of Congress to appropriate on future occasions since it would be Federal money that would be used and the benefits should be spread to as wide an area as practicable.
>
> Mr. President, let us not set region against region, watershed against watershed, State against State without thorough study, consideration and debate for the purposes of overall national policy. Let us not act piecemeal. It may be that the preference clause should be modified since, as it is sometimes argued, it gives preference to distributing systems rather than to consumers. But in a measure such as we are now concerned with, such broad considerations pro and con cannot be raised. (CONGRESSIONAL RECORD, June 7, 1962, p. 9961.)

He also pointed out that Nebraska had been subjected to a regional preference provision in the Rivers and Harbor Flood Control Act of 1959. A provision in that legislation provided that a reasonable amount of power produced at authorized projects in the Missouri Basin not yet under construction shall be made available in the State where such project is located. This was aimed at the Big Bend Dam, located in South Dakota; and it was designed primarily to preclude Nebraska from getting a large portion of the power produced at the Federal installation. Some of the comments made April 12, 1958, when the provision was debated are apropos to this bill. For example, Senator CURTIS, of Nebraska, said:

> This proviso modifies the power preferance clause. I think it should be brought in the front door and debated as such and all the equities weighted.

He said later in the debate:

> If we are to have a preference law, it should apply the same all over, in every State and to all people.
>
> This proposal establishes a precedent. It will follow that the next time preference will be given to the State in which the dam is located or so many miles from it.

Senators Humphrey, of Minnesota, Young of North Dakota, Symington, of Missouri, Carlson, of Kansas, and Thye, of Minnesota agreed with Senator Curtis in his criticism of that reservation. Senator SYMINGTON said that it was "the beginning of a leak in the dike of the preference clause." Senator HUMPHREY said that in his opinion "the language creates a change in the preference clause that can have far-reaching consequences."

The argument made by the proponents of this legislation that the Northwest is "unique" is specious. The fact that this is true has been well demonstrated by the numerous requests that have been made by other areas for similar protection. Senator MUNDT covered this point in his letter to the chairman when he said:

> Some have argued that the Northwest situation is "unique" in that the area is solely dependent on hydroelectric power. This power has always been extremely low cost power. In fact, in view of the 1961 BPA deficit of approximately $15 million, it would seem that rates charged are actually below cost.
>
> Some large power-consuming industries have undoubtedly located in the Northwest because of this low-cost power. Half of all the Federal power in the United States is located in the Northwest.
>
> However any "uniqueness" of the Northwest situation stops here. It certainly does not extend to all future Federal power installations or future power consumers in the Northwest. But S. 3153 would extend this Chinese wall to include both future powerplants and future consumers.

Madam President, in this connection I point out that the distinguished Senator from New Mexico [Mr. ANDERSON] at the committee hearings on May 21 of this year exposed the "uniqueness" argument when he said:

> The Northwest is not dependent upon hydro. It can generate all the power it wants by coal. They have just simply got a low price for hydro. We would be glad to have the same thing.

Madam President, if the entire country were to be Balkanized by legislation such as this bill, vast islands would be left with little or no Federal power available for their consumers. This situation would be accentuated and repeated many times over, should the principle of S. 3153 be extended.

Finally, Madam President, my third point is that the principle of this bill would lock in all present and future Federal power for all present and future consumers in the region of origin, to the detriment of those outside. The enactment of a regional preference bill assumes that the power facilities installed now or in the future in the Bonneville area were installed primarily for the benefit of the people living now or in the future in the Pacific Northwest. This is a false premise. These facilities were built for the people of the United States as a whole. Consumers of electricity located within economic transmission distance of these facilities have just as much right to the electric power produced at any one of these dams as have the people who are within only a mile or two of such installations. This proposed legislation assumes that it is perfectly proper to discriminate against consumers of electricity located at some distance from these projects. This is unfair and contrary to the American principles of fairness and equality.

Greatly increased demands will be made upon the taxpayers of the country to pay for the development of additional electric facilities in undeveloped hydroelectric power sites in the Pacific Northwest. Half of the entire water and power resources of the Nation are located in the Pacific Northwest. Half of all Federal hydroelectric facilities are situated here. Taxpayers throughout the country already have invested $1,700 million in Northwest power facilities. In the future this investment may well be doubled. Taxes paid by all the people build Federal power projects; so all the people should share to the maximum extent practicable in the benefits their taxes have created.

In the Pacific Northwest, according to the Federal Power Commission, there are still 37,129,700 kilowatts of undeveloped hydroelectric generating capacity. Should the Nation's taxpayers as a whole be asked to provide out of tax revenues large appropriations to develop the hydroelectric resources of the Pacific Northwest for the benefit solely of the present and future inhabitants of that area?

Madam President, I yield the floor.

Mr. MUNDT. Madam President, I earnestly hope that the U.S. Senate will not rush pellmell into approval of S. 3153, a bill guaranteeing all power users in the Pacific Northwest—both preference and nonpreference—a first call or priority on the electric energy generated at Federal plants in that region. I hope that there will not be any precipitous action on this bill, for I am fearful that many of my colleagues are not fully acquainted with the far-reaching questions involved in this bill.

S. 3153 is by no means a minor piece of legislation although we seem to be treating it as though it were. This is not just a bill to facilitate the marketing and allocation of electric energy generated at Federal facilities in the Pacific Northwest; this bill proposes a major and fundamental modification of the longstanding principle which has governed the marketing and allocation of federally produced power across the Nation. I refer to the user preference principle, under which public agencies and rural electric cooperatives have been given a "first call" or "preference" in the allocation of power generated at federally operated facilities.

S. 3153 seeks to set aside the existing preference principle for the power produced in the Pacific Northwest and to replace that traditional principle with a new arrangement, specially tailored for the Pacific Northwest, under which every user in the Pacific Northwest, present and future, would be given a "first call" on all federally produced power in the Pacific Northwest—present and future—before any "preference" customers outside this region would be considered for allocation.

Thus we inject an altogether new principle, a principle of community preference, which would erase the principle of preference customers in the area in which it operates.

Not only do the preference and nonpreference customers of the Pacific Northwest get a first call on that power, S. 3153 goes still further and provides that any Federal power marketed outside that geographic area will be subject to termination on not to exceed 7 days notice. Even the sale of peaking capacity outside the Pacific Northwest will be subject to contract conditions allowing the arrangement to be terminated on 48 months' notice. What S. 3153 does, Madam President, is to build a Chinese wall of preference around the Pacific Northwest for the benefit of the public and private power users in that area.

One may ask, why I am so concerned by this neat little arrangement which is proposed for the power users of the Pacific Northwest by S. 3153. I am concerned because we are being asked to play the game under an entirely different set of rules which are in effect out in the territory which I represent. We are being told, "You folks out in North and South Dakota go ahead and give up literally hundreds of thousands of valuable ranching and farming acres for Federal hydroelectric dams, and you export the power produced at those dams to every preference customer within the radius of economic transmission, but we in the Pacific Northwest will keep for our own use all of the several million kilowatts of power produced at Federal plants in the Pacific Northwest."

Now, Madam President, I come from an area which has gained a favorable reputation for the fairmindedness of its people. We are willing to abide by the user preference principle for the allocation of the many thousand kilowatts of power produced at Federal dams situated in our State—and, indeed, we feel the user preference principle is probably the fairest which can be developed for this power produced at facilities financed by all of the Nation's taxpayers—but we do ask that all other areas be governed by the same rule.

Incidentally, it was these rules which gave rise to the growth and expansion of the greatest rural electric system in the world, operated by the REA's of America, who depend upon this preference customers clause to have ready access, at proper rates, to Federal power.

In a way, I do not blame my good friends from Washington and Oregon for trying to reserve the federally produced power for use in their area, because such low-cost hydropower is a real drawing card for many large and important industries. I can appreciate the benefits they see for their area should S. 3153 be adopted, for I can visualize the almost limitless vistas for industrial development in North and South Dakota were we able to assure for power customers in our area a "first call" on the 1.8 million kilowatts of power which will ultimately flow from the generators at the great hydroelectric dams in North and South Dakota. But S. 3153 does not propose to give us any such regional preference; it does not propose to give the good and forward-looking people of Arizona any geographic preference or "first call" on the 900,000 kilowatts of power which will be generated at the mighty Glen Canyon project; it limits its special treatment to the Pacific Northwest and thereby gives to that area a distinct economic advantage over every other area in the United States.

Indicating the importance to the rest of the country, especially industrial States like Ohio, Illinois, Michigan, Pennsylvania, New Jersey, Connecticut, New York, and other States where industries are now located, of this special preference arrangement for power users in the Pacific Northwest is the fact that the Administrator of the Bonneville Administration himself, in a letter written to Hon. Stewart Udall, Secretary of the Interior, advocating the preservation of the power for that area, said this:

> As a result of the foregoing circumstances, we have shaped our program—

This is the program, S. 3153—

> to achieve two paramount purposes: (1) To maintain our low rates; (2) to meet the load growth requirements of the region, including those for new industries whose location in the region is dependent upon the availability of low-cost power.

I say this only so that Senators representing industrial States who vote for the legislation may have no reason later to complain, when the industries are drained out of their areas into the low-cost power areas, that they had not been forewarned by the man who conceived the legislation and initiated the proposal for the program, the Director of the Bonneville Administration, who states this as the specific purpose. So let every Senator consider the interest of his own State as he considers this proposal.

Mr. SYMINGTON rose.

Mr. MUNDT. Madam President, I understand that the Senator from Missouri would like to have me yield for a unanimous consent request, without my losing the floor. I shall be happy to do so.

Mr. SYMINGTON. Madam President, I appreciate the distinguished Senator's courtesy in yielding to me.

First, I am much impressed with the statement made by the Senator from South Dakota. My State is a State which, in my opinion, has a favorable tax program which, as set up by its government, draws business. Therefore, I intend to read with careful consideration the statements of the distinguished Senator from South Dakota, as well as other statements that have been made on this measure.

Mr. MUNDT. I thank the Senator.

AUTHORITY FOR STOCKPILING SUBCOMMITTEE TO MEET DURING SENATE SESSIONS, WEEK BEGINNING AUGUST 13, 1962

Mr. SYMINGTON. Madam President, I ask unanimous consent that during the week beginning August 13 the Subcommittee on National Stockpile and Naval Petroleum Reserves of the Committee on Armed Services may be allowed to meet during the sessions of the Senate.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Missouri? The Chair hears none, and it is so ordered.

Mr. SYMINGTON. I thank the Senator from South Dakota.

PACIFIC NORTHWEST POWER PREFERENCE

The Senate resumed the consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

Mr. MUNDT. Madam President, perhaps those of us representing States which have Federal power facilities within their borders are more sensitive to the special treatment granted another Federal power-producing region by S. 3153 than are our colleagues from power-importing States. Our colleagues from power-importing States face quite a different problem; that is, the problem of protecting their own industries and protecting their own interests. In the power-producing States, we are concerned primarily that all power-producing States live under the same rules and under the same considerations. I should like to caution my friends from the power-importing States that they had better give close scrutiny to the provisions of S. 3153, for the precedent being established by S. 3153 is one which could have a profound effect on the economic and industrial potential of their States in the future. Let no one be deceived into believing that we can break faith with the user preference principle for a region like the Pacific Northwest and then expect things to stop there. The Pacific Northwest has more federally produced power than any other geographic sector in the United States; as a matter of fact, on the basis of plant capacity in operation or under construction, the Pacific Northwest has over 60 percent of all of the Federal hydroelectric power in the entire United States. I base my contention on figures contained in a Federal Power Commission report issued this year, which shows that for Federal hydroelectric plants in operation or under construction the Pacific Northwest has an ultimate generating capacity of 11,518,310 kilowatts as compared with an ultimate capacity for all other areas of 7,233,810 kilowatts.

I submit, for those Senators who will read the Record tomorrow morning before they vote, or for the consideration of Senators who should read the Record tomorrow morning before they vote, that they would do well to understand the dimensions of the problem to be decided when the time to vote on the proposed legislation arrives.

This is not to be minor legislation. This is to be legislation which can affect the trend of industry across this country in perpetuity.

The proposed legislation could determine whether States like Missouri—we have just heard from the Senator from Missouri [Mr. Symington]—Ohio, and other States which are now industrialized, or States which seek to become industrialized, will have an opportunity to compete against a permanent setup of low-cost power in a certain area of the country, which could not be duplicated in any other area of the country.

Madam President, is any Senator so credulous as to believe that we can create an exception to the user preference rule which is larger than the rule itself and then expect the rule to stand?

Does anyone really believe that we could exempt from the rule 60 percent of all the power involved and make the rule applicable only to the lesser portion, to the 40 percent? It is no wonder that the REA interests are concerned about the ramifications and implications of S. 3153, because it will have a direct bearing on the future of the rural electric cooperative movement in America. I speak as one who has supported that movement from the very beginning. I speak as a member of the subcommittee of the Appropriations Committee of the Senate, which provides money for the rural electric cooperatives—for their loans, for their development, for their generating plants, for their transmission lines. I speak as one who, through personal observation, has come to realize the importance of the customer preference provision in order to protect the rural electrification movement in America.

So I speak as at least one Member of the Senate who refuses to sit idly by when the customer preference rule is to be abrogated for 60 percent of the hydroelectric power produced in the country.

Madam President, if the Congress of the United States strikes down the user preference principle for the Pacific Northwest, which is what we are being asked to do in S. 3153, then it had better be prepared to abandon that principle providing for preference customer priorities all across the country. We might just as well take a yea-or-nay vote tomorrow, or the next day—whenever a vote is taken—on the preference principle itself, for once we start the ball rolling with S. 3153 we are setting in motion an irreversible process which must ultimately result in total abandonment of the preference principle as the governing rule for the marketing and allocation of federally generated power. We shall then have sperimposed a system of regional preference, of community preference; which, wherever it operates, will obliterate the effectiveness of the customer preference principle. I wonder how many Members of this body representing States outside the geographic boundaries of the Pacific Northwest have queried their municipalities and their rural electric cooperatives, who are presently purchasing Federal power or are potential purchasers of Federal power, to see whether they favor national abandonment of the user preference principle and its replacement by a new geographic preference principle. My distinguished friends had better check with the folks back home before they cast their votes on S. 3153, for as certainly as the waters will continue to flow down the great Columbia River so total abandonment of the user preference principle will flow from enactment of S. 3153.

Perhaps there are some who will say that user preference has served its purpose—I have heard expressions on the floor of the Senate from Senators who say they oppose now the customer preference concept—that it is out of step with the New Frontier, that some new principle is needed to guide the marketing of federally produced power; that REA's have already been installed and are operating profitably and no longer need this assistance or protection.

Madam President, I do not say that the standing preference to public agencies and rural cooperatives in the allocation of power generated at Federal plants does not operate without some inequities.

I do not say it is a perfect solution to the problem, but I should be very interested to hear the arguments of anyone in this body who wants to tell me that a principle of inflexible regional preference for the marketing of Federal power produced at facilities financed by all of this Nation's taxpayers is a more equitable guideline.

I should like to hear the exhortations and explanations of the Senators from Pennsylvania, New Jersey, or New York, from any of the States of New England, from the great central area of our country, or from any industrial area of the country, when they try to describe the equities involved, which compel the taxpayers to provide Federal power to an area which then puts a veto on the capacity of anybody outside the area to use the power generated with public funds.

I do not believe the Senators from Minnesota, whose preference customers as of 1965 will be allocated 247,000 kilowatts of energy produced at Federal hydroelectric facilities in my State, want to make the argument for striking down the existing preference principle.

I do not believe the Senators from Iowa—we have heard from one of them—whose preference customers will be purchasing 137,000 kilowatts of the power generated in South Dakota, or the Senators from Nebraska, whose public agencies have allocated 226,000 kilowatts by 1965, really want to vote for a principle and a concept which would eventually exclude them from access to the power produced in the two Dakotas. I should be greatly surprised if there were any Member of this body who wanted to assume the burden of arguing directly against the user preference customer principle, which means so much to our public bodies, our municipalities, and, above all, to the great network of the REA facilities in the United States.

Yet when we take the frills from S. 3153, when we read it carefully, when we analyze its portents and its potentialities, we find that we are in fact considering the life expectancy of the user preference principle. If S. 3153 should be passed without amendment, I doubt that even Lloyds of London would sell an insurance policy on the life of the preference principle, for it is likely that death would come before the first premium could be paid.

Lest my position on S. 3153 be misinterpreted as one of total opposition to some type of special consideration for those areas which surrender many thousands of productive acres so that hydroelectric projects can become a reality, let me hasten to say that I strongly support such special consideration within reason.

I have supported it for Hungry Horse. I have supported it for Big Bend. I have supported it for Niagara Falls. I have supported it on other projects. I am perfectly willing to support it now, within reason, for the great Pacific Northwest.

In my own State of South Dakota we have received some special consideration with respect to the electric energy output from one of the four great hydroelectric dams which span the Missouri River in South Dakota. I refer, of course, to the Big Bend Reservation which reserves for use in South Dakota 50 percent of the 468,000 kilowatt capacity which will eventually be generated at the Big Bend Dam.

Mr. MANSFIELD. Madam President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. MANSFIELD. It should be pointed out that the Senator from South Dakota has been a consistent supporter of the Hungry Horse project in the Northwest ever since we both served in the House together.

Mr. MUNDT. The Senator is correct.

Mr. MANSFIELD. The Senator has mentioned the fact that there are only two projects which have a particular type of onsite preference clause.

Mr. MUNDT. Three. Niagara Falls has also.

Mr. MANSFIELD. Hungry Horse in Montana has guaranteed to it an on-site or at-site capacity of 200,000 kilowatts of power, but because of Hungry Horse and its reservoir capability, 800,000 additional kilowatts of power goes downstream to feed Bonneville, Grand Coulee, and the other projects in the lower Columbia.

It appears to me that the Big Bend has an even better preference clause than does the Hungry Horse because, as I recall, it guarantees 50 percent of the power produced at the site. The remainder, of course, goes downstream or upstream and depends on the lines that can be used.

The Senator has mentioned Niagara Falls, which I did not know about. He has indicated that there have been, at least in our part of the country, two projects which for a number of years have had a priority, which, in effect, gives to our States a certain amount of security so far as the power produced in those States is concerned.

I emphasize the fact, which the distinguished Senator has mentioned, and to thank him again for the fine work he did in behalf of Hungry Horse down through the years, and especially in obtaining for us the priority which has meant so much to us in Montana.

Mr. MUNDT. I appreciate what the Senator has said. It should be pointed out with respect to both Montana and South Dakota that while 200,000 kilowatts from Hungry Horse and about the same number of kilowatts which would come out of Big Bend for South Dakota represent a sizable percentage of the power produced from those particular sites, both Montana and South Dakota have contributed other sites for big hydroelectric projects from which no reservations have been made, and which are available to the whole general area.

Mr. MANSFIELD. The Senator is correct.

Mr. MUNDT. While this reservation of power authored by my late and distinguished colleague, Francis Case, is, indeed, an exception to the normal application of the preference principle, as discussed by the Senator from Montana, it is nevertheless an exceedingly modest consideration to the people of South Dakota for the several hundred thousand acres of farm and ranch land to be inundated by the reservoirs behind the Oahe, Big Bend, Fort Randall, and Gavins Point Dams. Certainly this modest reservation, representing less than one-sixth of the ultimate installed hydro capacity in South Dakota cannot be compared to the gigantic concession made to the Pacific Northwest by S. 3153, which grants "first call" to that area on all—"A-L-L," italicized and underscored—of the 11,518,310 kilowatt capacity at generators presently in operation or under construction and all other Federal power which may in the future be produced in the northwest region.

I point out that the proponents of S. 3153 seek to justify this unequaled special consideration for the Pacific Northwest on the grounds that the power situation in that region is unique. The "uniqueness" claimed is that 96 percent of the Pacific Northwest's total power supply is hydro-produced and 60 percent of their total capacity is generated at Federal plants. Thus the proponents contend there is always a danger under the normal operation of the preference principle that portions of their power supply will be exported to other regions.

If there is, in fact, any present "uniqueness" about the power situation of the Pacific Northwest—and I frankly question the validity of this claim—it is a singleness of circumstance soon to vanish. Already elaborate plans are being laid for thermal generation in the Pacific Northwest. Only last week the Senate adopted the Jackson amendment to the AEC authorization, which authorizes construction of an 800,000-kilowatt-capacity thermal unit at the Hanford production reactor. Next year construction is scheduled to begin on a 500,000-kilowatt-capacity steam generation plant at Cle Elum, Wash.—a plant, I might point out, which will be fueled by coal from bituminous deposits in that State. These two facilities alone have a combined capacity of 1.3 million kilowatts of thermally generated electric energy, the equivalent of one-fifth of the presently installed hydrocapacity in the Columbia River Basin.

We have heard much said by the spokesmen from the Pacific Northwest that each year millions of dollars of dump power from their hydrofacilities is going to waste. This is not a unique problem; we face the same dilemma in the Missouri division, and we are moving to meet that problem through the construction of thermal capacity and various pooling arrangements directed at "firming up" our "dump" hydropower.

I see no reason why the Pacific Northwest cannot take similar action. There is nothing prohibiting the production of thermal power in that region. As I pointed out, there are bituminous coal deposits in that area, and I am advised that two major natural gas lines now traverse that region, drawing on abundant natural gas reserves in Canada. The Pacific Northwest has much greater potential for the production of thermally generated power than we have in the upper Missouri basin. However, I do not see the Secretary of the Interior rushing to Congress with a regional preference bill for eastern Montana, North Dakota, South Dakota, and the neighboring States.

It is vividly apparent that neither the present nor the future power situation in the Pacific Northwest is in any way unique, save for the fact that that region is blessed with an abundance of cheap hydropower; and it should be clearly understood that the Chinese wall of regional preference proposed in S. 3153 applies not only to present plants and present customers, but to future plants and future customers as well. It would Balkanize the power system of America into perpetuity. S. 3153 would indeed make the Pacific Northwest situation unique—a uniqueness which is not today apparent from the facts, a uniqueness which would provide benefits to one area and which are denied to other areas of America, unless the proposed legislation is amended.

Even on the point of some future loss of power presently allocated to nonpreference users in the Pacific Northwest, the circumstances confronting that area seem to be anything but critical. We are told that many millions of dollars of industrial plant investment have been made in Washington and Oregon because of the low-cost power available there. I am sure that this is true. We are further told that unless the Pacific Northwest is granted regional protection for its hydropower that with the construction of transmission interties these plants stand in grave and immediate danger of losing their present cheap power allocations to preference customers outside the region, with the result that these plants would be forced to close and workers would be left jobless. I am just as sure that this is not true.

If anyone questions my skepticism on this point, he has only to refer to page 57 of the Senate Interior Committee hearings where Chairman ANDERSON was questioning Mr. Charles F. Luce, Administrator of the Bonneville Power Administration, about the contracts presently held with the BPA by nonpreference customers. Mr. Luce admitted that these contracts had an average remaining life of from 12 to 15 years with an option to renew—contracts, mind you, the terms of which cannot be abrogated without just compensation. Now, Mr. President, I do not think I am being too unreasonable when I suggest that this testimony by Mr. Luce hardly presents a picture of urgently critical circumstances, demanding that the Senate rush headlong forward to adopt legislation which has the practical effect of reserving for the Pacific Northwest literally millions of kilowatts of "firm power" produced at Federal plants in that area.

If this is not enough to convince my colleagues that the Pacific Northwest is not on the verge of economic collapse, let me quote some further comments from this Mr. Luce, who seems to be grim about Life, short on Time, and lacking in Fortune.

Referring again to the industrial power customers, Chairman ANDERSON asked this question, "How do you know they would be shut down if you stopped your 2-mill, postage-stamp rate? Suppose they had to pay 4 mills?"

To which Mr. Luce replied, "We know they would be shut down if that happened."

Senator ANDERSON reiterated, "How do you know?"

Here Mr. Luce emitted a most remarkable reply. He said:

> They would be shut down because the Pacific Northwest is so far from the large markets of the United States and, therefore, has such large transportation expense getting raw materials to these plants and the finished product back to the market, that 4-mill power is prohibitive for the aluminum companies.

Lo and behold, I think we have found a fugitive of the 18th century on the New Frontier. Perhaps when our forefathers broke across the Oregon Trail for the Pacific Northwest that region was, in fact, far removed from the major markets of the Nation, but I think that in the scintillating sixties of the 20th century the good people of California, which claims to be fast on its way to becoming our Nation's largest State, might take mild offense if they heard their neighbors to the north saying that they are far removed from the large markets of the United States. We in South Dakota would be eternally grateful if we had markets adjacent to us that were even one-tenth the size of those available in California. No; this testimony does not bring tears to my eyes.

While the Senate is bestowing its sympathy on the tragic plight confronting the sad-eyed and heavy-hearted people of the Pacific Northwest, I earnestly hope that it will reserve a modicum of its solicitude for the upper Missouri basin, which has given far more of its productive acres to Federal hydroelectric projects than has the Pacific Northwest and has received far less in return. I asked the Corps of Engineers to prepare some figures for me comparing the land acquisition figures for the North Pacific division with the land acquisition figures for the Missouri River division. This chart also includes total construction costs for the various hydroelectric projects in these two areas. I ask unanimous consent that this chart may appear at this point in the RECORD.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

Analysis of land costs for hydroelectric projects (as of June 30, 1962)

NORTH PACIFIC DIVISION

Name and location of project	Land area (acres)			Land costs			Types of land	Construction costs		Total project cost
	Private	Government owned	Total	To Jan. 30, 1962	To complete	Total [1]		To date	Remaining

[1] Exclusive of Government acquisition costs.

[2] In power production.

Mr. MUNDT. Madam President, the figures on land acquisition are, indeed, interesting, to say the least. They show that for projects either completed or under construction in the North Pacific division, 168,102 acres of land will ultimately be required, while for the projects in the upper Missouri basin the required acreage will total 1,656,855 acres.

This means that the States of Montana, North Dakota, and South Dakota have given up nearly 10 times the number of productive acres—acres which produced crops, livestock, timber, and local tax base—for Federal hydroelectric dams than have our good friends from Washington, Oregon, and Idaho, yet no one is suggesting that we should have a regional preference wall built around eastern Montana, North Dakota, and South Dakota for the over 2 million kilowatts of power that will be generated by the Federal plants in our region.

I cannot avoid the conclusion that the Pacific Northwest is, indeed, being granted some very special treatment and some highly valuable rights by the regional preference arrangement proposed in S. 3153. It is being given a distinct competitive advantage over all other States and all other regions which have Federal power production facilities located within their boundaries. A competitive advantage, I may say, that promises to pay real dividends from the standpoint of future industrial and economic development.

It is my earnest belief that this bill should be recommitted for further study and consideration, because the claims made in its support simply do not comport with the facts. But if it is the will of this body to adopt this bill, then I am prepared to ask my colleagues that they also provide geographic protection for the Federal power produced in my area and for all other States and areas in which Federal power-production facilities are situated. I have already had amendments printed which provide for uniform treatment respecting Federal power, and if this measure is not recommitted I intend to offer those amendments and ask for a rollcall vote at the appropriate time.

Mr. COTTON. Madam President, the proposed legislation, the so-called regional preference bill, S. 3153, is deeply disturbing to me. It has major implications for the entire Nation which cannot be overlooked.

Initially, I was inclined to regard this bill as a kind of back-fence argument on the west coast between the Pacific Northwest, where tremendous quantities of electric power are generated cheaply at federally built dams, and southern California, which must rely on the more expensive steam generation of electricity. But much more, in fact, is involved, and I want to address my comments to the effects that the principle of this legislation would have on the rest of the country.

Behind this bill lies recent technological advances which now make it possible to transmit large blocks of electric power economically over very long distances. The Bonneville Power Administrator, Mr. Charles Luce, indicated that the economic transmission distance may extend for 2,000 miles. Under these circumstances, low-cost hydropower could be made available over a substantial region of the country, giving citizens some direct benefit from the billions which they have paid for the Federal power developments in the Northwest and elsewhere. We ought to be free to do this, provided that these benefits can be made available to all with sufficient safeguards to make sure that we do not exclude isolated islands in distant or sparsely settled areas that will thereby be forced to pay even higher electric rates or to compete against even greater odds than now.

The bill turns its back on this possibility. It is not designed to spread the benefits of low-cost power, but instead to confine them.

As I understand the bill, it draws a line around and in some cases through portions of half a dozen States, reaching as far east as Montana and Wyoming, and defines that area as the Pacific Northwest. Then it provides that all present and future Federal power produced in that region shall belong to that region exclusively; that it shall be used for present and future private industry as well as for public purposes, and that no power can be exported across the region's border, even for public purposes, unless the Northwest permits it, and then only on a severely restricted basis.

On that point, let me declare it bewildering from any national point of view, and certainly from a New Englander's view, that Federal power which has been developed and paid for by all the people could thus be reserved for only a privileged few and denied to all others. In my State of New Hampshire, in fact in all of New England, there are no Federal powerplants. Many other States share with us this "have not" status. Under the precedent which this legislation would set, no "have not" States or regions could ever get any firm Federal power from any of the Federal plants located in the "have" regions, even though their tax dollars helped build them.

According to data in the hearings, half of all the hydroelectric power developed by the Federal Government is in the Northwest. The bill would restrict all that power to an area comprising less than six States. That power would be locked up tight in a Northwest power preserve.

To date, the Nation's taxpayers have invested $1.7 billion in Federal power facilities in the Northwest. The Bonneville Power Administration, which runs the Federal system there, is operating in the red and is losing millions of dollars each year. Thus, the power is being sold to privileged northwesterners at below-cost rates. No wonder they want to keep it to themselves—all of it.

The determination as to what power is available for export, when it may be available, who can have it, where the exact borderlines of the preserve shall be located, and many other powers, would be left to the discretion of the Secretary of the Interior. The bill would give the Secretary virtually dictatorial power over half the Federal hydroelectric power in the Nation, and would usurp much of the control over the Federal power policy which now properly resides in Congress.

This is what Senate bill 3153 proposes.

It is important to point out that the Bonneville Power Administration, which markets the Federal power in the Pacific Northwest, is not the sole source of power in the region. More than 150 non-Federal generating plants also serve the area, and provide about 40 percent of the region's total power supply. This is more than a statistic. It means that the Bonneville Power Administration does not have a utility responsibility for the area. It is under no legal or moral obligation to provide 100 percent of the region's needs for electric power now and into the future. It operates solely as a wholesale supplier of large blocks of power.

The role of Bonneville is thus in sharp contrast to the role of the Tennessee Valley Authority, which has a complete utility responsibility for its area, and is the sole source of electric power for its service area. In the case of TVA, Congress has limited its service area by statute in much the same way as most public utilities have limited and defined service areas under their franchises. As an original proponent of an area limit for TVA, I can state that its purpose was to define the area in which it was to be the sole supplier of power so that TVA could plan, budget, and build efficiently to meet the growing demands for power within its area.

The TVA area limitation—16 U.S.C. 831n-4—clearly and expressly permits the sale and transmission of blocks of power to other utilities outside the service area. It thus permits TVA to do what the bill would bar in the Pacific Northwest, and the TVA area limitation is, in fact, a sound precedent for the defeat of the bill.

I should like to call upon my colleagues in the Senate to search their souls as they contemplate what such a proposal as this could do to the Nation. In full conscience, we must consider how such a bill would affect all of the United States. We must rise above local interests; we must look beyond the administration's nose as it tries to satisfy conflicting demands among Federal power supporters; we must regard the proposed legislation from the viewpoint of all the people of all our 50 States, and we must look to the future welfare of the Nation.

With these obligations in mind, the bill poses many questions which call for answers based on equality, justice, and the general welfare. The conflicting and contradictory nature of some of these questions reflects the confusion and contradictions in the bill itself.

First. Why should the United States set aside tax-subsidized power that belongs to all the people and reserve it exclusively for just a few people?

Second. When it is economically feasible to transmit electric energy 2,000 miles, why should not the power from all Federal generating installations in all sections of the country be made available to all the people within reach?

Third. Why should Congress lock up all present and future Federal power in the Northwest, permitting the Northwest to lure more industry and payrolls from other areas with its below-cost electric power?

Fourth. Why should the Senate fall prey to the contention that somehow and for some reason the situation in the Northwest is unique and therefore deserves a special handout? We must bear in mind that the bill not only reserves present Federal power for present Northwest customers but also applies to all future Federal power and all future Northwest customers. Nor are the provisions limited to Federal hydroplants. Coal-fired steamplants and maybe even Federal nuclear plants also would be reserved in the privileged sanctuary of the Northwest.

Fifth. Why should the Senate Interior Committee have to adopt an amendment to the bill with regard to power from Hungry Horse Dam on the basis that "existing rights, established by prior legislation should not be infringed upon" when this very bill itself infringes upon the existing rights of customers outside the fences which would be erected by this bill?

Sixth. Why should Congress permit a Chinese wall to be erected around one region in the Northwest and not permit similar Chinese walls around every other region in which a Federal electric plant is located?

Seventh. Why should Congress give any Secretary of the Interior the discretionary power of a czar over half the Federal hydroelectric power in the Nation?

Eighth. Why should Congress create economic or marketing regions which would ignore State borders, and could form superstates under the control of an executive department of the Government?

Ninth. Could the Senate allow the Northwest to have its way, and then reject the similar demands for regional protection, or for exclusive regional rights? These demands are now before us in amendments. They come from the State of Montana, from the State of Arizona, from the Missouri River basin, from the northern California region of the Central Valley project, and unquestionably will come from many other regions of origin of Federal power.

Tenth. Why should the law of preference be abrogated in just one region, for the purpose of satisfying purely local special interests?

Eleventh. Why should the Congress consider any bill that penalizes the great majority of the people, to give more special privileges to an already privileged few?

I submit that in reaching responsible answers to these questions, we can make no finding with respect to this bill except that it is highly dangerous to the national welfare.

The principle of the bill is vicious.

The use of Federal money and Federal power would be confined to certain States and regions. States and regions, like my own, that do not have and are not blessed with the potentiality for power development, would find themselves completely starved by the creation of special privilege facilities whose benefits would be confined to more fortunate sections of the country, despite the fact that they are paid for by our people. Such a situation would be so monstrous that it would compel only one solution: Complete Federal power over the entire Nation. Make no mistake about it, that is what this bill aims at. That is why it must be defeated.

ORDER FOR ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. MANSFIELD. Madam President, I ask unanimous consent that when the Senate concludes its business tonight, it adjourn to meet at 11 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION TOMORROW

Mr. MANSFIELD. Madam President, I ask unanimous consent that the Judiciary Committee be permitted to sit during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Madam President, I ask unanimous consent that the Judiciary Committee's subcommittee on the nomination of Thurgood Marshall to be a judge of the U.S. circuit court be permitted to meet during the session of the Senate tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Madam President, I ask unanimous consent that the Public Works Committee's Subcommittee on Roads be permitted to meet during the session of the Senate tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

PACIFIC NORTHWEST POWER PREFERENCE

The Senate resumed the consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

Mr. MANSFIELD. Madam President, after discussing the matter with the distinguished minority leader and others interested, I am about to propound a unanimous-consent agreement: I ask unanimous consent that at the conclusion of the morning-hour business tomorrow, there go into effect the following time limitation: 2 hours on each amendment—or 1 hour to a side—and 4 hours on the bill.

Mr. SYMINGTON. Let me ask which bill will be the subject of the proposed agreement.

Mr. MANSFIELD. The Northwest power bill.

Mr. SYMINGTON. I thank the majority leader.

The PRESIDING OFFICER. Is there objection to the proposed agreement?

Mr. DIRKSEN. And to include not only amendments, but also motions?

Mr. MANSFIELD. Yes, including motions to recommit.

The PRESIDING OFFICER. Is there objection to the proposed unanimous-consent agreement? The Chair hears none, and it is so ordered.

The agreement as subsequently reduced to writing is as follows:

Unanimous-Consent Agreement

Ordered, That, effective on Wednesday, August 8, 1962, at the conclusion of routine morning business, during the further consideration of the bill (S. 3153) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 2 hours, to be equally divided and controlled by the mover of any such amendment or motion and the majority leader: *Provided,* That in the event the majority leader is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further,* That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 4 hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

THE YOUTH CONSERVATION CORPS

Mr. HUMPHREY. Madam President, I ask unanimous consent to have printed in the body of the Record an editorial relating to the Youth Conservation Corps. The editorial was published in the Washington Post.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Washington Post, June 17, 1962]

Youth Corps

It is a pity that the bill to create a Youth Conservation Corps, warmly supported by President Kennedy, has been mired in that legislative quicksand, the House Rules Committee. The measure won approval in the Committee on Education and Labor. It has considerable backing among Congressmen, Republicans as well as Democrats. A great many national organizations interested in youth welfare and job opportunities have pressed heartily for its adoption. We think the House ought to be given a chance to debate it and decide whether to put it into effect.

The proposal seems to us thoroughly sensible and constructive. It would establish two bodies—a 12,000-member corps based on the highly successful Civilian Conservation Corps of New Deal days which would give youngsters between 16 and 22 years of age a chance to engage in healthful and useful outdoor work such as reforestation; and a 25,000-member "Home Town Peace Corps" in which young people could work on local public projects while living at home.

Here is a formula for dealing with dropouts and delinquents which is much more likely to be helpful than pushing them around, subjecting them to curfews and antiloitering ordinances or denouncing them as beatniks. Surely it is worth a try on a small scale as the bill proposes. Let the House act on it.

Mr. HUMPHREY. Madam President, it is my hope that this measure will soon receive action by Congress and will become public law.

A NEW BASIS FOR CONCLUDING A NUCLEAR TEST BAN AGREEMENT

Mr. HUMPHREY. Madam President, for the second time in the last 8 or 9 months, shock waves from Soviet nuclear explosions are reverberating throughout the Arctic wastes around Novaya Zemlya. By exploding a weapon second in magnitude only to the 50-megaton monster of last October, the Russians have proved once more that their interest lies in terror, and intimidation, rather than in technical progress. Once again, press reports indicate that the Soviet leadership cannot look the Russian people in the eye: as was the case last year, the Russian man-in-the-street is the last person in the world to learn of the resumption of Soviet nuclear testing. The contrast between Soviet furtiveness and our own frank, yet reluctant, decision to resume testing this spring is too obvious to be dwelt upon. According to certain press reports, traces of radioactive fallout from the current Soviet test series may show up in U.S. milk supplies "in the next 10 to 14 days." How much longer will the world be exposed to such insidious and heedless experiments, when a basis already exists for bringing them to a halt forever? Clearly, Madam President, the time is at hand for both the Soviet Union and the United States to live up to their responsibility not only to their own national security, but also to the safety of mankind.

Madam President, the security of the United States is clearly the overriding concern of all of us in the Congress, all in the executive branch, and all in every level of the government in this country. We in this Chamber know very well that the burdens imposed upon the American people are for the sake of keeping this country and the entire free world militarily strong and free.

The American people have shown by their willingness to shoulder these burdens that they, too, completely understand the need for this country to be strong when it is faced by a challenge which is both ideological and military in nature. However, I sometimes think that in our preoccupation with our own defense, we tend to forget that the weapons we rely upon for national security are at the same time a risk to our civilization and to our way of life.

War by accident—by miscalculation—will always remain a definite possibility and must be constantly borne in mind in our thinking about military problems. In this country we have taken many unilateral steps to diminish the chances that war by accident or miscalculation will ever occur.

We must also bear in mind that nuclear war becomes increasingly likely as the number of countries which independently possess and control nuclear weapons continues to grow. It is almost axiomatic that suspicion, misunderstanding, miscalculation, and plain mistakes will increase—some say geometrically—as the number of governments which can unilaterally push a button to start a nuclear war increases in number.

This is one of the very important reasons why I have always supported our Government's efforts to secure an adequately monitored, nuclear-test-ban agreement. I have also felt that if we could achieve a ban on nuclear testing, this would be a very important step toward curtailing the spread of national nuclear weapons capabilities. Indeed, without such an agreement the "*n*th country" problem will never be solved.

It is not the only step that could be taken. There are others which are important also, but the nuclear test ban has always struck me as one type of agreement which would provide a platform on which to build other arms-control and disarmament agreements. The problems of monitoring a nuclear-test-ban agreement are difficult, but they are not so difficult as the inspection of many other kinds of conceivable disarmament arrangements.

The above does not exhaust the advantages to be derived from a test-ban agreement. An end to radioactive fallout would be desirable, whatever one thinks of the dangers to mankind represented by fallout. Clearly, as we move on into the nuclear age, the amount of contamination from the peaceful uses of atomic energy will increase; and it would be desirable, as a general principle, to keep to a minimum the unnecessary contributions to the reservoir of background radiation in the human environment.

Moreover, a beginning toward controlling the nuclear arms race between the two superpowers could be made through a nuclear test ban. Not only the development of a control system, but also the practical experience of a working arms-control agreement would have a catalytic effect in promoting further agreements of the same type.

The President and his principal advisers on national-security affairs in both this administration and the last administration have believed that an agreement banning nuclear weapons tests under adequate safeguards would be in the interests of the United States. As President Kennedy stated on March 2, 1962, when he announced the resumption of U.S. nuclear tests in the atmosphere:

> Our real objective is to make our own tests unnecessary, to prevent others from testing, to prevent the nuclear arms race from mushrooming out of control, to take the first steps toward general and complete disarmament.

To prevent the spread of nuclear weapons to additional countries is one area where the United States and the Soviet Union appear to have a clear common interest. In fact, in this respect, Soviet and American language is identical. Yet, at the 18-Nation Disarmament Conference now going on at Geneva, the Soviet attitude toward a nuclear-test-ban agreement, which would halt the spread of nuclear weapons, has not been encouraging. The Soviet Union has opposed the location of any internationally operated control posts on its territory, and it has accepted the principle of onsite inspection only if it invites the inspection team in each case. In other words, an international inspection team would be invited across the Soviet border to have what amounts to a cup of tea. Tea and sympathy would be the only practical result of such a performance. Obviously, the proposal of the Soviet Union is not acceptable.

The U.S. position has been based up to now on the United States-United Kingdom draft treaty submitted on April 18, 1961, which was slightly modified in later discussions. This draft provides that the control posts in the United States and U.S.S.R. would be operated one-third by U.S. nationals, one-third by Soviet nationals, and one-third by nationals of other countries. This draft also provides for a number of obligatory onsite inspections in cases where earth tremors shown by seismograph readings raise suspicions of a nuclear explosion.

The principal recent political development in this area at the 18-Nation Disarmament Conference was the tabling on April 16, 1962, of a memorandum by the 8 non-NATO, non-Warsaw Pact delegations—in other words, the nonalined powers. This memorandum suggests that nationally operated seismic stations should be the principal basis for a control system, working in conjunction with an international commission of scientists. It contains a statement concerning onsite inspections which has been interpreted by the United States as making them obligatory and by the Soviet Union as making them invitational. The pertinent passage of the eight-nation memorandum states that:

> All parties to the treaty should accept the obligation to furnish the Commission with the facts necessary to establish the nature of any suspicious and significant event.

And further:

> Should the Commission find that it was unable to reach a conclusion on the nature of a significant event * * * the party on whose territory that event had occurred should consult with the Commission as to what further measures of clarification, including verification in loco, would facilitate the assessment. The party concerned would * * * give speedy and full cooperation to facilitate the assessment.

Frankly, I do not understand how the Soviet Union can interpret these words in the sense that the party carrying the burden of proof can impose a veto on the movements of an international inspection team—up to the maximum number of inspections provided for in the treaty. As I have said before, inspection by invitation is a meaningless social convention. Clearly, no Senator in this Chamber could accept it and look his constituents in the eye next fall, or next election year, or any time in the foreseeable future.

Nevertheless, certain new technical developments indicate the feasibility of a simpler control system than was proposed in our draft treaty of April 18, 1961. The first of these key developments is a reassessment indicating an improved capability for long-range seismic detection which will make it possible to detect, at long distances, earth tremors which might have been caused by nuclear explosions. From their research and experience, our technical experts have concluded that a widely spaced network of a smaller number of stations than we originally proposed could detect earth tremors even in the low kiloton yield.

I digress to note that the Soviet Union's recent tests were monitored and recorded by the United States long before it was known that there was a 40- or 50-megaton explosion in the atmosphere within the past few days. The Atomic Energy Commission has informed the world that we were able to detect earlier low kiloton yield explosions in the Soviet Union, explosions that were not reported by the Soviet Union. So our detection system has again demonstrated its capability.

The second key technical development is the determination that the number of earthquakes which might produce earth tremors comparable to an underground nuclear test of a given magnitude has been reduced severalfold from the previous estimate.

It should be noted that our previous estimate was decidedly off in terms of the number of earth tremors that are anticipated in a particular area of the Soviet Union.

These developments are significant in several ways. First, the increase in the long-range detection capability makes it possible to develop a simplified and more economical system of internationally supervised but largely nationally manned stations. This system would have a detection capability not significantly different from that originally contemplated for the stations proposed in the April 18, 1961, United States-United Kingdom treaty draft. This system would cost far less to construct and operate, would be simpler to manage, more efficient in its operations, and could be put into effect in a much shorter period of time. Second, the decrease in the number of unidentified earth tremors with which a detection system will have to cope will make it possible to decrease the number of onsite inspections required for verifying that the observed earth tremors are caused by earthquakes.

Despite these welcome scientific advances, it would be futile for the Soviet negotiators to assert that national detection systems would suffice to establish the nature of each and every unidentified seismic event. The fact is—and I cannot emphasize this point too strongly—that these developments do not provide a means of determining from seismic data, in all cases, that a particular observed earth tremor is an earthquake rather than an underground explosion. They do not and cannot eliminate the need for an international system of verification and control, however ardently the Soviet spokesmen might want to draw the teeth of any conceivable test ban treaty.

With these few, but essential, caveats, I am personally gratified to learn that new technical findings have permitted us to adjust our control proposals for a nuclear test ban agreement in a direction which might be less expensive, more manageable, more efficient, and which also might and should bring agreement somewhat nearer. I have long urged that research in this area be pushed vigorously. Now that this research has yielded certain definitive results, it is incumbent upon us to keep our control requirements in line with the latest technological developments. For example, as automation becomes increasingly important in our civilization, we should determine how inspection techniques can be improved through the process of using automated equipment. Scientists, in fact, are looking into the application of modern computer techniques in the interpretation of data produced by seismographs.

Every time that new findings about natural forces in the earth and in space are made, we should immediately look for a way of applying these new findings to the problems of arms control and disarmament.

I think it is entirely proper, when new discoveries are made which show that the number of unidentified earth tremors would be far less than previously expected, that we should trim our inspection requirements accordingly. What this discovery means is that there are fewer chances of an underground nuclear explosion being concealed in the midst of naturally occurring earthquakes. We should, therefore, be able to reduce our requirements for onsite inspections to verify the nature of such unidentified events.

We can also reduce our requirements for the numbers of control posts to detect these earth tremors. Why? Because of improvements in detection devices and because our capability for long-range detection of seismic events is far superior to what we once thought it would be. Consequently, there can be a considerable reduction in the number of control posts deemed necessary inside the borders of the Soviet Union, and, indeed, in other areas of the world.

At his news conference last Wednesday, President Kennedy referred to these technical developments and described in broad outline the position we would take at Geneva. He said:

> We are completing a careful review of the technical problems associated with an effective test-ban treaty. This review was stimulated by important new technical assessments. These assessments give promise that we can work toward an internationally supervised system of detection and verification for underground testing which will be simpler and more economical than the system which was contained in the treaty which we tabled in Geneva in April 1961.

The President continued:

> I must emphasize that these new assessments do not affect the requirement that any system must include provision for onsite inspection of unidentified underground events. It may be that we shall not need as many as we have needed in the past. But we find no justification for the Soviet claim that a test-ban treaty can be effective without onsite inspection.
>
> We have been conducting a most careful and intensive review of our whole position with the object of bringing it squarely in line with the technical realities. I must express the hope that the Soviet Government, too, will reexamine its position on this matter of inspection. In the past it has accepted the principle, and if it would return to this earlier position we, for our part, will be able to engage in an attempt to reach

agreement on the number of onsite inspections which is essential.

Thus, the President has challenged the Soviet Union to accept the principle of obligatory onsite inspections. If it does so, we will then be prepared to negotiate a simpler, more efficient, and more economical control system for a test-ban treaty. While not technically foolproof, such a system would adequately serve the interests of all parties concerned, it could halt the dangerous proliferation of nuclear weapons, and it would respect in every instance the national sovereignty of the signatory powers. It should be negotiated and signed as soon as possible.

Senators will note that President Kennedy said that this control system would be "internationally supervised." This might mean, for example, that an international control organization would arrange for the communication of data, specify calibration procedures, supply time signals, and set standards for the equipment. It might also help train the personnel utilized at the various stations and provide additional personnel to assist these stations. It would receive data from each of the stations and coordinate that data with data received from other stations. Some of its personnel would be assigned to stations as observers, and others could make periodic visits to the stations.

These are examples of what we mean by international supervision. If the Soviet Union is really interested in negotiation, we will consider other ideas of international supervision. Let me assure the Members of this body, however, that if other ideas are to be put forward by the United States at Geneva, there will be further consultation here with leaders of both Houses of Congress and with all appropriate congressional committees.

Madam President, I have insisted, as chairman of the Subcommittee on Disarmament, that these negotiations be frequent and continuous. It is my view that any change in American policy on the subject of disarmament must be carefully discussed with Members of Congress, particularly those who have responsibility in committee assignments for atomic energy, for the armed services, and for foreign relations.

Some people question the idea of adjusting our control requirements to the actual technical situation. To call such adjustments concessions is a misnomer.

I have noticed that in any discussion of the Geneva disarmament talks, the comment in the press, radio, or television indicates we are prepared to make concessions, which is a way of saying that we are prepared to retreat from our former positions and thereby to sacrifice our national security. Let me give an example of how wrong this interpretation of our position can be.

If a million units of penicillin were first thought necessary to cure pneumonia and new scientific discoveries showed that 500,000 units would do the job, we would not think of labeling this reduction in the treatment a concession to pneumonia.

We would call it a great medical advance. We would take into consideration the new scientific data, the new medical information developed thereby. There are involved in the matter of a test ban agreement significant new improvements in detection and control, on the lines of the analogy I have used. We are adjusting our position to the technical realities. If this makes negotiation of a test ban treaty easier, so much the better for us. Because of new improvements in the detection and control systems—particularly in the field of seismographic operations and facilities—we can have a more prudent and more reliable inspection system.

Madam President, our new test ban proposals have been the subject of extensive review by the President with his top advisers in the national security area, including the Secretary of Defense, the Chairman of the AEC, the Director of CIA, the Secretary of State, and the Director of the Arms Control and Disarmament Agency. The proposals were concurred in by all of these officials. The alternatives which the President and his advisers considered were presented to the Joint Committee on Atomic Energy and to the Disarmament Subcommittee of the Senate Committee on Foreign Relations both while they were under consideration and before a final decision was made.

The committee and the subcommittee were informed of the attitude of the executive branch and were assured that no major change in the U.S. position will be made, over and above the suggestions which have been placed before the committees, unless there is further consultation.

I wish to commend the executive branch for following this procedure. I wish also to state that I intend, as the chairman of the Disarmament Subcommittee, to invite members of the Armed Services Committee and the Joint Committee on Atomic Energy to sit in on hearings on disarmament subjects in the future as I did in this present instance. A number of us have responsibilities in this area. We should work together so that the executive branch can obtain the combined judgment of Senators who are most directly concerned. In this way we can fulfill our duty to the Nation while serving the interest of our constituents and our fellow human beings in every corner of the globe.

Madam President, I ask unanimous consent that certain articles and editorials relating to the recent nuclear test series may be printed in the Record at this point.

There being no objection, the articles and editorials were ordered to be printed in the Record, as follows:

[From the New York Times, Aug. 3, 1962]

Legislators Back U.S. Test-Ban Plan—Administration's New Offer to Moscow Satisfies Joint Atom Unit in Congress

(By John W. Finney)

Washington, August 2.—The administration won general support today from the Joint Congressional Atomic Energy Committee for its new approach to a test-ban agreement with the Soviet Union.

Committee members, who in the past have represented the center of opposition to any concessions on terms for a test ban, said they were satisfied that the administration did not contemplate any significant retreat from the principles of international controls and inspection.

[The first reaction in Moscow was cool to President Kennedy's offer to revise the U.S. terms.]

The administration's spokesman on Capitol Hill was Ambassador Arthur H. Dean, U.S. representative to the disarmament and test-ban negotiations in Geneva,

MEMBERS REASSURED

Mr. Dean will return to Geneva tomorrow. He will carry a promise by the United States to modify its terms for a ban if the Soviet Union would agree to the principle of international inspection on its territory.

But before he left the administration saw to it that Mr. Dean, accompanied by State Department, disarmament agency and Defense Department officials, appeared before the Joint Atomic Energy Committee, a potential source of opposition at home.

In his 90 minutes of testimony behind closed doors, Mr. Dean reassured and notified the committee members about the new proposals to be offered by the administration.

Representative Chet Holifield, of California, the committee chairman, said after the meeting that the committee was "substantially in accord with what the President said yesterday."

The President said that if the Soviet Union would accept on-the-spot inspections, the United States would be prepared to offer such modifications as a reduced number of control posts and inspections and a national control system which would be internationally monitored or supervised.

The administration thus won the first and a critical round in its new bargaining offer, which for the moment it was keeping deliberately conditional and vague.

GESTURE TO NEUTRALS

In modifying American proposals, the administration wanted to return to Geneva with an offer that would put the Soviet Union on the spot, particularly as it prepared to renew atmospheric testing. It was also making a gesture to the neutralist bloc, which has been pressing for a compromise.

At the same time, the administration did not want to appear to go so far as to alienate the congressional forces that must ultimately pass on any treaty.

In principle, the administration has moved toward the demands of the neutral nations and the Soviet bloc for acceptance of national control systems to monitor a test ban. But it was vague about what was meant by international supervision or monitoring of national control stations.

Both during and after the hearings, Mr. Dean declined to be specific on the nature of the international supervision. He explained to the committee members that this would be a point of negotiation with the Soviet Union.

Committee members, however, came away from the meeting reassured that the administration would insist upon some form of international supervision that would prevent control stations in the Soviet Union from withholding or tampering with detection information.

ACCEPTANCE NOT EXPECTED

If committee members were not particularly concerned about the apparent shift in American position away from demands for internationally manned control stations, it was largely because they were convinced that the Soviet Union would not accept U.S. demands for onsite inspection to check on suspicious events detected by the control stations.

Committee members felt that all discussion about modifications and compromise would prove fruitless.

The feeling that the new U.S. offer will not lead to an immediate break in the negotiations is said to be widely shared within the administration. Disarmament officials believe the Soviet Union will not retreat from its opposition to international inspections, at least until it has completed its new test series.

The only openly critical reaction to the administration's new approach came from Representative Craig Hosmer, of California, a ranking Republican on the committee.

In a statement issued before the hearing, Mr. Hosmer said "The deliberate vagueness" of the administration proposals "hides from the U.S. public just what is in the President's mind and denies Americans the opportunity to determine just how far the administration intends to go in caving in and surrendering to Soviet demands for a one-sided treaty upon which it could cheat and gain overwhelming surprise nuclear weapons superiority while the United States and other free world nations bask in a false feeling of security."

[From the New York Times, Aug. 3, 1962]

Soviet Reaction Cool

Moscow, August 2.—The first Soviet reaction was cool today to President Kennedy's expressed readiness to modify U.S. terms for agreement on banning nuclear tests.

The account of the President's news conference yesterday sent by the Washington bureau of Tass, the official Soviet press agency, stressed the U.S. continued insistence on onsite inspection for controlling observance of a test-ban treaty.

The Tass report did not mention Mr. Kennedy's willingness to accept a system of national control posts subject to international supervision. It said the U.S. position still does not take into account the latest scientific achievements that permit detection of underground nuclear blasts by means of national detection systems.

POSITIONS CALLED UNCHANGED

"Positions remain unchanged" was the headline used tonight by Izvestia, the Government newspaper, over the Tass dispatch.

The Soviet Union has insisted that national means of detection are adequate to police a test ban. The United States has insisted on a system of on-the-spot inspection to investigate unidentified underground explosions. The Russians have charged that the United States demands are a pretext for spying on Soviet rocket bases.

Tass quoted from Mr. Kennedy's opening statement in which he said: "It may be that we shall not need as many (onsite inspections) as we have needed in the past. But we find no justification for the Soviet claim that a test-ban treaty can be effective without onsite inspection."

EARLIER INDICATION

The Soviet Union was not hopeful about any United States shift was indicated in earlier dispatches on a strategy meeting held in Washington Monday.

The Tass report on the conference at which President Kennedy met with Arthur H. Dean, the U.S. delegate to the Geneva disarmament conference, and other disarmament advisers to discuss modifications in U.S. proposals was printed in the Soviet Union press under such headlines as "White House maneuvers" and "New Plot."

Soviet newspaper headlines usually reflect an editorial position in contrast to U.S. headlines, which usually give the gist of an article.

[From the Washington Post, Aug. 3, 1962]

New Bid for a Test Ban

President Kennedy has made a strong new bid for a nuclear test ban in his offer to modify previous U.S. demands for controls to guard against secret atomic explosions. In its last unsuccessful negotiations the United States had held out for 19 control posts in the Soviet Union. Now the President appears to be saying that, if the U.S.S.R. will accept the principle of onsite inspection, the United States would be willing to rely upon a system of national control posts "internationally monitored or supervised" and to negotiate on the question of the number of onsite inspections to be permitted.

While this shift of ground should notably enhance the outlook for an agreement, it can scarcely be regarded as a concession. Rather, it is an adjustment of the U.S. position, as the President noted at his news conference, "squarely in line with the technical realities." In other words, the previous offer made by this country was based on scientific data which seemed to indicate that a more elaborate control system would be necessary to prevent cheating. Improved scientific data now show that fewer control centers and onsite inspections are necessary for this purpose. The United States would not be negotiating in good faith if it should continue to demand more rigid and far-reaching controls than are actually needed for reasonable security against violations.

The President wisely refused to spell out how far the administration would be willing to go in relying upon national control posts and in reducing onsite inspections. These are questions that must be threshed out at Geneva. But he has opened up a large field for negotiation and demonstrated this country's urgent desire for a test-ban treaty. If any comparable flexibility is evident on the Soviet side, a hopeful new approach can be made.

It would be a mistake, however, to minimize the obstacles that remain. Onsite inspection continues to be a vital element in the American policy and an obnoxious idea to the Russians. With the most effective kind of seismic instruments to detect underground shocks, there would remain strong possibilities of controversy over whether a given disturbance might have been caused by an earthquake or by an underground bomb. In the case of such a dispute, the country not guilty of any infraction of the ban would doubtless welcome inspectors to verify the facts. But if a country had violated the proposed test ban, it would be loath to admit inspectors. Consequently, it would be hazardous to make the movements of the inspectors upon an invitation from, or the consent of, the country under suspicion.

Here is the nub of the chief nuclear issue to be negotiated at Geneva. Will the Soviet Union now return to its previous offer of three onsite inspections a year? No doubt that will depend upon how eager Moscow is for a test-ban treaty. With the United States now nearer to the views advanced by the neutral nations, at least the Soviet Union will be under pressure to make a comparable shift in the interests of halting the tests which are contributing so much to the arms race and to the anxiety of the world.

[From the New York Times, Aug. 1, 1962]

Disarmament and Security

President Kennedy is holding top-level conferences with his military and diplomatic advisers to review our disarmament policy. The aim is, if possible, to devise a new strategy, starting with modifications of our stand on a nuclear test ban that is the key to further agreements on actual disarmament and even solution of some cold war burning issues.

The President is now weighing two major decisions. One is whether to offer further concessions to the Soviets on test ban controls to break the deadlock. The other is whether to end our Pacific tests before they can be completed because of three rocket failures in high-altitude experiments.

There is tremendous pressure on the President from both scientists and diplomats, especially in neutralist quarters, to do both. The recent scientific advances in detecting underground explosions, such as the French test in the Sahara and our own tests in Nevada, have convinced even high administration officials that it is now possible to simplify the international control system, which the Soviets reject as "espionage," and to reduce the number of annual onsite inspections. And the psychological disadvantage of extending the test period beyond the tentative deadline first suggested by the President is cited as reason for ending the tests now.

The United States has certainly neither reason nor any intention to obstruct or delay a test-ban agreement. Such an agreement would be a first step toward averting a nuclear war which President Kennedy has again characterized as "insane." For that reason the United States has made continuous concessions whenever scientific developments made them possible, and it may well be able to make more.

But all concessions must be subject to one overriding consideration. That is the security of both this Nation and the free world. Should the balance of military and especially nuclear power ever be tipped against us, the Communist world might well be tempted to plunge into an atomic Armageddon. That is why, with all readiness to make further concessions, the United States and the West generally must continue to insist on an international control system of both a test ban and all disarmament steps to prevent Soviet cheating. That is why all concessions must be kept within the bounds of scientific certitude that violations can and will be detected and this country will not be put at a disadvantage.

July 29, 1962]

Detection Advance Spurs Test-Ban Talk

(By Bernard Gwertzman)

President Kennedy and his top advisers wrestled most of last week with an urgent and thorny question—should the United States reduce its inspection requirements for a nuclear test-ban treaty with the Soviet Union?

At present, discussions about such a ban have reached an impasse in Geneva. The Soviet Union refuses any form of international inspection, and has announced a new series of tests that probably will start very soon.

Normally, in view of general world tensions, this would not be a time when the United States would alter its long-established test-ban policy. Preliminary findings from a long-awaited Defense Department study, however, have developed new information. This has led to the urgent round of high-level discussions here and in London about a change in the West's stand.

FROM ARPA REPORT

The information came to light on July 7, when the Advanced Research Projects Agency (ARPA) of the Defense Department released a preliminary report on Project Vela, a 2-year intensive study of earthquakes and underground nuclear explosions. The report said:

Sensitive seismic devices can be operated in abandoned oil wells or at the bottom of the ocean with considerably more accuracy and range than on the land.

New methods may make it easier to tell the difference between a small-scale underground explosion (1 kiloton or lower) and an earthquake.

New "depth of focus" techniques can tell how deep an explosion was, making it easier to learn if a seismic disturbance was manmade (usually less than a mile deep) or an earthquake.

It may be possible to detect a nuclear explosion from as far as 3,000 miles away. (Last week, it was learned that a U.S. seismic device detected a secret French underground explosion in the Sahara, 5,000 miles away.)

THE WEST'S PRESENT POSITION

The Pentagon scientists emphasized that their findings were still preliminary, but disarmament officials immediately realized the impact of the report.

Presently, the West insists on a nuclear test ban treaty that would provide a network of manned control posts around the world. Nineteen such posts would be on Soviet soil, and 16 on American territory. These posts would have seismic devices to record any earth disturbances.

The West also wants the right to hold from 12 to 20 onsite inspections a year. Such inspections would be held if a control post could not verify a particular explosion was an earthquake. Although once approving this double-inspection plan, the Russians now reject it completely.

It is obvious that the control posts would not be needed on Soviet or American territory if devices in neutral countries, or in the ocean, could detect them just as well. Likewise, if these devices could, without a doubt, detect the difference between an earthquake and a nuclear explosion, few, if any, onsite inspections would be needed.

Apparently taking the Pentagon report as his cue, Arthur H. Dean, the top U.S. delegate at Geneva, indicated on July 15 that the West might drop its control station requirement. This view—obviously premature—was disavowed by the State Department. Observers noted, however, that the Department was more embarrassed than angry by Mr. Dean's remarks.

KENNEDY COMMENTS

At his press conference last week, President Kennedy said Mr. Dean's statement did not reflect American policy at this time. He said top officials were studying the Vela data and would make appropriate recommendations.

Mr. Kennedy originally intended to make a decision by the end of the week, but he and his advisers wanted to discuss the matter further this week. A White House announcement on Friday, after a top-level meeting, said the President requested supplemental assessments.

These reports—presumably on diplomatic and military matters—will also be discussed with Mr. Dean, who was asked by the President to return for these policy talks.

It was learned last week that the top policymakers on disarmament feel in no rush to dispose of more than 3 years of scientific study that has supported the control-station policy.

William C. Foster, the director of the Arms Control and Disarmament Agency, was called before two congressional committees last week to explain the administration's view.

SEES SOME MODIFICATION

In an interview on Tuesday, Mr. Foster said the ARPA report might lead to some modification of the present "elaborate system" of detection. When all the data are analyzed, he said, the United States would present the results to the Geneva conference.

Improvements in detection, he added, might allow somewhat fewer onsite inspections, and possibly fewer control stations. But he indicated that the basic framework of inspection should remain.

This "conservative" approach to the Vela report will disappoint many scientists who believe the United States could now propose abolishing the control-post system on Soviet territory.

They will argue—as they have in the past—that present instruments are sensitive enough to detect possible explosions from beyond Soviet territory. Thus, so long as onsite inspections can be made on Soviet territory, the posts are not necessary.

The policymakers considered this approach last week but apparently will vote against it. They reportedly feel such a plan would be misunderstood by Congress as a sign of "softness" to the Russians, and might be a bad precedent at a time when the West is demanding strict inspection over all phases of disarmament.

Instead, the policymakers seem to favor a network of fewer stations, possibly including several unmanned stations controlled only by electronic subsurface instruments.

Congressional leaders, wary of any radical shift in policy, have pressured the administration to remain firm. Senator HUMPHREY, chairman of the Senate Disarmament Subcommittee, called a press conference after talking with Mr. Foster and said there would be no change in the demand to have onsite inspections.

The ARPA report was received with considerable interest in Great Britain. The British generally have supported more flexible test-ban terms than the United States.

[From the New York Times, July 20, 1962]

DEAN BIDS SOVIET JOIN MOVE TO BAR ACCIDENTAL WAR—U.S. DELEGATE AT GENEVA SAYS STOCKPILING OF ARMS INCREASES THE DANGER

GENEVA, July 19.—The United States urged today that immediate action be taken to reduce the threat of war "by accident, miscalculation or failure of communications."

Arthur H. Dean, of the United States, warned the 17-nation disarmament conference here that the "danger of inadvertent war had acquired a new dimension because of the growth of stockpiles of modern weapons."

Measures for reducing this danger, he declared, would not be a substitute for disarmament.

However, he added, "they would facilitate our efforts to reach agreement in the general disarmament field and would also bring increased stability to the process of initiating general disarmament."

Mr. Dean made his appeal when the delegates came together as a committee of the whole. They met to discuss steps for facilitating negotiations on a treaty for general and complete disarmament by reducing international tensions.

ZORIN ASSAILS GERMANS

Valerian A. Zorin of the Soviet Union bitterly attacked the West German Government while he was pressing for an accord seeking to stop the spread of nuclear weapons.

West German militarists, he charged, are designating the Soviet Army as the "enemy," while they are demanding nuclear arms.

Mr. Dean characterized the Soviet attack on Bonn as slanderous. Sir Michael Wright of Britain said the accusations were unjustified and only served to distract the conference.

At the session's outset the U.S. delegate accused the Soviet Union of "bowdlerizing" the conference records.

By having insisted on "very substantial deletions" from the verbatim account of an earlier committee meeting, the Soviet delegation had "completely" distorted the record, Mr. Dean said.

DRAFTED BY DEAN AND ZORIN

The Soviet delegation had had the United Nations Secretariat, which staffs the conference, delete all the statements in which he had warmly endorsed a declaration condemning war propaganda. He and Mr. Dean, as the conference's cochairmen, had drafted the declaration.

"The committee of the whole," Mr. Zorin said at that time, "will be entitled to record a success when it adopts this declaration."

* * * * *

[From the New York Times, July 18, 1962]

CONFUSION AT GENEVA

The Geneva disarmament talks have resumed in the usual atmosphere of confusion. For the Soviet Union, Mr. Zorin opened with minor changes in position, which he termed an "act of good will." But if good will was intended, it was not increased by the almost simultaneous release of Premier Khrushchev's boasts about his power to destroy us. If we believe the Premier, he has an antimissile missile so precise it could be used as an atomic fly swatter out in space, plus a global rocket nothing can stop. To cap this clumsy exercise in rocket-rattling, the Soviet press distorted the position of the American newspaper editors who interviewed the Premier. More candor in the Soviet press would be a more convincing sign of Kremlin good will than anything Mr. Zorin said at Geneva.

The United States has contributed its meed to the confusion. Chief American delegate Arthur H. Dean's hint that this country may yet accept a system of national control posts, such as Moscow has proposed, drew a prompt State Department repudiation. The entire incident was bewildering and maladroit. It must raise serious question about how well U.S. policy was thought through before the discussions.

The net result for the moment is to leave the impression that neither of the world's major nuclear powers is ready to yield an inch on the major issue of how to ban nuclear tests. Continuation of these frozen positions will, of course, doom the talks to the futility that has attended all previous efforts. That will mean we will continue with endless rounds of testing and ever-increasing radioactive contamination of the atmosphere. It will also mean that the two great powers are holding the door open for others to join the atomic arms race until nuclear weapons eventually become as common as artillery is today. Can any sensible policymaker in Washington or Moscow really believe that such a course will increase the security of either the United States or the Soviet Union?

ATTACK ON FBI CHIEF J. EDGAR HOOVER

Mr. HICKENLOOPER. Madam President, the speech made yesterday by W. H. Ferry, vice president of the Fund for the Republic, at the Western States' Democratic Conference, attacking FBI Chief J. Edgar Hoover, was reprehensible.

I read in this morning's New York Times that the luncheon speaker, Mr. Ferry, at the Democratic conference in Seattle accused the respected Mr. Hoover of "sententious poppycock" in building a false legend of communism's strength.

I have known and respected Mr. Hoover for many years. His work in defense of America, against organized crime in our country, against the Nazis in World War II, and against the Communists today is a monument to the dedication of one man.

I am amazed that any speaker, at any Democratic rally, would refer to J. Edgar Hoover's work as a "mischiefmaking tapestry of legend and illusion if there ever was one."

I am sure repudiation of this attack will be forthcoming shortly from Democratic national headquarters. At least, I fervently and sincerely hope it will.

Madam President, in connection with these remarks I ask unanimous consent to have printed in the RECORD the article from the New York Times of August 7, written by Wallace Turner, reporting on this rather surprising statement made at Seattle.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUND OFFICIAL ATTACKS FBI CHIEF ON RED "LEGENDS"

(By Wallace Turner)

SEATTLE, WASH., August 6.—The vice president of the Fund for the Republic accused J. Edgar Hoover today of "sententious poppycock" in building a false legend of communism's strength.

W. H. Ferry, of Santa Barbara, Calif., the fund official, referred to the Director of the Federal Bureau of Investigation in a luncheon address at the Western States' Democratic Conference.

He said he was speaking of "a mischief-making tapestry of legend and illusion if there ever was one." He recalled President Kennedy's speech at Yale University urging that legends and myths about Government and business be avoided.

"What is the legend that haunts and cripples us here (in considering communism)?" Mr. Ferry asked. "Is it that the Communists are 9 feet tall, craftier than Satan, the most expert managers the world has ever seen, not human beings like ourselves but a race apart, determined to put man and God into jail forever."

SCOFFS AT OLD LINE

The legend "shrinks in the washing," Mr. Ferry asserted, as he cited Communist problems in Yugoslavia, China, and in Soviet agriculture. He described Mr. Hoover as "the indubitable mandarin of anticommunism in the United States" and "our official spy-swatter."

Mr. Hoover's warnings against Soviet espionage are "an old line of the FBI chief," he went on.

"Its success year after year is a tribute to the trance into which his sermons throw Americans, not excepting Congressmen," he commented.

Noting that "Congress never grudges Mr. Hoover a penny," Mr. Ferry asked whether "in these persistent reports about espionage and sabotage, is he delicately telling us that he isn't up to the job, that Red spies are running loose despite his best efforts?"

He scoffed at a statement he attributed to Mr. Hoover that the Communists had an advance guard in the United States with the capacity to destroy the American freedom.

"Our institutions are nowhere nearly as fragile as Mr. Hoover thinks they are," he said.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, August 7, 1962, he presented to the President of the United States the following enrolled bills:

S. 1771. An act to improve the usefulness of national bank branches in foreign countries;

S. 2869. An act to amend chapter 31 of title 38, United States Code, to afford additional time during which certain veterans blinded by reason of a service-connected disability may be afforded vocational rehabilitation training;

S. 2978. An act to authorize the Foreign Claims Settlement Commission of the United States to investigate the claims of citizens of the United States who suffered property damage in 1951 and 1952 as the result of the artificial raising of the water level of Lake Ontario;

S. 3109. An act to amend chapter 17 of title 38, United States Code, in order to authorize hospital and medical care for peacetime veterans suffering from non-compensable service-connected disabilities; and

S. 3525. An act to authorize the Administrator of General Services, in connection with the construction and maintenance of a Federal office building, to use the public space under and over 10th Street SW., in the District of Columbia, and for other purposes.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. HUMPHREY. Madam President, if there is no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 o'clock a.m. tomorrow.

The motion was agreed to; and (at 6 o'clock and 30 minutes p.m.) the Senate adjourned, under the previous order, until tomorrow, Wednesday, August 8, 1962, at 11 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate August 7, 1962:

ATOMIC ENERGY COMMISSION

The following-named persons to be members of the Atomic Energy Commission for the terms indicated:

James T. Ramey, of Illinois, for the remainder of the term expiring June 30, 1964, vice John S. Graham, resigned.

John Gorham Palfrey, of New York, for a term of 5 years expiring June 30, 1967, vice Loren Keith Olson, term expired.

IN THE NAVY

The following-named officers of the staff corps of the Navy, as indicated, for temporary promotion to the grade of rear admiral, subject to qualification therefor as provided by law:

MEDICAL CORPS

Martin T. Macklin
William N. New

SUPPLY CORPS

Elton W. Sutherling
William A. Evans
Bernhard H. Bieri, Jr.

CHAPLAIN CORPS

James W. Kelly

CIVIL ENGINEER CORPS

Alexander C. Husband

DENTAL CORPS

Frank M. Kyes

HOUSE OF REPRESENTATIVES

TUESDAY, AUGUST 7, 1962

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

James 5: 16: *The supplication of a righteous man availeth much.*

Almighty God, in whose fellowship our spirits are renewed and exalted, grant that in these moments, set aside for prayer, we may find ourselves fortified and sustained as we encounter grave and critical days in world affairs.

May we never become hysterical and panic stricken when we think of the magnitude of the issues that are involved or feel the agony of suspense as we anxiously wait for the better and brighter days of peace and good will.

We humbly confess that we do not know what value and relevancy our prayers may have in the course and issue of events but we are appropriating by faith the testimony of the ancient apostle that "the supplication of a righteous man availeth much."

Give us a deeper and profounder insight into Thy ways and will and may we understand that the secret of knowing that we are being divinely guided is to be found in our willingness to obey and follow Thee.

Hear us in Christ's name. Amen

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Miller, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On August 2, 1962:

H.R. 6374. An act to clarify the application of the Government Employees Training Act with respect to payment of expenses of attendance of Government employees at certain meetings, and for other purposes; and

H.R. 9520. An act to continue for 2 years the suspension of duty on certain alumina and bauxite.

On August 6, 1962:

H.R. 2129. An act for the relief of John Calvin Taylor;

H.R. 2187. An act for the relief of Augustin Ramirez-Trejo;

H.R. 2198. An act for the relief of Carlos Sepulveda Abarca;

H.R. 2664. An act for the relief of Mrs. Irena Ratajczak;

H.R. 3000. An act for the relief of Lea Min Wong;

H.R. 3501. An act for the relief of Mrs. Hasmik Arzoo;

H.R. 3821. An act for the relief of Ivy Gwendolyn Myers;

H.R. 4718. An act for the relief of Bogdan Kusulja;

H.R. 6833. An act for the relief of Frantisek Tisler;

H.R. 6967. An act to provide for the incorporation of certain nonprofit corporations in the District of Columbia, and for other purposes;

H.R. 8214. An act to permit the use of certain construction tools actuated by explosive charges in construction activity on the U.S. Capitol Grounds;

H.R. 8992. An act to amend administrative provisions of title 38, United States Code, relating to the Department of Medicine and Surgery in the Veterans' Administration;

H.R. 9186. An act for the relief of Eladio Aris (also known as Eladio Aris Carvallo);

H.R. 9522. An act for the relief of certain members of the U.S. Marine Corps who incurred losses pursuant to the cancellation of a permanent change of station movement;

H.R. 10069. An act to amend section 216 of title 38, United States Code, relating to prosthetic research in the Veterans' Administration;

H.R. 10184. An act to amend section 130 (a) of title 28, United States Code, so as to reconstitute the Eastern Judicial District of Wisconsin to include Menominee County, Wis.;

H.R. 10525. An act for the relief of Francis L. Quinn;

H.R. 10526. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies for the fiscal year ending June 30, 1963, and for other purposes;

H.R. 11127. An act for the relief of Ernst Haeusserman;

H.R. 11735. An act authorizing the change in name of the Beardstown, Ill., flood control project, to the Sid Simpson flood control project; and

H.J. Res. 417. Joint resolution to designate the lake formed by Terminus Dam on the Kaweah River in California as Lake Kaweah.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 2206. An act to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado.

THE HENRY C. DWORSHAK DAM AND RESERVOIR

Mr. HARDING. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Idaho?

There was no objection.

Mr. HARDING. Mr. Speaker, the State of Idaho was shocked and grieved late last month at the sudden passing of our senior Senator Henry D. Dworshak who had represented Idaho in the Halls of the U.S. House of Representatives and Senate for nearly 24 years.

The people he served so long will miss his concern and interest in their problems. We in the Idaho congressional delegation who worked with him regard his death as a personal loss.

Conscientious in discharging his legislative responsibilities to the State and the Nation, Senator Dworshak served in a manner which reflected great credit on our western area. There are those who would disagree with the Senator's political philosophy, but few would question his dedication, high ideals, and integrity.

At his death he was the 10th ranking Republican member of the U.S. Senate. He held important posts on the Appropriations, Atomic Energy, and Interior Committees.

The respect with which he was held in Washington as well as Idaho is demonstrated by these statements of regret:

President John F. Kennedy: "Senator Henry C. Dworshak was a man who served his State honorably and with dignity for almost a quarter century. I knew him to be one of the hardest working men in all of the Congress. I mourn his passing."

Senate Democratic Leader Michael J. Mansfield: "Mrs. Mansfield and I extend to Mrs. Dworshak and her family our deepest condolences; and we know that the Senate will be far poorer because of the passing of Henry Dworshak."

Senate Republican Minority Leader Everett Dirksen: "He was uncompromising toward evil wherever he found it. His chuckling laugh was as hearty and as contagious as that of an Idaho lumberjack as he was coming out of the timber after a long stay there. He had the courage of a crusader and the determination of a missionary."

Senator Frank Church: "Senator Dworshak's long tenure in Washington is a fine example of public service honorably rendered. Few, indeed, are the men, throughout the whole history of my State, who have dedicated so many years to so faithful a discharge of the public trust."

Congresswoman Gracie Pfost: "I had known Senator Dworshak for many years. While we sat on the opposite sides of the political aisle, and we disagreed on many policies and issues, I always had the greatest respect for his integrity and energy as a legislator on the national scene."

Gov. Robert E. Smylie: "Senator Dworshak's untimely death is a great loss to all Idaho and to the Nation. He was Idaho's most distinguished public servant and his loss will be deeply mourned throughout the State and Nation."

Republican Minority Leader in the House, Charlie Halleck: "Henry Dworshak was a strong, courageous exponent of those things in which he believed. But as firm as he was in his convictions, I never knew him to be anything but completely fair toward those with whom he differed on principle. And above all, may I say that never, to my knowledge, did anyone ever question his sincerity or his honesty."

Robert McLaughlin: "He was truly a great American who unselfishly gave of his energies for the causes in which he believed."

Senator Hubert Humphrey: "Mr. Dworshak was a voice of honest conservatism in Congress who was known for his frankness and courage. The American political system needs these honest differences of opinion."

Ezra Taft Benson: "The passing of Senator Henry C. Dworshak is a truly great loss to Idaho, the Nation, and the free world. He was a valiant fighter for constitutional principles."

Congressman J. Edgar Chenoweth: "It was a distinct privilege to have Senator Dworshak as a friend. He was truly a great American. He was a man who believed in the fundamental principles of our Government and was willing to fight for them. I never heard anyone question his sincerity or his motives."

Republican State Chairman John O. McMurray: "Henry Dworshak was truly one of the greatest Senators in Idaho's history. He was a true patriot in every sense of the word, a bulwark of his party, and the most devoted of all public servants. His passing will leave a great void."

State Democratic Chairman Lloyd Walker: "There have, of course, been disagreements and campaigns in the past, but at no time could or did anyone ever question the love and devotion which Senator Dworshak so clearly held for the people of Idaho. The Republican Party has lost a trusted leader and we have all lost a fine citizen and neighbor."

Former Gov. Len Jordan, of Boise: "The Senator's death is an extremely tragic loss for Idaho, the West and the Nation. He was a public servant of real stature, a dedicated man who believed in constitutional government. He was fearless in the defense of right."

Madison County Democratic Central Committee Chairman Howard Potter: "I have not always agreed with Senator Dworshak, but I recognize him to be a great statesman, a sincere political leader and a true friend of all Idahoans. Republicans and Democrats alike mourn his passing and will miss his devoted leadership."

More than any other achievement in his political career, Senator Dworshak would probably be most proud of his role in the area of reclamation, particularly his efforts on the Palisades project.

The Senator recognized, as do all westerners, that water is the key to thriving communities, prosperous business centers, and productive farmland. Water has transformed overnight what previously had been merely desert or semiarid lands.

As early as 1941, Senator Dworshak, who then held the seat I now hold in the House, began the long, hard steps necessary to secure congressional authorization for the Palisades project.

Approval had to be sought from the Corps of Engineers, the Bureau of Reclamation and the Secretary of Interior. On December 9, 1941, approval was forthcoming.

However, with Pearl Harbor and a Second World War requiring all of the Nation's efforts for defense, construction of this vital project had to be delayed for several years.

When the Nation could once again concentrate on domestic needs, it was Congressman Dworshak, as a member of the House Appropriations Committee, who secured the first appropriation of $250,000 to complete engineering and provide construction plans for the Palisades project in 1945.

Again in 1946 Congressman Dworshak succeeded in winning approval of $1,450,000 to provide for the preliminary construction facilities at the Palisades Dam site.

The years 1947 and 1948 found him continuing this effort as a member of the Senate Appropriations Committee, where he obtained $650,410 and $930,750 for the construction of powerline and relocation of highways at the Palisades Dam.

A serious delay in the construction of the project arose over the finding by Bureau of Reclamation officials in early 1949 that because of plan changes, the Palisades project would have to be reauthorized by the Congress.

At that time Senator Dworshak was not serving in the Senate or the House, but upon his return in late October of that year resumed his fight for this desperately needed water which would result from the project.

Within 1 month from the time the Bureau of the Budget approval made final action by the Congress possible, Senator Dworshak was able to obtain favorable action by the Senate.

In view of the fact that Senator Dworshak devoted nearly a quarter of a century of his life to Idaho and the Nation in the House and the Senate, in view of the fact he was a great proponent of western reclamation; and in view of the vital part he played in winning congressional approval of the Palisades project I believe there would be no more fitting memorial or tribute to this man than for the Palisades Dam and Reservoir to bear his name.

Therefore, I urge the House to designate the Palisades Dam and Reservoir, the Henry C. Dworshak Dam and Reservoir and hope that early approval will be forthcoming on the resolution I am introducing today for this purpose.

OUTLAW STRIKES IN DEFENSE

Mr. DORN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN. Mr. Speaker, I have today introduced a bill which will make it unlawful for employers or employees to strike in any plant or activity essential to the national defense of the United States. Our soldiers, sailors, marines, and airmen standing guard throughout the world are not permitted to strike. The least we can do at home is to see that they get the weapons to defend themselves and to defend our country without delays, walkouts, and strikes. The American people have been shocked recently with strikes at our nuclear plants, submarine bases, and other defense installations essential to our national security.

The wages and working conditions of employers and employees at our nuclear and other defense plants are far superior to the operating conditions of our men in Thailand, Laos, and Vietnam.

Mr. Speaker, if it is right to take the lives of our young men in defense of our country, it is also right to require employers and employees working in essential defense industries to remain on the job. The world situation is critical. It is urgent that Congress meet this threat to our national security at this session.

PUBLICITY ACCOMPLISHMENTS OF SECRETARY OF LABOR ARTHUR GOLDBERG

Mr. BECKER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New york?

There was no objection.

Mr. BECKER. Mr. Speaker, yesterday I addressed myself to the great publicity accomplishments of the Attorney General. Today, I would like to compliment the Secretary of Labor, Mr. Arthur Goldberg, for his great accomplishments in the field of publicity. Hardly a day goes by when the American people do not read about Mr. Goldberg, shooting all over the country, interesting himself in one labor dispute after another.

Why, last year he was reported to have made great strides in settling the Metropolitan Opera strike. This was hailed by opera lovers everywhere.

But this week, I read in the papers that strike idleness in 1962 is 60 percent above 1961 period. Perhaps, if less attention and effort was paid to creating images through publicity, and this same energy and talent devoted to the job, perhaps Mr. Goldberg, could accomplish part of his mission.

I notice also by the press that President Kennedy stated in his press conference:

> I don't think there has been an increase in strikes.

This was in response to a question why he has not sent up a labor message to Congress.

It seems, that with all the publicity, both the Secretary of Labor and the President could get together on the facts, and then perhaps the interests of the American people might be given some consideration and get the country moving, forward, that is.

OVERTIME PAY FOR CUSTOMS AGENTS

Mr. GROSS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GROSS. Mr. Speaker, in view of the fact that debate is not permitted on the Private Calendar I would like to call the attention of Members of the House to several bills on today's Private Calendar which would provide overtime pay to customs agents. Some of these bills go back several years. Some of the claimants are widows.

Mr. Speaker, the Treasury Department in almost all cases is opposed to the payment of overtime in this manner, and it seems to me there ought to be some clear policy established by Congress with respect to payments of this kind.

Mr. Speaker, I am going to object to some of the bills and I understand my colleague, the gentleman from Illinois [Mr. ANDERSON], will object to others of these bills, until some policy in this respect can be worked out that is fair.

SUBCOMMITTEE ON HEALTH AND SAFETY, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce be permitted to sit today during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

NATIONAL CAPITAL HOUSING AUTHORITY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on the District of Columbia.

To the Congress of the United States:

In accordance with the provisions of section 5(a) of Public Law 307, 73d Congress, approved June 12, 1934, I transmit herewith for the information of the Congress the report of the National Capital Housing Authority for the fiscal year ended June 30, 1961.

JOHN F. KENNEDY.

THE WHITE HOUSE, *August 7, 1962.*

PRIVATE CALENDAR

The SPEAKER pro tempore (Mr. ALBERT). This is Private Calendar day. The Clerk will call the first bill on the Private Calendar.

MRS. WILLIAM W. JOHNSTON

The Clerk called the bill (H.R. 9942) for the relief of Mrs. William W. Johnston.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

CLARA B. FRY

The Clerk called the bill (H.R. 7615) for the relief of Clara B. Fry.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MARGARET MACPHERSON, ANGUS MACPHERSON, RUTH MACPHERSON, AND MARILYN MACPHERSON

The Clerk called the bill (H.R. 1660) for the relief of Margaret MacPherson, Angus MacPherson, Ruth MacPherson, and Marilyn MacPherson.

Mr. ANDERSON of Illinois. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

CARLETON R. McQUOWN, THOMAS A. PRUETT, AND JAMES E. ROWLES

The Clerk called the bill (H.R. 4950) for the relief of Carleton R. McQuown, Thomas A. Pruett, and James E. Rowles.

Mr. ANDERSON of Illinois. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

DANIEL WALTER MILES

The Clerk called the bill (H.R. 7469) for the relief of Daniel Walter Miles.

Mr. ANDERSON of Illinois. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

MRS. MARY E. O'ROURKE

The Clerk called the bill (H.R. 3624) for the relief of Mrs. Mary E. O'Rourke.

Mr. ANDERSON of Illinois. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

DR. AND MRS. ABEL GORFAIN

The Clerk called the bill (H.R. 6709) for the relief of Dr. and Mrs. Abel Gorfain.

Mr. ANDERSON of Illinois. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

THEODORE ZISSU

The Clerk called the bill (H.R. 8550) for the relief of Theodore Zissu.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

ARIE ABRAMOVICH

The Clerk called the bill (S. 2736) for the relief of Arie Abramovich.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

Mr. WALTER. Mr. Speaker, I will have to object.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. HEMPHILL. I object, Mr. Speaker.

The SPEAKER pro tempore. This bill requires two objections. Is there further objection? The Chair hears none.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrant of arrest, and bonds, which may have issued in the case of Arie Abramovich. From and after the date of the enactment of this Act, the said Arie Abramovich shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued.

With the following committee amendment:

At the end of the bill, change the period to a colon and add the following: *"Provided,* That nothing in this Act shall be construed to waive the provisions of section 315 of the Immigration and Nationality Act.

The committee amendment was agreed to.

Mr. GROSS. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 1, line 8, after the word "deportation" insert the word "solely".

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed. A motion to reconsider was laid on the table.

ALFRED C. ALTUM

The Clerk called the bill (H.R. 6822) for the relief of Alfred C. Altum.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the limitations of time prescribed in section 2104 of title 38, United States Code, shall not apply with respect to any claim for mustering-out payment under chapter 43 of title 38, United States Code, filed with the Secretary of the Navy by Alfred C. Altum, former storekeeper, third class, United States Navy (service number 3587345) within the six-month period which begins on the date of enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

COMBEST B. SILLS

The Clerk called the bill (H.R. 8062) for the relief of Combest B. Sills.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

GEORGE H. PETERS

The Clerk called the bill (H.R. 8549) for the relief of George H. Peters.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MARVIN M. GREENLEE

The Clerk called the bill (H.R. 10111) for the relief of Marvin M. Greenlee.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

ANGELO A. RUSSO

The Clerk called the bill (H.R. 10678) for the relief of Angelo A. Russo.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Angelo A. Russo, of Burlington, Massachusetts, the sum of $200. Such sum represents reimbursement to the said Angelo A. Russo for paying out of his own funds judgments rendered against him in the third district court of Eastern Middlesex, Massachusetts, as a result of an accident occurring when Angelo A. Russo was operating a Government vehicle in the course of his duties as an employee of the Corps of Engineers, Department of the Army: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NORMAN R. THARP

The Clerk called the bill (H.R. 1410) for the relief of Norman R. Tharp.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Norman R. Tharp, Falls Church, Virginia, a civilian employee of the Department of the Air Force, is hereby relieved of liability to the United States in the sum of $940.80. Such sum represents the aggregate amount of salary overpayments received by him from the United States for the period beginning August 24, 1958, and ending July 9, 1960, as a result of administrative error and without fault on his part. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for the amount for which liability is relieved by this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN, AND HELPERS OF AMERICA LOCAL 863 PENSION FUND

The Clerk called the bill (H.R. 8205) to provide tax relief to the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America Local 863 pension fund and the contributors thereto.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America Local Union 863 pension fund, created January 10, 1955, and retroactively effective to September 1, 1954, as a result of an agreement between the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America Local 863 and the A. & P. Contract Carriers Association, which fund has never been operated in a manner which would jeopardize the interests of its beneficiaries, shall be deemed to have met the requirements of section 401(a) of the Internal Revenue Code of 1954 and shall be deemed to have been and to be exempt from tax under section 501(a) of the Internal Revenue Code of 1954 for the period beginning September 1, 1954, and ending December 31, 1956.

With the following committee amendments:

Page 1, line 9, and page 2, lines 1 and 2, strike "which fund has never been operated in a manner which would jeopardize the interests of its beneficiaries,".

Page 2, line 7, strike "December 31, 1956." and insert: "December 31, 1956, but only if it is shown to the satisfaction of the Secretary of the Treasury or his delegate that the trust has not in this period been operated in a manner which would jeopardize the interest of its beneficiaries."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

REXFORD R. CHERRYMAN

The Clerk called the bill (H.R. 10720) for the relief of Rexford R. Cherryman, of Williamsburg, Va.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Navy is authorized and directed to pay, out of current appropriations available for the payment of severance pay, to Rexford R. Cherryman, who was discharged from the United States Navy on June 30, 1959, an amount equal to the difference between (a) the amount of severance pay which would have been paid to him upon his discharge from the United States Navy if the computation of such severance pay had been based upon his actual commissioned service in the United States Navy, and (b) the amount of severance pay actually paid to him.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CARL ADAMS

The Clerk called the bill (H.R. 11058) for the relief of Carl Adams.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Carl Adams, of Mexico, Missouri, is hereby relieved of liability to the United States in the amount of $550.34, the amount by which he was overpaid as a regular clerk in the postal service during the periods from October 1, 1953, to August 23, 1957, inclusive, and from October 4, 1958, to April 15, 1960, inclusive. Such overpayments were made as a result of an administrative error on the part of the Post Office Department in determining the longevity increases to which he was entitled. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for any amount for which liability is relieved by this Act.

SEC. 2. The Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Carl Adams, of Mexico, Missouri, an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him, in complete or partial satisfaction of the liability to the United States specified in the first section: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

THOMAS C. BARRINGER

The Clerk called the bill (H.R. 10196) for the relief of Thomas C. Barringer.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Thomas C. Barringer, of McLean, Virginia, is hereby relieved of liability to the United States for excess salary payments received by him, covering the period June 14, 1959, through December 9, 1961, as a result of an administrative error in the determination of his longevity step increases. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for any amount for which liability is relieved by this Act.

SEC. 2. The Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Thomas C. Barringer, of McLean, Virginia, an amount equal to the aggregate of the amounts paid by him, or withheld from sums otherwise due him, in complete or partial satisfaction of the liability to the United States specified in the first section: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ISABEL K. LANNING

The Clerk read the bill (H.R. 11183) for the relief of Isabel K. Lanning.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Isabel K. Lanning, of Spokane, Washington, is hereby relieved of liability to the United States for excess salary payments received by her, covering the period January 12, 1958, through December 9, 1961, as a result of an administrative error in the determination of her longevity step increases. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for any amount for which liability is relieved by this Act.

SEC. 2. The Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Isabel K. Lanning, of Spokane, Washington, an amount equal to the aggregate of the amounts paid by her, or withheld from sums otherwise due her, in complete or partial satisfaction of the liability to the United States specified in the first section: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provision of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 2, lines 8 and 9, strike "in excess of 10 per centum thereof".

The committee amendment was ageed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MERRITT-CHAPMAN & SCOTT CORP.

The Clerk called the bill (S. 2572) for the relief of the Merritt-Chapman & Scott Corp.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the Merritt-Chapman and Scott Corporation, of Cleveland, Ohio, the sum of $192,500. The payment of such sum shall be in full satisfaction of all claims of the said Merritt-Chapman and Scott Corporation against the United States for compensation for damages sustained by such corporation when, on August 5, 1959, a federally owned aircraft assigned to the 128th Fighter Group of the Wisconsin Air National Guard, General Mitchell Field, Milwaukee, Wisconsin, crashed into a barge owned by the said Merritt-Chapman and Scott Corporation while such barge was anchored in Milwaukee Harbor, Milwaukee, Wisconsin: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARY J. PAPWROTH

The Clerk called the bill (H.R. 11334) for the relief of Mary J. Papwroth.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Civil Service Retirement Act, Mary J. Papwroth shall be held and considered to have received congressional employee salary at the rate of $9,455.88 per annum on the day prior to her employment with the International Atomic Energy Agency (which employment ended December 4, 1960) if the additional deposit due to civil service retirement and disability fund by reason of the enactment of this Act is paid to the United States Civil Service Commission not later than the ninetieth day following the date of enactment of this Act. Notwithstanding any other provision of law, annuity benefits payable by reason of the enactment of this Act shall be paid from the civil service retirement and disability fund.

With the following committee amendment:

Page 1, line 4, strike "Papwroth" and insert "Papworth".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Mary J. Papworth."

A motion to reconsider was laid on the table.

MR. AND MRS. GORDON C. BRYANT

The Clerk called the bill (H.R. 10604) for the relief of Mr. and Mrs. Gordon C. Bryant.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mr. and Mrs. Gordon C. Bryant, of Thomasville, Georgia, jointly, the sum of $10,000, as a gratuity by reason of the death of their son, Bobby Jack Bryant, steelworker third class (5190447, United States Navy), on June 22, 1961, as the result of negligence of personnel of the United States Navy while he was working on a pipeline at Midway Island: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 1, line 6, strike "$10,000" and insert "$5,000".

Page 2, line 1, strike "in excess of 10 per centum thereof".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

HENRY ARMSTRONG, ADMINISTRATOR OF THE ESTATE OF ELLA ARMSTRONG

The Clerk called the bill (H.R. 6940) for the relief of Henry Armstrong, administrator of the estate of Ella Armstrong.

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

Mr. TOLL. Mr. Speaker, I object.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. GROSS and Mr. ANDERSON of Illinois objected and the bill was recommitted to the Committee on the Judiciary.

MARIA ODELIA CAMPOS

The Clerk called the bill (H.R. 1450) for the relief of Maria Odelia Campos.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 203(a)(3) and 205 of the Immigration and Nationality Act, the minor child Maria Odelia Campos, shall be held and considered to be the natural-born alien child of Zeferino Antonio and Lucy Maria Campos, lawfully resident aliens of the United States: *Provided,* That the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was order to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Maria Odelia Campos."

A motion to reconsider was laid on the table.

MRS. JANE R. MOORE

The Clerk called the bill (H.R. 2659) for the relief of Mrs. Jane R. Moore.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mrs. Jane R. Moore shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Mrs. Jane R. Moore. From and after the date of the enactment of this Act, the said Mrs. Jane R. Moore shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOAO DE FREITAS FERREIRA DE VASCONCELOS

The Clerk called the bill (H.R. 3125) for the relief of Joao de Freitas Ferreira de Vasconcelos.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Joao de Freitas Ferreira de Vasconcelos, shall be held and considered to be the natural-born alien child of Mr. and Mrs. Manuel Vasconcelos, citizens of the United States: *Provided,* That the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendments:

On page 1, line 7, after the name "Mrs. Manuel Vasconcelos" insert the following: ", citizens".

On page 1, line 7, after the words "the United States" change the colon to a period and strike out the remainder of the bill.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MAURIZIO PLACIDI

The Clerk called the bill (H.R. 6653) for the relief of Maurizio Placidi.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Maurizio Placidi, shall be held and considered to be the natural-born alien child of Aurora Placidi, a citizen of the United States: *Provided,* That the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

With the following committee amendment:

On page 1, line 7, after "United States" change the colon to a period and strike out the remainder of the bill.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

STELLA ROSA PAGANO

The Clerk called the bill (H.R. 7437) for the relief of Stella Rosa Merello.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Stella Rosa Merello shall be held and considered to be the minor natural-born alien child of Mr. and Mrs. Luigi Pagano, citizens of the United States.

With the following committee amendment:

On page 1, line 4, strike out the name "Stella Rosa Merello" and substitute in lieu thereof the name "Stella Rosa Pagano."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Stella Rosa Pagano."

A motion to reconsider was laid on the table.

KAZIMIERZ KRUPINSKI

The Clerk called the bill (H.R. 10796) for the relief of Kazimierz Krupinski.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(9) of the Immigration and Nationality Act, Kazimierz Krupinski may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DR. KWAN HO LEE

The Clerk called the bill (S. 1174) for the relief of Dr. Kwan Ho Lee.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Doctor Kwan Ho Lee shall be held and considered to have been lawfully admitted to the United States for permanent residence as of December 13, 1952.

SEC. 2. The time Doctor Kwan Ho Lee has resided and has been physically present in the United States since December 13, 1952, shall be held and considered to meet the residence and physical presence requirements of section 316 of the Immigration and Nationality Act, as amended.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

STEPHEN S. CHANG

The Clerk called the bill (S. 1849) for the relief of Stephen S. Chang.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Stephen S. Chang shall be held and considered to have been lawfully admitted to the United States for permanent residence as of October 2, 1954, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

On page 1, line 6, strike out the date "October 2, 1954" and substitute in lieu thereof the language "the date of the enactment of this Act."

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SU-FEN CHEN

The Clerk called the bill (S. 2208) for the relief of Su-Fen Chen.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Su-Fen Chen shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Su-Fen Chen. From and after the date of the enactment of this Act, the said Su-Fen Chen shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. ELIZABETH LOVIC

The Clerk called the bill (S. 2455) for the relief of Mrs. Elizabeth Lovic.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraph (4) of section 212(a) of the Immigration and Nationality Act, Mrs. Elizabeth Lovic may be issued an immigrant visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of such Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General be deposited as prescribed by section 213 of that Act. This Act shall apply only to grounds for exclusion under such paragraph known to the Secretary of State or the Attorney General prior to the date of the enactment of this Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MR. AND MRS. ALFREDO HUA-SING ANG

The Clerk called the bill (S. 2614) for the relief of Mr. and Mrs. Alfredo Hua-Sing Ang.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mr. and Mrs. Alfredo Hua-Sing Ang shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RENATO GRANDUC AND GRAZIA GRANDUC

The Clerk called the bill (S. 2769) for the relief of Renato Granduc and Grazia Granduc.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Renato Granduc and Grazia Granduc shall be held and considered to be the natural-born alien minor children of Captain William L. O'Neal and Mary Granduc O'Neal, citizens of the United States: *Provided,* That the natural parents of the said Renato Granduc and Grazia Granduc shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SUSPENSION OF DEPORTATION OF IOANNIS CONSTANTELIAS

The Clerk called the resolution (S. Con. Res. 76) withdrawing suspension of deportation of Ioannis Constantelias.

There being no objection, the Clerk read the resolution, as follows:

Resolved by the Senate (the House of Representatives concurring), That the Congress, in accordance with section 246(a) of the Immigration and Nationality Act (8 U.S.C.A. 1256(a)), withdraws the suspension of deportation in the case of Ioannis Constantelias (A–2044661) which was previously granted by the Attorney General and approved by the Congress.

The resolution was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

MISS ANKA GRAHOVAC

The Clerk called the bill (H.R. 1427) for the relief of Miss Anka Grahovac.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Anka Grahovac shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

Amend the title so as to read: "A bill for the relief of Ann Super, formerly Anka Grahovac."

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Ann Super, formerly Anka Grahovac, shall be held and considered to be the natural-born alien minor child of Mr. and Mrs. Steve Super, citizens of the United States: *Provided*, That the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title of the bill was amended to read: "A bill for the relief of Ann Super, formerly Anka Grahovac."

A motion to reconsider was laid on the table.

GENNARO PRUDENTE

The Clerk called the bill (H.R. 3619) for the relief of Gennaro Prudente.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 212(a)(4) of the Immigration and Nationality Act, Gennaro Prudente may be admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act.

With the following committee amendment:

On page 1, line 7, at the end of the bill, change the period to a colon and add the following: "*Provided*, That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PAGONA PASCOPOULOS

The Clerk called the bill (H.R. 3719) for the relief of Pagona Pascopoulos.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Pagona Pascopoulos shall be held and considered to be the natural-born minor alien child of Peter Pascopoulos, a citizen of the United States: *Provided,* That the natural parents of Pagona Pascopoulos shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ALDO FRANCESCO CARBONE

The Clerk called the bill (H.R. 4478) for the relief of Aldo Francesco Carbone.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provision of section 212(a)(1) of the Immigration and Nationality Act, Aldo Francesco Carbone may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of such Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the Immigration and Nationality Act: *Provided further,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice had knowledge prior to the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FOTIOS SAKELAROPOULOS KAPLAN

The Clerk called the bill (H.R. 4628) for the relief of Fotios Sakelaropoulos Kaplan.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Fotios Sakelaropoulos Kaplan shall be held and considered to be the natural-born alien child of Mrs. Helen Kaplan, a citizen of the United States: *Provided,* That the natural parents of Fotios Sakelaropoulos Kaplan shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FOTINI CONSTANTINOS VOGGAS

The Clerk called the bill (H.R. 5331) for the relief of Fotini Constantinos Voggas.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Fotini Constantinos Voggas shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Fotini Constantinos Voggas. From and after the date of the enactment of this Act, the said Fotini Constantinos Voggas shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CONVEYING MINERAL INTERESTS IN SOUTH CAROLINA

The Clerk called the bill (H.R. 7364) to provide for the conveyance of certain mineral interests of the United States in property in South Carolina to the record owners of the surface of that property.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior shall convey to those persons who, on the date of enactment of this Act, are the record owners of the surface rights thereof, all of the right, title, and interest of the United States in and to the real property consisting of fifty-three and three-tenths acres and more particularly described in the conveyance entered into between Gus Loskoski and Ola Loskoski as grantors and L. T. Vaughn and Sheron K. Vaughn as grantees, which conveyance is recorded in the office of the clerk of court for Anderson County, South Carolina, in deed book A–9 at page 257. Such conveyance shall be made only if application is made therefor by a record owner of the surface rights within one year after the date of enactment of this Act and upon payment to the United States by such record owner of the fair market value, as determined by the Secretary, of the right, title, and interest of the United States being conveyed under this Act.

With the following committee amendment:

Page 2, strike out all of lines 7, 8, and 9 and insert in lieu thereof the following: "the sum of $200 to reimburse the United States for the administrative cost of the conveyance plus the fair market value of the minerals as determined by the Secretary."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

HANNA GHOSN

The Clerk called the bill (S. 296) for the relief of Hanna Ghosn.

There being no objection the Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Hanna Ghosn shall be held and considered to be the minor natural-born alien child of Mrs. Louisa Assaff, a United States citizen: *Provided,* That the natural parents of Hanna Ghosn shall not by virture of such parentage be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

ASSUNTA BIANCHI

The Clerk called the bill (S. 1882) for the relief of Assunta Bianchi.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Assunta Bianchi, shall be held and considered to be the natural-born alien child of Mr. and Mrs. Bernard A. Lange, citizens of the United States: *Provided,* That the natural mother of Assunta Bianchi shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and the motion to reconsider was laid on the table.

SUSAN GUDERA AND OTHERS

The Clerk called the bill (S. 2751) for the relief of Susan Gudera, Heinz Hugo Gudera, and Catherine Gudera.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

MRS. JULIANE C. ROCKENFELLER

The Clerk called the bill (S. 2807) for the relief of Mrs. Juliane C. Rockenfeller.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraph (3) of section 212(a) of the Immigration and Nationality Act, Mrs. Juliane C. Rockenfeller may be issued an immigrant visa and admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of such Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act. This Act shall apply only to grounds for exclusion under such paragraph known to the Secretary of State or the Attorney General prior to the date of the enactment of this Act.

The bill was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

YIANNOULA VASILIOU TSAMBIRAS

The Clerk called the bill (S. 2675) for the relief of Yiannoula Vasiliou Tsambiras.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Yiannoula Vasiliou Tsambiras, shall be held and considered to be the natural-born alien child of Jerry Simos and Helen Chamber Simos, citizens of the United States: *Provided,* That the natural parents of the said Yiannoula Vasiliou Tsambiras shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SIEU-YOEH TSAI YANG

The Clerk called the bill (S. 2835) for the relief of Sieu-Yoeh Tsai Yang.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Sieu-Yoeh Tsai Yang shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of the status of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof, the following: "That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Sieu-Yoeh Tsai Yang. From and after the date of the enactment of this Act, the said Sieu-Yoeh Tsai Yang shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BARTOLA MARIA S. LA MADRID

The Clerk called the bill (S. 3039) for the relief of Bartola Maria S. La Madrid.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Bartola Maria S. La Madrid shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof, the following: "That the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond which may have issued in the case of Bartola Maria S. La Madrid. From and after the date of the enactment of this Act, the said Bartola Maria S. La Madrid shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SOON TAI LIM

The Clerk called the bill (H.R. 2125) for the relief of Soon Tai Lim.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Soon Tai Lim shall be deemed to be a nonquota immigrant and may be issued a visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of that Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof, the following: "That, for the purposes of sections 101(a) (27) (A) and 205 of the Immigration and Nationality Act, Soon Tai Lim, shall be held and considered to be the natural-born alien minor child of Mr. Shi Kyun Lim, a citizen of the United States: *Provided*, That the natural parents of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. SUN YEE

The Clerk called the bill (H.R. 5317) for the relief of Mrs. Sun Yee (also known as Mrs. Tom Goodyou).

There being no objections, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Mrs. Sun Yee (also known as Mrs. Tom Goodyou), the widow of a United States citizen, shall be deemed to be within the purview of section 101(a) (27) (A) of the Immigration and Nationality Act, and the provisions of section 205 of that Act shall not be applicable in this case.

Amend the title so as to read: "A bill for the relief of Mrs. Sun Yee (also known as Mrs. Tom Goodyou) and her children, Male Har Yee, Shee Bell Yee, and Male Jean Yee."

With the following committee amendments:

On page 1, line 4, after the word "citizen," insert the following: "and her children, Male Har Yee, Shee Bell Yee, and Male Jean Yee,".

On page 1, line 7, strike out the words "this case" and substitute in lieu thereof the words "their cases".
